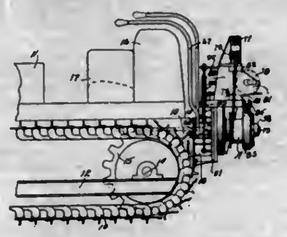
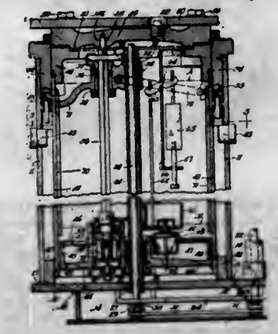
1. In a process for the conversion of hydrocarbons in the presence of hydrofluoric acid as a catalyst in which a portion of the hydrofluoric acid is added to the process from a storage vessel, the method for minimizing the loss of hydrofluoric acid from said acid storage vessel and for confining the acid to a lower liquid phase therein

which comprises substantially maintaining said hydrofluoric acid in liquid phase under an atmosphere of inert pressuring gas and introducing between said acid layer and said atmosphere of pressuring gas a liquid layer of a heavy paraffinic hydrocarbon fraction through which said hydrofluoric acid is undiffusible to further prevent vaporization and the diffusion of acid vapors into the pressuring gas and to maintain said acid in the liquid phase.



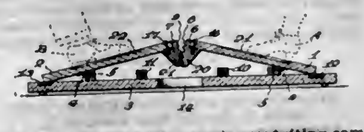
2,471,967
UNIVERSAL JOINT
Philip M. Waite, Corry, Pa.
Application July 3, 1945, Serial No. 602,991
1 Claim. (Cl. 64—16)



A universal joint comprising a pair of oppositely extending socket members adapted to be secured to a pair of shafts, confronting cup-shaped members carried by the inner ends of said socket members, a ball loosely disposed in said cup-shaped members and formed with a pair of right angularly disposed grooves, an arcuate key fixedly carried by each cup-shaped member and slidably engaging in said grooves, a casing about said cup-shaped members formed of parti-spherical members, and means supporting said casing, said parti-spherical members including confronting annular flanges, an inner anti-friction race about said flanges, a flange carried by said inner race engaging between said first named flanges, means securing all of said flanges together, an outer race, means for securing said outer race to a stationary support, and anti-friction elements between said races.

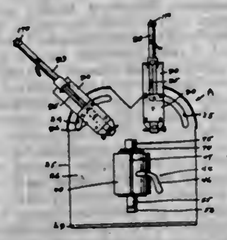
2,471,988
WINCH
Harry H. Washbond and Orville R. Beattie, Springfield, Ill., assignors to The Baker Manufacturing Company, Springfield, Ill., a corporation of Illinois
Application March 20, 1944, Serial No. 527,164
8 Claims. (Cl. 254—187)

1. In a winch including a supporting housing, a drive shaft journalled in and extending from said housing, a cable drum journalled on said housing concentric with and surrounding said drive shaft, said drum at its outer end presenting a clutch surface, a clutch head secured to the outer end of said drive shaft to rotate therewith but being free to shift axially thereon, said drive shaft having an axially extending bore therethrough, and a clutch control shaft extending through said bore, the improvements of a thrust bearing having an inner race fixedly secured to the outer end of said control shaft, said clutch head having a bore at its outer end provided with internal threading, a seating structure in said clutch head bore for said thurst bearing, said thrust bearing having an outer race fixedly secured to said bore by said seating structure, means for effecting axial movement of said control shaft for transmission by said bearing to said clutch head for setting of said head relative to the clutch surface, and said seat structure having threaded engagement with the threading in said head bore whereby said control shaft may be axially adjusted relative to said clutch head.



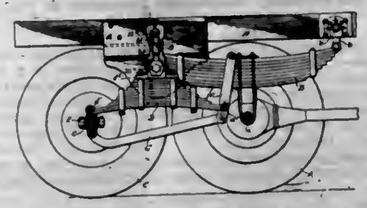
2,471,989
FLUID ACTUATED LOAD LIFTING AND LOWERING MECHANISM
Ira A. Weaver, Springfield, Ill., assignor to Weaver Engineering Co., a corporation of Illinois
Application November 28, 1947, Serial No. 788,381
6 Claims. (Cl. 60—51)

6. In a load lifting and lowering appliance of known general type having an upstanding cylinder accommodating a hollow piston with a pressure-seal between them allowing the piston to reciprocate in the cylinder, said piston being adapted to contain a liquid, and means to apply such liquid under pressure from the piston to the cylinder beneath the piston to raise the latter and to return the liquid to the interior of the piston to lower the latter, the novel combination of means providing an air-chamber below the bottom, wall of the cylinder, means providing a liquid-chamber in the lower portion of the piston,



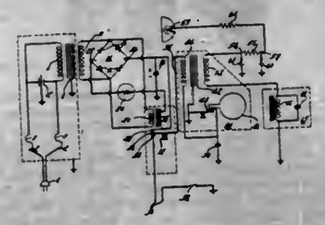
a first valve connecting the interior of the piston with the liquid-chamber, a second valve connecting the liquid-chamber with the cylinder beneath the piston, a first upstanding stationary air-tube outside of the cylinder and connecting at its lower end with the air-chamber, a second upstanding stationary air-tube in the piston extending down through the bottom walls of the piston and cylinder with its lower end in communication with the air-chamber and with its upper end in communication with the piston above the highest liquid level therein, controllable means near the top of the first air-tube to admit air under pressure into the first air-tube and cause it to discharge from the second air-tube into the piston or to discharge air from the first air-tube to the atmosphere, manually operable means occupying said first air-tube, said second air-tube and said air-chamber to open and close said second valve.

2,471,990
DEVICE FOR BEATING TIME IN TEACHING MUSIC
Ralph E. Weiss, Cheektowaga, N. Y.
Application March 23, 1945, Serial No. 584,367
2 Claims. (Cl. 84—484)



1. A device for teaching music comprising companion pedals arranged in end-to-end relation and each of which is mounted for rocking movement, one of said pedals being adapted to be engaged and operated by a foot of a teacher for beating the proper time and the other of which is adapted to be engaged and operated by a foot of a pupil being instructed by the teacher, and means operatively connecting said pedals so that a rocking movement of one will cause a corresponding and simultaneous rocking movement of the other in the same direction, whereby the teacher, by controlling the rate of operation of one pedal, may influence the pupil to operate the other pedal at a rate corresponding to the proper time.

2,471,991
STONE DRESSER
Paul Weynand, San Antonio, Tex.
Application April 22, 1947, Serial No. 743,079
11 Claims. (Cl. 125—11)

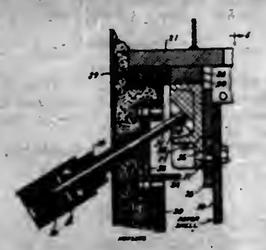


1. In a dresser for a stone mounted upon a pilot shaft, a support and pilot shaft-receiving-and-supporting means carried by the support and including an outer body portion having a longitudinal bore, an inner body portion, slidable longitudinally of said bore, means to retain said inner body portion in various selected positions longitudinally of said outer body portion, and a rotatable assembly, rotatably carried by said inner body portion, including a tubular portion having an open end, a pilot shaft-receiving seat within said tubular portion and slidable longitudinally of said tubular portion, and resilient means urging said seat toward said open end.

2,471,992
MOUNTING FOR TANDEM SPRINGS FOR TRUCKS
Charles A. Wicker, Selma, Ala.
Application August 17, 1945, Serial No. 611,021
4 Claims. (Cl. 267—36)

1. A mounting for the springs for tandem truck wheels which springs are disposed in overlapping tandem arrangement, said mounting comprising a bracket for attachment to a side rail of a truck frame having depending inner and outer arms embracing said springs, a shackle pivoted between the arms near their upper ends and carrying the rear end of the forward spring and a second connection for the center of the rear spring also pivoted between the bracket arms below the shackle.

2,471,993
FENCE CHARGING CIRCUIT
Lee A. Woolley, Kokomo, Ind., assignor to Kingston Products Corporation, Kokomo, Ind., a corporation of Indiana
Application February 7, 1946, Serial No. 646,043
2 Claims. (Cl. 171—97)

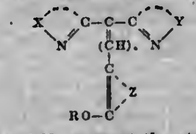


2. A fence charging circuit comprising A. C. input terminals adapted to be connected to a source of alternating current, D. C. input terminals adapted to be connected to a source of D. C. current, rectifying means connected to said A. C. input terminals, surge generating means responsive to direct current for periodically producing high voltage surges having a frequency different from the frequency of said alternating current source, a circuit adapted to supply said high volt-

age surges to a fence independently of current from said alternating current source, said circuit including a series connected filter having a high impedence at the frequency of said source and substantially negligible impedence to said voltage surges, a relay, and means for energizing said relays from said A. C. terminals, said relay being arranged to connect said surge generating means to said rectifying means when said relay is energized and to connect said surge generating means to said D. C. terminals when said relay is de-energized.

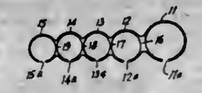
2,471,994
PYROLYSIS OF BETA-OXIMINO-TERT.-BUTYL PYRIDINIUM CHLORIDE
Charles B. Wooster, Philadelphia, Pa., assignor to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application December 18, 1947, Serial No. 792,593
1 Claim. (Cl. 260—465.9)

A process for preparing methacrylonitrile which comprises reacting at 50° C. pyridine and the dimer formed by the addition of equimolecular proportions of nitrosyl chloride and isobutene, thereby forming beta-oximino-tert.-butyl pyridinium chloride, separating said pyridinium chloride, heating it at 175° C. to 250° C., thereby forming methacrylonitrile, and separating methacrylonitrile from the heated pyridinium chloride.



2,471,995
ADJUSTABLE CIRCUMFERENTIAL SEAL FOR PREHEATERS
William D. Yerrick and John C. Vickland, Wellsville, N. Y., assignors to The Air Preheater Corporation, New York, N. Y.
Application August 22, 1947, Serial No. 770,086
11 Claims. (Cl. 257—6)

1. In a regenerative air preheater or the like having a rotor made up of a cylindrical shell joined to a rotor post by radial partitions forming compartments that carry heat transfer material, and a housing surrounding the rotor and provided opposite the ends of the latter with sector plates formed with apertures for the flow of heating gases and air to and through the rotor; a sealing ring mounted on the outer surface of the rotor shell at or closely adjacent each end edge thereof; groups of sealing shoes of arcuate form mounted in the housing outwardly of the rotor shell close to said sector plate, the shoes of each group together forming a stationary sealing ring of circular shape disposed opposite one of the sealing rings on the rotor; and spring biased means engaging said arcuate shoes and acting to maintain them in contact with the sealing rings carried by the rotor and with the adjacent portions of said sector plates.



2,471,996
TRINUCLEAR IMINOL CYANINE DYES
Alfred W. Anish, Vestal, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application January 19, 1945, Serial No. 573,631
14 Claims. (Cl. 260—240)

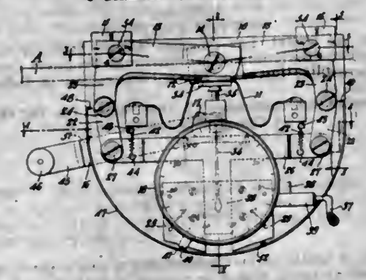
1. Trinuclear iminol cyanine dyes characterized by the following general formula:

wherein X and Y represent the atoms necessary to complete a heterocyclic nitrogenous ring system of the type usual in cyanine dyes and selected from the class consisting of indolenines, lepidines, oxazoles, oxazolines, selenazoles, selenazolines, pyridines, quinolines, thiazoles, thiazolines, diazoles, and quinazolines, Z represents the atoms necessary to complete a member selected from the class consisting of a five-membered and six-membered heterocyclic ring system, *n* represents a positive odd integer of from one to five, and R is a member selected from the class consisting of hydrogen and a heavy metal.

2,471,997
DEVICE FOR STRAIGHTENING TOES
Bella M. Baltor, New York, N. Y.
Application July 4, 1945, Serial No. 603,215
11 Claims. (Cl. 128—81)

1. A toe brace comprising a member having ring portions adapted to receive the toes of a foot, said ring portions having curved outer and inner surfaces and being interconnected by webs at points of tangency between adjacent ring portions.

2,471,998
COLUMN-STAND FOR SUPPORTING APPARATUS VERTICALLY MOVABLE ALONG THE COLUMN, PARTICULARLY X-RAY APPARATUS
Detlof Emanuel Berggren, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application July 2, 1946, Serial No. 680,960
In the Netherlands March 22, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires March 22, 1963
5 Claims. (Cl. 248—123)



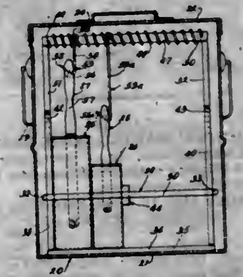
1. A column-stand for supporting apparatus vertically movable along the column, particularly an X-ray unit, comprising a spring counteracting the weight of the apparatus by its tension and constituted by helically wound turns arranged adjacent to each other with one end adapted to be free and the other end adapted to be fixed, means supporting the spring so the free end of the spring is movable in response to movement of the supported apparatus so the elastic or tension force is active tangentially in the direction of the turns, and an adjustable spring-tensioning member having the fixed end of the spring

secured thereto, said spring-tensioning member being adjustably anchorable on the column to

thereby establish an initial stress in the spring and to secure the fixed end of the spring to the column.

2,471,999
CABLE TENSIOMETER
Adolph Boos, Elmhurst, N. Y., assignor to John Chatillon & Sons, New York, N. Y., a corporation of New York
Application October 30, 1945, Serial No. 625,543
9 Claims. (Cl. 73—144)

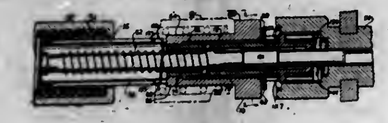
1. A cable tensiometer comprising a spring-supported cable contacting member, spaced pressure elements mounted for arcuate movement about a common center to bend the cable around the cable contacting member, and a gauge arranged for actuation in relation to the amount of deflection produced in the cable by the arcuate movement of the pressure elements.



2,472,000
ELECTRICAL JUMPER LINE AND CLAMP THEREFOR
Thomas H. Bowen, St. Louis, Mo., assignor to James R. Kearney Corporation, St. Louis, Mo., a corporation of Missouri
Application July 28, 1945, Serial No. 607,543
5 Claims. (Cl. 200—51.07)

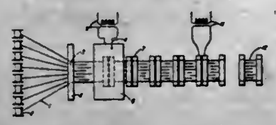
1. A clamp adapted for connection to an electrical conductor, comprising a tubular member having opposed elongated slots formed in the wall thereof, a jaw movable with respect to said tubular member and adapted to clampingly engage an electrical conductor, a fixed contact arranged within said tubular member, a movable contact disposed within said tubular member and adapted for movement longitudinally thereof into and out of contact engagement with respect to said fixed contact, opposed pins supported by said movable contact and extended therefrom through the elongated slots of said tubular member, a sleeve which embraces said tubular member and is movable longitudinally with respect thereto, said sleeve being provided with opposed apertures formed through the wall thereof which receive

end portions of said pins, said sleeve being movable longitudinally of said tubular member to move said movable contact out of contact engagement with respect to said fixed contact, and spring means for moving said movable contact into contact engagement with respect to said fixed contact.



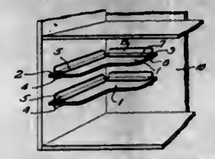
2,472,001
PAINTBRUSH PROTECTOR
Michael Buhoveckey, Cleveland, Ohio
Application July 31, 1944, Serial No. 547,498
6 Claims. (Cl. 206—15.1)

4. A paint brush protector, comprising: receptacle means for containing preservative liquid, said receptacle means including a plurality of open-top receptacles; receiving means for receiving said receptacles in side-by-side relation, said receiving means comprising basket-means including a first pair of spaced substantially parallel elements engageable by opposite sides of said receptacles, and a second pair of elements spaced a lesser distance than said first pair, and substantially parallel to said first pair and disposed with respect thereto so as to be engageable by the bottoms of said receptacles; means for suspending a plurality of brushes in the preservative liquid in said receptacles, respectively, said suspending means including a rod surrounded by a helically



wound wire, and means for supporting said rod so that it is disposed above said receptacles and approximately parallel to said elements.

2,472,002
AUTOMATIC SCREW AND NUT RELEASE
Harry F. Clark, Oakwood, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application May 16, 1946, Serial No. 669,822
16 Claims. (Cl. 74—2)



15. In combination, a screw having its thread interrupted adjacent one end, a releasable nut upon the screw including operating means having one position for releasing the nut from the screw and a second position for re-engaging the threads of the screw, spring means for moving the nut relative to the screw in one direction to the place at which the threads are interrupted, projecting means adjacent the place where the threads are interrupted for engaging and moving said operating means to its second position upon movement of the nut in said one direction to the place where the threads are interrupted for re-engaging the threads of the screw, a second spring means acting in a direction opposite the first mentioned spring means for moving the nut out of the interrupted screw threaded portion to the beginning of the screw threaded portion of the screw, means for rotating the screw relative to the nut to cause relative axial movement in the opposite direction to said one direction, and a second projecting means located a predetermined distance from the interrupted portion of the screw for engaging the operating means to move the operating means to its first mentioned position when the nut travels relative to the screw a predetermined distance in said opposite direction for releasing the nut from the screw.

2,472,003
METHOD OF MAKING WIRE BRUSHES
John F. Cunningham, Jr., Greensburg, Pa., assignor to Elliott Company, Jeannette, Pa., a corporation of Pennsylvania
Application May 10, 1945, Serial No. 592,988
6 Claims. (Cl. 300—21)

1. In the method of making wire bristle brushes, the steps comprising clamping a long compact bundle of wires at a pair of closely spaced points, applying a charge of electricity to the wires between said clamped points to burn said wires apart and simultaneously to weld together the burned ends of the wires in each of the two bundles thus formed, and severing the wires of a welded-end bundle at a distance from their welded ends to provide a pack of bristles welded together at one end.

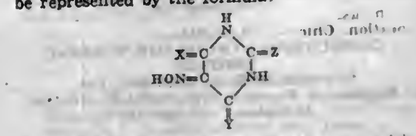
2,472,004
SHELF
John F. Czerniewicz, Mineola, N. Y.
Application February 2, 1946, Serial No. 645,177
1 Claim. (Cl. 211—90)

A shelf including a platform extending substantially perpendicular to two walls meeting one another at right angles and having two meeting edges perpendicular to the two inner upright faces of such meeting walls, upper and lower adhesive strips for each edge of said platform bent into two flanges at substantial right angles to one another, one flange of each upper strip adhesively secured to a horizontal upper plane face of the platform adjacent one of the edges of the platform, one flange of each lower strip adhesively secured to a horizontal lower plane face of the platform adjacent one of the edges of the platform, and the other flange of each strip adhesively secured to the vertical face of one of the adjacent walls.

2,472,005
BOTTLE CARRIER
Jan de Swart, Los Angeles, Calif., assignor, by mesne assignments, to Shellmar Products Corporation, Chicago, Ill., a corporation of Delaware
Application December 12, 1944, Serial No. 567,863
11 Claims. (Cl. 224—45)

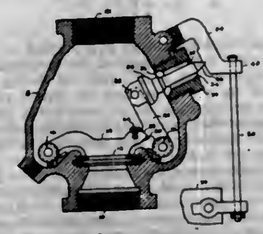
1. A bottle carrier comprising a single piece of sheet material folded to provide a bottom wall, a top wall and side walls joining said top and bottom walls, said bottom wall being substantially horizontal and having means for supporting by their necks a row of bottles, said top wall overlying the tops of said bottles to form a deck for supporting by their base ends a tier of bottles, and said top wall being provided with handle means.

2,472,006
ADJUSTABLE JIG FOR MANUFACTURING LAMINATED TIMBERS
Cornelius D. Dosker, Louisville, Ky., assignor to Gamble Brothers, Louisville, Ky., a corporation of Kentucky
Application July 15, 1944, Serial No. 545,160
16 Claims. (Cl. 144—259)



1. An adjustable jig for use in manufacturing laminated timbers comprising: a base having a horizontally-elongated section underlying a work space; a series of upright jig members, positioned at horizontally-spaced intervals along the length of said section and arranged to project upwardly

therefrom toward the work space and to present at their upper ends a series of horizontal, disconnected, longitudinally-spaced, upwardly-facing timber-supporting jig surfaces extending transversely to said section, each jig member having its jig surface carried by an upright leg; means on said base to support said leg for independent movement, both vertically toward and away from the work space and angularly toward and away from adjacent jig members, and adjustable to any of a range of positions in which its jig surface cooperates with the jig surfaces of the other adjusted jig members to form a longitudinally-extending transversely-slotted, lumber-receiving platform facing upwardly into the work space; and means for securing upper and lower portions of each adjusted jig leg rigidly to the base in order to maintain said platform in a rigid condition.

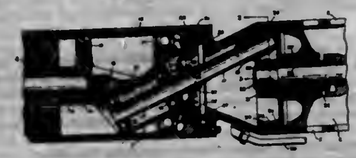


2,472,007
PROCESS OF PREPARING ISOALLOXAZINES
Walter G. Farkas, Palisades Park, and Leo A. Flexser, Elizabeth, N. J., assignors to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey
No Drawing. Application October 17, 1946, Serial No. 703,716
13 Claims. (Cl. 260—211)

1. The process of producing isoalloxazines which comprises reacting a compound selected from the group consisting of an N-mono-aliphatic substituted phenyl amine and the mineral acid salts thereof with a violuric acid which can be represented by the formula:

X and Y being selected from the group consisting of oxygen and imino, and Z being selected from the group consisting of oxygen, sulfur, imino and cyanimino.

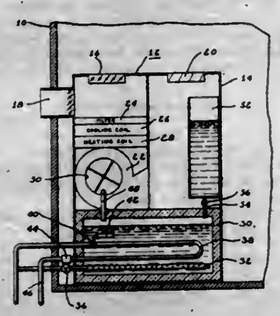
2,472,008
DELUGE VALVE
Howard G. Freeman, Worcester, Mass., assignor to Rockwood Sprinkler Company of Massachusetts, Worcester, Mass., a corporation of Massachusetts
Application March 24, 1945, Serial No. 584,568
1 Claim. (Cl. 169—19)



A quick release valve comprising a valve body having a valve seat, a pivotally mounted clapper movable into and out of engagement with said seat, a lever for releasably holding the clapper in closed position against fluid pressure, said lever being pivotally mounted within the valve body and having a surface adapted to overlie and engage the clapper when the lever is in holding position, said surface lying substantially in a plane that includes the pivotal axis of the lever to provide a non-self-locking engagement requiring the application of a holding force on the lever to maintain the clapper closed against fluid pressure, a holding member connected to the lever and extending through an open passage in the valve body to the exterior thereof, said passage being substantially larger than the holding member, means external to the valve body for releasably retaining the holding member against outward movement to cause the lever to maintain the clapper closed against fluid pressure, said external retaining means supporting the holding member substantially centered in the passage and out of contact with the valve body, a beveled valve seat surrounding the passage, and a valve carried by the holding member inwardly of the valve seat and complementary in shape to said seat to provide self-centering sealing engagement therewith upon release of the external retaining means and outward movement of the holding member.

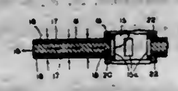
2,472,009
SURGICAL DRESSING
William James Gardner, Cleveland Heights, Ohio, assignor to Cleveland Clinic Foundation, a non-profit corporation of Ohio
Application August 1, 1945, Serial No. 608,122
13 Claims. (Cl. 128—335)

1. A dressing comprising a mid portion of a material having a high elasticity, end portions extending from said elastic mid portion and comprising a stiffening material to which said elastic portion is secured to hold said elastic material against stretching and provide relatively stiff end portions, means for attaching said dressing to the body of a patient comprising metal skin gripping members, said stiffened portion extending beyond said metal portions to provide tabs to facilitate manipulation of the dressing when attaching or removing the same from the patient's body.



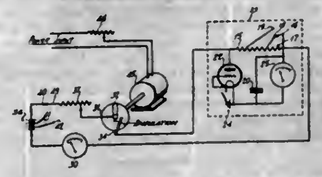
2,472,010
HERMETICALLY SEALED POWER TRANSMITTING MECHANISM
Frederick C. Gilman, Pompton Lakes, N. J., assignor to Worthington Pump and Machinery Corporation, Harrison, N. J., a corporation of Delaware
Application April 3, 1947, Serial No. 739,232
23 Claims. (Cl. 74—66)

1. In a power transmitting mechanism, a driving shaft, a driving crank connected to said driv-



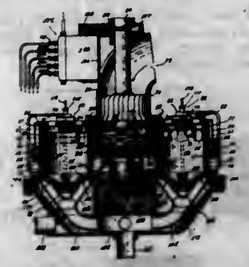
ing shaft, a driven shaft, a driven crank on said driven shaft, a nutating shaft, means connecting said driving crank and said nutating shaft, means connecting said nutating shaft to said driven crank, said last named means being free to move parallel to the axis of the driven crank and also along the nutating shaft to compensate for inaccuracies in relative placement of the nutating shaft and driving crank, and means forming a fluid tight seal between the driving and driven cranks.

2,472,011
AIR TREATING APPARATUS
Charles D. Graham, Oakwood, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application June 8, 1946, Serial No. 675,363
8 Claims. (Cl. 21—74)



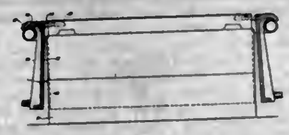
1. In an air conditioning system, the combination of a tank adapted to contain a germicidal solution, a steam pipe disposed within said tank below the liquid level therein for supplying heat to said solution, at least a portion of said pipe having perforations for allowing steam to escape from said pipe into said liquid solution so as to cause vaporization of said solution, and means for directing the resulting vapor into a space to be conditioned.

2,472,012
LIQUID FILTER
Robert Gorden Hanneman, Cleveland, Ohio, assignor to Air-Maze Corporation, Cleveland, Ohio, a corporation of Delaware
Application August 30, 1946, Serial No. 693,933
4 Claims. (Cl. 210—185)



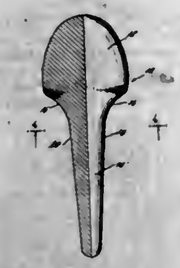
1. A liquid filter element comprising an annular disk having a stiff self-supporting base portion of very porous paper stock of the order of kraft stock, opposite faces of said disk having a contiguous facing layer of paper having much finer fiber spacing than said base portion and of the order of pulp stock, means sealing the outer periphery of said disk against entrance of liquid there, and means for conducting filtrate away from the inner periphery of said disk.

2,472,013
CALIBRATING PEAK CURRENT METER
Clarence W. Hansell, Rocky Point, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Original application April 11, 1942, Serial No. 438,592. Divided and this application November 20, 1943, Serial No. 511,158
5 Claims. (Cl. 175—18.3)



5. A circuit arrangement for calibrating a peak current indicating instrument, comprising a circuit having an instrument indicating steady-state direct current values, the peak current indicating instrument to be calibrated and a circuit interrupting device connected in series, said device comprising a rotatable insulating disc having on one face thereof a radial conductor of uniform width and a stationary brush bearing on said face and arranged to be adjustably positioned at various distances from the center of said disc whereby the open-to-closed ratio of said circuit closer may be varied, and means to connect an adjustable source of direct current to said series circuit.

2,472,014
COMBUSTION SYSTEM FOR TURBINE ENGINES
Raymond E. Heald, Plainfield, Ind.
Application August 2, 1944, Serial No. 547,796
18 Claims. (Cl. 60—44)

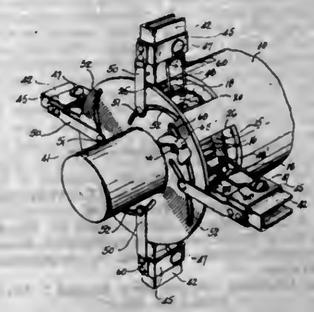


1. A combustion system comprising a stationary outer cell, a cell mounted for rotation within said stationary cell, said outer cell being formed to provide an even number of outlet ports arranged in an annular series, said inner cell being formed to provide one-half as many outlet ports adapted to move into and out of registry with said outer cell outlet ports as said inner cell rotates, a high pressure receiver, a low pressure receiver, one-half said outer cell outlet ports being arranged to discharge into said high pressure receiver and the other half thereof being arranged to discharge into said low pressure receiver, means for rotating said inner cell, and means, including separate inlet ports in said inner and outer cells, for intermittently injecting a mixture of fuel and air into said inner cell and there igniting such mixture.

2,472,015
SLIP-ON JACKET FOR MOLDS
Andrew B. Henkel, Rochester, N. Y.
Application November 29, 1947, Serial No. 788,828
4 Claims. (Cl. 22—112)

3. A slip-on jacket for sand molds comprising plates for supporting engagement with the mold sides, said plates having downwardly and outwardly inclined wedge surfaces thereon, connectors connecting the top portions of adjacent ends of adjacent plates and having means affording bodily movement of said plates toward and from each other and also swinging movement of said plates about said connectors toward and from the sides of said mold a ring embracing said plates and adjustable vertically thereon for wedging said plates into supporting engagement with said mold sides, said plates having outwardly and downwardly inclined flanges along the upper edges thereof, whereby said ring may be raised into engagement with said flanges and swing said plates to downwardly and outwardly inclined positions spaced from said mold sides, for applying and removing said jacket.

2,472,016
MENDING DEVICE
Daniel C. Hungerford, Madison, N. J., assignor to Hungerford Plastics Corporation, New Providence, N. J., a corporation of New Jersey
Application August 21, 1946, Serial No. 692,043
2 Claims. (Cl. 223—100)

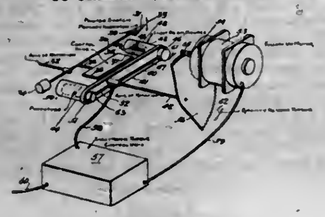


1. In a mending device providing surface for supporting material to be mended, a pair of elongated plastic sections united along a longitudinal center line to form a member having an enlarged head portion at one end and a conical handle portion at the other end, the enlarged head portion having a convex outer surface, the material of said longitudinal sections being formed of strongly contrasting light and dark colors, whereby the device may be easily rotated about its longitudinal axis to present a light or dark surface appropriately contrasting to the material supported.

2,472,017
FOOD PRESERVATION
Frank L. Jungerich, Webster Groves, Mo., assignor to William Peche, St. Louis, Mo.
No Drawing. Application September 12, 1946, Serial No. 696,614
7 Claims. (Cl. 99—154)

1. The method of treating a raw food of a class consisting of fresh fruits and vegetables which have a tendency to discolor by enzymic action when exposed to the air, comprising inactivating those enzymes on the surface thereof which tend to cause discoloration, by the application of heat to same in the presence of acetic acid for a short period in the order of seconds and insufficient to cause any obvious change in the structure of the food, and then removing the same from contact with said acid.

2,472,018
BRUSH LIFTER
Joseph A. Johnson, Seattle, Wash.
Application March 29, 1947, Serial No. 736,187
6 Claims. (Cl. 171—324)



1. A brush lifting device for use in generator assembly and repair comprising a mounting plate adapted to be applied flatly against an end wall of a generator housing and having a hollow hub portion adapted to be holdingly applied to the end bearing of the said generator, arms extended radially from the edges of said plate in alignment with the location of the housing openings and brushes of the generator, a collar slideable along each of the said arms, a second plate rotatable about the hub portion of the first plate, and having cam slots formed therein at intervals corresponding to the spacings of the said arms and spirally inclined relative to the axis of rotation, adjusting bars fixed to the said collars and equipped with means at their inner ends adapted to follow in the cam slots and whereby rotatable adjustment of the said second plate in opposite directions will effect the simultaneous inward and outward adjustment of the said collars, and hooks on said collars adapted, by the full inward adjustment of the collars, to be shifted into lifting contact with the corresponding brushes of the generator and then by an initial outward adjustment of the collars, to lift the brushes clear of the generator's commutator.

2,472,019

FOLLOWING AND RECORDING

Walter J. Kinderman, Philadelphia, Pa., assignor to Yarnall-Waring Company, Philadelphia, Pa., a corporation of Pennsylvania

Application August 29, 1946, Serial No. 693,795
35 Claims. (Cl. 250—41.5)

1. In an instrument, a primary indicator having angular movement, a follow-up element having angular movement generally conforming to that of the primary indicator, means for projecting a beam of light from a single source which moves with the follow-up element, means on the primary indicator for variantly eclipsing the beam of light from the single source in accordance with the relative angular positions of the primary indicator and the follow-up element and phototube means for continuously angularly shifting the follow-up element as the primary indicator shifts angularly, and in response to the extent of eclipse of the beam from the single source.

2,472,020

GAS-SHIELDED CARBON ARC WELDING OF MAGNESIUM

Paul Klain, Midland, and Robert B. MacPhail, Bay City, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

No Drawing. Application August 7, 1946, Serial No. 688,972
5 Claims. (Cl. 219—10)

1. In the inert-gas-shielded refractory electrode arc welding of magnesium and weldable magnesium-base alloys wherein the shielding gas is selected from the class consisting of helium and argon, the improvement which comprises maintaining a welding arc between the work and a carbon electrode and limiting the arc current intensity to a value below that at which carbon dust is deposited on the molten weld metal, such value corresponding to below about 100 amperes per inch of electrode perimeter in the case of a direct-current arc and below about 210 amperes per inch in the case of an alternating-current arc.

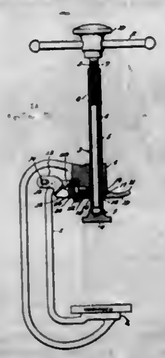
2,472,021

PREASSEMBLED IMPEDANCE UNIT

Donald H. Mitchell, Chicago, Ill., assignor to Motorola, Inc., a corporation of Illinois

Original application February 20, 1942, Serial No. 431,722. Divided and this application February 21, 1945, Serial No. 579,003
2 Claims. (Cl. 250—16)

1. In an electrical apparatus including one or more electron tube sockets, each of said sockets having a cylindrical body portion adapted to receive prongs of an electron tube, and a plurality of axially extending connection terminals arranged in generally concentric relation to said body portion, a preassembled impedance unit for use as a component of said apparatus comprising an annular container having an inner opening of such size as to fit closely about said body portion of a tube socket, a plurality of impedance elements of predetermined values fixedly arranged within said container and insulatedly supported



thereby, and electrical conductors extending from said impedance elements out of said container, said container having an axial dimension not greater than the overall axial dimension of said tube socket body portion and said connection terminals, whereby said impedance unit may be disposed within the axial limits of and surrounding the space occupied by said socket body portion and said terminals.

2,472,022

QUICK-ACTING C-CLAMP

Ernest C. Neal, Chicago, Ill., assignor of one-half to Elmer Brandell, Chicago, Ill.

Application July 30, 1945, Serial No. 607,781
3 Claims. (Cl. 144—305)

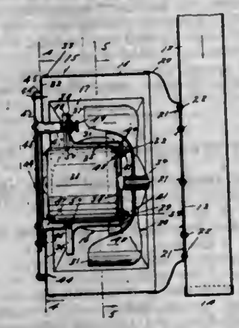
2. A clamp embodying a body forming a yoke, a stationary jaw at one end of the yoke, a bearing at the other end of the yoke, a sleeve slidably mounted in said bearing, a rod within the sleeve, movable with the sleeve and with respect to the sleeve in directions lengthwise thereof, a jaw carried by one end of said rod beyond the sleeve, for co-operating with the first said jaw, a locking member disposed within the yoke adjacent said bearing and having an opening in alinement with the opening in the bearing, and through which opening said sleeve passes, means for adjusting the rod with respect to the sleeve to force the jaw on the rod toward the other jaw, means loosely connecting one end of the locking member to the body of the clamp, a hand-engaging portion on the other end of the locking member, guide means secured to the clamp body and loosely associated with the locking member, resilient means mounted on said guide means and supported thereby tending normally to move the locking member in one direction to grip the sleeve, said resilient means being mounted within a recess in said locking member, and said locking member and guide means being disposed within the clamp adjacent one of the yoke arms, and resilient means tending normally to move the rod through the bearing, to move the jaw on the rod away from the jaw on the yoke.

2,472,023

METHOD OF FORMING WOOD ASSEMBLIES

Joseph A. Potchen, Grand Rapids, Mich., assignor, by mesne assignments, to William B. Scarborough, Englewood, N. J., as trustee

Application January 19, 1944, Serial No. 518,890
2 Claims. (Cl. 154—133)



1. The method of fabricating a plurality of like assemblies of molded wood, which comprises placing a layup of an assembly in position on the rigid forming surface of a die, covering the material in position on the die with an uncured flexible blanket capable of being molded and set to a predetermined contour, and subjecting the blanket to pressure and heat to mold and set the blanket to the contour of the assembly.

2,472,024

BLOWER FOR VENTILATORS

Carl W. Olson, Minneapolis, Minn., assignor to Electro Specialty Manufacturing Co., Inc., Minneapolis, Minn., a corporation of Minnesota

Application April 30, 1947, Serial No. 744,859
4 Claims. (Cl. 230—117)

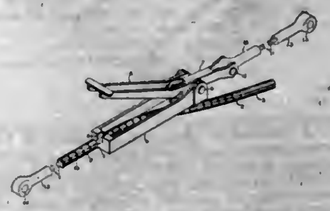
3. In a ventilator, an intake hood, a suction pipe leading from the hood, a cylindrical housing detachably secured at one of its ends to the pipe, said pipe and housing having coincident communicating openings, said housing having in its side a discharge opening and in its other end an entrance passageway, a displaceable mounting plate closing the entrance passageway, a cup-like motor holder on the mounting plate in the housing, an electric motor in said holder, secured to the closed end thereof and spaced from the sides thereof, a bell-shaped body member on the armature shaft of the motor and capping the closed end portion of the motor holder, and a plurality of blades on the body member for rotation about the motor holder.

2,472,025

METHOD OF TREATMENT OF MAGNESIUM-BASE ALLOYS

John S. Peake, Bloomington, Ind., and Frank E. Robbins, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

No Drawing. Application November 5, 1947, Serial No. 784,302
4 Claims. (Cl. 75—67)



1. The method of treating an aluminum-containing magnesium-base alloy which comprises maintaining the same in the molten state at a casting temperature in contact with a saline flux therefor, the flux having about 0.1 to 5 per cent of a carbide of an alkaline earth metal in admixture therewith, separating the so-treated metal from the flux, and casting the separated metal.

2,472,026

ADJUSTABLE MOORING CABLE

Kenneth L. Peck, United States Navy, and Reinhold F. Balmer, United States Navy, Philadelphia, Pa.; said Balmer assignor to said Peck

Application July 25, 1946, Serial No. 686,098
4 Claims. (Cl. 24—115)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

4. In a mooring device using cables, means for drawing two cable ends together comprising a series of spacers slidably mounted on one of the cable ends, a stop at the extremity of said first cable end beyond the spacers, a toggle lever linkage having a lever handle pivotally connected at a point spaced from its inner end to the second cable end, and a U-shaped yoke member having its open end pivotally connected to the inner end of the lever handle and having a slot in its closed end for receiving said first cable end between a pair of the spacers whereby said cable end may be inserted in the slot, taking up manually all of the slack between the cable ends by moving as many spacers as possible beyond the slot with the lever handle in the full extended position of the linkage, so that when the lever handle is operated the linkage will be shortened to tighten the cable ends.

2,472,027

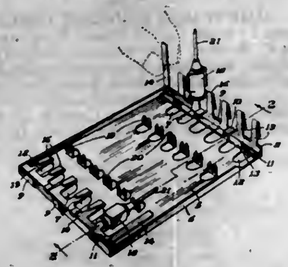
AUSTENITIC CAST IRON

Alfred Gordon Evans Robiette, Bovingdon, and Peter Francis Hancock, Birmingham, England, assignors to The International Nickel Company, Inc., New York, N. Y., a corporation of Delaware

No Drawing. Application July 10, 1946, Serial No. 682,592. In Great Britain October 20, 1943

4 Claims. (Cl. 148—21.8)

1. A process for producing a malleable casting from an austenitic white cast iron composition in which manganese is the principal alloying element and which contains free carbides in the as cast condition, said process comprising making an austenitic white cast iron casting containing about 2% to 5% nickel in addition to about 9% to 18% manganese, 3% to 6% carbon, 1.5% to 4.5% silicon, not more than 0.15% phosphorus and the balance essentially iron, treating said casting made of said nickel-containing austenitic white cast iron between about 1000° C. and 1100° C. for more than five hours to graphitize substantially all the free carbides while retaining an austenitic matrix structure, and rapidly cooling the thus-treated casting from within the range of about 900° C. to 1150° C.



2,472,028

STERILIZING TRAY FOR HYPODERMIC NEEDLES AND THE LIKE

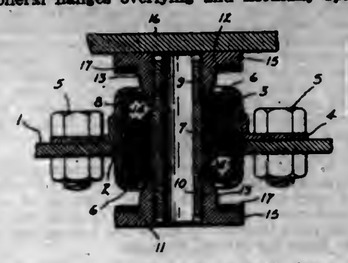
Anthony J. Son, Boston, Mass., assignor to Sonco, Inc., Boston, Mass., a corporation of Massachusetts

Application November 30, 1946, Serial No. 713,211

10 Claims. (Cl. 21—105)

1. A sterilizing tray for hypodermic needles having their hubs formed each with a tip receiving bore, said tray comprising a base, a member including an arm and a plurality of fingers spaced substantially in parallel therewith, each of said fingers terminating in a bore entering head to detachably connect a needle hub to said member, and hinge means connecting said member to said tray so that the needles on said member may be moved by said arm from a position in which they are in a plane substantially in parallel with said base to a position substantially perpendicular thereto.

2,472,029



VIBRATION DAMPING MOUNTING

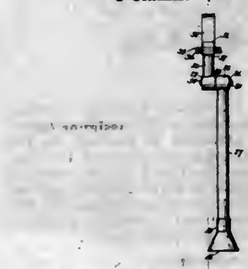
Leon F. Thiry, Montclair, N. J., assignor to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio

Application December 4, 1944, Serial No. 566,416

8 Claims. (Cl. 248—358)

5. A vibration damping support comprising a sleeve, a post extending centrally through the sleeve, a bushing of elastic material confined under radial compression between the sleeve and post, two collars on said post provided with peripheral flanges overlying and normally spaced

axially from opposite ends of said sleeve, and snubbing cushions of elastic material mounted upon the inner faces of said flanges.



2,472,030

BATHTUB SHOWER BATH APPLIANCE

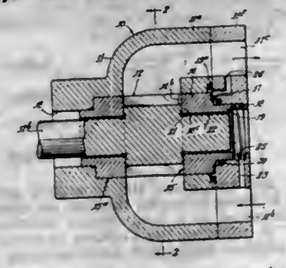
Ivar V. Thulin, Upper Darby, Pa.

Application February 5, 1946, Serial No. 645,595

3 Claims. (Cl. 4—148)

1. A bathtub shower bath appliance comprising a tubular arm removably connected to a bathtub faucet and in direct communication with the spout of said faucet and extending downwardly therefrom, a long tubular arm pivotally hinged to the lower end of said short arm and communicating with the latter, and a spray head rotatably and removably mounted on the outer end of said long arm, the long arm being swingable from a depending position contiguous the adjacent end wall of the tub and to one side of a vertical plane parallel with said end wall and bisecting the faucet spout, to an elevated position on the opposite side of said plane entirely within the tub.

2,472,031



PUMP WITH PRESSURE LOADED STEPPED BUSHING

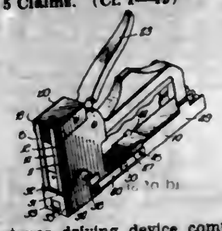
Edmund F. Wichorek, Euclid, Ohio, assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois

Application July 31, 1946, Serial No. 687,379

4 Claims. (Cl. 103—126)

1. In a pressure loaded rotary liquid displacement device of the type, including a housing, rotary liquid displacement means received within said housing; means defining an axially adjustable bushing having a radially extending flange formed with a pressure responsive surface for effecting a liquid seal engagement with said rotary liquid displacement means, said bushing being further formed with a reduced axial tubular extension received in a corresponding reduced bore in said housing said tubular portion having an uninterrupted external surface, an O-ring seal member positioned between said tubular extension and said housing bore; said arrangement being particularly characterized by the formation

of an enlarged step in the inner open terminal of said reduced bore for the reception of said seal ring, said tubular extension being embraced by said step, said O-ring seal being located within said enlarged step in sealing contact with the outer surface of said reduced tubular extension; and means for directing pressure liquid to said pressure responsive surface.



2,472,032

MAGAZINE CLOSURE FOR STAPLING MACHINES

Oscar A. Wandel, Chicago, Ill., assignor to Henry A. Torstenson, Chicago, Ill.

Application July 10, 1947, Serial No. 760,059

5 Claims. (Cl. 1—49)

1. In a fastener driving device comprising a head having a vertical fastener driveway and a staple driving blade operable in said guideway, a movable front wall section for said guideway provided with flanges which extend rearwardly in engagement with the side walls of the head, said flanges being provided with rearwardly opening notches, indexing studs which project laterally of the side walls of the head into the rearwardly opening notches in the flanges for positioning the flanges accurately when the same are moved into their rearmost positions, and means for positively locking the flanges in their rearmost position including a pair of pivotally connected link elements pivoted to one of said flanges and to said side walls.

2,472,033

SPORTSMAN'S HAT

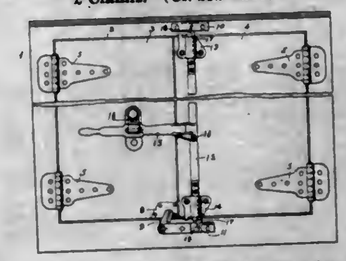
Earl W. Wetzel, Milwaukee, Wis.

Application February 24, 1947, Serial No. 730,373

7 Claims. (Cl. 2—4)

4. In a hat having a first brim, a second brim spaced below said first brim to form a pocket therebetween, reticulated material connected to one of said brims and having a portion adapted to be suspended therefrom to form an insect

screen, and releasable means connected to one of said brims and coacting with the other of said brims to maintain said reticulated material concealed in said pocket when not in use as a screen.



2,472,034

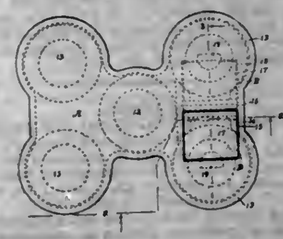
DOOR OPENING MECHANISM

Keith Williams, Buffalo, N. Y.

Application May 12, 1945, Serial No. 593,409

2 Claims. (Cl. 292—241)

1. A bearing cap member for a rotary bar and crank arm door operating mechanism, said bearing cap being adapted to be fixed to the door to form at least a part of the bearing surface for the rotary bar and said bearing cap being provided with an integral axially extending lug adapted to project beyond the margin of the door and into the path of said crank arm thereby to form a stop to prevent excessive rotation of said operating mechanism.

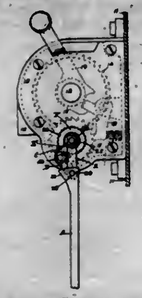


2,472,035

COMBINED SPRING AND FRICTION SHOCK ABSORBER

Keith Williams, Buffalo, N. Y.

Application August 19, 1946, Serial No. 691,582



4 Claims. (Cl. 267—9)

1. In a shock absorber, the combination with a pair of follower plates relatively movable toward each other, each plate having a recess therein; of a pair of relatively movable friction

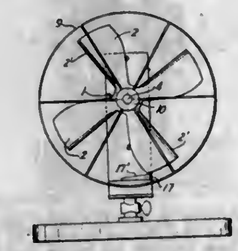
elements in lengthwise sliding frictional contact with each other, each of said elements having a base flange at one end thereof, said elements being interposed between said follower plates with the base flanges thereof accommodated in the recesses of said plates respectively; a fulcrum lip at the outer end of the base flange of each element protruding from the recess of the corresponding plate over the inner side of said plate and having rocking bearing engagement with the latter; and spring means interposed between said plates and having bearing engagement with said flanges of said elements respectively for pressing the latter into tight frictional contact.

2,472,036
OPERATING HANDLE LEVER MEANS FOR ROTARY HAND BRAKES
Keith Williams, Buffalo, N. Y.
Application August 20, 1947, Serial No. 769,608
3 Claims. (Cl. 74—151)

1. In operating means for the rotary chain-tightening element of a hand brake, the combination with a toothed wheel operatively connected to the rotary tightening element for rotating said rotary tightening element, said wheel being rotatable about a horizontal axis; of a link swingingly supported for rotation about the axis of rotation of said wheel; an actuating lever pivoted to the lower end of said link; a second link pivoted at one end to said lever; a third link pivoted at its lower end to the upper end of said second named link and supported at the upper end for swinging movement about the axis of rotation of said wheel, said last named link being guided for sliding movement at its upper end; a locking dog carried by the pivotal connection of said second and third links; and a short arm on said lever engageable with said second named link by relative swinging movement of said arm and first named link to rock said second named link toward said first named link to force the dog into gripping engagement with said wheel.

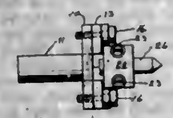
2,472,037
METHOD FOR FINISHING POLYMERS
Walter A. Wurth, Cranford, and Stanley C. Lane, Roselle, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
Application January 16, 1946, Serial No. 641,611
4 Claims. (Cl. 260—93)

1. In a process for finishing solid, high molecular weight rubbery polymers prepared from isobutylene at temperatures between —40° C. and —160° C. in the presence of a Friedel-Crafts catalyst, in which process the cold polymer product and associated low boiling materials including unreacted monomer and diluents are discharged into a heated liquid medium in order to flash off said associated low boiling materials and to form a slurry of polymer particles in said liquid medium; the improvement which comprises separating wet polymer particles from said liquid



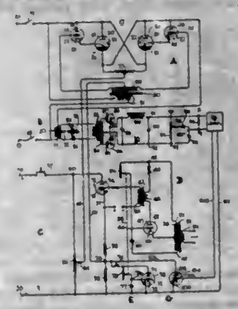
medium, and subjecting the separated polymer particles to screw extrusion through an extrusion zone maintained at a temperature between 150 and 450° F. whereby the polymer is essentially freed of residual liquid and simultaneously compacted.

2,472,038
ULTRA HIGH FREQUENCY METERING DEVICE AND METHOD
Stephen Yando, Long Island City, N. Y., assignor of fifteen per cent to Edward Pious, New York, N. Y.
Application January 15, 1945, Serial No. 572,868
10 Claims. (Cl. 171—95)



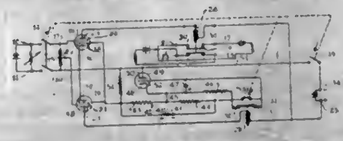
1. In the method of determining voltage in an U. H. F. transmission line, the steps which consist in projecting an electron beam of known transit angle and of appreciable width with respect of the wavelength of the U. H. F. voltage to be measured, across a dielectric space containing the guided electromagnetic wave whose voltage is to be measured at the position of maximum voltage along the standing wave, assuming a standing wave does exist, so as to result in the velocity modulation of said beam, applying a measured decelerating voltage to said beam, and noting the point of zero space current to a collector anode in the path of said beam, as the point where correlation exists between the decelerating voltage and the maximum voltage of the standing wave, then projecting said beam through the electromagnetic field at the position of minimum voltage along the standing wave so as to result in the velocity modulation of said beam, applying a measured decelerating voltage, and noting the point of abrupt change in the slope of the space current to the collector anode as the point where correlation exists between the decelerating voltage and the minimum voltage of the standing wave.

2,472,039
ELECTRIC FAN
Erhard Zacharias, New York, N. Y.
Application December 9, 1946, Serial No. 715,090
5 Claims. (Cl. 230—259)



1. An electro-magnetic fan comprising a salient pole magnetic stator provided with an energizing winding; a magnetic rotor for cooperating with the stator, said rotor consisting of a revolving armature comprising a revolving shaft provided with fan blades as rotor poles, said blades made of a material that is attracted by the magnetic forces generated in said stator; a make-and-break device connected in series relation with said energizing winding of the stator; means operated by rotation of said rotor for energizing and de-energizing said stator and thereby opening and closing said make-and-break device; and detent means likewise operated by rotation of the rotor for automatically positioning the rotor in an unbalanced magnetic relation to the stator as the circuit is broken and the rotor is brought to a standstill, whereby the fan becomes self-starting if switched on again.

2,472,040
TOOLHOLDER
Donald W. Brookfield, Sharon, Mass., assignor to Brookfield Engineering Laboratories, Incorporated, Sharon, Mass.
Application December 5, 1946, Serial No. 714,321
6 Claims. (Cl. 29—96)

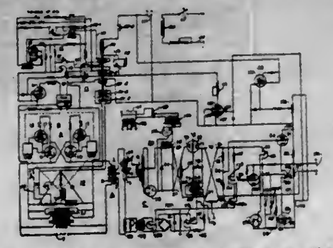


1. A tool holder comprising a body member having a shank and having an inner face perpendicular to the axis of the shank, a tool clamping member having an inner face parallel to said face, in contact therewith and slidable in transverse directions thereon, means for clamping said members together, said clamping member having a shoulder portion with a substantially V-shaped recess therein, said recess having sides extending in planes substantially parallel to said axis and tool clamping means extending into said recess.

2,472,041
WELD CONTROL SYSTEM
Henry Richard Davies, Philadelphia, Pa., assignor to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application March 31, 1944, Serial No. 528,166
14 Claims. (Cl. 219—4)

1. In an electrical system including a power source, a load unit adapted to receive a voltage variable load, and a translating device connected to said unit for indicating load voltage variation, said device comprising an operating circuit including a resistor and plural means connected to said circuit for short-circuiting said resistor, one of said means functioning on conclusion of a predetermined time period of power supply, and another of said means functioning on load voltage change.

2,472,042
PERCENTAGE POWER CONTROL APPARATUS
Richard Stillman Davies, Philadelphia, Pa., assignor to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application April 5, 1944, Serial No. 529,621
22 Claims. (Cl. 219—4)

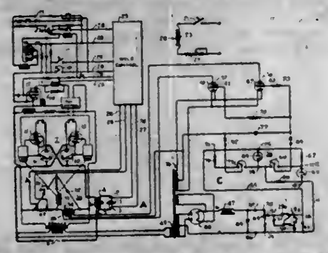


1. In an electric control system, an electric power unit subject to voltage change from an initial voltage, a control element adapted for connection to said power unit and having a voltage variable with that of said unit, percentage means for establishing, as a standard, a voltage at a fixed percentage of the initial unit voltage, and a conductor connected to said element and power unit adapted to be energized at a change of the initial voltage to said standard voltage, said standard percentage being constant for varying values of initial voltage.

2,472,043
ELECTRICAL CONTROL SYSTEM
Edwin M. Callender, Cynwyd, Pa., assignor to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application November 23, 1945, Serial No. 630,401
18 Claims. (Cl. 322—4)

2. In a system of power supply control including a power source and a load unit receiving

power from said source and subject to voltage change, load controlled circuital apparatus comprising a comparator connected to the load for fixing a component of the load voltage prior to voltage change for comparison with subsequent load voltage values, percentage means for fixing the percentage of voltage change effective to actuate said apparatus, and power means effective on change of comparator voltage to the set percentage value to operate said apparatus, said percentage means comprising a linear potential divider, an electrical bridge connected to the divider normally underbalanced to prevent load control actuation, but becoming overbalanced to cause said apparatus actuation on development of a voltage change in said comparator.



2,472,044

ELECTRIC CONTROL APPARATUS FOR VARIABLE LOADS

Herbert Doane Van Selver, II, Merion, Pa., assignor to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania

Application June 14, 1946, Serial No. 676,653
10 Claims. (Cl. 219—4)

1. A control system comprising a load circuit, a source of alternating current for supplying current to said load circuit, heat control means including a phase shift bridge having a variable impedance in one arm thereof for changing the current supply to said load circuit, and phase shift means for changing the impedance and phase of said bridge continuously during supply of current to said load circuit whereby the current supply to the load is progressively changed.

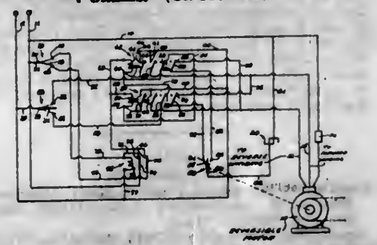
2,472,045

FLUID PRESSURE MEASURING DEVICE

Chester H. Gibbons, Drexel Hill, Pa., assignor to The Baldwin Locomotive Works, a corporation of Pennsylvania

Application December 12, 1945, Serial No. 634,422
5 Claims. (Cl. 201—63)

1. A fluid pressure measuring device comprising, in combination, a movable member exposed to fluid pressure which is to be measured, a strain responsive element having one portion held against movement and another portion connected to said movable member whereby strains are induced in said responsive element in response to fluid pressures acting on said movable member, electrical strain gages connected to said strain responsive element so that the gages are responsive directly to the strains induced in the element itself and thereby act as an index of the fluid pressure to be measured, and means for imposing an initial preload on said strain responsive element to induce strains therein in addition to those induced by the fluid pressure.



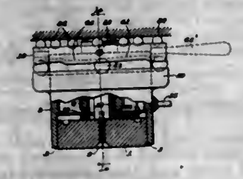
2,472,046

BRAKING MEANS FOR ELECTRIC MOTORS

Glen Malcom, Columbus, Ind., assignor to Reeves Pulley Company, Columbus, Ind., a corporation of Indiana

Application June 28, 1946, Serial No. 679,965
7 Claims. (Cl. 318—31)

1. For use with a reversible electric motor having a forward winding and a reverse winding, an energizing circuit for said forward winding, an energizing circuit for said reverse winding, and switch means dominating said circuits, said switch means including a switch arm movable between a position establishing the circuit for one of said windings and a position breaking said one circuit, a capacitor, and a second arm movable with said switch arm and operative to connect said capacitor between the ends of the other of said windings upon movement of said first switch arm to said last-named position.



2,472,047

ELECTRICAL LOAD WEIGHING APPARATUS

Arthur C. Ruge, Cambridge, Mass., assignor to The Baldwin Locomotive Works, a corporation of Pennsylvania

Application March 14, 1946, Serial No. 654,246
10 Claims. (Cl. 201—63)

1. A load weighing device comprising, in combination, a base and an axially extending supporting structure, a load transmitting piston having an axially extending bore, one end of which terminates at a closed end of the piston and the other end of which is open, a load sensitive element supported at one end on said base and its other end extending through said open end into said bore for load transmitting contact with said closed end of the piston whereby the sensitive element is operated in accordance with load acting on said piston, a plurality of means spaced axially of said piston and operatively connected to said supporting structure for laterally supporting and guiding the piston so that an axial component of load is transmitted to said load sensitive element substantially independent of lateral and eccentric load effects on the piston, and means responsive to the load acting on said sensitive element.

2,472,048

ELECTRIC CIRCUIT CONTROLLER

John D. Russell and James W. Woolf, Franklin, Pa., assignors to Joy Manufacturing Company, Franklin, Pa., a corporation of Pennsylvania

Application November 1, 1943, Serial No. 508,472
14 Claims. (Cl. 318—403)

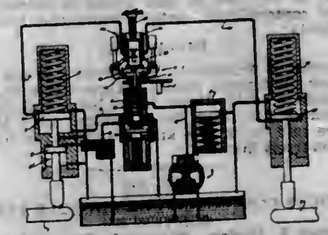
6. In a series motor circuit having a resistance in series, the combination of an electric circuit controller consisting of a coil mounted on a core with a return magnetic path to an armature arranged to be attracted to the core when the coil is energized and biased to move away when the coil is de-energized, magnetic means connected to one end of the core and providing a second magnetic path extending around the coil toward the other end of the core, said second magnetic path having a fixed gap intermediate of its ends, a magnetic part interposed in said gap, an enclosed magnetically operable mercury switch on each side of said part and operated by the flux across the gap, switch means connected to initially energize the coil, magnetic means carried by the armature for closing the magnetic path to the other end of the core when the coil is energized and the armature is attracted to the core for operating said mercury switches, a holding circuit to said coil closed by one of said mercury switches to bridge the switch means, a contact carried by the armature and connected for supplying current to the series motor circuit, a circuit closed by the other mercury switch to shunt the series resistance of the motor circuit, and means causing a time delay in the operation of said other mercury switch.

2,472,049

RELIEF VALVE

Frederick W. Schneck, Pacific Palisades, Calif., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware

Application December 3, 1945, Serial No. 632,325
2 Claims. (Cl. 137—53)



1. A relief valve comprising: a body member having a bore extending therethrough and means for closing opposite ends of said bore; a pressure port communicating with said bore adjacent one end thereof and a relief port communicating with said bore at a point longitudinally spaced from said pressure port; an annular valve seat member slidably positioned in sealing relation with said bore between said pressure and relief ports, said seat member having a poppet seat at its pressure end and a valve stem passage of lesser diameter than the seat passage adjacent its other end; a poppet valve having a stem extending through said valve stem passage and reciprocable with respect to said seat member between open and closed positions; spring means interposed between said seat member and the closure means at the relief port end of said bore; a stop element supported by the closure means at the relief port end of said bore and projecting axially into said bore for engaging said stem in response to predetermined movement of said poppet valve with said seat member; and means including said valve stem defining a restricted fluid passage of appreciable resistance between said valve seat and said relief port.

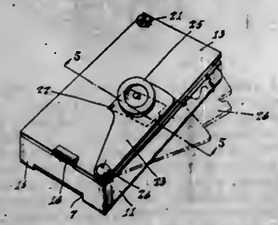
2,472,050

GOVERNING APPARATUS

Dana R. Staples, Ridley Park, Pa., assignor to The Baldwin Locomotive Works, a corporation of Pennsylvania

Application November 27, 1943, Serial No. 512,080
4 Claims. (Cl. 264—7)

1. A metering apparatus for allowing transmission of periodic impulses of controlling fluid to control the power output of a speed governor controlled engine-generator unit comprising a metering valve operative to allow transmission of only periodic impulses of a controlling fluid at any



time during normal operation, means controlled by the rotation of the engine for actuating said valve so that the frequency of said controlling impulses is in accordance with the speed of the unit, and said valve having means controlled by the governor for also varying the capacity of the periodic impulses of the metering valve in accordance with the unit speed.

2,472,051

BLADE-DISPENSING CONTAINER

Nicholas Testi, Boston, Mass., assignor to Gillette Safety Razor Company, Boston, Mass., a corporation of Delaware

Application November 15, 1946, Serial No. 710,063
5 Claims. (Cl. 206—16)

4. A blade dispenser including walls and a stationary cover forming an elongated enclosure having a side outlet slot, means for locating a stack of corner-notched blades in superposed relation within the enclosure, a fulcrum member located wholly within the enclosure and fitting the notches in one corner of the said blades, and means movable from outside the enclosure for swinging the uppermost blade from its position in the stack, about the said fulcrum member and outwardly through the said outlet slot.

2,472,052

LIQUID SULFUR DYE COMPOSITION COMPRISING AN ALKYLOL AMINE

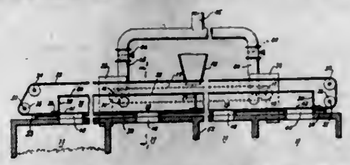
Robert Carland Conn, Bound Brook, N. J., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine

No Drawing. Application March 29, 1946, Serial No. 658,233
4 Claims. (Cl. 8—37)

1. A process of preparing a liquid sulfur dye composition which comprises heating a mixture of a mono-alkylol amine and a sulfur dye until said sulfur dye is reduced and a stable dispersion of the dye in said amine is formed, the said mono-alkylol amine having the following formula:

$$HO—R—NH_2$$

wherein R represents an alkylene group containing not more than 5 carbon atoms and the amount of said alkylol amine being sufficient to maintain the sulfur dye in reduced form, to dissolve said sulfur dye and to render the composition freely fluent.



2,472,053

DUST COLLECTOR FOR SHUTTLE FEED CONVEYERS

Morton I. Dorfan, Pittsburgh, Pa., assignor to American Wheelabrator & Equipment Corporation, a corporation of Delaware

Application October 26, 1946, Serial No. 706,039
6 Claims. (Cl. 209—147)

1. In an installation for the removal of dust from a plurality of stations, particularly bins, each station being provided with a dust exhaust port, all dust exhaust ports being arranged in line, the station being chargeable by a loading means adapted to be moved into unloading position with respect to any of said stations, the combination of an elongated suction chamber extending the length of said stations adjacent said exhaust ports; a movable belt forming a wall of said chamber, said belt normally covering said

exhaust ports and having an aperture therein through which air is admitted into said chamber, said aperture being movable into registry with any of said ports; means for exhausting air from said chamber; and means for moving said belt relatively to the remainder of the suction chamber to follow with its aperture the position of said movable loading means, whereby dust may be removed at any of the stations being loaded without the use of flexible duct connections.

2,472,054

RUBBERLIKE ARTICLES AND METHOD OF MAKING SAME

George H. McFadden, Columbus, Ohio, assignor to The Ohio State University Research Foundation, Columbus, Ohio, a corporation of Ohio

Application September 25, 1948, Serial No. 51,238
22 Claims. (Cl. 260—723)

10. In the manufacture of sponge rubber articles, the steps comprising: aerating latex, mixing suitable compounding ingredients into said aerated latex, and finally controlling the time for gelation of said aerated and compounded latex by the addition thereto of a predetermined small quantity of a delayed coagulant, selected from the class of fluotitanates consisting of the soluble and partially soluble salts of alkali and alkaline earth metals, and ammonium.

16. In the manufacture of articles from aqueous dispersions of rubber-like materials, taken from the class consisting essentially of: natural rubbers, polychloroprene and butalastic polymers including a single ethylenic double bond >C=C< which are copolymerizable with butadiene-1,3 hydrocarbon in aqueous emulsion; the step of reacting an alkaline dispersion of rubber-like material with a relatively small quantity of salt of fluotitanic acid selected from the class consisting of the soluble and partially soluble salts of the alkali and alkaline earth metals and ammonium, the quantity of salt controlling the degree and speed of gelling of said dispersion.

2,472,055

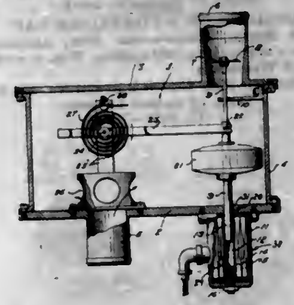
RUBBERLIKE ARTICLES AND METHOD OF MAKING SAME

George H. McFadden and John F. Lyman, Columbus, Ohio, and Amos G. Horney, Merrifield, Va., assignors to The Ohio State University Research Foundation, Columbus, Ohio, a corporation of Ohio

No Drawing. Application October 2, 1948, Serial No. 52,588
15 Claims. (Cl. 260—723)

2. In the manufacture of articles from aqueous dispersions of rubber-like materials, taken from the class consisting of: natural rubbers, butadiene-acrylonitrile copolymers, butadiene-styrene copolymers and polychloroprene, the step of reacting an alkaline dispersion of rubber-like material with suitable small quantities of a soluble material taken from the class consisting of the alkali and alkaline earth metal fluozirconate, the quantity of said salt controlling the degree and speed of gelling of said disperson.

10. A new composition of matter for use in the production of sponge rubber articles comprising: a foamed and compounded latex having admixed therewith a predetermined small quantity of a delayed coagulant consisting of ammonium fluozirconate.



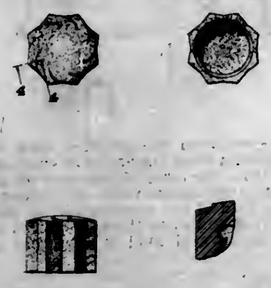
2,472,056

FLOWMETER

Russell M. Otis, Pasadena, Calif., assignor to Lane-Wells Company, Los Angeles, Calif., a corporation of Delaware

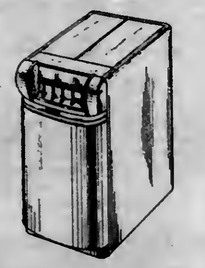
Application December 11, 1944, Serial No. 567,629
9 Claims. (Cl. 73—209)

1. A flow meter comprising: a throat for the flow therethrough of fluid to be metered; a movable system, including a member associated with said throat, and movable throughout a limited range in response to variation in differential pressure between the upstream and downstream sides of said member, both of said sides of said member being located within said throat throughout said range of movement of said member, said movable system having an effective buoyancy volume, the buoyancy of which tends to move said member in the same direction as that tended to be induced by said differential pressure; and means acting on said movable system with a predetermined force component, substantially independent of acceleration, tending to move said member in the opposite direction to that induced by said differential pressure, the sum of the effective force of said means and the



force of gravity on the effective mass of said movable system being substantially equal and opposite to twice the force of buoyancy on said effective buoyancy volume when said system is immersed in fluid of the same density as the fluid to be metered and when the acceleration on said system and on said fluid is only that due to gravity.

DESIGNS



MAY 31, 1949

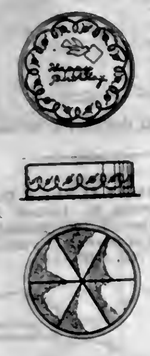
153,912
DESIGN FOR A CONTAINER CAP
Leonard Baron, Wauwatosa, Wis., assignor to Hobar Corporation, Milwaukee, Wis., a corporation of Wisconsin
Application May 10, 1948, Serial No. 140,257
Term of patent 14 years
(Cl. D58—26)

The ornamental design for a container cap, as shown.

153,913
DESIGN FOR A DISHWASHING MACHINE
Thomas Stephen Bartlett, London, Ontario, Canada
Application January 29, 1949, Serial No. 571
In Canada August 6, 1948
Term of patent 14 years
(Cl. D49—1)

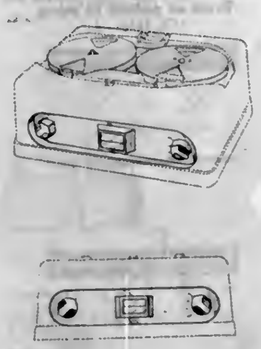
The ornamental design for a dishwashing machine, as shown and described.

153,914
DESIGN FOR A HAND LUGGAGE CASE
George G. Barton, Racine, Wis., assignor to Hartmann Company, Racine, Wis., a corporation of Wisconsin
Application December 31, 1947, Serial No. 143,464
Term of patent 14 years
(Cl. D87—5)



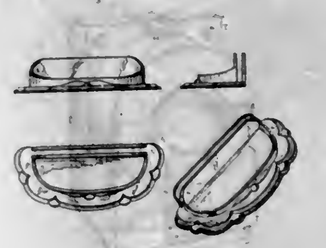
The ornamental design for a hand luggage case, as shown.

153,915
DESIGN FOR A BELT FOR WEARING APPAREL
Bernell J. Bequette, Arvada, Colo.
Application January 9, 1948, Serial No. 143,631
Term of patent 7 years
(Cl. D3—10)



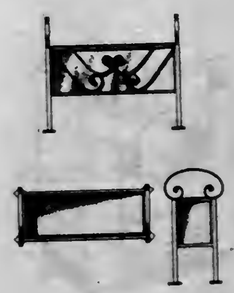
The ornamental design for a belt for wearing apparel, as shown.

153,916
DESIGN FOR A CONTAINER FOR CANDY OR THE LIKE
Sidney H. Berg, East Orange, N. J., assignor to Loft Candy Corporation, Long Island City, N. Y., a corporation of New York
Application October 29, 1946, Serial No. 134,367
Term of patent 3½ years
(Cl. D58—13)



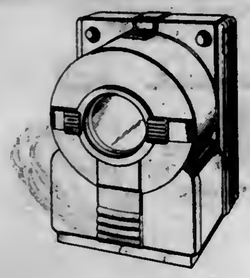
The ornamental design for a container for candy or the like, as shown.

153,917
DESIGN FOR A DICTATING MACHINE OR SIMILAR ARTICLE
Emmanuel Berlant, Culver City, Calif., assignor to Berlant Associates, Los Angeles, Calif., a partnership
Application November 19, 1948, Serial No. 149,728
Term of patent 14 years
(Cl. D26—14)



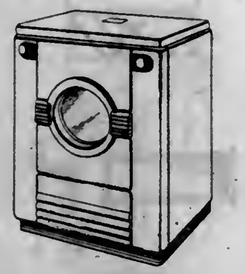
The ornamental design for a dictating machine or similar article, substantially as shown and described.

153,918
DESIGN FOR A COMB HOLDER OR THE LIKE
Milton W. Bernstein, Leominster, Mass., assignor, by mesne assignments, to Foster Grant Co., Inc., Leominster, Mass., a corporation of Massachusetts
Application December 24, 1947, Serial No. 143,316
Term of patent 14 years
(Cl. D86—10)



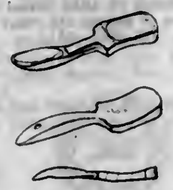
The ornamental design for a comb holder or the like, substantially as shown.

153,919
DESIGN FOR A FLOWER BASKET
Albert Berra, Eveleth, Minn.
Application October 21, 1946, Serial No. 134,148
Term of patent 14 years
(Cl. D35—3)



The ornamental design for a flower basket, as shown.

153,920
DESIGN FOR A WASHING MACHINE
Melvin H. Boldt, South Bend, Ind., assignor to Bendix Home Appliances, Inc., South Bend, Ind., a corporation of Delaware
Application July 31, 1948, Serial No. 147,882
Term of patent 14 years
(Cl. D49—1)

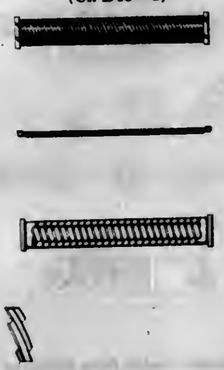


The ornamental design for a washing machine, as shown and described.

153,921
DESIGN FOR A WASHING MACHINE CABINET
Melvin H. Boldt, South Bend, Ind., assignor to Bendix Home Appliances, Inc., South Bend, Ind., a corporation of Delaware
Application July 31, 1948, Serial No. 147,863
Term of patent 14 years
(Cl. D49—1)

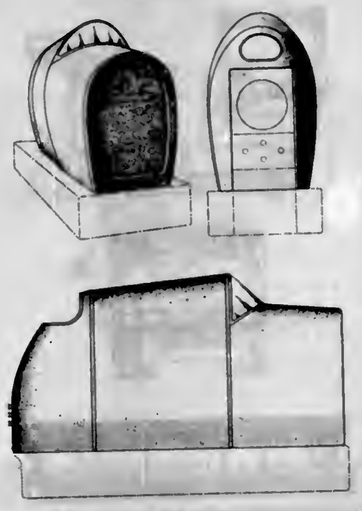
The ornamental design for a washing machine cabinet, as shown and described.

153,922
DESIGN FOR AN EAR SPATULA
Nicholas F. Brignola, Troy, N. Y.
Application May 20, 1947, Serial No. 139,162
Term of patent 14 years
(Cl. D63—1)



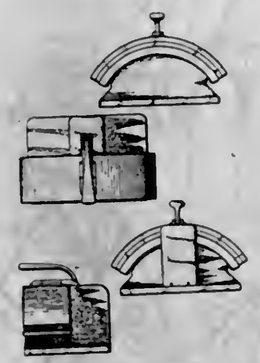
The ornamental design for an ear spatula, as shown.

153,923
DESIGN FOR LAUNDRY TONGS
Paul H. Brown, Sr., Detroit, Mich.
Application October 15, 1948, Serial No. 149,118
Term of patent 14 years
(Cl. D49—1)



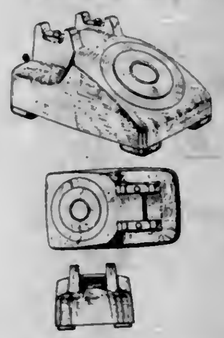
The ornamental design for laundry tongs, as shown.

153,924
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Alfred Corbi, Pawtucket, R. I., assignor to Acco Mfg. Co., Inc., a corporation of Rhode Island
Application February 11, 1948, Serial No. 144,400
Term of patent 14 years
(Cl. D45—4)



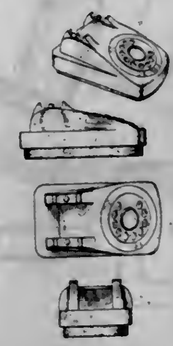
The ornamental design for a bracelet or similar article, substantially as shown.

153,925
DESIGN FOR A FLIGHT TRAINER HOOD
Richard C. Dehmel, Summit, N. J.
Application September 14, 1946, Serial No. 688,827
Term of patent 3½ years
(Cl. D71—1)



The ornamental design for a flight trainer hood, substantially as shown and described.

153,926
DESIGN FOR A COLLAR CUFF IRON
Harry N. Dixon, North Hollywood, Calif.
Application July 2, 1948, Serial No. 147,355
Term of patent 14 years
(Cl. D49—6)

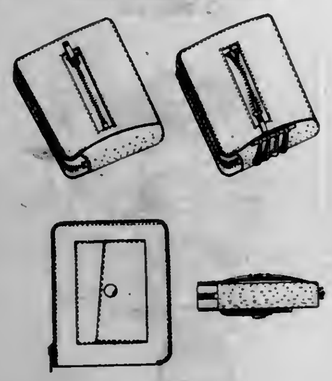


The ornamental design for a collar cuff iron, substantially as shown and described.

153,927
DESIGN FOR A DESK STAND FOR A HAND TELEPHONE
Henry Dreyfuss, Pasadena, Calif., and Robert H. Hose, Mountainside, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application February 11, 1948, Serial No. 144,404
Term of patent 14 years
(Cl. D26—14)

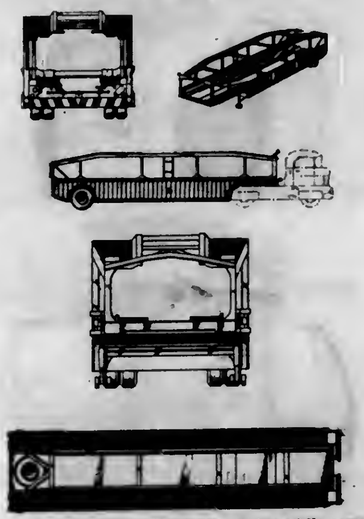
The ornamental design for a desk stand for a hand telephone, as shown.

153,928
DESIGN FOR A DESK STAND FOR A HAND TELEPHONE
Henry Dreyfuss, Pasadena, Calif., and Robert H. Hose, Mountainside, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 19, 1948, Serial No. 145,208
Term of patent 14 years
(Cl. D26—14)



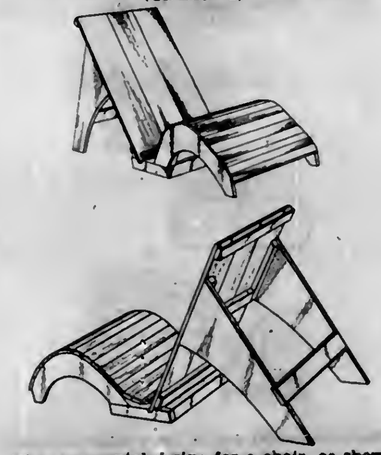
The ornamental design for a desk stand for a hand telephone, as shown.

153,929
DESIGN FOR A TOY PISTOL
Myron Fleishman, Bronx, N. Y.
Application June 6, 1947, Serial No. 139,481
Term of patent 7 years
(Cl. D34—15)



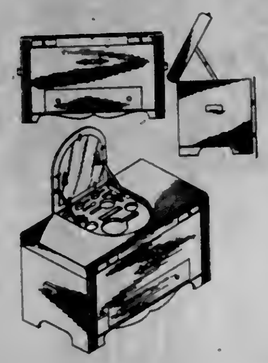
The ornamental design for a toy pistol, substantially as shown and described.

153,930
DESIGN FOR A COMBINED BILLFOLD, KEY CASE, AND COIN PURSE
Charles A. Fox, New York, N. Y.
Application November 6, 1947, Serial No. 142,352
Term of patent 14 years
(Cl. D67—3)



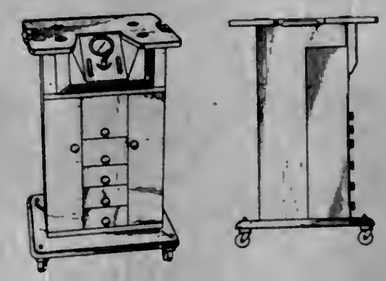
The ornamental design for a combined billfold, key case, and coin purse, as shown.

153,931
DESIGN FOR AN AUTOMOBILE CARRYING TRAILER
Lynn M. Francis, Detroit, Mich.
Application March 10, 1947, Serial No. 137,485
Term of patent 7 years
(Cl. D14—3)



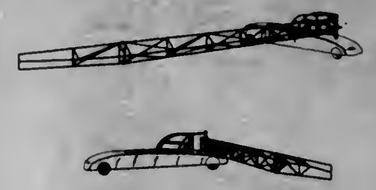
The ornamental design for an automobile carrying trailer, as shown and described.

153,932
DESIGN FOR A CHAIR
John H. Fraser, Marietta, Ohio
Application July 16, 1947, Serial No. 140,328
Term of patent 14 years
(Cl. D15—1)



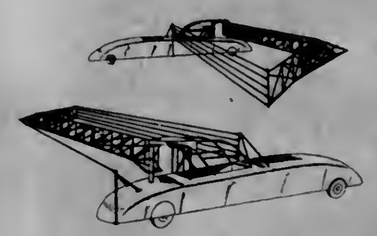
The ornamental design for a chair, as shown.

153,933
DESIGN FOR A CHEST
James J. Gilmore, Sanford, N. C.
Application August 29, 1947, Serial No. 141,114
Term of patent 14 years
(Cl. D33—19)



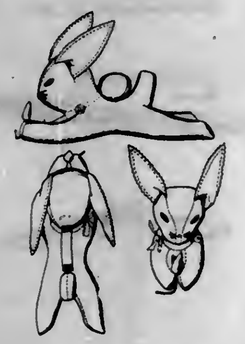
The ornamental design for a chest, as shown.

153,934
DESIGN FOR A COMBINATION RESUSCITATOR, INHALATOR, AND ASPIRATOR CABINET
Monroe Harry Goodner, Glendale, Calif., assignor to Stephenson Corporation, Red Bank, N. J., a corporation of New Jersey
Application November 4, 1947, Serial No. 142,300
Term of patent 14 years
(Cl. D83—1)



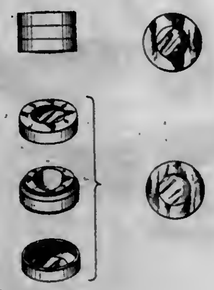
The ornamental design for a combination resuscitator, inhalator, and aspirator cabinet, as shown and described.

153,935
DESIGN FOR A MOBILE RACE CONTROL GATE
John S. Goodwin, Whittier, Calif., assignor to Globe Oil Tools Company, Los Nietos, Calif., a corporation of California
Application February 21, 1947, Serial No. 137,668
Term of patent 14 years
(Cl. D14—3)



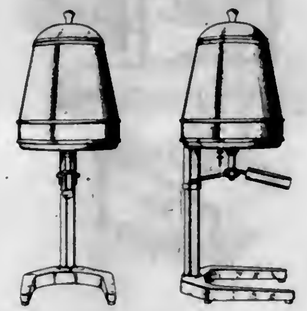
The ornamental design for a mobile race control gate, as shown.

153,936
DESIGN FOR A MOBILE RACE CONTROL GATE
John S. Goodwin, Whittier, Calif., assignor to Globe Oil Tools Company, Los Nietos, Calif., a corporation of California
Application January 19, 1948, Serial No. 143,866
Term of patent 14 years
(Cl. D14—3)



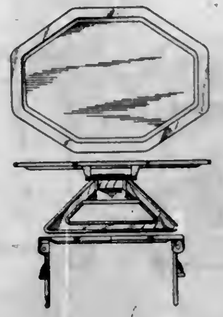
The ornamental design for a mobile race control gate, as shown.

153,937
DESIGN FOR A BABY'S BOTTLE HOLDER OR THE LIKE
Michael Grabel, New York, N. Y.
Application January 23, 1948, Serial No. 144,115
Term of patent 14 years
(Cl. D63—8)



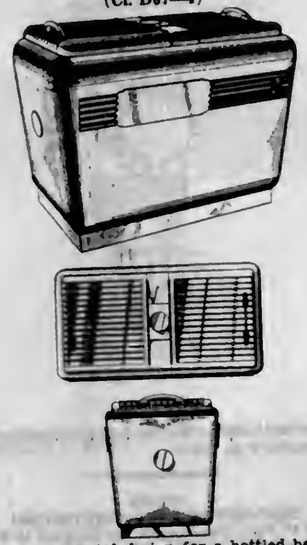
The ornamental design for a baby's bottle holder or the like, substantially as shown and described.

153,938
DESIGN FOR A COMBINED EYE SHADOW AND ROUGE CASE
Elizabeth N. Graham, New York, N. Y.
Application September 11, 1947, Serial No. 141,315
Term of patent 14 years
(Cl. D86—10)



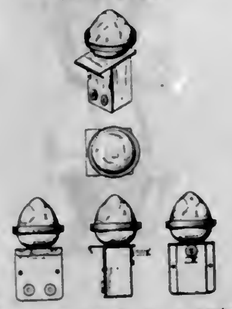
The ornamental design for a combined eye shadow and rouge case, substantially as shown.

153,939
DESIGN FOR A BEVERAGE DISPENSER OR SIMILAR ARTICLE
Frederick F. Gunther, Chicago, Ill., assignor to Heimco, Inc., Chicago, Ill., a corporation of Illinois
Application January 31, 1948, Serial No. 144,194
Term of patent 7 years
(Cl. D2—3)



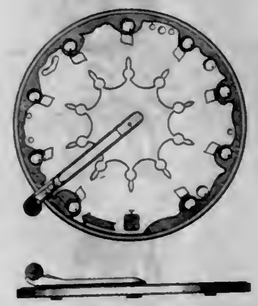
The ornamental design for a beverage dispenser or similar article, as shown.

153,940
DESIGN FOR A CHAIR-ARM TRAY
Melvin Higgs, Pomona, and James W. Crall, Los Angeles, Calif.
Application March 4, 1947, Serial No. 137,322
Term of patent 7 years
(Cl. D44—10)



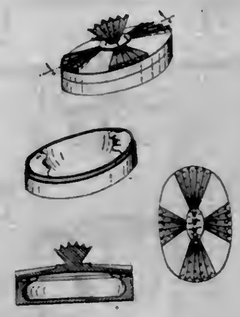
The ornamental design for a chair-arm tray, substantially as shown.

153,941
DESIGN FOR A BOTTLED BEVERAGE COOLER
Warner W. Hoople, Dallas, Tex., assignor to Dr. Pepper Company, Dallas, Tex., a corporation of Colorado
Application June 28, 1948, Serial No. 147,248
Term of patent 7 years
(Cl. D67—4)



The ornamental design for a bottled beverage cooler, as shown and described.

153,942
DESIGN FOR A PORTABLE SIGNAL LIGHT FOR MOTOR VEHICLES OR SIMILAR ARTICLE
Frederick K. Hussey, New York, N. Y.
Application September 18, 1948, Serial No. 148,648
Term of patent 14 years
(Cl. D48—32)



The ornamental design for a portable signal light for motor vehicles or similar article, substantially as shown.

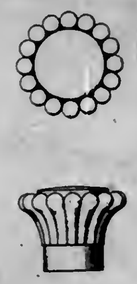
153,943
DESIGN FOR A GAME BOARD
Adelbert J. Jackson, Kalamazoo, Mich.
Application June 5, 1947, Serial No. 138,462
Term of patent 3½ years
(Cl. D34—5)

The ornamental design for a game board, as shown.

153,944
DESIGN FOR AN ASH TRAY
Anneliese Jargstorff, Flushing, N. Y.
Application October 21, 1947, Serial No. 142,061
Term of patent 3½ years
(Cl. D85—2)

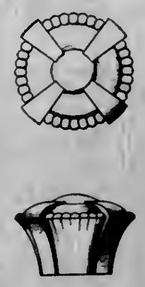
The ornamental design for an ash tray, as shown.

153,945
DESIGN FOR A CONTAINER CAP
Albert H. Jung, Flushing, N. Y., assignor to Victor Industries Corporation, Brooklyn, N. Y., a corporation of New York
Application May 1, 1948, Serial No. 146,111
Term of patent 14 years
(Cl. D58—26)



The ornamental design for a container cap, substantially as shown.

153,946
DESIGN FOR A CONTAINER CAP
Albert H. Jung, Flushing, N. Y., assignor to Victor Industries Corporation, Brooklyn, N. Y., a corporation of New York
Application May 1, 1948, Serial No. 146,112
Term of patent 14 years
(Cl. D58—26)



The ornamental design for a container cap, substantially as shown.

153,947
DESIGN FOR A CONTAINER CAP
Albert H. Jung, Flushing, N. Y., assignor to Victor Industries Corporation, Brooklyn, N. Y., a corporation of New York
Application May 1, 1948, Serial No. 146,113
Term of patent 14 years
(Cl. D58—26)

The ornamental design for a container cap, substantially as shown.

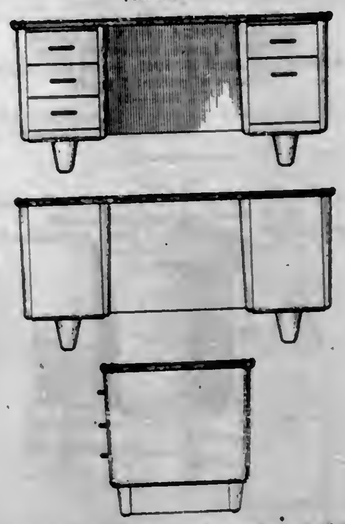
153,948
DESIGN FOR A CONTAINER CAP
Albert H. Jung, Flushing, N. Y., assignor to Victor Industries Corporation, Brooklyn, N. Y., a corporation of New York
Application May 1, 1948, Serial No. 146,114
Term of patent 14 years
(Cl. D58—26)

The ornamental design for a container cap, substantially as shown.

153,949
DESIGN FOR A CONTAINER CAP
Albert H. Jung, Flushing, N. Y., assignor to Victor Industries Corporation, Brooklyn, N. Y., a corporation of New York
Application May 12, 1948, Serial No. 146,321
Term of patent 14 years
(Cl. D58—26)

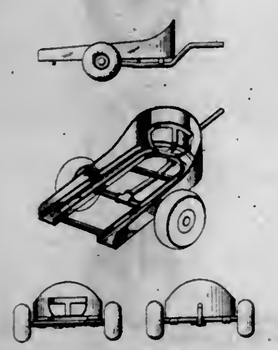
The ornamental design for a container cap, substantially as shown.

153,950
DESIGN FOR A CONTAINER CAP
Albert H. Jung, Flushing, N. Y., assignor to Victor Industries Corporation, Brooklyn, N. Y., a corporation of New York
Application May 20, 1948, Serial No. 146,474
Term of patent 14 years
(Cl. D58—26)



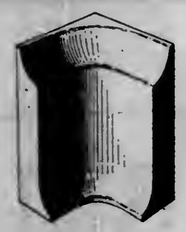
The ornamental design for a container cap, substantially as shown.

153,951
DESIGN FOR A CONTAINER CAP
Albert H. Jung, Flushing, N. Y., assignor to Victor Industries Corporation, Brooklyn, N. Y., a corporation of New York
Application May 20, 1948, Serial No. 146,475
Term of patent 14 years
(Cl. D58—26)



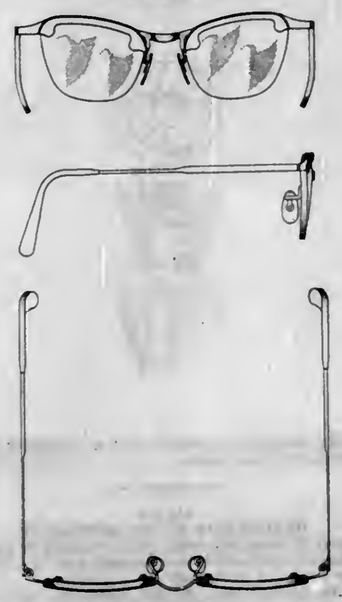
The ornamental design for a container cap, substantially as shown.

153,952
DESIGN FOR A DESK OR SIMILAR ARTICLE
Clarence Karstadt, Glen Ellyn, and Charles M. Abrahamson, Aurora, Ill., assignors to All-Steel Equipment, Inc., a corporation of Illinois
Application December 23, 1946, Serial No. 135,816
Term of patent 14 years
(Cl. D33—7)



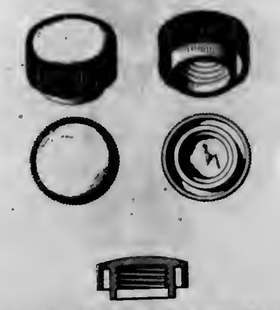
The ornamental design for a desk or similar article, substantially as shown and described.

153,953
DESIGN FOR A TRAILER
Paul W. Lane, San Rafael, Calif.
Application August 19, 1947, Serial No. 140,943
Term of patent 14 years
(Cl. D14—3)



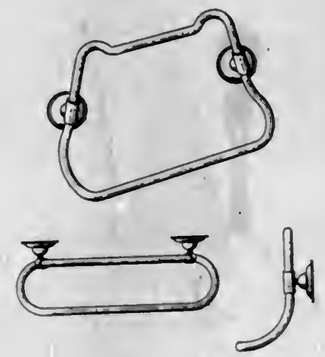
The ornamental design for a trailer, as shown and described.

153,954
DESIGN FOR A CORNER PIECE
Henry F. Lange, Cleveland, Ohio
Application April 30, 1947, Serial No. 138,710
Term of patent 7 years
(Cl. D18—2)



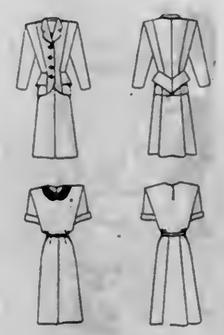
The ornamental design for a corner piece, as shown.

153,955
DESIGN FOR A PAIR OF SPECTACLES
John A. Lauber, Rochester, N. Y., assignor to Continental Optical Company, Inc., Rochester, N. Y., a corporation of Indiana
Application January 3, 1949, Serial No. 8
Term of patent 14 years
(Cl. D57—1)



The ornamental design for a pair of spectacles, as shown.

153,956
DESIGN FOR A SCREW CAP
John L. Lay, Ogden, Pa.
Application May 6, 1948, Serial No. 146,205
Term of patent 14 years
(Cl. D58—26)



The ornamental design for a screw cap, substantially as shown.

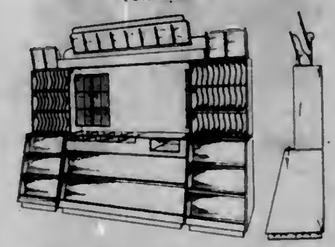
153,957
DESIGN FOR A RACK
Irvin R. Linnard, Montclair, N. J.
Application June 17, 1947, Serial No. 139,748
Term of patent 14 years
(Cl. D32—16)

The ornamental design for a rack, as shown.

153,958
DESIGN FOR A DRESS ENSEMBLE
Julius Lipman, New York, N. Y.
Application June 30, 1948, Serial No. 147,292
Term of patent 3½ years
(Cl. D3—26)

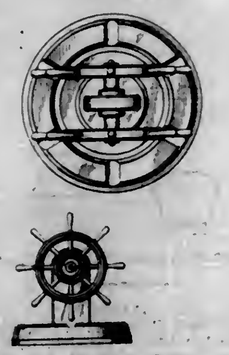
The ornamental design for a dress ensemble, substantially as shown.

153,959
DESIGN FOR A DOLLY
Frank T. Loser, Oak Park, Ill.
Application May 13, 1946, Serial No. 129,658
Term of patent 14 years
(Cl. D54—13)



The ornamental design for a dolly, as shown.

153,960
DESIGN FOR A CUFF LINK OR THE LIKE
George Kingdon Lowe, Warwick, R. I., assignor to Campus Jewelry Products, Inc., Providence, R. I., a corporation of Rhode Island
Application January 31, 1948, Serial No. 144,203
Term of patent 3½ years
(Cl. D17—7)

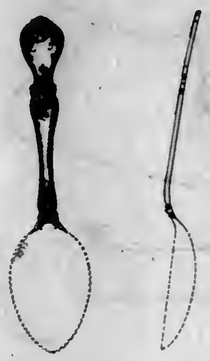


The ornamental design for a cuff link or the like, substantially as shown.

153,961
DESIGN FOR A RECORD DISPLAY COUNTER
Simon Malkin, New York, N. Y.
Application April 6, 1948, Serial No. 145,564
Term of patent 14 years
(Cl. D30—2)

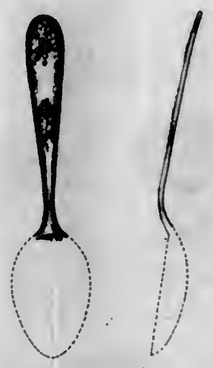
The ornamental design for a record display counter, substantially as shown.

153,962
DESIGN FOR AN ASH TRAY OR THE LIKE
Charles Mankowski, Newport, N. Y.
Application January 27, 1947, Serial No. 136,460
Term of patent 14 years
(Cl. D85—2)



The ornamental design for an ash tray, as shown.

153,963
DESIGN FOR A DOLL OR SIMILAR ARTICLE
Maurice Marossi and Gertrude Cornell, New York, N. Y.
Application April 21, 1948, Serial No. 145,876
Term of patent 3½ years
(Cl. D34—4)

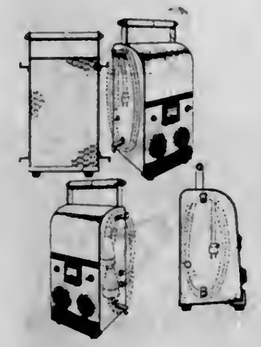


The ornamental design for a doll or similar article, as shown.

153,964
DESIGN FOR A SPOON OR SIMILAR ARTICLE
Edward B. McAlpine, Cranston, R. I., assignor to Manchester Silver Company, Inc., a corporation of Rhode Island
Application September 16, 1948, Serial No. 148,603
Term of patent 7 years
(Cl. D54—12)

The ornamental design for a spoon or similar article, substantially as shown and described.

153,965
DESIGN FOR A SPOON OR SIMILAR ARTICLE
Edward B. McAlpine, Cranston, R. I., assignor to Manchester Silver Company, Inc., a corporation of Rhode Island
Application September 16, 1948, Serial No. 148,604
Term of patent 7 years
(Cl. D54—12)

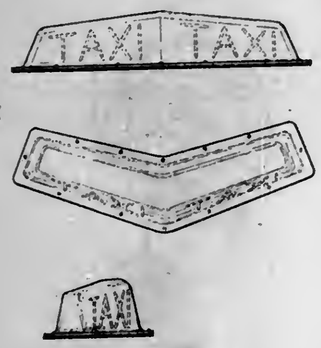


The ornamental design for a spoon or similar article, substantially as shown and described.

153,966
DESIGN FOR A TABLE ORNAMENT OR SIMILAR ARTICLE
Laurance McDougall, Goliad, Tex.
Application October 18, 1946, Serial No. 134,040
Term of patent 14 years
(Cl. D28—1)

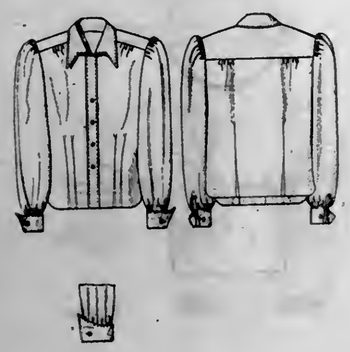
The ornamental design for a table ornament or similar article, substantially as shown and described.

153,967
DESIGN FOR A PORTABLE BATTERY CHARGER
Lewis A. Mediar, Orchard, Pa., assignor to Fox Products Company, Philadelphia, Pa., a corporation of Pennsylvania
Application April 21, 1948, Serial No. 145,877
Term of patent 14 years
(Cl. D26—5)



The ornamental design for a portable battery charger, substantially as shown and described.

153,968
DESIGN FOR A PRESSURE COOKER OR THE LIKE
Willard L. Morrison, Jr., West Bend, Wis., assignor to West Bend Aluminum Co., West Bend, Wis., a corporation of Wisconsin
Application October 15, 1947, Serial No. 141,913
Term of patent 14 years
(Cl. D44—1)

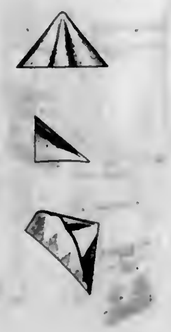


The ornamental design for a pressure cooker or the like, as shown and described.

153,969
DESIGN FOR A TAXI TOP LIGHT
William H. Murray, Houston, Tex.
Application March 31, 1947, Serial No. 138,069
Term of patent 3½ years
(Cl. D48—32)

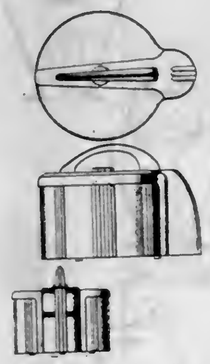
The ornamental design for a taxi top light, substantially as shown and described.

153,970
DESIGN FOR A SHIRT
Joseph Nachman, Philadelphia, Pa.
Application March 19, 1948, Serial No. 145,209
Term of patent 3½ years
(Cl. D3—25)



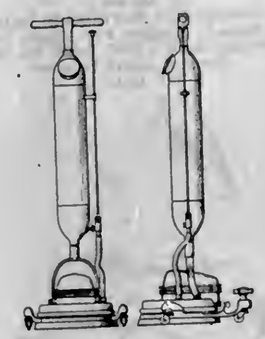
The ornamental design for a shirt, substantially as shown.

153,971
DESIGN FOR A TAXICAB CRUISING LIGHT
Charles D. Nelson, Jr., Arlington, Va.
Application October 30, 1947, Serial No. 142,204
Term of patent 14 years
(Cl. D48—32)



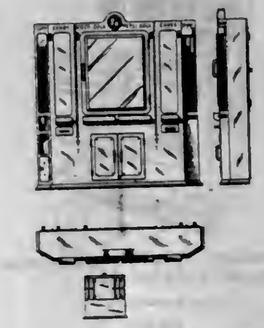
The ornamental design for a taxicab cruising light, as shown.

153,972
DESIGN FOR A TAXICAB CRUISING LIGHT
Charles D. Nelson, Jr., Arlington, Va.
Application October 30, 1947, Serial No. 142,205
Term of patent 14 years
(Cl. D48—32)



The ornamental design for a taxicab cruising light, as shown.

153,973
DESIGN FOR A POKER CHIP COUNTER
Robert D. Nelson, Chicago, Ill., assignor to Count-Rite Industries, Inc., Chicago, Ill., a corporation of Illinois
Application October 31, 1946, Serial No. 134,411
Term of patent 7 years
(Cl. D34—13)



The ornamental design for a poker chip counter, as shown.

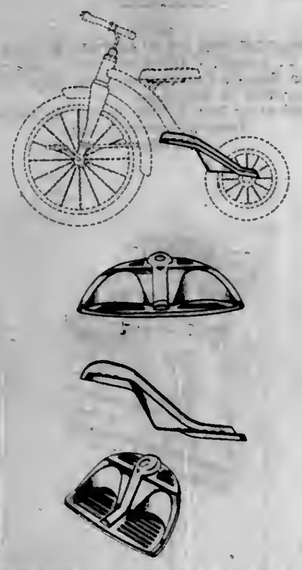
153,974
DESIGN FOR A RUG SCRUBBING MACHINE
William L. Petersen, West New York, N. J., assignor to Clarke Sanding Machine Company, Muskegon, Mich., a corporation of Michigan
Application April 12, 1948, Serial No. 145,659
Term of patent 14 years
(Cl. D9—2)

The ornamental design for a rug scrubbing machine, substantially as shown.

153,975
DESIGN FOR A CONFECTIONERY THROW DISPENSING MACHINE
Laurits Petrus, New York, N. Y.
Application November 29, 1947, Serial No. 142,867
Term of patent 7 years
(Cl. D52—3)

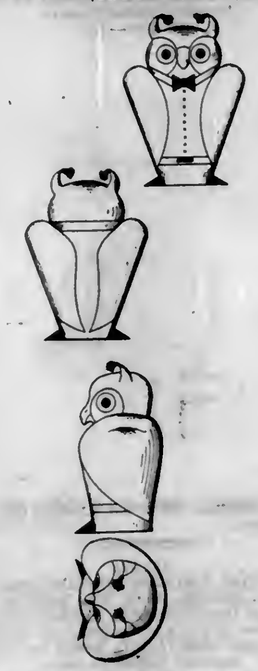
The ornamental design for a confectionery dispensing machine, substantially as shown and described.

153,976
DESIGN FOR AN ELECTRIC RANGE
Harry L. Porter, Cincinnati, Ohio, assignor to Noma Electric Corporation, New York, N. Y., a corporation of Maryland
Application July 9, 1947, Serial No. 140,167
Term of patent 7 years
(Cl. D81—4)



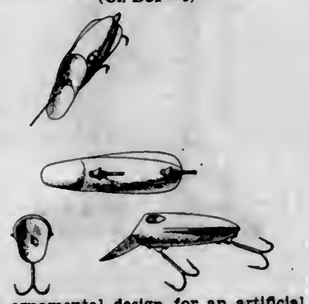
The ornamental design for an electric range, substantially as shown and described.

153,977
DESIGN FOR A GAS RANGE
Harry L. Porter, Cincinnati, Ohio, assignor to Norma Electric Corporation, New York, N. Y., a corporation of Maryland
Application July 9, 1947, Serial No. 140,168
Term of patent 7 years
(Cl. D81—4)



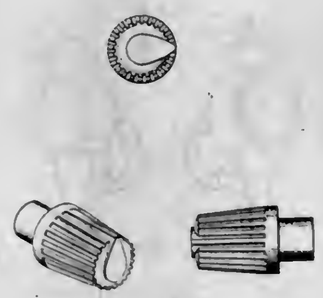
The ornamental design for a gas range, substantially as shown and described.

153,978
DESIGN FOR A TRICYCLE STEP PLATE
Chester V. Queen, Jeffersonville, Ind., assignor to Wheelmaster Corporation, Owensboro, Ky., a corporation of Kentucky
Application April 24, 1947, Serial No. 138,576
Term of patent 14 years
(Cl. D34—15)



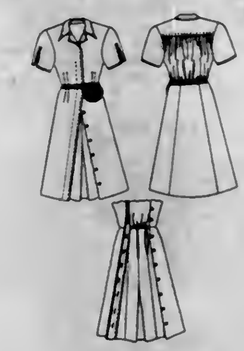
The ornamental design for a tricycle step plate, as shown, and described.

153,979
DESIGN FOR A TOY BIRD
Delmar J. Ranahan, Wilmington, Calif.
Application December 30, 1947, Serial No. 142,450
Term of patent 14 years
(Cl. D34—2)



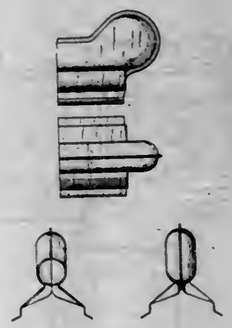
The ornamental design for a toy bird, as shown.

153,980
DESIGN FOR ARTIFICIAL BAIT
William L. Raschke, Fort Worth, Tex.
Application April 7, 1947, Serial No. 138,203
Term of patent 14 years
(Cl. D31—4)



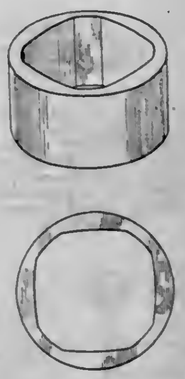
The ornamental design for an artificial bait, substantially as shown.

153,981
DESIGN FOR AN ADJUSTING KNOB
Jean O. Reinecke, Oak Park, Ill., assignor to McGraw Electric Company, Elgin, Ill., a corporation of Delaware
Application July 9, 1946, Serial No. 131,413
Term of patent 14 years
(Cl. D26—1)



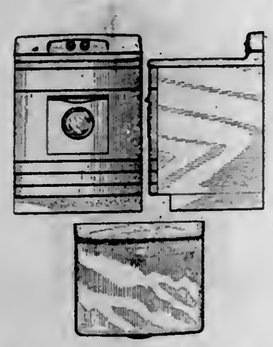
The ornamental design for an adjusting knob, substantially as shown and described.

153,982
DESIGN FOR A DRESS
Ethel Rosenthal, New York, N. Y.
Application November 13, 1947, Serial No. 142,506
Term of patent 3½ years
(Cl. D3—26)



The ornamental design for a dress, substantially as shown.

153,983
DESIGN FOR A ROOF FINIAL
Max L. Rysdon, Sioux City, S. Dak.
Application June 19, 1947, Serial No. 139,869
Term of patent 14 years
(Cl. D68—1)

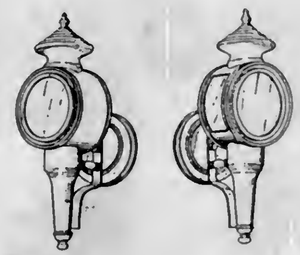


The ornamental design for a roof finial, substantially as shown.

153,984
DESIGN FOR A FINGER RING
Abraham G. Sager, Chicago, Ill.
Application June 22, 1948, Serial No. 147,130
Term of patent 14 years
(Cl. D45—10)

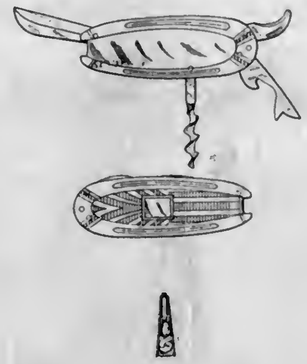
The ornamental design for a finger ring, as shown.

153,985
DESIGN FOR AN AUTOMATIC CLOTHES DRIER
Ray C. Sandin, Oak Park, Ill., assignor to Hotpoint Inc., a corporation of New York
Application February 13, 1948, Serial No. 144,470
Term of patent 14 years
(Cl. D49—1)



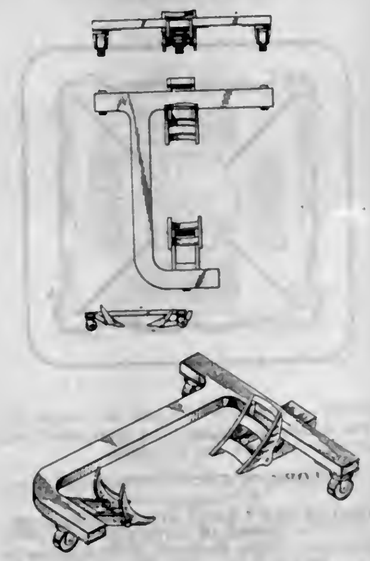
The ornamental design for an automatic clothes drier, as shown.

153,986
DESIGN FOR A FINGER RING
Crescenzo J. Scola, Providence, R. I.
Application August 26, 1948, Serial No. 148,314
Term of patent 14 years
(Cl. D45—10)



The ornamental design for a finger ring, substantially as shown.

153,987
DESIGN FOR A LANTERN
Philip Silberhartz, Maywood, N. J., assignor to Artolier Corporation, Lodi, N. J., a corporation of New York
Application August 5, 1947, Serial No. 140,705
Term of patent 3½ years
(Cl. D48—24)

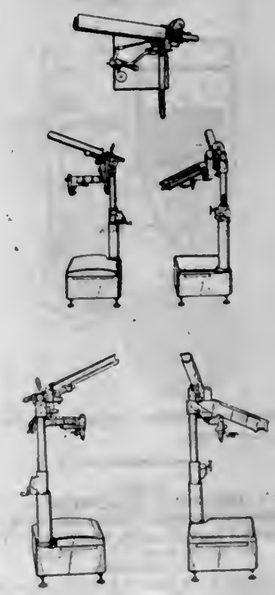


The ornamental design for a lantern, as shown.

153,988
DESIGN FOR A COMBINATION POCKET TOOL
Henry J. Smoleroff and John J. Kovacs, New York, N. Y.
Application July 2, 1947, Serial No. 140,064
Term of patent 3½ years
(Cl. D22—3)

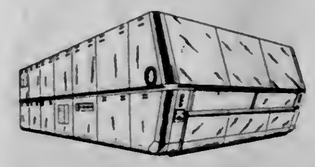
The ornamental design for a combination pocket tool as shown.

153,989
DESIGN FOR A DOLLY FOR TRANSPORTING AIRPLANES AND THE LIKE
Mahlon C. Snyder, Hamburg, N. Y.
Application May 8, 1947, Serial No. 138,902
Term of patent 14 years
(Cl. D14—3)



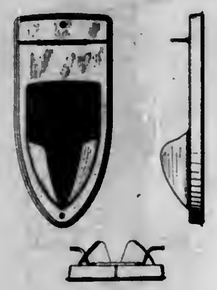
The ornamental design for a dolly for transporting airplanes and the like, as shown.

153,990
DESIGN FOR A TOY ANIMAL FIGURE OR OTHER SIMILAR ARTICLE
Monte Sohn, New York, N. Y.
Application June 15, 1948, Serial No. 146,973
Term of patent 14 years
(Cl. D34—2)



The ornamental design for a toy animal figure or other similar article, as shown.

153,991
DESIGN FOR A BOTTLE CAP FEEDER
Rudolph Sonnenberg, Belvidere, Ill., assignor to Mid-West Bottle Cap Co., Belvidere, Ill., a corporation of Illinois
Application September 15, 1947, Serial No. 141,406
Term of patent 14 years
(Cl. D2—3)

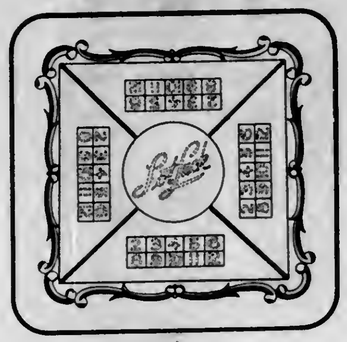


The ornamental design for a bottle cap feeder, substantially as shown.

153,992
DESIGN FOR A BAKING OVEN OR SIMILAR ARTICLE
John F. Stammler, New Haven, Conn., assignor to American Machine & Foundry Company, a corporation of New Jersey
Application December 4, 1947, Serial No. 142,955
Term of patent 14 years
(Cl. D81—10)

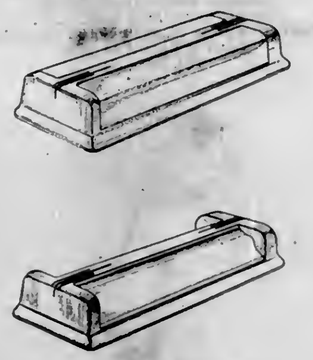
The ornamental design for a baking oven or similar article, as shown and described.

153,993
DESIGN FOR AN IRON HOLDER
Chester D. Stanley, Akron, Ohio
Application September 18, 1947, Serial No. 141,463
Term of patent 14 years
(Cl. D49—6)



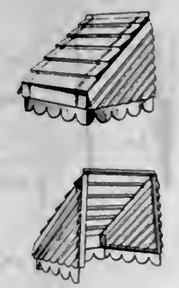
The ornamental design for an iron holder, substantially as shown.

153,994
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application July 13, 1948, Serial No. 147,537
Term of patent 3½ years
(Cl. D3—26)



The ornamental design for a dress, substantially as shown.

153,995
DESIGN FOR A GAME BOARD
Nick Thomas, Akron, Ohio
Application September 19, 1946, Serial No. 133,406
Term of patent 14 years
(Cl. D34—5)



The ornamental design for a game board, substantially as shown and described.

153,996
DESIGN FOR A DISPLAY CONTAINER OR SIMILAR ARTICLE
Herman G. Treiss, Brooklyn, N. Y., assignor to Robert P. Foose, New York, N. Y.
Application April 16, 1947, Serial No. 138,435
Term of patent 7 years
(Cl. D80—5)

The ornamental design for a display container or similar article, substantially as shown.

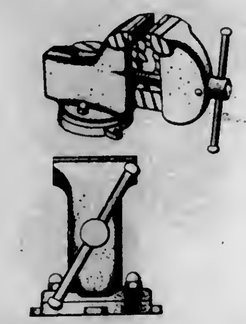
153,997
DESIGN FOR AN AWNING
Charles R. Trent, Conway, Ark., assignor of one-half to Charles W. Trent, Conway, Ark.
Application May 3, 1948, Serial No. 146,148
Term of patent 14 years
(Cl. D21—6)

The ornamental design for an awning, as shown.

153,998
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Joseph Tricarico, New York, N. Y.
Application March 16, 1948, Serial No. 145,147
Term of patent 14 years
(Cl. D92—1)

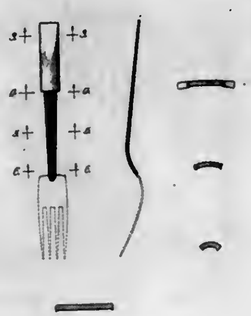
The ornamental design for a textile fabric or similar article, substantially as shown and described.

153,999
DESIGN FOR A POWDER PUFF CONTAINER OR THE LIKE
Bernard Ulvad, Leominster, Mass., assignor, by mesne assignments, to Foster Grant Co., Inc., Leominster, Mass., a corporation of Massachusetts
Application August 20, 1948, Serial No. 148,204
Term of patent 14 years
(Cl. D86—10)



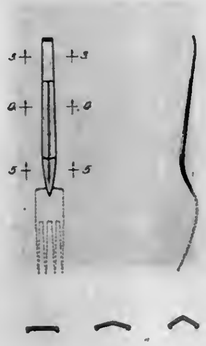
The ornamental design for a powder puff container or the like, substantially as shown.

154,000
DESIGN FOR A DISPLAY FIGURE
Marguerite T. Upson, Tucson, Ariz.
Application January 5, 1948, Serial No. 143,536
Term of patent 14 years
(Cl. D1—2)



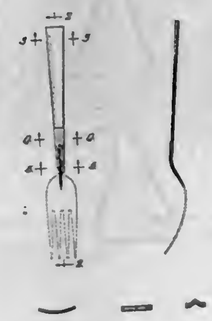
The ornamental design for a display figure, as shown.

154,001
DESIGN FOR A BENCH VISE OR SIMILAR ARTICLE
Hugh W. Vogl, Wilmette, Ill.
Application November 12, 1947, Serial No. 142,486
Term of patent 7 years
(Cl. D54—13)



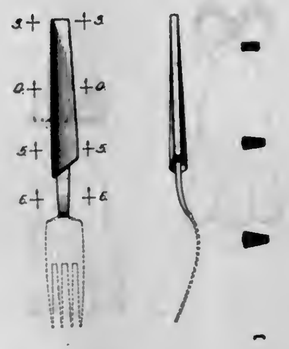
The ornamental design for a bench vise or similar article, substantially as shown.

154,002
DESIGN FOR A FORK OR SIMILAR ARTICLE
Franz Wagner, Chicago, Ill., assignor to Ekco Products Company, Chicago, Ill., a corporation of Illinois
Application July 17, 1948, Serial No. 147,649
Term of patent 14 years
(Cl. D54—12)



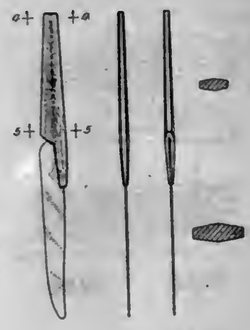
The ornamental design for a fork or similar article, as shown and described.

154,003
DESIGN FOR A FORK OR SIMILAR ARTICLE
Franz Wagner, Chicago, Ill., assignor to Ekco Products Company, Chicago, Ill., a corporation of Illinois
Application July 17, 1948, Serial No. 147,650
Term of patent 14 years
(Cl. D54—12)



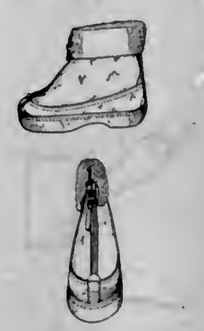
The ornamental design for a fork or similar article, as shown and described.

154,004
DESIGN FOR A FORK OR SIMILAR ARTICLE
Franz Wagner, Chicago, Ill., assignor to Ekco Products Company, Chicago, Ill., a corporation of Illinois
Application July 17, 1948, Serial No. 147,651
Term of patent 14 years
(Cl. D54—12)



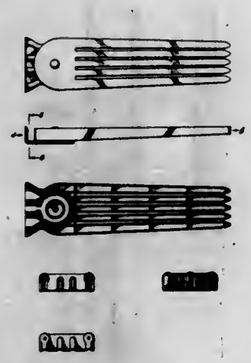
The ornamental design for a fork or similar article, as shown and described.

154,005
DESIGN FOR A FORK OR SIMILAR ARTICLE
Franz Wagner, Chicago, Ill., assignor to Ekco Products Company, Chicago, Ill., a corporation of Illinois
Application July 17, 1948, Serial No. 147,646
Term of patent 14 years
(Cl. D54—12)



The ornamental design for a fork or similar article, as shown and described.

154,006
DESIGN FOR A KNIFE OR SIMILAR ARTICLE
Franz Wagner, Chicago, Ill., assignor to Ekco Products Company, Chicago, Ill., a corporation of Illinois
Application July 17, 1948, Serial No. 147,647
Term of patent 14 years
(Cl. D54—12)



The ornamental design for a knife or similar article, as shown.

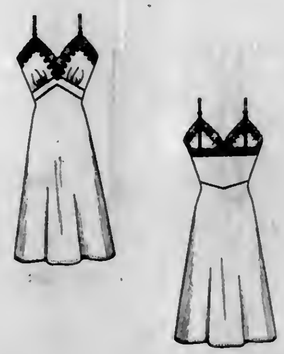
154,007
DESIGN FOR A WOMAN'S OVERSHOE
Harold A. Watkins and Elsmer M. Heimerl, Milwaukee, Wis.; said Heimerl assignor to said Watkins
Application April 10, 1948, Serial No. 145,644
Term of patent 14 years
(Cl. D7—4)

The ornamental design for a woman's overshoe, substantially as shown and described.

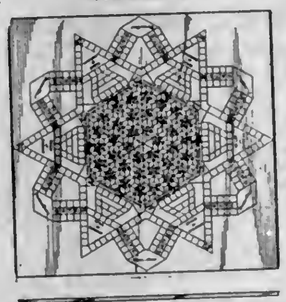
154,008
DESIGN FOR A PANTS HANGER
William Grant Williams, Anaheim, Calif.
Application December 1, 1947, Serial No. 142,967
Term of patent 14 years
(Cl. D32—8)

The ornamental design for a pants hanger, as shown.

154,009
DESIGN FOR A BOOK END
Julius H. Witzke, Chicago, Ill.
Application January 31, 1947, Serial No. 136,581
Term of patent 14 years
(Cl. D33—1)

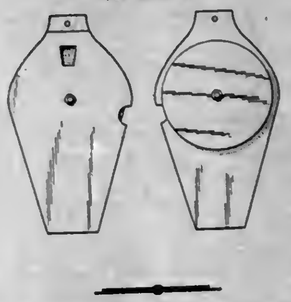


154,009—Continued



The ornamental design for a book end, substantially as shown.

154,010
DESIGN FOR A SLIP OR SIMILAR ARTICLE
Semon Wolf, New York, N. Y.
Application November 26, 1947, Serial No. 142,809
Term of patent 3½ years
(Cl. D3—26)



The ornamental design for a slip or similar article, substantially as shown.

154,011
DESIGN FOR A GAME BOARD
Analee Womack, Fort Worth, Tex.
Application August 26, 1947, Serial No. 141,071
Term of patent 7 years
(Cl. D34—5)

The ornamental design for a game board, as shown and described.

154,012
DESIGN FOR A COCKTAIL RECIPE GUIDE
Louis F. Zimmermann, Chicago, Ill.
Application September 10, 1947, Serial No. 141,302
Term of patent 14 years
(Cl. D1—2)

The ornamental design for a cocktail recipe guide, substantially as shown.

Adhesive, Vegetable derivative. A. E. Staley Manufacturing Company. 510,353, May 31; Serial No. 545,783, published Feb. 15, 1949.
Glue. National Starch Products, Inc. 510,336, May 31; Serial No. 542,480, published Feb. 8, 1949.
Tape, Gummed. Mid-States Gummed Paper Co. 510,339, May 31; Serial No. 543,367, published Feb. 8, 1949.
Tape, Gummed paper, and gummed cloth tape. General Gummed Products, Inc. 510,431, May 31; Serial No. 555,498, published Feb. 15, 1949.
Tape, Plain adhesive paper. E. K. Krakaur. 510,243, May 31; Serial No. 531,809, published Dec. 28, 1948.
Tapes, Normally tacky and pressure-sensitive adhesive. Industrial Tape Corporation. 510,163, May 31; Serial No. 493,124, published Feb. 8, 1949.

CLASS 6

Absorbent, alterative, and analgesic preparations. Winthrop Chemical Company, Inc. 510,261, May 31; Serial No. 534,216, published Feb. 22, 1949.
Agents, Surface active. Pacific Chemical Company. 510,200, May 31; Serial No. 524,077, published Feb. 1, 1949.
Alcohol, Amyl. The Sharplee Solvents Corporation. 255,152, renewed Apr. 16, 1949. O. G. May 31.
Allergens, antibiotics, vitamin B-complex, etc. Wyeth Incorporated. 510,277, May 31; Serial No. 530,208, published Feb. 8, 1949.
Analgesic and antispasmodic tablets. Western Pharmacal Company. 510,421, May 31; Serial No. 554,182, published Jan. 25, 1949.
Anaesthetic, Topical. Dixie Laboratories, Inc. 434,440, Nov. 18, 1947. Republished May 31.
Anti-acid effervescent preparations. Miles Laboratories, Inc. 510,330, May 31; Serial No. 541,949, published Feb. 1, 1949.
Anti-freeze solutions. Shell Oil Company, Incorporated. 375,560, Feb. 20, 1940. Republished May 31.
Anti-histaminic preparations. William R. Warner & Co., Inc. 510,407, May 31; Serial No. 550,882, published Feb. 1, 1949.
Aspirin tablets. O. H. Brown Specialty Co. 510,429, May 31; Serial No. 555,140; published Feb. 22, 1949.
Astringent preparation, Cosmetic. A. Miller. 510,432, May 31; Serial No. 555,551, published Feb. 1, 1949.
Bath salts, toilet water, talcum powder, etc. Elizabeth Arden Sales Corporation. 510,355, May 31; Serial No. 545,936, published Feb. 22, 1949.
Bicarbonate of soda. Church & Dwight Co., Inc. 257,950, renewed June 25, 1949. O. G. May 31.
Bicarbonate of soda, baking soda, sal soda, etc. Church & Dwight Co., Inc. 257,768, renewed June 18, 1949. O. G. May 31.
Bleach, disinfectant, deodorant, and cleanser. F. Uddo & Sons. 370,563, Aug. 29, 1939. Republished May 31.
Chemical compounds. The Teehkote Company. 510,374, May 31; Serial No. 547,579, published Feb. 22, 1949.
Chemical compounds having water-softening qualities. Oakite Products, Inc. 510,387, May 31; Serial No. 546,674, published Feb. 22, 1949.
Chemical preparation. American Chemical Paint Company. 510,191, May 31; Serial No. 521,423, published Feb. 1, 1949.
Chemicals. Keuffel & Esser Company. 510,425, May 31; Serial No. 554,797, published Feb. 15, 1949.
Chemicals, pharmaceutical products, and veterinary preparations. Winthrop Chemical Company, Inc. 261,030, renewed Sept. 3, 1949. O. G. May 31.
Chemicals, Photographic. Sears, Roebuck and Co. 510,349, May 31; Serial No. 544,776, published Feb. 8, 1949.
Cleansing preparations, Dry alkaline. MacDermid Incorporated. 510,390, May 31; Serial No. 548,975, published Dec. 28, 1948.
Cola tablets. Standard Pharmaceutical Co., Inc. 510,382, May 31; Serial No. 548,425, published Feb. 1, 1949.
Colloidal sulphur solution. C. V. Wilson. 384,881, Jan. 31, 1939. Republished May 31.
Cologne; hand, face, and skin lotions; after-shaving lotion; etc. Perfumeria Floralia, S. A. 510,401, May 31; Serial No. 549,839, published Feb. 22, 1949.

Compositions of matter in block, powder, or other form used as insecticides and deodorizers. The White Tar Company of New Jersey, Inc. 259,567, renewed July 30, 1949. O. G. May 31.
Coolant, Antifreeze. Prairie States Oil & Grease Company. 510,440, May 31; Serial No. 559,245, published Feb. 22, 1949.
Corn starch for laundry purposes. Corn Products Refining Company. 442,765, May 31; Serial No. 509,975, published Feb. 15, 1949.
Cosmetic cream. National Toilet Company. 44,716, July 18, 1905. Republished May 31.
Cosmetic preparations. Sunclyme House, Inc. 343,858, Mar. 9, 1937. Republished May 31.
Cosmetic preparations. Wal Drug Company. 442,782, May 31; Serial No. 517,028, published Feb. 8, 1949.
Cosmetics. Mortan Manufacturing Corporation. 510,171, May 31; Serial No. 504,921, published Feb. 8, 1949.
Cosmetics. E. Norris. 510,462, May 31; Serial No. 521,271.
Cosmetics. Dr. J. Parker Pray Company. 33,358, renewed Aug. 15, 1949. O. G. May 31.
Cough syrup, nasal drops, rectal suppositories, etc. E. D. Hilgrinbotham. 510,268, May 31; Serial No. 534,532, published July 13, 1948.
Creams and oils for beautifying the skin. Lancôme S. A. 510,196, May 31; Serial No. 522,143, published Feb. 22, 1949.
Creams and oils for beautifying the skin, All kinds of beauty. Lancôme S. A. 510,197, May 31; Serial No. 622,146, published Feb. 8, 1949.
Depilatory in powder form. Morehouse Manufacturing Company. 510,244, May 31; Serial No. 531,931, published July 27, 1948.
Developer, Photograph. Mallinckrodt Chemical Works. 510,398, May 31; Serial No. 522,519, published Jan. 25, 1949.
Disinfectants and insecticides. H. J. Brownstein. 806,672, Sept. 26, 1933. Republished May 31.
Dyestuffs. Geigy Company, Inc. 510,252, May 31; Serial No. 533,159, published Feb. 22, 1949.
Dyestuffs. National Aniline & Chemical Company, Incorporated. 144,874-6, July 19, 1921. Republished May 31.
Dyestuffs, Coal tar. H. P. Rossiger & Co., Inc. 510,443, May 31; Serial No. 559,736, published Feb. 8, 1949.
Emulsifiers. Griffin Chemical Company. 510,242, May 31; Serial No. 531,791, published Feb. 1, 1949.
Esters, Substantially saturated fatty acid. The Baker Castor Oil Company. 442,796, May 31; Serial No. 520,677, published Jan. 18, 1949.
Estrogenic compound. Ciba Pharmaceutical Products, Inc. 510,445, May 31; Serial No. 560,448, published Feb. 22, 1949.
Exterminating powder, Rat. The Rat Biscuit Company. 439,042, June 1, 1948. Republished May 31.
Face and body powders, face cream, toilet water, etc. Helena Rubinstein, Inc. 510,457, May 31; Serial No. 503,943.
Face cream and hair lotion. M. Mahiques. 510,438, May 31; Serial No. 537,197, published Feb. 22, 1949.
Face powder. National Toilet Company. 44,715, July 18, 1905. Republished May 31.
Face powder, rouge, lipstick, etc. John L. Michael, Inc. 510,427, May 31; Serial No. 554,905, published Feb. 1, 1949.
Face powders, bleach cream, tissue and wrinkle cream, etc. National Toilet Company. 215,149, July 13, 1920. Republished May 31.
Facial and hand creams, skin lotion, etc. Howe-Lewis, Inc. 510,373, May 31; Serial No. 547,454, published Jan. 18, 1949.
Finger-nail polishes. Dr. J. Parker Pray Company. 33,357, re-renewed Aug. 15, 1949. O. G. May 31.
Flotation oils, pine oils, and pine tar oil. The Glidden Company. 510,439, May 31; Serial No. 538,135, published Feb. 22, 1949.
Foundations for facial use, Liquid and cream. Elizabeth Arden Sales Corporation. 510,405, May 31; Serial No. 550,766, published Feb. 22, 1949.
Fungicidal compound. Sequoia Products Company. 510,273, May 31; Serial No. 535,264, published Jan. 11, 1949.
Gas in portable tanks. Roxana Petroleum Corporation. 253,361, Feb. 26, 1929. Republished May 31.
Gel catalyst in spheroidal form. The Davison Chemical Corporation. 510,226, May 31; Serial No. 529,970, published Jan. 18, 1949.
Gel catalyst, Magnesia-silica. The Davison Chemical Corporation. 510,227, May 31; Serial No. 529,969, published Jan. 18, 1949.
Germicide. Economics Laboratory, Inc. 442,805, May 31; Serial No. 522,564, published Sept. 9, 1947.
Hair and scalp conditioner, Liquid. N. Bindillo. 510,389, May 31; Serial No. 548,915, published Feb. 22, 1949.
Insecticide, Scented. Koppers Company, Inc. 442,756, May 31; Serial No. 477,934, published Dec. 11, 1945.
Insecticides. O-Cedar Corp'n. 510,328, May 31; Serial No. 541,765, published Feb. 1, 1949.
Insecticides. The Pennsylvania Salt Manufacturing Company. 510,399, May 31; Serial No. 549,657, published Feb. 22, 1949.
Laxative, Alterative. J. C. Mendenhall Medicine Co., Incorporated. 510,367, May 31; Serial No. 547,012, published Feb. 22, 1949.
Liniment. W. Kalleta. 424,754, Oct. 22, 1946. Republished May 31.
Lotion. H. Clay Glover Co., Inc. 510,456, May 31; Serial No. 500,301.
Lotion, After-shaving. Florian, Inc. 269,325 Apr. 1, 1930. Republished May 31.
Lotion for the hair. A. C. Hynd Corp. 510,223-4, May 31; Serial No. 529,649-50, published Feb. 1, 1949.
Lotions, Scalp and hair, and oil shampoos. Thee Products Co. 510,274, May 31; Serial No. 535,272, published Feb. 15, 1949.
Mascara. Whitehall Pharmacal Company. 510,404, May 31; Serial No. 550,371, published Feb. 15, 1949.
Medical preparation. Gelky Company, Inc. 442,807, May 31; Serial No. 522,779, published Feb. 1, 1949.
Medicinal oil. National Remedy Company, Inc. 510,354, May 31; Serial No. 545,874, published Jan. 18, 1949.
Medicinal preparation. Bengué Inc. 510,378, May 31; Serial No. 547,888, published Feb. 1, 1949.
Medicinal preparation. A. Doxakis. 249,128, Nov. 6, 1928. Republished May 31.
Medicinal preparation. J. U. Korée. 510,311, May 31; Serial No. 540,757, published Feb. 8, 1949.
Medicinal preparation. Lincoln Laboratories, Incorporated. 442,773, May 31; Serial No. 511,333, published Jan. 25, 1949.
Medicinal preparation. Lincoln Laboratories, Incorporated. 442,774, May 31; Serial No. 511,342, published Jan. 11, 1949.
Medicinal preparations. The Norwich Pharmacal Company. 257,956, renewed June 25, 1949. O. G. May 31.
Medicines. Consolidated Royal Chemical Corporation. 510,350, May 31; Serial No. 544,977, published Feb. 22, 1949.
Mineral oil, Medicinal white, rubbing alcohol, citrate of magnesia, etc. San Antonio Drug Company. 510,403, May 31; Serial No. 550,173, published Feb. 1, 1949.
Mineral waters. French Lick Springs Hotel Co. 47,745-50, Nov. 21, 1905. Republished May 31.
Mineral waters. French Lick Springs Hotel Co. 47,879, Nov. 28, 1905. Republished May 31.
Mouthwash, Astringent. Kata Drug Company. 409,934, Oct. 31, 1944. Corrected. O. G. May 31.
Ointment, Athlete's foot. G. D. Stanley. 510,416, May 31; Serial No. 553,646, published Feb. 1, 1949.
Ointment, Zinc paste sulphur, Whitfield ointment, etc. Royal Pharmacal Corporation. 510,266, May 31; Serial No. 534,369, published Aug. 17, 1948.
Organic chemicals, Synthetic. Rohm & Haas Company. 510,441, May 31; Serial No. 559,325, published Feb. 22, 1949.
Organic material, Quaternary. Sun Chemical Corporation. 442,778, May 31; Serial No. 515,138, published Jan. 25, 1949.
Perfume. J. W. Simoneau. 442,802, May 31; Serial No. 521,693, published Feb. 1, 1949.
Perfume, cologne, lipstick, face powder, etc. Kay Daumit, Inc. 442,766, May 31; Serial No. 508,420, published Jan. 6, 1948.
Perfume, toilet water, face powder, etc. Houbigant, Inc. 510,282, May 31; Serial No. 536,606, published Feb. 8, 1949.
Perfumery. E. Westall. 422,300, July 16, 1946. Republished May 31.
Perfumes, toilet waters, eau de colognes, etc. Parfums Charbert, Inc. 510,435, May 31; Serial No. 556,467, published Feb. 22, 1949.
Powder to dissolve in internal douche to facilitate concention. Maternal Health Products, Inc. 261,041, renewed Sept. 3, 1949. O. G. May 31.
Preparation for athlete's foot, Foot. I. Simon. 442,755, May 31; Serial No. 466,746, published July 11, 1944.
Preparation for the care of sore, inflamed, and bleeding gums. L. Salazar. 510,240, May 31; Serial No. 531,724, published July 6, 1948.
Preparation for the treatment of dermatophytosis, eczema, simple ringworm, etc. 442,777, May 31; Serial No. 514,606, published Feb. 1, 1949.
Preparation for the treatment of diarrhea. W. F. Wilhelm. 510,234, May 31; Serial No. 530,880, published Jan. 18, 1949.
Preparation for use in the treatment of hypertension. The Paul Plesmer Company. 510,410, May 31; Serial No. 552,005, published Feb. 22, 1949.
Preparation in liquid form used for embellishing and improving the appearance of the skin. Coty, Inc. 259,706, renewed Aug. 6, 1949. O. G. May 31.
Preparations in dry powder form for use in the processing of textiles. Wallerstein Company, Inc. 510,419, May 31; Serial No. 553,935, published Feb. 1, 1949.
Purifiers, Air. No-Oda Products Co. 442,795, May 31; Serial No. 520,565, published June 8, 1948.
Rat paste. Bell Chemical Co. 510,352, May 31; Serial No. 545,327, published Feb. 22, 1949.
Refreshant, Skin, and emollient for massage. American Hospital Supply Corporation. 510,454, May 31; Serial No. 489,307.
Remedy for the treatment of eczema, tetter, ringworm, etc. Cawthon-Coleman Company. 72,480, re-renewed Jan. 26, 1949. O. G. May 31.

Resins, Ion exchange. The Dow Chemical Company. 510,450, May 31; Serial No. 363,245, published Feb. 22, 1949.
Sal soda. Church & Dwight Co., Inc. 257,600, renewed June 11, 1949. O. G. May 31.
Salts for the treatment of ferrous metal surfaces. Alrose Chemical Company. 347,284, June 22, 1937. Republished May 31.
Salve or rub, Counter-irritant. Whitehall Pharmacal Company. 510,289, May 31; Serial No. 537,640, published Feb. 8, 1949.
Scalp preparation, Liquid. P. Bell. 442,782, May 31; Serial No. 505,332, published June 10, 1947.
Shampoo in cream form. Bonne Bell, Inc. 510,290, May 31; Serial No. 537,807, published Sept. 28, 1948.
Silicate of soda. Philadelphia Quartz Company. 510,420, May 31; Serial No. 554,140, published Feb. 1, 1949.
Soda, Caustic. Bray Chemical Co. 510,417, May 31; Serial No. 553,869, published Feb. 1, 1949.
Soldering fluid. C. J. Johnson. 230,731, Aug. 2, 1927. Republished May 31.
Solvent, Water, dehydrating agent, rust inhibitor, corrosion inhibitor, etc. Winkenweder & Ladd, Inc. 510,217, May 31; Serial No. 529,328, published Feb. 8, 1949.
Spirits for filling pocket cigarette and cigar lighters. Peoples Drug Stores, Inc. 253,125, Feb. 19, 1929. Republished May 31.
Sweeteners, Artificial, guaiacol carbonates, creosote carbonates, etc. The Heyden Chemical Works. 72,247, re-renewed Jan. 12, 1949. O. G. May 31.
Syrup against coughs, bronchitis, asthma, etc. J. Fougerat. 32,888, re-renewed May 16, 1949. O. G. May 31.
Thiosulfate fixing bath compositions, Ammonium. Mallinckrodt Chemical Works. 510,199, May 31; Serial No. 522,524, published Feb. 15, 1949.
Tinning liquid. W. P. Wannemacher. 442,792, May 31; Serial No. 520,131, published Jan. 25, 1949.
Toilet powder, Antiseptic. The Specialty Products Company. 510,250, May 31; Serial No. 532,520, published Feb. 22, 1949.
Toilet preparation. Dr. J. Parker Pray Company. 33,359, re-renewed Aug. 15, 1949. O. G. May 31.
Toilet preparation for the purpose of cleansing the scalp, and hair, etc., Perfumed. McKesson & Robbins, Incorporated. 442,752, May 31; Serial No. 456,127, published Apr. 27, 1943.
Toilet water and talcum and sachet powder. Lenthéric Incorporated. 510,444, May 31; Serial No. 560,417, published Feb. 1, 1949.
Tonic. Chicago Pharmacal Company. 339,590, Oct. 13, 1936. Republished May 31.
Toothache-drops, sore throat, cold-cream, tooth paste, etc. American Drug & Press Association. 104,024, June 29, 1915. Republished May 31.
Vanishing cream, cleansing cream, deodorant cream, etc. National Toilet Company. 207,819, Jan. 12, 1926. Republished May 31.
Viscous liquids. Nonoily. American Air Filter Company, Inc. 510,447, May 31; Serial No. 562,005, published Feb. 22, 1949.
Vitamin adjutant preparation in table form. Hengue & Co. Ltd. 510,381, May 31; Serial No. 548,233, published Feb. 22, 1949.
Weed killer and insecticide. Conk Chemical Company. 442,767, May 31; Serial No. 509,973, published Feb. 8, 1949.
Wetting agent, Photographic. Eastman Kodak Company. 442,760, May 31; Serial No. 497,470, published Feb. 15, 1949.

CLASS 7

Rope and twine, Fibrous and textile. Plymouth Cordage Company. 54,721, June 26, 1906. Republished May 31.
Rope and twine, Fibrous and textile. Plymouth Cordage Company. 92,577, July 15, 1913. Republished May 31.
Rope and twine, Fibrous and textile. Plymouth Cordage Company. 95,144, Feb. 3, 1914. Republished May 31.
Rope, Wire, and wire-rope cables and high carbon wire. Union Wire Rope Corporation. 250,738, renewed Aug. 6, 1949. O. G. May 31.
Ropes, cords and twines. Tubbs Cordage Company. 439,580, July 6, 1948. Republished May 31.
Twine, Binder. Plymouth Cordage Company. 251,310, Jan. 1, 1929. Republished May 31.
Twine, Binder. Plymouth Cordage Company. 430,291, June 10, 1947. Republished May 31.

CLASS 8

Lighters, Pyrophoric pocket and desk-type. The Napier Company. 510,312, May 31; Serial No. 540,853, published Jan. 18, 1949.
Lighters, Pyrophoric pocket cigar. Henry Lederer & Bro. Inc. 234,334, Oct. 25, 1927. Republished May 31.
Pouches, Tobacco, cigar, cigarette, and pipe cases, etc. Rogers Imports Inc. 510,189, May 31; Serial No. 502,717, published Jan. 25, 1949.

CLASS 9

Matches. Armstrong Grocery Company. 436,516, Feb. 10, 1948. Republished May 31.

CLASS 10

Fertiliser. F. S. Royster Guano Co. 259,254, renewed July 30, 1949. O. G. May 31.
Fertilizers. The Pacific Guano & Fertilizer Co. 96,329, Apr. 14, 1914. Republished May 31.

CLASS 11

Ink and ink pads, Duplicating. A. B. Dick Company. 510,442, May 31; Serial No. 550,661, published Feb. 15, 1949.
Ink, Printing. Sun Chemical Corporation. 510,369, May 31; Serial No. 547,173, published Feb. 1, 1949.
Ink, Printing. Sun Chemical Corporation. 510,370, May 31; Serial No. 547,181, published Feb. 1, 1949.
Ink, Printing. Sun Chemical Corporation. 510,371, May 31; Serial No. 547,180, published Feb. 1, 1949.
Pads, Stamp, and rubber stamp ink. Fulton Specialty Co. 510,253, May 31; Serial No. 533,299, published Feb. 8, 1949.

CLASS 12

Aggregate, Dry, ready to mix with water to form a plastic heat insulating material. Pilbrico Jointless Firebrick Company. 510,413, May 31; Serial No. 552,877, published Feb. 15, 1949.
Board, Chemically processed. The Teracite Corporation. 510,241, May 31; Serial No. 531,738, published Dec. 21, 1948.
Board, Vegetable fiber hard. United States Gypsum Company. 510,409, May 31; Serial No. 551,923, published Feb. 1, 1949.
Brick, Fire. A. P. Green Fire Brick Company. 510,415, May 31; Serial No. 553,277, published Feb. 1, 1949.
Building material. Newport Rolling Mill Co. 218,427, Sept. 28, 1920. Republished May 31.
Building units. Faberete Corporation. 439,100, June 1, 1948. Republished May 31.
Caulking compound. The Sherwin-Williams Company. 510,351, May 31; Serial No. 545,292, published Feb. 1, 1949.
Caulking of various mixtures and consistencies. Independent Silo Company. 442,753, May 31; Serial No. 462,097, published June 8, 1948.
Cement, Building. The Lawrence Cement Company of Pennsylvania. 74,139, June 22, 1909. Republished May 31.
Cement, Building. The Lawrence Cement Company of Pennsylvania. 74,234, June 29, 1909. Republished May 31.
Cements, Refractory, refractory ramming mixes, refractory bricks and refractory blocks. The Chas. Taylor's Sons Company. 510,269, May 31; Serial No. 534,692, published Feb. 1, 1949.
Concrete products. Multiplex Concrete Co., Inc. 510,287, May 31; Serial No. 537,473, published Feb. 1, 1949.
Cross-arms, braces, pins and brackets. American Cross-arm & Conduit Company. 510,207, May 31; Serial No. 539,377, published Dec. 28, 1948.
Doors, Rolling. The Kinnear Manufacturing Company. 510,286, May 31; Serial No. 537,459, published Feb. 1, 1949.
Emulsion composition, Bituminous. Hubert E. Schmid. 510,292, May 31; Serial No. 538,182, published Feb. 1, 1949.
Firebrick. Mexico Refractories Company. 510,329, May 31; Serial No. 541,862, published Feb. 1, 1949.
Houses, Prefabricated. Texas Housing Company. 510,343, May 31; Serial No. 544,005, published Jan. 18, 1949.
Insulating and protective materials for metals, Heat and sound. Tri-Sulex Corporation. 442,803, May 31; Serial No. 522,007, published Jan. 18, 1949.
Lime, Hydrated. United States Lime Products Corporation. 281,735, Mar. 24, 1931. Republished May 31.
Liquid used in hardening concrete, Clear. H. E. Schmid. 510,295, May 31; Serial No. 539,087, published Feb. 1, 1949.
Lumber, Ponderosa pine. Edward Hines Lumber Co. 510,320, May 31; Serial No. 541,140, published Dec. 28, 1948.
Mixture of Portland cement and other materials. Higgins Industries, Inc. 510,168, May 31; Serial No. 500,657, published Jan. 18, 1949.
Paving materials, Bituminous tar. American Tar Products Company. 260,690, renewed Aug. 27, 1949. O. G. May 31.
Pipe, Ceramic, ceramic pipe fittings, and ceramic pipe joint collars. Pacific Clay Products. 510,263, May 31; Serial No. 534,332, published Jan. 25, 1949.
Plaster, Gypsum. Ideal Cement Company. 510,344, May 31; Serial No. 544,107, published Feb. 1, 1949.
Plastering, Insulative and fireproof, patching, moldable and cementitious construction materials. A. Troplano. 442,790, May 31; Serial No. 519,608, published Jan. 11, 1949.
Plastic articles, Molded. Nalle Plastics, Inc. 510,201, May 31; Serial No. 537,930, published Jan. 25, 1949.
Poles and posts, Chemically treated wood. Southern Wood Preserving Company. 510,346, May 31; Serial No. 544,472, published Feb. 8, 1949.
Refractory material, Castable. Pilbrico Jointless Firebrick Company. 510,412, May 31; Serial No. 552,876, published Feb. 15, 1949.

Roofings and building-papers, Waterproof. The Paraffine Paint Co. 75,095, re-renewed Aug. 31, 1949. O. G. May 31.
Roofings and sidings, Corrugated iron and steel, etc. The Newport Rolling Mill Co. 325,864, July 9, 1935. Republished May 31.
Sashes, Window, in weather-stripped window frames, door and window frames, etc. Mondeaux Millwork and Supply Company. 510,251, May 31; Serial No. 532,622, published Dec. 28, 1948.
Screen and ventilator storm sash, Combination. L. O. Davis. 510,453, May 31; Serial No. 541,651, published Feb. 8, 1949.
Shapes and joist hangers, Lightweight metallic structural. Jones & Laughlin Steel Corporation. 510,211, May 31; Serial No. 528,479, published Feb. 8, 1949.
Shutters, Metallic. Tasco Corporation. 510,225, May 31; Serial No. 529,828, published Feb. 1, 1949.
Tile board, Imitation, and asphalt slate surfaced roofing. Pease Woodwork Company. 510,335, May 31; Serial No. 542,343, published Jan. 18, 1949.
Tile, Plastic wall. The Tile-Tex Company. 510,288, May 31; Serial No. 537,635, published Jan. 18, 1949.
Tile, Plastic wall, and floor tile. United Distributors, Inc. 442,818, May 31; Serial No. 524,839, published Jan. 18, 1949.
Tiles, foundation sheets for tiles, and cement. Porcelain Tile Company. 293,148, Apr. 12, 1932. Republished May 31.
Walkways and stairways, Steel, Black, Sivalls & Bryson, Inc. 510,411, May 31; Serial No. 552,566, published Jan. 11, 1949.
Windows and doors, Steel, reinforcing commodities. Soule Steel Company. 510,202, May 31; Serial No. 527,479, published Jan. 11, 1949.
Wood, Laminated impregnated. The Formica Insulation Company. 510,236, May 31; Serial No. 531,323, published Jan. 18, 1949.

CLASS 13

Adjusters, Casement window, window catches, hand rail brackets, etc. The H. B. Ives Company. 510,229, May 31; Serial No. 530,004, published Feb. 1, 1949.
Balls, Flush tank. American Rubber Products Corporation. 510,470, May 31; Serial No. 541,631.
Balls, Flush tank. Scully Rubber Mfg. Co. 510,475, May 31; Serial No. 552,087.
Brass cocks, valves, elbows, etc. The Turner Brass Works. 77,497, Apr. 12, 1910. Republished May 31.
Chains. Link-Belt Company. 220,198, Nov. 2, 1926. Republished May 31.
Chains and chain links. Link-Belt Company. 322,474, Mar. 5, 1935. Republished May 31.
Chains, Drive, and conveyer chains. Link-Belt Company. 63,003, June 4, 1907. Republished May 31.
Chains, Drive, and conveyer chains. Link-Belt Company. 63,052, June 4, 1907. Republished May 31.
Chains, Drive, conveyer chains, and chain cables. Link-Belt Company. 63,503, June 25, 1907. Republished May 31.
Chains, Power, and chain links. Link-Belt Company. 319,888, Dec. 11, 1934. Republished May 31.
Coffee making apparatus. Cory Corporation. 510,200, May 31; Serial No. 534,090, published Feb. 1, 1949.
Couplings, Hose. Dixon Valve & Coupling Co. 510,240, May 31; Serial No. 532,432, published Feb. 15, 1949.
Culverts, Corrugated, plain conductor pipes, round corrugated conductor pipes, etc. Newport Rolling Mill Co. 211,692, Apr. 20, 1926. Republished May 31.
Fasteners and fastener parts and accessories, Quick-acting, self-locking. Dzus Fastener Co., Inc. 510,208, May 31; Serial No. 528,197, published Feb. 15, 1949.
Fixtures, Plumbing. W. A. Case and Son Manufacturing Company. 510,275, May 31; Serial No. 535,802, published Feb. 1, 1949.
Fixtures, Plumbing. W. A. Case and Son Manufacturing Company. 510,276, May 31; Serial No. 535,808, published Feb. 1, 1949.
Fixtures, Plumbing. W. A. Case and Son Manufacturing Company. 510,278-80, May 31; Serial Nos. 536,345-7, published Feb. 15, 1949.
Hangers, Door, door tracks and track brackets. Starline Inc. 417,487, Oct. 30, 1945. Republished May 31.
Heating materials. Crane Co. 293,974, May 10, 1932. Republished May 31.
Lock nuts and lock washers. Whittet-Higgins Company. 442,798, May 31; Serial No. 521,101, published Feb. 15, 1949.
Nozzles, Hose. A & A Sales Co. 439,375, June 22, 1948. Republished May 31.
Pipe fittings. The Brockway Company. 442,780, May 31; Serial No. 516,951, published Feb. 8, 1949.
Pipe fittings; highway guard rail fittings; and pole hardware specialties. Malleable Iron Fittings Company. 510,262, May 31; Serial No. 534,298, published Feb. 8, 1949.
Pipe, Thermally insulated metal. A. A. Durant. 510,189, May 31; Serial No. 520,688, published Feb. 1, 1949.
Screens, Well. Howard Smith Co. 510,221, May 31; Serial No. 529,413, published Feb. 1, 1949.
Separators, Fluid. Centrifix Corporation. 442,791, May 31; Serial No. 519,731, published June 15, 1948.
Supplies, Plumbing and steam fitting. Warren Webster & Company. 442,819, May 31; Serial No. 525,722, published Jan. 25, 1949.
Tire-chains. The Columbus McKinnon Chain Corporation. 442,772, May 31; Serial No. 510,424, published Feb. 8, 1949.
Track for garage and barn doors. Hunt, Helm, Ferris & Co. 183,840, May 6, 1924. Republished May 31.
Tubing, Rolled and extruded non-ferrous. Ampco Metal, Inc. 510,185, May 31; Serial No. 517,395, published Jan. 25, 1949.
Valves and parts thereof, Plug. Rockwell Manufacturing Company. 510,436, May 31; Serial No. 556,674, published Feb. 15, 1949.
Valves, Automatic cut-off. United Aircraft Products, Inc. 442,767, May 31; Serial No. 479,501, published Feb. 8, 1949.
Valves, faucets, and parts therefor. A. Rhodes. 434,584, Nov. 25, 1947. Republished May 31.
Valves, Gate, and globe valves. The Wm. Powell Company. 442,809-10, May 31; Serial Nos. 523,534-5, published Feb. 1, 1949.
Valves, Plumbing and steam-fitting, metal pipe and pipe fittings, etc. Metals Supply Company, Inc. 406,659, Apr. 18, 1944. Republished May 31.
Washers, Lock. Eaton Manufacturing Company. 510,473, May 31; Serial No. 551,877.
Washers, Lock. Eaton Manufacturing Company. 510,474, May 31; Serial No. 551,879.

CLASS 14

Alloys, Ferrous and nonferrous. General Plate Company. 193,051, Jan. 6, 1925. Republished May 31.
Copper sheet, copper in roll, copper wire, etc. Copper Range Company. 505,758, Jan. 18, 1949. Corrected. O. G. May 31.
Forgings, Metal. Lansdowne Steel & Iron Company. 439,994, July 13, 1948. Republished May 31.
Metal sheets, Corrugated, and plain metal sheets. The Newport Rolling Mill Company. 123,475, Nov. 12, 1918. Republished May 31.
Metal sheets, Corrugated, and plain metal sheets. Newport Rolling Mill Co. 212,103, Apr. 27, 1926. Republished May 31.
Metal sheets, Processed galvanised ferrous. The Newport Rolling Mill Co. 301,629, Nov. 18, 1941. Republished May 31.
Sheeting, Zinc coated iron and steel. The Newport Rolling Mill Company, Inc. 334,590, May 5, 1936. Republished May 31.

CLASS 15

Fuel, Liquid. Shell Oil Company. 324,610, May 21, 1935. Republished May 31.
Gasoline, kerosene, lubricating oil, etc. Pasotex Petroleum Company. 253,628, renewed Mar. 5, 1949. O. G. May 31.
Oil, Lubricating. Shell Oil Company. 332,292, Feb. 11, 1936. Republished May 31.
Oil, Lubricating, and transformer oil. Shell Oil Company, Incorporated. 383,815, Dec. 24, 1940. Republished May 31.
Oils, Fuel, and lubricating oils and greases. Appaline Oil Company. 254,154, renewed Mar. 12, 1949. O. G. May 31.
Oils, Lubricating. Shell Oil Company. 301,513, Mar. 7, 1933. Republished May 31.
Oils, Lubricating. The Singer Manufacturing Company. 74,992, re-renewed Aug. 24, 1949. O. G. May 31.

CLASS 16

Coverings in the nature of paint, Plastic wall. United States Gypsum Company. 254,389, renewed Mar. 26, 1949. O. G. May 31.
Enamels, Paint. The Sherwin-Williams Company. 510,313, May 31; Serial No. 540,910, published Feb. 15, 1949.
Liquid containing oil for use in mixing paints. James B. Sipe & Co. 221,440, Nov. 30, 1926. Republished May 31.
Paint and baking enamels, undercoaters, reducers, etc., Automotive synthetic. De Boom Paint Co. 510,302, May 31; Serial No. 540,048, published Jan. 25, 1949.
Paints and enamels, Ready-mixed. The Glidden Company. 259,361, renewed July 30, 1949. O. G. May 31.
Paints and paint enamels, Custom mixed. The Martin-Senour Company. 510,334, May 31; Serial No. 542,323, published Jan. 25, 1949.
Paints, and varnishes. Hancock Paint & Varnish Company. 256,549, renewed July 9, 1949. O. G. May 31.
Paints, Dry, paste, and ready-mixed, and varnishes. Hall Hardware Company. 305,819, Aug. 22, 1933. Republished May 31.
Paints, Ready mixed, dry paints, paste paints, etc. International Paint Company, Inc. 316,965, Sept. 11, 1934. Republished May 31.
Paints, Ready-mixed, stains, enamels, etc. The Fox Paint Company. 256,526, May 21, 1929. Republished May 31.
Paints, varnishes, enamels, etc. De Boom Paint Co. 510,301, May 31; Serial No. 540,044, published Jan. 25, 1949.
Varnishes, japans, varnish-oils, etc. The Cleveland Varnish Company. 67,886, Feb. 25, 1908. Republished May 31.
Varnishes, stains, and finishes. John Lucas & Company Incorporated. 213,941, June 8, 1926. Republished May 31.

Wall finish, Decorative, or calcimine in the nature of a paint. M. Ewing Fox Co., Inc. 510,232, May 31; Serial No. 530,302, published Jan. 11, 1949.

CLASS 19

Accessories, Automobile. Houde Engineering Corporation. 248,512-13, Oct. 23, 1928. Republished May 31.
Airplanes and structural parts. Boeing Airplane Company. 247,992, Oct. 9, 1928. Republished May 31.
Boats, Motor. The Electric Launch Company. 74,278, re-renewed June 29, 1949. O. G. May 31.
Brake blocks, Vehicular. I. Simon. 439,448, June 29, 1948. Republished May 31.

CLASS 21

Batteries, Storage. Van Camp Hardware & Iron Company. 255,436, renewed Apr. 23, 1949. O. G. May 31.
Condensers, Electrostatic. Condenser Corporation of America. 322,066, Feb. 26, 1935. Republished May 31.
Connectors, Electrical. Albert & J. M. Anderson Manufacturing Company. 437,320, Mar. 16, 1948. Republished May 31.
Electroplating apparatus and parts thereof. Hanson-Van Winkle-Munning Company. 258,325, renewed July 2, 1949. O. G. May 31.
Plugs and receptacles, Circuit breaking. The Pyle National Company. 268,987, Nov. 10, 1931. Corrected. O. G. May 31.
Signal amplifying and/or relaying apparatus, Electrical, etc. Photoswitch Incorporated. 431,183, July 15, 1947. Republished May 31.
Signalling apparatus, Electric, etc. Signal Engineering & Mfg. Co. 368,825, July 4, 1939. Republished May 31.
Toasters, Electric. Radiron Corporation. 438,127, Apr. 6, 1948. Republished May 31.

CLASS 22

Amusement apparatus, Coin-controlled. Exhibit Supply Company. 510,388, May 31; Serial No. 548,810, published Feb. 1, 1949.
Athletic balls. The Sun Rubber Company. 510,256-8, May 31; Serial Nos. 533,640-2, published Feb. 1, 1949.
Athletic equipment. W. J. Voit Rubber Corp. 510,267, May 31; Serial No. 534,492, published Jan. 11, 1949.
Badminton rackets. A. G. Spalding & Bros. Inc. 510,283, May 31; Serial No. 536,649, published Jan. 25, 1949.
Badminton rackets, squash rackets, tennis rackets, etc. A. G. Spalding & Bros. Inc. 510,319, May 31; Serial No. 541,040, published Feb. 1, 1949.
Bait, Artificial. Fred Arbogast and Company, Inc. 510,302-3, May 31; Serial Nos. 549,043-4, published Feb. 1, 1949.
Baseballs, baseball mitts, baseball gloves, etc. A. G. Spalding & Bros. Inc. 510,316, May 31; Serial No. 541,036, published Jan. 18, 1949.
Billiard balls. Albany Billiard Ball Company. 510,305, May 31; Serial No. 540,234, published Feb. 1, 1949.
Billiard balls. Albany Billiard Ball Company. 510,306, May 31; Serial No. 540,236, published Feb. 1, 1949.
Board game. J. S. Campen. 510,384, May 31; Serial No. 548,635, published Jan. 18, 1949.
Dolls. A. Le Blanc. 510,220, May 31; Serial No. 529,304, published Jan. 11, 1949.
Dolls. Sayco Doll Corporation. 442,761, May 31; Serial No. 501,092, published Jan. 11, 1949.
Fish line reels. R. E. Brown. 510,281, May 31; Serial No. 536,493, published Jan. 11, 1949.
Fish lures. Witch Fire Lures. 442,771, May 31; Serial No. 510,292, published Jan. 11, 1949.
Fish lures, Artificial. J. E. Clark. 510,167, May 31; Serial No. 499,823, published Jan. 25, 1949.
Fishing bobs. Frabill Manufacturing Company. 510,332, May 31; Serial No. 542,305, published Feb. 1, 1949.
Fishing lines. The H. & D. Folsom Arms Co. Inc. 510,385, May 31; Serial No. 548,652, published Feb. 1, 1949.
Fishing tackle. C. W. Scott. 442,797, May 31; Serial No. 520,772, published Feb. 1, 1949.
Footballs. A. G. Spalding & Bros. Inc. 510,315, May 31; Serial No. 541,035, published Jan. 18, 1949.
Game. Sargo Company. 400,637, Mar. 23, 1943. Republished May 31.
Games. E. H. Grundy. 442,781, May 31; Serial No. 516,978, published Jan. 11, 1949.
Golf balls. The Worthington Ball Company. 510,205, May 31; Serial No. 527,858, published Jan. 11, 1949.
Golf balls and golf clubs. A. G. Spalding & Bros. Inc. 510,317, May 31; Serial No. 541,037, published Jan. 18, 1949.
Golf balls, golf clubs, tennis rackets, etc. A. G. Spalding & Bros. Inc. 510,318, May 31; Serial No. 541,038, published Jan. 18, 1949.
Golf clubs. K. Smith. 510,307, May 31; Serial No. 540,326, published Jan. 18, 1949.
Pieces of a chess game. Kingsway, Inc. 510,402, May 31; Serial No. 549,937, published Feb. 1, 1949.
Plastic materials adapted to be blown into hollow bodies and used for amusement or toy purposes. Industrial Lacquer and Chemical Corporation. 510,323, May 31; Serial No. 541,299, published Jan. 18, 1949.
Playing cards. The United States Playing Card Company. 510,321, May 31; Serial No. 541,224, published Feb. 1, 1949.
Propellers for toy power driven airplanes. R. J. Roberts. 510,166, May 31; Serial No. 519,138, published Feb. 1, 1949.
Skis, ski-poles, ski-bindings, etc. L. A. Jonssons Skidfabriks A. B. 442,775, May 31; Serial No. 513,260, published Jan. 11, 1949.
Sleds, Coasting. S. L. Allen & Co., Inc. 252,134, Jan. 22, 1929. Republished May 31.
Strings for tennis, badminton and squash rackets. Armour and Company. 510,204, May 31; Serial No. 527,767, published Jan. 18, 1949.
Strings for tennis, badminton, and squash rackets. Armour and Company. 510,206, May 31; Serial No. 527,870, published Jan. 18, 1949.
Tennis rackets, badminton rackets, squash rackets, etc. A. G. Spalding & Bros. Inc. 510,326, May 31; Serial No. 541,996, published Jan. 18, 1949.
Toy. L. K. B. Manufacturing Co. 510,219, May 31; Serial No. 529,392, published Jan. 11, 1949.
Toy golf games. Moen & Patton, Inc. 510,368, May 31; Serial No. 546,310, published Jan. 4, 1949.
Toys. Bois Toys, Incorporated. 510,284, May 31; Serial No. 536,752, published Jan. 11, 1949.
Toys. Super-Cyclone, Inc. 442,770, May 31; Serial No. 510,285, published Feb. 1, 1949.
Toys, Mechanical. Brenner Manufacturing Company. 510,175, May 31; Serial No. 511,859, published Jan. 11, 1949.

CLASS 23

Automatic water systems. Crane Co. 303,158, May 16, 1933. Republished May 31.
Cast-metal machinery-wheels. Link-Belt Company. 107,494, Dec. 7, 1915. Republished May 31.
Conveying machinery, Endless chain, etc. Link-Belt Company. 83,806, July 2, 1907. Republished May 31.
Conveyors, trolley conveyors, conveyor systems, and parts thereof. Link-Belt Company. 279,454, Jan. 13, 1931. Republished May 31.
Cups, Grease. Link-Belt Company. 206,187, Nov. 24, 1925. Republished May 31.

LIST OF REISSUE PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 31ST DAY OF MAY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Armstrong Cork Company, assignee: *See*—
Carman, Frank H.

Carman, Frank H., Washington, D. C., assignor of Armstrong Cork Company, Lancaster, Pa. Textile machine unit for drafting fibers. Re. 23,117, May 31.

Clayton, Benjamin, assignee: *See*—
Ewing, Frederick J.

Ewing, Frederick J., Arcadia, Calif., assignor, by mesne assignments, to B. Clayton, Houston, Tex., doing business as Refining, Unincorporated. Process for refining animal and vegetable oils. Re. 23,118, May 31.

Fischer, Alfred, Bronx, N. Y., assignor to Nuodex Products Co., Inc., Elizabeth, N. J. Oil-soluble drier metal salt compositions. Re. 23,119, May 31.

Nuodex Products Co., Inc., assignee: *See*—
Fischer, Alfred.

Refining, Unincorporated, assignee: *See*—
Ewing, Frederick J.

LIST OF PLANT PATENTEES

Brownell, Josephine D., Little Compton, R. I. Rose plant. 841, May 31.

Brownell, Josephine D., Little Compton, R. I. Rose plant. 842, May 31.

Brownell, Josephine D., Little Compton, R. I. Rose plant. 843, May 31.

Byrum, Roy L., assignor to Joseph H. Hill Company, Richmond, Ind. Rose plant. 844, May 31.

Hill, Joseph H., Company, assignee: *See*—
Byrum, Roy L.

LIST OF DESIGN PATENTEES

Abrahamson, Charles M.: *See*—
Karstadt, Clarence, and Abrahamson.

Acco Mfg. Co., Inc., assignee: *See*—
Corbi, Alfred.

All-Steel Equipment, Inc., assignee: *See*—
Karstadt, Clarence, and Abrahamson.

American Machine & Foundry Company, assignee: *See*—
Stammler, John F.

Artolier Corporation, assignee: *See*—
Silberhartz, Philip.

Baron, Leonard, Wauwatosa, assignor to Hobar Corporation, Milwaukee, Wis. Container cap. 153,912, May 31.

Bartlett, Thomas S., London, Ontario, Canada. Dishwashing machine. 153,913, May 31.

Barton, George G., assignor to Hartmann Company, Racine, Wis. Hand luggage case. 153,914, May 31.

Bell Telephone Laboratories, Incorporated, assignee: *See*—
Dreyfuss, Henry, and Hose.

Bendix Home Appliances, Inc., assignee: *See*—
Boldt, Melvin H.

Bequette, Bernell J., Arvada, Colo. Belt for wearing apparel. 153,915, May 31.

Berg, Sidney H., East Orange, N. J., assignor to Loft Candy Corporation, Long Island City, N. Y. Container for candy or the like. 153,916, May 31.

Berland Associates, assignee: *See*—
Berlant, Emmanuel.

Berlant, Emmanuel, Culver City, assignor to Berland Associates, Los Angeles, Calif. Dictating machine or similar article. 153,917, May 31.

Bernstein, Milton W., assignor, by mesne assignments, to Foster Grant Co., Inc., Leominster, Mass. Comb holder or the like. 153,918, May 31.

Berra, Albert, Eveleth, Minn. Flower basket. 153,919, May 31.

Boldt, Melvin H., assignor to Bendix Home Appliances, Inc., South Bend, Ind. Washing machine. 153,920, May 31.

Boldt, Melvin H., assignor to Bendix Home Appliances, Inc., South Bend, Ind. Washing machine cabinet. 153,921, May 31.

Brignola, Nicholas F., Troy, N. Y. Ear spatula. 153,922, May 31.

Brown, Paul H., Sr., Detroit, Mich. Laundry tongs. 153,923, May 31.

Campus Jewelry Products, Inc., assignee: *See*—
Lowe, George K.

Clark Sanding Machine Company, assignee: *See*—
Petersen, William L.

Continental Optical Company, Inc., assignee: *See*—
Lauber, John A.

Corbi, Alfred, Pawtucket, R. I., assignor to Acco Mfg. Co., Inc. Bracelet or similar article. 153,924, May 31.

Cornell, Gertrude: *See*—
Marossi, Maurice, and Cornell.

Count-Rite Industries, Inc., assignee: *See*—
Nelson, Robert D.

Crall, James W.: *See*—
Higgs, Melvin, and Crall.

Dehmel, Richard C., Summit, N. J. Flight trainer hood. 153,925, May 31.

Dixon, Harry N., North Hollywood, Calif. Collar cuff iron. 153,926, May 31.

Dr. Pepper Company, assignee: *See*—
Hoople, Warner W.

Dreyfuss, Henry, Pasadena, Calif., and R. H. Hose, Mountainside, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Desk stand for a hand telephone. 153,927, May 31.

Dreyfuss, Henry, Pasadena, Calif., and R. H. Hose, Mountainside, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Desk stand for a hand telephone. 153,928, May 31.

Ekco Products Company, assignee: *See*—
Wagner, Franz.

Fleishman, Myron, Bronx, N. Y. Toy pistol. 153,929, May 31.

Foose, Robert P., assignee: *See*—
Treiss, Herman G.

Fox, Charles A., New York, N. Y. Combined billfold, key case, and coin purse. 153,930, May 31.

Fox Products Company, assignee: *See*—
Medlar, Lewis A.

Francis, Lynn M., Detroit, Mich. Automobile carrying trailer. 153,931, May 31.

Fraser, John H., Marietta, Ohio. Chair. 153,932, May 31.

Gilmore, James J., Sanford, N. C. Chest. 153,933, May 31.

Globe Oil Tools Company, assignee: *See*—
Goodwin, John S.

Goodner, Monroe H., Glendale, Calif., assignor to Stephenson Corporation, Red Bank, N. J. Combination resuscitator, inhalator, and aspirator cabinet. 153,934, May 31.

Goodwin, John S., Whittier, assignor to Globe Oil Tools Company, Los Nietos, Calif. Mobile race control gate. 153,935, May 31.

Goodwin, John S., Whittier, Calif., assignor to Globe Oil Tools Company. Mobile race control gate. 153,936, May 31.

Grabol, Michael, New York, N. Y. Baby's bottle holder or the like. 153,937, May 31.

Graham, Elizabeth N., New York, N. Y. Combined eye shadow and rouge case. 153,938, May 31.

Grant, Foster, Co., Inc., assignee: *See*—
Bernstein, Milton W.
Ulvad, Bernard.

Gunther, Frederick F., assignor to Helmco, Inc., Chicago, Ill. Beverage dispenser or similar article. 153,939, May 31.
Hartmann Company, assignee: *See*—
Barton, George G.
Helmerl, Elsmer M.: *See*—
Watkins, Harold A., and Helmerl.
Helmco, Inc., assignee: *See*—
Gunther, Frederick F.
Higgs, Melvin, Pomona, and J. W. Crail, Los Angeles, Calif. Chair-arm tray. 153,940, May 31.
Hobar Corporation, assignee: *See*—
Haron, Leonard.
Hoople, Warner W., assignor to Dr. Pepper Company, Dallas, Tex. Bottled beverage cooler. 153,941, May 31.
Hose, Robert H.: *See*—
Dreyfuss, Henry, and Hose.
Hotpoint Inc., assignee: *See*—
Sandin, Ray C.
Hussey, Frederick K., New York, N. Y. Portable signal light for motor vehicles or similar article. 153,942, May 31.
Jackson, Adelbert J., Kalamazoo, Mich. Game board. 153,943, May 31.
Jargstorff, Anneliese, Flushing, N. Y. Ash tray. 153,944, May 31.
Jung, Albert H., Flushing, assignor to Victor Industries Corporation, Brooklyn, N. Y. Container cap. 153,945, May 31.
Jung, Albert H., Flushing, assignor to Victor Industries Corporation, Brooklyn, N. Y. Container cap. 153,946, May 31.
Jung, Albert H., Flushing, assignor to Victor Industries Corporation, Brooklyn, N. Y. Container cap. 153,947, May 31.
Jung, Albert H., Flushing, assignor to Victor Indnatries Corporation, Brooklyn, N. Y. Container cap. 153,948, May 31.
Jung, Albert H., Flushing, assignor to Victor Industries Corporation, Brooklyn, N. Y. Container cap. 153,949, May 31.
Jung, Albert H., Flushing, assignor to Victor Industries Corporation, Brooklyn, N. Y. Container cap. 153,950, May 31.
Jung, Albert H., Flushing, assignor to Victor Industries Corporation, Brooklyn, N. Y. Container cap. 153,951, May 31.
Karstadt, Clarence, Glen Ellyn, and C. M. Abrahamson, Aurora, Ill., assignors to All-Steel Equipment, Inc. Desk or similar article. 153,952, May 31.
Kovacs, John J.: *See*—
Smoleroff, Henry J., and Kovacs.
Lane, Paul W., San Rafael, Calif. Trailer. 153,953, May 31.
Lange, Henry F., Cleveland, Ohio. Corner piece. 153,954, May 31.
Lauber, John A., assignor to Continental Optical Company, Inc., Rochester, N. Y. Pair of spectacles. 153,955, May 31.
Lay, John L., Ogden, Pa. Screw cap. 153,956, May 31.
Linnard, Irvin R., Montclair, N. J. Rack. 153,957, May 31.
Lipman, Julius, New York, N. Y. Dress ensemble. 153,958, May 31.
Loft Candy Corporation, assignee: *See*—
Berg, Sidney H.
Loser, Frank T., Oak Park, Ill. Dolly. 153,959, May 31.
Lowe, George K., Warwick, assignor to Campus Jewelry Products, Inc., Providence, R. I. Cuff link or the like. 153,960, May 31.
Malkin, Simon, New York, N. Y. Record display counter. 153,961, May 31.
Manchester Silver Company, Inc., assignee: *See*—
McAlpine, Edward B.
Mankouski, Charles, Newport, N. Y. Ash tray. 153,962, May 31.
Maroesi, Maurice, and G. Cornell, New York, N. Y. Doll or similar article. 153,963, May 31.
McAlpine, Edward B., Cranston, R. I., assignor to Manchester Silver Company, Inc. Spoon or similar article. 153,964, May 31.
McAlpine, Edward B., Cranston, R. I., assignor to Manchester Silver Company, Inc. Spoon or similar article. 153,965, May 31.
McDougall, Laurance, Goliad, Tex. Table ornament or similar article. 153,966, May 31.
McGraw Electric Company, assignee: *See*—
Reinecke, Jean O.
Medlar, Lewis A., Orsland, assignor to Fox Products Company, Philadelphia, Pa. Portable battery charger. 153,967, May 31.
Mid-West Bottle Cap Co., assignee: *See*—
Sonnenberg, Rudolph.
Morrison, Willard L., Jr., assignor to West Bend Aluminum Co., West Bend, Wis. Pressure cooker or the like. 153,968, May 31.
Murray, William H., Honston, Tex. Taxi top light. 153,969, May 31.
Nachman, Joseph, Philadelphia, Pa. Shirt. 153,970, May 31.
Nelson, Charles D., Jr., Arlington, Va. Taxicab cruising light. 153,971, May 31.
Nelson, Charles D., Jr., Arlington, Va. Taxicab cruising light. 153,972, May 31.
Nelson, Robert D., assignor to Count-Rite Industries, Inc., Chicago, Ill. Poker chip counter. 153,973, May 31.
Noma Electric Corporation, assignee: *See*—
Porter, Harry L.
Petersen, William L., West New York, N. J., assignor to Clarke Sanding Machine Company, Muskegon, Mich. Rug scrubbing machine. 153,974, May 31.
Petrus, Lanrits, New York, N. Y. Confectionery dispensing machine. 153,975, May 31.
Porter, Harry L., Cincinnati, Ohio, assignor to Noma Electric Corporation, New York, N. Y. Electric range. 153,976, May 31.
Porter, Harry L., Cincinnati, Ohio, assignor to Noma Electric Corporation, New York, N. Y. Gas range. 153,977, May 31.
Queen, Chester V., Jeffersonville, Ind., assignor to Wheelmaster Corporation, Owensboro, Ky. Tricycle step plate. 153,978, May 31.
Ranahan, Delmar J., Wilmington, Calif. Toy bird. 153,979, May 31.
Raschke, William L., Fort Worth, Tex. Artificial bait. 153,980, May 31.
Reinecke, Jean O., Oak Park, assignor to McGraw Electric Company, Elgin, Ill. Adjusting knob. 153,981, May 31.
Rosenthal, Ethel, New York, N. Y. Dress. 153,982, May 31.

Womack, Analee, Fort Worth, Tex. Game board. 154,011, May 31.
Zimmermann, Louis F., Chicago, Ill. Cocktail recipe guide. 154,012, May 31.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 31ST DAY OF MAY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Adams, Mosel A., Evangeline, La. Salt shaker. 2,471,507, May 31.
Adams, Senator W., Birmingham, Ala. Kitchen cabinet with table forming front. 2,471,508, May 31.
Adams, William H., Jr., and H. H. Lebach, assignors to Havey Corporation, Newark, Del. Making furfuryl alcohol resinous products and the product. 2,471,600, May 31.
Adler, Charles, Cincinnati, Ohio. Venetian blind. 2,471,710, May 31.
Aero Supply Mfg. Co., Inc., assignee: *See*—
Downey, George T.
Agriculture, the United States of America as represented by the Secretary of, assignee: *See*—
Reeves, Richard E., and Giddens.
Ahler, Georges, and E. Tourarion, Paris, France, assignors to International Standard Electric Corp., New York, N. Y. Neutrodyning for short waves. 2,471,401, May 31.
Air King Products Company, Inc., assignee: *See*—
Lobel, Seymour.
Air-Maze Corporation, assignee: *See*—
Hanneman, Robert G.
Schaaf, Oliver H.
Air Preheater Corporation, The, assignee: *See*—
Yerrick, William D., and Vickland.
Aktiengesellschaft Brown, Boveri & Cie, assignee: *See*—
Diebold, Eduard.
Alba, Ralph T.: *See*—
Wallerstein, James S., Farber, and Alba.
Alba, Ralph T., and J. S. Wallerstein, assignors, by mesne assignments, to Wallerstein Company, Inc., New York, N. Y. Clarifying and purifying vegetable beverages. 2,471,474, May 31.
Albright, Robert B., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Variable-reslstance phonograph pickup. 2,471,601, May 31.
Alfisi, Giuseppe, Springfield, Mass. Signaling mailbox. 2,471,919, May 31.
Allied Chemical & Dye Corporation, assignee: *See*—
Fricke, Edwin F.
Allis-Chalmers Manufacturing Company, assignee: *See*—
Meyer, Walter A.
Allmanna Svenska Elektriska Aktiebolaget, assignee: *See*—
Schmidt, Wilhelm G.
Altenpohl, William F., Philadelphia, Pa. Automatic weighing and sorting machine. 2,471,711, May 31.
Aluminum Company of America, assignee: *See*—
Menking, Helns.
American Bridge Company, assignee: *See*—
Lucas, Fred H., and Rhodes.
American Chemical Paint Company, assignee: *See*—
Snyder, Eugene.
Spruance, Frank P., Jr.
American Cyanamid Company, assignee: *See*—
Barthel, Justus C., Davis, and Poor.
Conn, Robert C.
Conn, Robert C., and Weiss.
American Optical Company, assignee: *See*—
Grant, Charles T.
Lowber, David D., and Peters.
American Pearl Button Co., assignee: *See*—
Palmer, Rufus N.
American Telephone and Telegraph Company, assignee: *See*—
Bacon, Walter M., and Walker.
American Wheelabrator & Equipment Corporation, assignee: *See*—
Dorian, Morton I.
Anderson, Karl V., assignor to Nordberg Manufacturing Co., Milwaukee, Wis. Inlet and exhaust valve mechanism with associated turbocharger. 2,471,509, May 31.
Anderson, Lloyd L.: *See*—
Mark, Vennice E., and Anderson.
Anderson, Raymond T., Lakewood, assignor, by mesne assignments, to The V. D. Anderson Company, Cleveland, Ohio. Continuous press. 2,471,920, May 31.
Anderson, V. D., Company, The, assignee: *See*—
Anderson, Raymond T.
Andresen, Harold, assignee: *See*—
Frazier, Orville Z.
Andrus, Orrin E., Altadena, Calif., assignor to A. O. Smith Corporation, Milwaukee, Wis. Hot-water tank connection. 2,471,475, May 31.
Anish, Alfred W., Vestal, assignor to General Aniline & Film Corporation, New York, N. Y. Trinuclear iminol cyanine dyes. 2,471,906, May 31.

Anthony, John B., Berkeley, assignor to Kaiser Engineers, Oakland, Calif. Panel. 2,471,510, May 31.
Ark-Les Switch Corporation, assignee: *See*—
Betcheller, Hugh W.
Arnold, Carl S., Cullman, Ala., assignor to Emery Industries, Inc., Cincinnati, Ohio. Dry cleaning. 2,471,667, May 31.
Arnold, Philip M., Bartlesville, Okla., assignor to Phillips Petroleum Company. Treatment of hydrocarbons. 2,471,602, May 31.
Ashdown, Thomas J., East Cleveland, assignor to Thompson Products, Inc., Cleveland, Ohio. Spring loaded collet chucking assembly. 2,471,921, May 31.
Automatic Temperature Control Co., Inc., assignee: *See*—
Hunt, Walter L.
Automatic Voting Machine Corporation, assignee: *See*—
Gustaveon, Alvin N.
Axe, William N., Bartlesville, Okla., assignee to Phillips Petroleum Company. Production of aromatic derivatives. 2,471,922, May 31.
Axelrod, Solomon, New York, N. Y. Basketball toy paddle. 2,471,511, May 31.
Axford, Luther, Clifton, N. J., assignor to United States Rubber Company, New York, N. Y. Improving the tensile strength of grey cotton yarn. 2,471,554, May 31.
Bacon, Walter M., New York, N. Y., and C. R. Walker, Jersey City, N. J., said Bacon assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., and said Walker assignor to American Telephone and Telegraph Company. Intercommunication teletypewriter system. 2,471,712, May 31.
Bailey Meter Company, assignee: *See*—
Dickey, Paul S.
Baker, Albert R., Gordon, Nebr. Tractor type hayrake. 2,471,718, May 31.
Baker, John H., Schenectady, N. Y., assignor to General Electric Company. Collector ring assembly. 2,471,808, May 31.
Baker, Malvern S., Muskegon, assignor to Continental Motors Corporation, Detroit, Mich. Transmission. 2,471,668, May 31.
Baker, Malvern S., North Muskegon, assignor to Continental Motors Corporation, Muskegon, Mich. Power-transmitting device. 2,471,669, May 31.
Baker Manufacturing Company, The, assignee: *See*—
Washbond, Harry H., and Beattie.
Baker-Raulang Company, The, assignee: *See*—
Hawkins, Paul E.
Baldwin Locomotive Works, The, assignee: *See*—
Gibbons, Chester H.
Ruge, Arthur C.
Staples, Dana R.
Balmer, Reinhold F.: *See*—
Peck, Kenneth L., and Balmer.
Baltor, Bella M., New York, N. Y. Device for straightening toes. 2,471,997, May 31.
Barlock, Everett W., assignor of one-half to P. S. Reimann, Ann Arbor, Mich. Bottle holder. 2,471,512, May 31.
Barthel, Justus C., Stamford, A. R. Davis, Riverside, and E. N. Poor, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y. Stabilized dry rosin size composition. 2,471,714, May 31.
Bartlett, Kenneth M.: *See*—
Gibian, Emil F., and Bartlett.
Batcheller, Hugh W., Newton Highlands, assignor to Ark-Les Switch Corporation, Watertown, Mass. Electric connector with spring wire. 2,471,923, May 31.
Bates, Albert H., Rockford, Ill. Piston ring gap-aligning device. 2,471,402, May 31.
Bau, Robert G., North Hollywood, Calif. Dispenser with flow restricting valve. 2,471,852, May 31.
Bauman, William C.: *See*—
Hunter, Melvin J., and Bauman.
Beach, Leland K., Mountainside, and G. C. Connolly, Elizabeth, N. J., assignors to Standard Oil Development Company. Catalytic partial oxidation process. 2,471,853, May 31.
Beatrice, Gabriel C., Shrewsbury, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Filling thread cutter for weft replenishing looms. 2,471,609, May 31.
Beattie, Orville R.: *See*—
Washbond, Harry H., and Beattie.
Beck, Thomas M.: *See*—
Toy, Arthur D. F., and Beck.
Becker, Abraham S., and V. I. Becker, Los Angeles, Calif. Brassiere. 2,471,670, May 31.
Becker, Victor I.: *See*—
Becker, Abraham S., and V. I.

Beckert, John H., Los Angeles, Calif. Air circulating fan. 2,471,671, May 31.

Bécote, Antoine, St. Etienne, France. Device for producing rectilinear movement of the optical assembly in cinematograph apparatus. 2,471,715, May 31.

Bell, Leon M., Portsmouth, Ohio; P. W. Bell, executrix of said L. M. Bell, deceased. Barrel sput. 2,471,716, May 31.

Bell Telephone Laboratories, Incorporated, assignee: *See*—
Bacon, Walter M., and Walker.
Bryant, Newton W.
Edson, William A., and Kannenberg.
Lukacs, Joseph J., and Rippere.
Mason, Warren P.
Milioche, Herman A.
Potter, James A.

Bell, Welch, executrix: *See*—
Bell, Leon M.

Bendix Aviation Corporation, assignee: *See*—
MacCallum, Alan M.
Schneck, Frederick W.
Stamper, Hamilton A.

Benes, Gordon J., assignor to Enco Mfg. Co., Chicago, Ill. Turret-type tool post. 2,471,403, May 31.

Bennett, Walter, assignor to Utility Trailer Manufacturing Company, Los Angeles, Calif. Trailer coupling. 2,471,555, May 31.

Benning, Anthony F., Woodstown, and F. B. Downing, Carney's Point, N. J., assignors to Kinetic Chemicals, Inc., Wilmington, Del. Process and apparatus for transmitting energy. 2,471,476, May 31.

Berggren, Detlof E. Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Column-stand for supporting apparatus vertically movable along the column, particularly X-ray apparatus. 2,471,998, May 31.

Bies, Peter H., and F. M. Cruthers, McKeesport, Pa. Fifth wheel lock for trailers. 2,471,554, May 31.

Bird, William C., assignor to Pro-phy-lac-tic Brush Company, Northampton, Mass. Metal-plated plastic brush. 2,471,555, May 31.

Birkle, Carol B., Sheboygan, Wis. Diaper holder. 2,471,556, May 31.

Birtman Electric Company, assignee: *See*—
Howard, Frank S.
Nelson, Ray M.
Sparklin, Charles H.

Bishop, Arthur E. J., assignor to National Motor Springs Pty. Limited, Alexandria, near Sydney, New South Wales, Australia. Retractable mounting and locking device for the wheels of aircraft. 2,471,603, May 31.

Bishop, Willard H., Garrettsville, Ohio. Oil seal removing tool. 2,471,557, May 31.

Black, Sivalls & Bryson, Inc., assignee: *See*—
Kimmell, Garman G.

Blair, Craig A., Hackettstown, N. J., assignor to "X" Laboratories, Inc., New York, N. Y. Leak-stopping compositions. 2,471,856, May 31.

Bleakney, William M., L. F. Zielinski, and C. M. Ede, assignors to Lockheed Aircraft Corporation, Burbank, Calif. Flutter damper. 2,471,857, May 31.

Bloomfield, John J., assignor to Lockheed Aircraft Corporation, Burbank, Calif. Brake cooling means. 2,471,858, May 31.

Boberg, Irving E., Chicago, Ill., assignor to Chicago Bridge & Iron Company. Seal for floating roofs. 2,471,404, May 31.

Bogle, Aubrey B., Highland Park, Mich. Conveyer locking and aligning system. 2,471,513, May 31.

Bolesky, John D., assignor to Metals & Controls Corporation, Attleboro, Mass. Thermal relay. 2,471,924, May 31.

Bolesky, John D., assignor to Metals & Controls Corporation, Attleboro, Mass. Thermal switch. 2,471,925, May 31.

Bolt, Robert O.: *See*—
McBee, Earl T., Bolt, and Tebbe.

Bolta Company, The, assignee: *See*—
Halbach, Ernest W.

Bonalumna, Ernest L.: *See*—
Rossi, Ouido J., and Bonalumna.

Bonnand, Henri, Viroflay, assignor to L'Air Liquide, Societe Anonyme pour l'Etude et l'Exploitation des Procedes Georges Claude, Paris, France. Piston packing. 2,471,477, May 31.

Book Machinery Company Limited, The, assignee: *See*—
French, Lionel J. B. R.

Boos, Adolph, Elmhurst, assignor to John Chatillon & Sons, New York, N. Y. Cable tensiometer. 2,471,999, May 31.

Booth, James H., Detroit, Mich., assignor to Thompson Products, Inc., Cleveland, Ohio. Joint assembly. 2,471,672, May 31.

Borek, William S., Worcester, Mass. Support and guard for accordions. 2,471,926, May 31.

Borg-Warner Corporation, assignee: *See*—
La Barre, Dwight.
Wichorek, Edmond F.

Bortnick, Newman M., Philadelphia, and D. J. Butterbaugh, Abington, assignors to Rohm & Haas Company, Philadelphia, Pa. Preparation of methacrylonitrile from α-aminoisobutyraldoximes. 2,471,927, May 31.

Bortnick, Newman M., and G. W. Cannon, assignors to Rohm & Haas Company, Philadelphia, Pa. Preparation of methacrylonitrile. 2,471,928, May 31.

Bosshard, Werner: *See*—
Hartmann, Max, and Bosshard.

Bowen, Thomas H., assignor to James R. Kearney Corporation, St. Louis, Mo. Electrical jumper line and clamp therefor. 2,472,000, May 31.

Boyer, Charles F., Allentown, Pa. Safety device for pneumatic tools. 2,471,604, May 31.

Boyar, Ralph K., assignor to Designers for Industry, Inc., Cleveland, Ohio. Hair drier. 2,471,405, May 31.

Bradley, Allen, Company, assignee: *See*—
Thomson, Homer G.

Bradley, William H., assignor to Horton Manufacturing Company, Fort Wayne, Ind. Ironing machine control mechanism. 2,471,717, May 31.

Bramberry, Harry M., Sr., assignee: *See*—
Jones, Cerryw F.

Brandell, Elmer, assignee: *See*—
Neal, Ernest C.

Branson, Charles D., Knoxville, Tenn., assignor to Robertshaw-Fulton Controls Company. Safety type thermostat. 2,471,514, May 31.

Brealt, Delphis C., Lowell, Mass. Pressure regulating valve. 2,471,859, May 31.

Breck, Lawrence W., Cleveland, Ohio. Antifreeze appliance. 2,471,718, May 31.

Breitenstein, Victor W., assignor to Illinois Testing Laboratories, Inc., Chicago, Ill. Heater controlling circuit. 2,471,929, May 31.

Breuow, Albert B. assignee: *See*—
Zuckerman, Samuel G.

Brigham, Nelson E., Arlington, assignor to Worthington Pump and Machinery Corporation, Harrison, N. J. Reciprocating pump. 2,471,860, May 31.

Brightman, Earl: *See*—
Bonine, William K., Jr., and Brightman.

Brinkmann, Guenther, assignor to Ex-Cell-O Corporation, Detroit, Mich. Grinding machine. 2,471,406, May 31.

Britten, Edwin F., Jr., Short Hills, assignor to Monroe Calculating Machine Company, Orange, N. J. Ship's log transmission regulator. 2,471,930, May 31.

Broese, Johannes J., Delft, Netherlands, assignor to Shell Development Company, San Francisco, Calif. Pressure controlled injection valve. 2,471,605, May 31.

Bromtt, Wilgus S., Indianapolis, Ind., and H. Montague, Lexington, Ky. Automatic welder's hood control. 2,471,719, May 31.

Bronk, Lester B.: *See*—
Liebhafsky, Herman A., and Bronk.

Brooke, Norman E., Washington, D. C. Weed slasher. 2,471,720, May 31.

Brookfield, Donald W., assignor to Brookfield Engineering Laboratories, Incorporated, Sharon, Mass. Toolholder. 2,472,040, May 31.

Brookfield Engineering Laboratories, Incorporated, assignee: *See*—
Brookfield, Donald W.

Brown, George B., and J. Epstein, Princeton, N. J., assignors to Radio Corporation of America. Antenna. 2,471,815, May 31.

Brown, Robert O.: *See*—
Kimball, Mary H., Harrel, and Brown.

Brueckner, Karl K., assignor to A. O. Smith Corporation, Milwaukee, Wis. Flexible electrode for welding. 2,471,478, May 31.

Bryant, Newton W., Chatham, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Plan position indicating system and method. 2,471,516, May 31.

Budd Company, The, assignee: *See*—
Callender, Edwin M.
Davies, Henry R.
Davies, Richard S.
Manning, Matthew J., and Eisen.
Van Sciver, Herbert D., II.

Budig, Josef, Elmont, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Chuck. 2,471,407, May 31.

Buhoveckey, Michael, Cleveland, Ohio. Paintbrush protector. 2,472,001, May 31.

Bulldog Electric Products Company, assignee: *See*—
Platts, Elwood T.

Bunch, Benjamin, assignee: *See*—
Bunch, Fred W.

Bunch, Emily E., administratrix, assignee: *See*—
Bunch, Fred W.

Bunch, Fred W., Green Bay, Wis., deceased; E. B. Bunch, administratrix, assignor of thirty-three and one-third per cent to E. E. Bunch, Green Bay, thirty-three and one-third percent to F. W. Bunch, Jr., and thirty-three and one-third per cent to B. Bunch, Eau Claire, Wis. Sanitary drinking glass cleaner. 2,471,721, May 31.

Bunch, Frederick W., Jr., assignee: *See*—
Bunch, Fred W.

Burcher, George E., Jr., Newport News, Va. Carriage. 2,471,558, May 31.

Burne, Bruce, Los Angeles, Calif. Clothespin. 2,471,606, May 31.

Busignies, Henri G., Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation. Radio obstacle detection apparatus. 2,471,408, May 31.

Busignies, Henri G., Forest Hills, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Indicating tube system. 2,471,409, May 31.

Butler, John M.: *See*—
Seymour, Raymond B., and Butler.

Butterbaugh, Darrel J.: *See*—
Bortnick, Newman M., and Butterbaugh.

C & D Batteries, Inc., assignee: *See*—
Rittenhouse, John, and Peters.

C-O-Two Fire Equipment Co., assignee: *See*—
Cabusac, Clarence N.

Cabes, Lucien A. B.: *See*—
Deakin, Gerald, Hatton, and Cabes.

Cadwallader, Robert, Detroit, assignor to Chrysler Corporation, Highland Park, Mich. Door construction receiving slidable window. 2,471,810, May 31.

Cadwallader, Robert, Detroit, assignor to Chrysler Corporation, Highland Park, Mich. Door construction. 2,471,811, May 31.

Cahn, Frank J., assignor to The Emulsol Corporation, Chicago, Ill. Testing of solutions. 2,471,861, May 31.

Cahusac, Clarence N., assignor to C-O-Two Fire Equipment Co., Newark, N. J. Breakable plate switch controlling mechanism. 2,471,410, May 31.

Calkin, Frank G., Glen Rock, assignor to Finch Telecommunications, Inc., Passaic, N. J. Facsimile recording papers. 2,471,607, May 31.

Callender, Edwin M., Cynwyd, assignor to The Budd Company, Philadelphia, Pa. Electrical control system. 2,472,043, May 31.

Caillite Tungsten Corporation, assignee: *See*—
Kurtz, Jacob.

Campbell, Donald A., Cleveland, Ohio. Extensible figure wheeled toy. 2,471,722, May 31.

Candor, Robson E., Oakwood, assignor to General Motors Corporation, Dayton, Ohio. Time and temperature controller for domestic appliances. 2,471,862, May 31.

Cannon, George W.: *See*—
Bortnick, Newman M., and Cannon.

Cannon, Melvin C.: *See*—
Lester, Raymond H., and Cannon.

Cannon, Richard L., Spokane, Wash. Fishing reel. 2,471,723, May 31.

Carnegie-Illinois Steel Corporation, assignee: *See*—
Lucas, Fred H., and Rhodes.
Mercer, David L.

Castro, René, Ugine, and A. Lebet, Albertville, assignors to Societe d'Electro-Chimie, d'Electro-Metallurgie et des Acieries Electriques d'Ugine, Paris, France. Welding electrode for hard facing. 2,471,931, May 31.

Caswell, Arthur S., assignor to I. T. E. Circuit Breaker Company, Philadelphia, Pa. Circuit breaker contact construction. 2,471,608, May 31.

Celanese Corporation of America, assignee: *See*—
Roberts, Robert P., and Jones.

Chaffee, Edmund L., Milwaukee, Wis. Machine for separating spent hops from wort. 2,471,517, May 31.

Chain Belt Company, assignee: *See*—
Fleischmann, George A.

Chance, A. B., Company, assignee: *See*—
Hubbard, David C.

Chaplin, Merle P., South Portland, Maine. Molded pulp apparatus and method. 2,471,932, May 31.

Charbonneau, Allan P., Wauwatosa, assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Electric immersion heater. 2,471,609, May 31.

Chatillon, John, & Sons, assignee: *See*—
Boos, Adolph.

Chemical Construction Corporation, assignee: *See*—
Streisoff, Samuel.

Chicago Bridge & Iron Company, assignee: *See*—
Boberg, Irving E.

Chicago Rawhide Manufacturing Company, assignee: *See*—
Gardner, Allen F.

Christensen, Carl A., Milwaukee, Wis. Rotatable practice ball bat. 2,471,610, May 31.

Christensen, Niels A., South Euclid, Ohio. Sealing device. 2,471,933, May 31.

Christensen, Niels C., Salt Lake City, Utah. Gas washer. 2,471,724, May 31.

Christley, Paul W.: *See*—
Szabo, Edward J., and Christley.

Chrysler Corporation, assignee: *See*—
Cadwallader, Robert.
Cousino, Walter P.
McCullough, Jack D.
Thomas, Edward B.

Chudner, Joseph, New York, N. Y. Abrasive wheel. 2,471,934, May 31.

Church, Albert E., assignor to Union Manufacturing Company, New Britain, Conn. Power actuated wrench. 2,471,863, May 31.

Ciba Pharmaceutical Products Inc., assignee: *See*—
Hartmann, Max, and Boesshard.

Claesson, Per H. E., Jakobsberg, Sweden. Reactor. 2,471,411, May 31.

Clark, Harry F., Oakwood, assignor to General Motors Corporation, Dayton, Ohio. Automatic screw and nut release. 2,472,002, May 31.

Clark, Trevor H., Boonton, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Frequency controlled direction finder. 2,471,412, May 31.

Clear, Arthur J.: *See*—
Rinkenbach, William H., and Clear.

Cleeton, Claud E., Washington, D. C. Pulse code-signaling system. 2,471,413, May 31.

Cleveland Clinic Foundation, assignee: *See*—
Gardner, William J.

Clifford, Walter B., Boston, Mass. Mixing valve. 2,471,725, May 31.

Clorox Chemical Co., assignee: *See*—
Morris, Mark M., and Kleeman.

Coffing, Fredrick W., assignor to Coffing Hoist Company, Danville, Ill. Jack operable and supported vise. 2,471,726, May 31.

Coffing Hoist Company, assignee: *See*—
Coffing, Fredrick W.

Coggeshall, Norman D., O'Hara Township, Allegheny County, and M. Muskat, Oakmont, assignors to Gulf Research & Development Company, Pittsburgh, Pa. Method and apparatus for separating charged particles of different masses. 2,471,935, May 31.

Collins, Paul D.: *See*—
Maynard, John R., and Collins.

Colwell, Archie T., Cleveland, Ohio, assignor to Thompson Products, Inc. Making poppet valves. 2,471,936, May 31.

Colwell, Archie T., Cleveland, Ohio, assignor to Thompson Products, Inc. Making hollow poppet valves. 2,471,937, May 31.

Commercial Solvents Corporation, assignee: *See*—
Wilkerson, Claude A.

Conn, Robert C., Bound Brook, N. J., assignor to Americas Cyanamid Company, New York, N. Y. Liquid sulfur dye composition comprising an alkylol amide. 2,472,052, May 31.

Conn, Robert C., Bound Brook, and R. H. Weiss, Plainfield, N. J., assignors to American Cyanamid Company, New York, N. Y. Preparation of 1-naphthylamine-2-sulfonic acid. 2,471,400, May 31.

Connolly, Gerald C.: *See*—
Beach, Leland K., and Connolly.

Continental Motors Corporation, assignee: *See*—
Baker, Malvern S.

Cook Electric Company, assignee: *See*—
Rose, Arthur E.

Coon, Harold R., Sr.: *See*—
Rapp, Earl J., and Coon, Sr.

Coons, Barton C., San Jose, Calif., assignor to Food Machinery and Chemical Corporation. Pear orienting and feeding apparatus. 2,471,479, May 31.

Cote, Alfred, Montreal, Quebec, Canada. Electrical heating unit. 2,471,674, May 31.

Coté, Charles, Windsor, Ontario, Canada. Weight-operated air pump. 2,471,673, May 31.

Cousino, Walter P., Detroit, assignor to Chrysler Corporation, Highland Park, Mich. Injection molding apparatus. 2,471,813, May 31.

Cousino, Walter P., Detroit, assignor to Chrysler Corporation, Highland Park, Mich. Plastic injection apparatus and method. 2,471,814, May 31.

Crandall, Lon R., assignee: *See*—
De Jongh, Peter.

Creamer, James P., Hamden, assignor to Lea Manufacturing Company, Waterbury, Conn. Apparatus for supplying abrasive to buffing wheels. 2,471,727, May 31.

Cristiano, Angelo M., assignor to Robbins & Myers, Inc., Springfield, Ohio. Electric motor. 2,471,812, May 31.

Crompton & Knowles Loom Works, assignee: *See*—
Beatrice, Gabriel C.
Turner, Richard C.

Crouch, Willie W., and J. E. Pritchard, Bartlesville, Okla., assignors to Phillips Petroleum Company. Ferrous sulfate pretreatment in emulsion polymerization of conjugated diolefins. 2,471,938, May 31.

Cruthers, Finley M.: *See*—
Bies, Peter H., and Cruthers.

Culkosky, Martin, Gary, Ind. Motor brush holder. 2,471,480, May 31.

Cunningham, John F., Jr., Greensburg, assignor to Elliott Company, Jeannette, Pa. Making wire brushes. 2,472,003, May 31.

Curtiss-Wright Corporation, assignee: *See*—
Hamilton, Jack I.

Cutler-Hammer, Inc., assignee: *See*—
Charbonneau, Allan P.

Czernlewica, John P., Mineola, N. Y. Shelf. 2,472,004, May 31.

Dematra, Peter G., Holland, Mich. Pipe clamp. 2,471,611, May 31.

Dasher, John, Galveston, Tex., and J. E. Norman, Malvern, Ark. Conditioning minerals for film concentration. 2,471,414, May 31.

Dath, George E., Mokena, assignor to W. H. Miner, Inc., Chicago, Ill. Friction shock absorbing mechanism. 2,471,481, May 31.

Davies, Henry R., assignor to The Budd Company, Philadelphia, Pa. Weld control system. 2,472,041, May 31.

Davies, Richard S., assignor to The Budd Company, Philadelphia, Pa. Percentage power control apparatus. 2,472,042, May 31.

Davis, Arnold R.: *See*—
Barthel, Justus C., Davis, and Poor.

Davis, Douglas P., Burbank, Calif. Pumping mechanism. 2,471,939, May 31.

Dunkin, Gerald, New York, N. Y., W. Hatton, South Orange, N. J., and L. A. B. Cahen, Antwerp, Belgium, assignors to International Standard Electric Corporation, New York, N. Y. Telephone calling line identification system. 2,471,416, May 31.

Decca Record Company Limited, The, assignee: *See*—
O'Brien, William J.

De Jongh, Peter, Arlington, N. J., assignor to L. R. Crandall, New York, N. Y. Poultry house. 2,471,675, May 31.

Deloraine, Edmond M., Paris, France, and D. D. Grieg, Forest Hills, assignors to Federal Telephone and Radio Corporation, New York, N. Y. Radio communicating system. 2,471,416, May 31.

De Palo, Thomas P., Framingham, Mass. Circumcision clamp. 2,471,864, May 31.

Designers for Industry, Inc., assignee: *See*—
Boyer, Ralph K.

De Swart, Jan, Los Angeles, Calif., assignor, by mesne assignments, to Shellmar Products Corporation, Chicago, Ill. Bottle carrier. 2,472,005, May 31.

Dickenson, Haydn G.: *See*—
Pickbois, Siegfried, and Dickenson.

Dickey, Paul S., East Cleveland, Ohio, assignor to Bailey Meter Company. Control system. 2,471,726, May 31.

Diebold, Eduard, Zorich, assignor to Aktiengesellschaft Brown, Boveri & Cie, Baden, Switzerland. Electromagnetic reciprocating motor. 2,471,729, May 31.

Dieckmann, Albert, Normandy, assignor to Wagner Electric Corporation, St. Louis, Mo. Dual brake adjusting mechanism. 2,471,865, May 31.

Dimmick, Howard S., and F. S. Jenkins, Philadelphia, Pa. Device for locating faults in cables. 2,471,417, May 31.

Dion, Major, Lincoln, R. I. All-purpose work holder for drills and the like. 2,471,940, May 31.

Dorr, Elizabeth C., Newburgh, N. Y. Table attachment for automobile luggage compartments. 2,471,730, May 31.

Dolesal, Richard, Vitkovice, Czechoslovakia. Installation for the granulation of slag. 2,471,559, May 31.

Dorfan, Morton I., Pittsburgh, Pa., assignor to American Wheelabrator & Equipment Corporation. Dust collector for shuttle feed conveyers. 2,472,053, May 31.

Dosker, Cornelius D., assignor to Gamble Brothers, Louisville, Ky. Adjustable jig for manufacturing laminated timbers. 2,472,006, May 31.

Douglas Aircraft Company, Inc., assignee: *See*—
Stewart, Francis S., and Hardy.

Dow Chemical Company, The, assignee: *See*—
Hunter, Melvin J., and Banman.
Klain, Paul, and MacPhail.
Peake, John S., and Robbins.

Downee, Kenneth W.: *See*—
Lowe, Sherwin P., Long, Kent, and Downee.

Downey, George T., assignor to Aero Supply Mfg. Co. Inc., Corry, Pa. Valve and liner therefor. 2,471,941, May 31.

Downing, Frederick B.: *See*—
Benning, Anthony F., and Downing.

Doyle, Frank P.: *See*—
Kendall, John D., and Doyle.

Drew, Ernest P., New York, N. Y. Method of recovering volatile materials. 2,471,942, May 31.

Duessel, Bernard F., Yonkers, and H. L. Friedman, New York, assignors to Pyridium Corporation, Nepera Park, N. Y. Nicotinic acid amide and preparing same. 2,471,518, May 31.

Duncan Electric Manufacturing Company, assignee: *See*—
Green, Stanley S.

Duncan, Gordon W.: *See*—
Pallwoda, Miriam A., and Duncan.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Hunt, Madison.

Dvorak, James J., Chicago, Ill. Curtain stretcher. 2,471,943, May 31.

Earp, Charles W., London, W. C. 2, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Interference reducing radio impulse receiver. 2,471,418 May 31.

Eby, Lawrence T., Roselle, N. J., assignor to Standard Oil Development Company. Reclaiming synthetic olefin-polyolefin-rubbery polymers. 2,471,866, May 31.

Edson, William A., New York, N. Y., and W. F. Kannenberg, Lyndhurst, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Tunable resonant cavity with adjustable walls. 2,471,419, May 31.

Eisen, Paul F.: *See*—
Manning, Matthew J., and Eisen.

Electric Boat Company, assignee: *See*—
Wilson, Perry J.

Electric Construction Company, assignee: *See*—
Milne, John C.

Electro Specialty Manufacturing Co., Inc., assignee: *See*—
Olson, Carl W.

Elgin National Watch Company, assignee: *See*—
Lester, Raymond H., and Cannon.

Elkin, Lauren N., United States Army, Oakland, Calif. Collapsible steam table. 2,471,420, May 31.

Elliott Company, assignee: *See*—
Cunningham, John F., Jr.

Ellis, David G.: *See*—
Willson, Karl S., and Ellis.

Emery Industries, Inc., assignee: *See*—
Arnold, Carl B.

Emulsol Corporation, The, assignee: *See*—
Cahn, Frank J.

Enco Mfg. Co., assignee: *See*—
Benes, Gordon J.

Enochs, Edward L., Modesto, Calif. Hat trick toy. 2,471,876, May 31.

Engineering and Research Corporation, assignee: *See*—
Nagel, Felix.

Epstein, Jess: *See*—
Brown, George H., and Epstein.

Erbe, John R.: *See*—
Stoltz, Glenn E., Erbe, and Geiselman.

Everson, Russell B., Tallman, N. Y., and W. E. Ward, Dover, assignors to The Okonite Company, Passaic, N. J. Sparking electrode for dry electrical testing of insulated wire. 2,471,560, May 31.

Ex-Cell-O Corporation, assignee: *See*—
Brinkmann, Guenther.

Farber, Eduard: *See*—
Wallerstein, James S., Farber, and Alba.

Farkas, Walter G., Palisades Park, and L. A. Flexser, Elizabeth, assignors to Hoffmann-La Roche Inc., Nutley, N. J. Preparing isoalloxazines. 2,472,007, May 31.

Farris, Herman K., and W. Renshaw, Eldorado, Ill. Concrete brick piece. 2,471,721, May 31.

Favre, John A., Drexel Hill, Pa., assignor to General Electric Company, Electric switch. 2,471,315, May 31.

Federal Telephone and Radio Corporation, assignee: *See*—
Budig, Josef.
Busignies, Henri G.
Clark, Trevor H.
Deloraine, Edmond M., and Grieg.
Glauber, John J.
Grieg, Donald D.
Labin, Emil.
Reade, Ralph B., and Grieg.
Young, Norman H., Jr.

Feed Products Laboratories, Inc., assignee: *See*—
Pulley, George N.

Feenberg, Eugene, St. Louis, Mo. Resistance element for coaxial transmission lines. 2,471,732, May 31.

Fellows Gear Shaper Company, The, assignee: *See*—
Norton, Wendell P., Jr.

Fernald, Herman H., Wichita, Kans. Garment hanger. 2,471,944, May 31.

Ferro Enamel Corporation, assignee: *See*—
McIntyre, Glenn H., and Skinner.

Finuccia, Anthony, Cedar Grove, N. J. Snow and ice melting machine. 2,471,733, May 31.

Fielding, Edgar C., Walsall, England. Guard for grinding machines and the like. 2,471,561 May 31.

Figdor, Hans G., assignor to E. F. Houghton and Company, Philadelphia, Pa. Wetting agent. 2,471,946, May 31.

Finch Telecommunications, Inc., assignee: *See*—
Calkin, Frank G.
Vois, Philip R.

Fischer, Friedriech C., De Witt, Nebr. Toggle operated slidable jaw wrench. 2,472,734, May 31.

Fisher, Franklin M., New York, N. Y., and H. C. Hopp, Des Plaines, assignors to Standard Cap and Seal Corporation, Chicago, Ill. Processing cheese and package therefor. 2,471,867, May 31.

Fites, Cyril B., St. Johns, assignor to Wagner Electric Corporation, St. Louis, Mo. Compressor lubrication supply mechanism. 2,471,868, May 31.

Fitterer, George R., Oakmont, assignor to E. H. Heckett, Valencia, Pa. Utilizing metallurgical slags. 2,471,562, May 31.

Fitzgerald, Lawrence C., Oregon, Wis., dedicated to the free use of the People in the territory of the United States. Rotary disk glue applicator. 2,471,519, May 31.

Fleischmann, George A., assignor to Chain Belt Company, Milwaukee, Wis. Semitrailer vehicle with elevating means. 2,471,735, May 31.

Fleming, Harold W., Bartlesville, Okla. assignor to Phillips Petroleum Company. Production of ethylene diformate. 2,471,520, May 31.

Fleming, John G., Pawtucket, R. I., and W. J. Klem, Miami Beach, Fla., assignors, by mesne assignments, to said Fleming. Baseball base. 2,471,736, May 31.

Flexser, Leo A.: *See*—
Farkas, Walter G., and Flexser.

Floedorf, Earl W., Forest Grove, Pa., assignor to Lyophile-Cryochem Corporation, Baltimore, Md. Desiccating orange juice involving freese drying. 2,471,677, May 31.

Floedorf, Earl W., Forest Grove, Pa., assignor to Lyophile-Cryochem Corporation, Baltimore, Md. Desiccating lemon and lime juices. 2,471,678, May 31.

Food Machinery and Chemical Corporation, assignee: *See*—
Coons, Burton C.

Fox, Raymond S., assignor to Niles-Bement-Pond Company, West Hartford, Conn. Air gauge. 2,471,737, May 31.

Frasier, Orville Z., assignor of one-half to H. Andresen, Elkhart, Ind. Atmospheric pressure engine with lateral support for burners. 2,471,421, May 31.

Freeman, Harry, Providence, R. I. Thermoplastic luggage frame. 2,471,612, May 31.

Freeman, Howard G., assignor to Rockwood Sprinkler Company of Massachusetts, Worcester, Mass. Deluge valve. 2,472,008, May 31.

French, Lionel J. B. B., assignor to The Book Machinery Company Limited, London, England. Creasing linings for books and for analogous purposes. 2,471,482, May 31.

Fricke, Edwin F., Flushing, assignor to Allied Chemical & Dye Corporation, New York, N. Y. Making thionyl chloride. 2,471,946, May 31.

Friedman, Harris L.: *See*—
Duessel, Bernard F., and Friedman.

Frost, William F., Williston Park, N. Y., assignor to The Sperry Corporation. Position and speed control system. 2,471,422, May 31.

Fry, Hugh A., Los Angeles, Calif. Cutter mounting. 2,471,613, May 31.

Frydlender, Sophie, assignor to Lancome Societe Anonyme, Paris, France. Lipstick case. 2,471,483, May 31.

Galey, Floyd I., Detroit, Mich. Transporting motor vehicles. 2,471,521, May 31.

Gamble Brothers, assignee: *See*—
Dosker, Cornelius D.

Gardner, Allen F., Birmingham, Mich., assignor to Chicago Rawhide Manufacturing Company, Chicago, Ill. Oil seal. 2,471,679, May 31.

Gardner, Henry A., Laboratory, Inc., assignee: *See*—
Hunter, Richard S.

Gardner, William J., Cleveland Heights, Ohio, assignor to Cleveland Clinic Foundation. Surgical dressing. 2,472,009, May 31.

Garrett, Elmer E., Freeport, R. C. Steck, Mount Vernon, and A. T. Yasensky, Jamaica, N. Y., assignors to Polaroid Corporation, Cambridge, Mass. Photographic film holder. 2,471,522, May 31.

Gates, Major E., Crystal Lake, Ill. Toggle press and molding articles from granular material. 2,471,563, May 31.

Gatter, Louis H.: *See*—
Henderson, Prentice M., and Gatter.

Gaudette, Henry V., Los Angeles, Calif. Folding table. 2,471,564, May 31.

Gebel, Irving, Chicago, Ill., assignor to International Register Co. Coil construction and method. 2,471,869, May 31.

Geiselman, Ralph A.: *See*—
Stoltz, Glenn E., Erbe, and Geiselman.

General Aniline & Film Corporation, assignee: *See*—
Anish, Alfred W.

General Electric Company, assignee: *See*—
Baker, John H.
Favre, John A.
Hamm, Clarence L.
Liebhafsky, Herman A., and Bronk.
Lord, Harold W.
McDowell, Earle B.
Norgaard, Donald E.
Seely, Richard E.
Von Hoorn, Fred G.
Wilcock, Donald F.

General Electric Company Limited, The, assignee: *See*—
Harrison, William J. D.

General Motors Corporation, assignee: *See*—
Candor, Robert R.
Clark, Harry F.
Graham, Charles D.
Kuhn, George.

General Tire & Rubber Company, The, assignee: *See*—
Thiry, Leon F.

Giannini, Gabriel M., West Los Angeles, Calif., assignor, by mesne assignments, to Howe & Fant, Inc., South Norwalk, Conn. Impulse generator for telemetering systems. 2,471,947, May 31.

Gibbons, Chester H., Drexel Hill, Pa., assignor to The Baldwin Locomotive Works. Fluid pressure measuring device. 2,472,045, May 31.

Gibian, Emil F., East Cleveland, and K. M. Bartlett, Cleveland, Ohio, assignors to Thompson Products, Inc. Making poppet valves. 2,471,948, May 31.

Gibson, George A., Jr., New York, N. Y. Toothbrush handle. 2,471,680, May 31.

Giddens, Joel E.: *See*—
Reeves, Richard E., and Giddens.

Gidley, Philip T., Fairhaven, Mass., assignor, by mesne assignments, to Standard Oil Development Company. Oil-resistant composition. 2,471,870, May 31.

Gillette Safety Razor Company, assignee: *See*—
Testi, Nicholas.

Gilman, Frederick C., Pompton Lakes, assignor to Worthington Pump and Machinery Corporation, Harrison, N. J. Hermetically sealed power transmitting mechanism. 2,472,010, May 31.

Gilman, Russell A., San Gabriel, Calif. Device for controlling the tightness of expanded tube joints. 2,471,614, May 31.

Gilowitz, Benjamin, New York, N. Y. Aromatic earring or other ornament. 2,471,949, May 31.

Gisholt Machine Company, assignee: *See*—
Godfriaux, Louis E.

Gisser, Henry, Philadelphia, Pa. Tester for bearings. 2,471,423, May 31.

Gladden, John N., Glendale, Calif. Bushing. 2,471,615, May 31.

Glauber, John J., West Orange, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Electron discharge device. 2,471,424, May 31.

Globe Oil Tools Company, assignee: *See*—
Goodwin, John S.
Stevenson, Edward E.

Glocker, Eugenie, administratrix: *See*—
Glocker, Gustave.

Glocker, Gustave, Washington, D. C.; E. Glocker, administratrix of said G. Glocker, deceased, assignor to Super-Seal Container Corporation, Washington, D. C. Container and closure therefor. 2,471,565, May 31.

Gluharoff, Michael E., Stratford, assignor to United Aircraft Corporation, East Hartford, Conn. Stop for helicopter blades. 2,471,681, May 31.

Godfriaux, Louis E., assignor to Gisholt Machine Company, Madison, Wis. Piston and cylinder construction for reciprocating hydraulic motors. 2,471,484, May 31.

Goodman, Clark, Cambridge, assignor to New England Mica Company, Waltham, Mass. Mica splitting machine. 2,471,735, May 31.

Goodrich, B. F., Company, The, assignee: *See*—
Harrison, Sinart A.
Wilt, Homer E., and Tincier.

Goodwin, John S., Whittier, assignor to Globe Oil Tools Company, Los Nietos, Calif. Core catcher. 2,471,616, May 31.

Gotti, George A., New York, A. Killian, Elmhurst, and N. Volpicelli, Astoria, N. Y. Link chain. 2,471,950, May 31.

Graham, Charles D., Oakwood, assignor to General Motors Corporation, Dayton, Ohio. Air treating apparatus. 2,472,011, May 31.

Graham, Jesse B., La Mesa, Calif. Coin-operated type-writer control apparatus. 2,471,617, May 31.

Granath, Axel G., Chicago, assignor to H. S. Simpson, Evanston, Ill. Mixer. 2,471,487, May 31.

Granberg, Albert J., Oakland, Calif. Strainer. 2,471,951, May 31.

Grant, Charles T., assignor to American Optical Company, Southbridge, Mass. Work support for lens drilling machines. 2,471,871, May 31.

Grant, Harry C., Jr., New York, N. Y., and A. E. Reichard, North Arlington, assignors to Specialties Development Corporation, Bloomfield, N. J. Device for controlling the release of high-pressure fluid mediums. 2,471,425, May 31.

Grant, Richard H., Brooklyn, N. Y. Time cycling device. 2,471,426, May 31.

Green, Stanley S., assignor to Duncan Electric Manufacturing Company, La Fayette, Ind. Instrument and bearing therefor. 2,471,618, May 31.

Grieg, Jon, New Hope, Pa. Method and apparatus for making molded articles. 2,471,789, May 31.

Grieg, Donald D.: *See*—
Deloraine, Edmond M., and Grieg.
Reade, Ralph B., and Grieg.

Grieg, Donald D., Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J. Interference reducing amplitude modulation detector. 2,471,427, May 31.

Griffith, Dinsmore L., and M. J. Rankin, Flin Flon, assignors to Hudson Bay Mining and Smelting Co., Limited, Winnipeg, Manitoba, Canada. Removing cobalt from electrolytes. 2,471,952, May 31.

Grob, Benjamin, Grafton, Wis. Electric fence post. 2,471,682, May 31.

Groetchen, Richard, Chicago, Ill. Cooking oven with means to withdraw utensils therefrom. 2,471,566, May 31.

Gruetjen, Frederick A., assignor to A. O. Smith Corporation, Milwaukee, Wis. Mandrel with means for clamping and spreading tubes. 2,471,485, May 31.

Gruetjen, Frederick A., assignor to A. O. Smith Corporation, Milwaukee, Wis. Constructing propeller foil plates. 2,471,486, May 31.

Gulf Research & Development Company, assignee: *See*—
Cogrenhall, Norman D., and Muskat.
McCarthy, Paul R.

Gusdorf, Frederik H., and A. Horowitz, Eindhoven, Netherlands, assignors, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Circuit element for tuning an electric circuit over a plurality of frequency bands. 2,471,523, May 31.

Gustavson, A. N., Bemus Point, assignor to Automatic Voting Machine Corporation, Jamestown, N. Y. Voting machine. 2,471,567, May 31.

Haag-Streit Werkstatten fur Prazisionsmechanik, assignee: *See*—
Paprita, Hans.

Halbach, Ernest W., Andover, assignor to The Bolta Company, Lawrence, Mass. Multiple nozzle mechanism for injection molding machines. 2,471,683, May 31.

Hall, Edwin S., Farmington, Conn. Barrel engine mounting. 2,471,428, May 31.

Hamilton, Bertie F., assignor to Hamilton Manufacturing Corporation, Columbus, Ind. Metal furniture. 2,471,740, May 31.

Hamilton, Jack L., Essex Fells, N. J., assignor to Curtiss-Wright Corporation. Pitch controlling system for propeller blades. 2,471,953, May 31.
Hamilton Manufacturing Company, assignee: *See*—
Hamilton, Bertis F.
Merrett, Earle B.
Hamm, Clarence L., Marblehead, Mass., assignor to General Electric Company. Bobbin spindle. 2,471,816, May 31.
Hancock, Peter F.: *See*—
Roblette, Alfred G., Evans, and Hancock.
Hanklas Container Company, The, assignee: *See*—
Miessler, Paul W.
Hanneman, Robert G., assignor to Air-Mase Corporation, Cleveland, Ohio. Liquid filter. 2,472,012, May 31.
Hansell, Clarence W., Rocky Point, N. Y., assignor to Radio Corporation of America. Calibrating peak current meter. 2,472,013, May 31.
Hardy, Gordon W., Cleveland Heights, Ohio. Hydraulic pressure transmitter. 2,471,619, May 31.
Hardy, Vernal R.: *See*—
Stewart, Francis S., and Hardy.
Harrel, Chastain G.: *See*—
Kimball, Mary H., Harrel, and Brown.
Harris, Julius H., Dallas, Tex. Expendable razor. 2,471,620, May 31.
Harris, Robert C., Fort Wayne, Ind. Electric generator. 2,471,741, May 31.
Harrison, Stuart A., Stow, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Polymerization of acrylonitrile. 2,471,742, May 31.
Harrison, Stuart A., Stow, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Aqueous emulsion polymerization of acrylonitrile in the presence of an aromatic hydrocarbon. 2,471,743, May 31.
Harrison, William J. D., Coventry, assignor to The General Electric Company Limited, London, England. Electrical switching device. 2,471,568, May 31.
Harshaw Chemical Company, The, assignee: *See*—
Willson, Karl S., and Ellis.
Hartford National Bank and Trust Company, assignee: trustee: *See*—
Berggren, Detlof E.
Gusdorf, Frederik H., and Horowitz.
Kerbof, Frederik.
Hartmann, Max, and W. Boshard, Richen, Switzerland, assignors to Ciba Pharmaceutical Products Inc., Summit, N. J. Mercury compounds and making same. 2,471,621, May 31.
Hartmann, Max, and W. Boshard, Richen, Switzerland, assignors to Ciba Pharmaceutical Products Inc., Summit, N. J. Mercury compounds and preparing same. 2,471,622, May 31.
Harvey, Walter J., Toronto, Ontario, Canada. Reflecting and focusing apparatus with pivotally adjustable spaced apart reflecting members for heat and light rays. 2,471,954, May 31.
Hastings, James E., assignor to The L. S. Starrett Company, Athol, Mass. Machinist's gauge. 2,471,684, May 31.
Hatch, Robert L., assignor to Rodney Hunt Machine Company, Orange, Mass. Bench stand table lift. 2,471,955, May 31.
Hathaway, Madeleine P., executor: *See*—
Perkins, Hiram A.
Hatton, William: *See*—
Deakin, Gerald, Hatton, and Cabes.
Haug, John S.: *See*—
Spahr, Floyd W., and Haug.
Haveg Corporation, assignee: *See*—
Adams, William H., Jr., and Lebach.
Lebach, Hans H.
McWhorter, Purnal L., Jr.
Hawkins, Paul E., Lakewood, assignor to The Baker-Raulang Company, Cleveland, Ohio. Mounting for the driving and operating mechanisms of industrial trucks. 2,471,429, May 31.
Hay, Malcolm, Canajoharie, N. Y. Radio receiving set. 2,471,569, May 31.
Heald, Raymond E., Plainfield, Ind. Combustion system for turbine engines. 2,472,014, May 31.
Heckett, Eric H., assignee: *See*—
Fitterer, George B.
Heil Co., The, assignee: *See*—
Reits, Donald S.
Henderson, Prentice M., and L. H. Gatter, St. Louis, Mo. Window frame and double sash unit. 2,471,685, May 31.
Hendricks, John R., assignee: *See*—
Seiders, Le Roy E.
Hendricks, William L., Los Angeles, Calif. Antiglare rearview mirror attachment. 2,471,524, May 31.
Hendy, Joshua, Iron Works, assignee: *See*—
Talamini, Elio J.
Henkel, Andrew B., Rochester, N. Y. Slip-on jacket for molds. 2,472,015, May 31.
Hercules Powder Company, assignee: *See*—
Rummelsburg, Alfred L.
Hershberger, William D., Princeton, N. J., assignor to Radio Corporation of America. Measuring microwave power. 2,471,744, May 31.
Hers, Alfred, Chicago, Ill. Variable impedance device. 2,471,817, May 31.
Hickman, Clarence N., Jackson Heights, N. Y., assignor to the United States of America, as represented by the Secretary of War. Spacer trap for rockets. 2,471,745, May 31.
Hielen, Henry: *See*—
Parks, John R., and Hielen.
Higbee, Glenn A., Detroit, Mich. Telephone number listing attachment. 2,471,430, May 31.
Hilbert, Rudolph, Salt Lake City, Utah. Gauge tool for timing Diesel engines. 2,471,746, May 31.
Hillyer, John C., and J. P. Wilson, Bartlesville, Okla., assignors to Phillips Petroleum Company. Reaction of an acetylene with HF to produce vinyl fluoride and/or difluoroethane and homologues thereof. 2,471,525, May 31.
Hiltner, Walter F., Pasadena, Calif. Celestial navigation instrument. 2,471,686, May 31.
Hinden, Hellmut: *See*—
Hinden, Werner and H., Rio de Janeiro, Brazil. Centrifugally operable clutch. 2,471,747, May 31.
Hoesling, John, assignee: *See*—
Russell, Joseph.
Hoffman-La Roche Inc., assignee: *See*—
Farkas, Walter G., and Flexser.
Holl, James W. F., Los Angeles, Calif. Torque equalising braking apparatus. 2,471,956, May 31.
Holmes, Donald H., assignor to Norton Company, Worcester, Mass. Hydraulic table reciprocating mechanism. 2,471,688, May 31.
Holmes, Gifford L., Manchester, assignor to United Aircraft Corporation, East Hartford, Conn. Dynamic damper counterbalance. 2,471,687, May 31.
Hopp, Harold C.: *See*—
Fisher, Franklin M., and Hopp.
Horne, William R., Los Angeles, Calif. Animal trap. 2,471,748, May 31.

Benning, Anthony F., and Downing.
Kingston Products Corporation, assignee: *See*—
Woolley, Lee A.
Kinney, J. Warren, Jr., assignee: *See*—
Seiders, Le Roy E.
Kirsch, Murray, Mamaroneck, N. Y. Lighted cigarette dispenser. 2,471,820, May 31.
Kleskalt, Adam J., Grosse Pointe Farms, Mich. Apparatus for drying and heat-treating. 2,471,964, May 31.
Klais, Paul, Midland, and R. B. MacPhail, Bay City, assignors to The Dow Chemical Company, Midland, Mich. Gas shielded carbon arc welding of magnesium. 2,472,020, May 31.
Kleeman, Annete K.: *See*—
Morris, Mark M., and Kleeman.
Klem, William J.: *See*—
Fleming, John G., and Klem.
Kling, Lester E., Yorktown, Va. Child's rocking bowl. 2,471,628, May 31.
Knecht, Oscar, and T. Wirth, Basel, assignor to Sandoz Limited, Fribourg, Switzerland. Manoazo pyrazolone dyes. 2,471,628, May 31.
Koleske, Otto: *See*—
Ward, George A., and Koleske.
Koppers Company, Inc., assignee: *See*—
Shaw, Joseph A.
Krumbhaar, William, New York, N. Y. Depolymerized copal-like resinous esters. 2,471,629, May 31.
Kuhn, George, Silver Spring, Md., assignor to General Motors Corporation, Dayton, Ohio. Clothes-washing and cleaning machine. 2,471,876, May 31.
Kurtz, Jacob, Teaneck, assignor to Callite Tungsten Corporation, Union City, N. J. Pressed and sintered oxidation resistant nickel alloys. 2,471,630, May 31.
Kutzler, Robert J., and T. J. Wilson, assignors to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Aircraft control apparatus. 2,471,821, May 31.
La Barre, Dwight, Detroit, Mich., assignor to Borg-Warner Corporation, Chicago, Ill. Cabinet with drawer and work board combination. 2,471,629, May 31.
Labin, Emile, New York, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J. Transmitter-receiver system. 2,471,436, May 31.
L'Air Liquide, Societe Anonyme pour l'Etude et l'Exploitation des Procedes Georges Claude, assignee: *See*—
Bonnaud, Henri.
Lancome Societe Anonyme, assignee: *See*—
Frydlender, Sophie.
Lane, Stanley C.: *See*—
Warth, Walter A., and Lane.
Lane-Wells Company, assignee: *See*—
Otis, Russell M.
Lang, Karl A., Glenview, assignor to Lindberg Engineering Company, Chicago, Ill. Current control apparatus. 2,471,822, May 31.
Lang, Karl A., Glenview, assignor to Lindberg Engineering Company, Chicago, Ill. Current regulating device. 2,471,823, May 31.
Larson, Lloyd A., Oakland, Calif. Portable and foldable vehicle lifting ramp. 2,471,756, May 31.
Lea Manufacturing Company, assignee: *See*—
Creamer, James P.
Lebach, Hans H.: *See*—
Adams, William H., Jr., and Lebach.
Lebach, Hans H., assignor to Haveg Corporation, Newark, Del. Furfuryl alcohol-phenol aldehyde resinous products and making the same. 2,471,631, May 31.
Lebet, André: *See*—
Castro, René and Lebet.
Lemos, Manuel G., New York, N. Y. Line producing device for typewriters. 2,471,757, May 31.
Leotakis, Christy N., Portland, Oreg. Shoe stitching machine. 2,471,877, May 31.
Lester, Raymond H., Pittsburgh, Pa., and M. C. Cannon, Aurora, assignors to Elgin National Watch Company, Elgin, Ill. Method and apparatus for producing sapphire hollow articles. 2,471,437, May 31.
Lewis, Albert M., Detroit, Mich. Lid lifter and carrier. 2,471,878, May 31.
Libby, Carl F., Stoughton, Mass. Selvage forming mechanism. 2,471,758, May 31.
Liebhafsky, Herman A., and L. B. Brook, Schenectady, N. Y., assignors to General Electric Company. Recovery of silver from residues containing the same. 2,471,824, May 31.

Ligett, Waldo B.: *See*—
McBee, Earl T., Lindgren, and Ligett.
Lilienfeld, Jacob, assignee to Lit Brothers, Philadelphia, Pa. Pallet construction. 2,471,693, May 31.
Lindberg Engineering Company, assignee: *See*—
Lang, Karl A.
Lindgren, Vincent V.: *See*—
McBee, Earl T., Lindgren, and Ligett.
Lit Brothers, assignee: *See*—
Lilienfeld, Jacob.
Lobel, Seymour, Brooklyn, N. Y., assignor to Air King Products Company, Inc. System for comparing synchronized wave signals. 2,471,530, May 31.
Lockheed Aircraft Corporation, assignee: *See*—
Bleakney, William M., and Zielinski.
Bloomfield, John J.
Johns, Harry W.
Price, Nathan C.
Pulver, Wilfrid A.
Loker, Elmer H., assignor of one-half to E. P. Stahly, Sioux City, Iowa. Teetering device. 2,471,572, May 31.
Long, George W.: *See*—
Lowe, Sherwin P., Long, Kent, and Downes.
Long, Margaret, Baltimore, Md. Electric razor holder. 2,471,825, May 31.
Lord, Harold W., Schenectady, N. Y., assignor to General Electric Company. Electronic control circuit for performing a timing function. 2,471,826, May 31.
Louisiana State University and Agricultural and Mechanical College, Board of Supervisors, of, assignee: *See*—
Kaloyereas, Socrates A.
Lowber, David D., Snyder, and L. J. Peters, Buffalo, N. Y., assignors to American Optical Company, Southbridge, Mass. Vertical illuminator. 2,471,879, May 31.
Lowe, Clinton A., assignee: *See*—
Lumpkin, Kenneth L.
Lowe, Sherwin P., G. W. Long, G. H. Kent, and K. W. Downes, Flin Flon, Manitoba, assignors to Hudson Bay Mining and Smelting Co., Limited, Winnipeg, Manitoba, Canada. Electrolytically producing zinc of high purity. 2,471,965, May 31.
Lowrey, George A., Houston, Tex. Pipe coupling. 2,471,759, May 31.
Lucas, Donald F., assignee: *See*—
Pandolfi, Albert.
Lucas, Fred H., Winnetka, Ill., and G. E. Rhodes, Gary, Ind., assignors to Carnegie-Illinois Steel Corporation, and American Bridge Company. Method of and apparatus for inspecting and assorting metal disks and the like. 2,471,489, May 31.
Lucas-Milhaupt Engineering Sales Co., assignee: *See*—
Pandolfi, Albert.
Ludwig, Norman C., Chicago, Ill., assignor to Universal Atlas Cement Company. Retarded cement. 2,471,632, May 31.
Lufkin Rule Co., The, assignee: *See*—
Witchger, Eugene J.
Lukacs, Joseph J., New Rochelle, and R. O. Rippere, Massapequa, assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Ground trainer for aircraft personnel. 2,471,966, May 31.
Lumpkin, Kenneth L., Gladwater, assignor of one-fourth to C. A. Lowe, Houston, Tex. Aerated minnow bucket. 2,471,573, May 31.
Lutz, George B., Lakewood, Ohio. Electric circuit controller. 2,471,633, May 31.
Lyman, John F.: *See*—
McFadden, George H., Lyman, and Horney.
Lynch Corporation, assignee: *See*—
Rapp, Earl J., and Coon, St.
Lyophile-Cryochem Corporation, assignee: *See*—
Ploedorf, Earl W.
MacCallum, Alan M., Maywood, assignor to Bendix Aviation Corporation, Teterboro, N. J. Automatic steering control. 2,471,637, May 31.
MacDonald, Karl, Wellsville, N. Y., assignor to Worthington Pump and Machinery Corporation, Harrison, N. J. Valve. 2,471,860, May 31.
Machler, Raymond C.: *See*—
Wilson, Benjamin J., Machler, Polster, and Murray.
MacPhail, Robert: *See*—
Klain, Paul, and MacPhail.
Maestri, Benjamin, Chicago, Ill. Adjustable metallic wrist band. 2,471,694, May 31.
Magrath, George, Whitinsville, Mass. Bobbin clutch. 2,471,874, May 31.
Mahan, Joseph R., Toledo, Ohio, assignor to The National Supply Company, Pittsburgh, Pa. Welded gear blank. 2,471,827, May 31.
Malcom, Glen, assignor to Reeves Pulley Company, Columbus, Ind. Braking means for electric motors. 2,472,046, May 31.
Manning, Matthew J., and P. F. Eisen, Detroit, Mich., assignors to The Budd Company, Philadelphia, Pa. Portable welding device. 2,471,881, May 31.
Manske, Richard H. F., Guelph, Ontario, Canada, assignor to United States Rubber Company, New York, N. Y. Preparing 2,4-dichlorophenoxy-acetic acid. 2,471,575, May 31.
Mark, Vennice E., and L. L. Anderson, Grand Rapids, assignors to Winters & Crampton Corporation, Grandville, Mich. Refrigerator closure and seal. 2,471,634, May 31.
Mark, Vennice E., and L. L. Anderson, Grand Rapids, assignors to Winters & Crampton Corporation, Grandville, Mich. Magnetic door closure and seal. 2,471,635, May 31.
Marsh, Jas. P., Corporation, assignee: *See*—
Rose, Alexander D., and Willisch.
Marsh, Rutherford H., Girard, Pa.; M. L. Irons, administratrix of said R. H. Marsh, deceased. Oscillatory washing machine agitator. 2,471,760, May 31.
Martin, Warren S., Massapequa, N. Y. Converting material. 2,471,882, May 31.
Martin, William E., Kewanee, Ill. Trailer connection. 2,471,836, May 31.
Maschinenfabrik Oerlikon, assignee: *See*—
Karrer, Werner.
Mason, Warren P., West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Piezoelectric type switching relay. 2,471,967, May 31.
Matmer, Simon, New York, N. Y. Composite ornamental strip. 2,471,576, May 31.
Mautner, Steven E., assignor to Skydyne, Inc., Port Jervis, N. Y. Parabolic antenna. 2,471,828, May 31.
Maynard, John E., Detroit, Mich., and P. O. Collins, Elyria, Ohio. Damper. 2,471,980, May 31.
McBee, Earl T., R. O. Bolt, and R. Tebbe, assignors to Purdue Research Foundation, La Fayette, Ind. Hydrocarbonoxybis trifluoromethyl benzenes. 2,471,829, May 31.
McBee, Earl T., La Fayette, Ind., R. O. Bolt, Richmond, Calif., and R. Tebbe, Orono, Maine, assignors to Purdue Research Foundation, La Fayette, Ind. Hydrocarbonoxy(trifluoromethyl)-benzene synthesis. 2,471,830, May 31.
McBee, Earl T., La Fayette, Ind., V. V. Lindgren, Cos Cob, Conn., and W. B. Ligett, Berkley, Mich., assignors to Purdue Research Foundation, La Fayette, Ind. Bromine trifluoride treatment of halohydrocarbons. 2,471,831, May 31.
McCarthy, Paul R., Allison Park, assignor to Gulf Research & Development Company, Pittsburgh, Pa. Rust preventive compositions. 2,471,638, May 31.
McCollum, Henry J. D., deceased, late of Chicago, Ill., by T. McCollum, executrix, assignor to Stewart-Warner Corporation, Chicago, Ill. Internal-combustion heater with Knipp's singing tubes. 2,471,832, May 31.
McCollum, Henry J. D., deceased, late of Chicago, Ill., by T. McCollum, executrix, assignor to Stewart-Warner Corporation, Chicago, Ill. Combustion heater with fuel retaining trough and igniter pocket. 2,471,833, May 31.
McCollum, Thelma, executrix: *See*—
McCollum, Henry J. D.
McCullough, Ira J., Ploche, Nev. Method of and apparatus for forming wells. 2,471,695, May 31.
McCullough, Jack D., Detroit, assignor to Chrysler Corporation, Highland Park, Mich. Indicating device. 2,471,988, May 31.
McDowell, Earle B., and P. Juchter, Scotia, N. Y., assignors to General Electric Company. Electronic relay. 2,471,834, May 31.
McElhinney, Eric M., Dysart, Iowa. Loading machine. 2,471,630, May 31.
McFadden, George H., assignor to The Ohio State University Research Foundation, Columbus, Ohio. Rubber-like articles and making same. 2,472,054, May 31.
McFadden, George H., and J. F. Lyman, Columbus, Ohio, and A. G. Horney, Merrifield, Va., assignors to The Ohio State University Research Foundation, Columbus, Ohio. Rubber-like articles and making same. 2,472,055, May 31.
McFadden, Leo M., Denver, Colo., assignor to R. W. McKee, Jr., Lodi, Calif. Electric insect and rodent trap. 2,471,640, May 31.
McIntyre, Glenn H., Cleveland Heights, and R. E. Skinner, Lakewood, assignors to Ferro Enamel Corporation, Cleveland, Ohio. Electrode. 2,471,531, May 31.
McKee, Roy W., Jr., assignee: *See*—
McFadden, Leo M.
McMillan, Daniel S., Raleigh, N. C. Gun sight. 2,471,761, May 31.
McWhorter, Purnal L., Jr., Odessa, assignor to Haveg Corporation, Newark, Del. Making a furfuryl alcohol resin. 2,471,438, May 31.
Melvin, Grant C., Springfield, P. C. Jones, and S. B. White, Dayton, Ohio. Device for simulating runway localizer and glide path beams for training purposes. 2,471,439, May 31.
Menking, Heinz, Rocky River, Ohio, assignor to Aluminum Company of America, Pittsburgh, Pa. Picker stick. 2,471,532, May 31.
Mercer, David L., Gary, Ind., assignor to Carnegie-Illinois Steel Corporation. Apparatus for making structural shapes. 2,471,490, May 31.
Merck & Co., Inc., assignee: *See*—
Minion, Huang.
Merrett, Earle E., assignor to Hamilton Manufacturing Company, Manitowoc, Wis. Play pen construction. 2,471,762, May 31.
Merrick, Layton T., Kansas City, Mo. Wallpaper perforator. 2,471,763, May 31.
Mesavage, Clement, New Orleans, La.: dedicated to the free use of the People in the Territory of the United States. Tree volume calculator. 2,471,491, May 31.
Messenger, Joseph U.: *See*—
Oblad, Alex G., and Messenger.

Metals & Controls Corporation, assignee: *See*—
Bolesky, John D.
Meyer, Walter A., Wauwatosa, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Belt and transmission. 2,471,969, May 31.
Midwest Rubber Reclaiming Company, assignee: *See*—
Randall, Robert L.
Midwest Tool & Manufacturing Company, assignee: *See*—
Parker, Emmett E.
Mierley, George M., Havertown, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electrical connector device. 2,471,440, May 31.
Miessler, Paul W., Lakewood, assignor to The Hoskins Container Company, Cleveland, Ohio. Box and corner lock therefor. 2,471,883, May 31.
Milchen, Leo, Los Angeles, Calif. Machineless manufacture of shoes. 2,471,696, May 31.
Milhaupt, Howard A., assignee: *See*—
Pandolfi, Albert.
Miller, Carl H., Arlington, Va., and W. S. Wilks, Trenton, N. J. Magnetic hand pickup tool. 2,471,764, May 31.
Mills, Charles L., Jr.: *See*—
Mowry, David T., and Mills, Jr.
Milne, John C., assignor to The Electric Construction Company Limited, Wolverhampton, England. Supply equipment for electric arcs. 2,471,641, May 31.
Miloche, Herman A., Teaneck, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Wiring device. 2,471,970, May 31.
Miner, W. H., Inc., assignee: *See*—
Dath, George E.
Minion, Huang, Cambridge, Mass., assignor to Merck & Co., Inc., Rahway, N. J. Reducing carbonyl compounds to their corresponding methylene analogues. 2,471,697, May 31.
Minneapolis-Honeywell Regulator Company, assignee: *See*—
Kutzler, Robert J., and Wilson.
Mitchell, Donald H., Chicago, Ill., assignor to Motorola, Inc. Preassembled impedance unit. 2,472,021, May 31.
Mitchell, Gerald L. J., assignee: *See*—
Mitchell, Lewis M.
Mitchell, Lewis M., Greeley, Colo.; W. A. E. Mitchell, administrator of said L. M. Mitchell, deceased, assignor of forty-six and sixty-six one-hundredths per cent to W. A. E. Mitchell, Greeley, Colo., twenty-six and sixty-seven one-hundredths per cent to P. M. Mitchell, Chicago, and twenty-six and sixty-seven one-hundredths per cent to G. L. J. Mitchell, Glen Ellyn, Ill. Refrigerator ventilator system. 2,471,971, May 31.
Mitchell, Paul M., assignee: *See*—
Mitchell, Lewis M.
Mitchell, Wilbur A. E., administrator: *See*—
Mitchell, Lewis M.
Modern Machine Products Co., assignee: *See*—
Ward, George A., and Koleske.
Moffett, Eugene W., Milwaukee, Wis., assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa. Bodying of oil by heat. 2,471,577, May 31.
Molts, Benjamin E., Gridley, Calif. Wheel supporting stand for tire changing. 2,471,642, May 31.
Monnot, Edward L., assignor to The Weber Dental Manufacturing Company, Canton, Ohio. Heated dental instrument table. 2,471,884, May 31.
Monroe Calculating Machine Company, assignee: *See*—
Britten, Edwin F., Jr.
Monsanto Chemical Company, assignee: *See*—
Mowry, David T., and Mills, Jr.
Mowry, David T., and Yanko.
Seymour, Raymond B., and Butler.
Montagne, Homer F.: *See*—
Bronitt, Wilgus S., and Montagne.
Montclair Research Corporation, assignee: *See*—
Rust, John B.
Moore, Alfreda B., Chicago, Ill. Combination lipstick and rouge container. 2,471,441, May 31.
Moore Company, The, assignee: *See*—
Moore, Robert D.
Moore, Dewey R., Dallas, Tex. Portable derrick. 2,471,492, May 31.
Moore, Joseph F., Jr., Berryville, Va. Length metering apparatus for drill pipe and the like. 2,471,644, May 31.
Moore, Robert D., assignor to The Moore Company, Kansas City, Mo. Fan. 2,471,578, May 31.
Moran, Wilson A., Antigo, Wis. Food grater with horizontal axis disk. 2,471,643, May 31.
Moreau, Ralph C.: *See*—
Seltner, Louis P., and Moreau.
Morf, Frederick P., Little Silver, N. J. Desiccator cartridge. 2,471,442, May 31.
Morgan Construction Company, assignee: *See*—
O'Malley, Joseph M.
Morgan, David L., Bridgeport, Conn., assignor to Robertshaw-Fulton Controls Company. Temperature regulator for internal-combustion engines. 2,471,533, May 31.
Morris, Mark M., Berkeley, and A. K. Kleeman, San Francisco, assignors to Clorox Chemical Co., Oakland, Calif. Detergent composition. 2,471,645, May 31.
Morton, John R., Mountain Grove, Mo. Chick fountain guard. 2,471,765, May 31.
Moseley, Francis L.: *See*—
Wilkie, Harry, and Moseley.
Motorola, Inc., assignee: *See*—
Mitchell, Donald H.
Mowry, David T., and C. L. Mills, Jr., Dayton, Ohio, assignors to Monsanto Chemical Company, St. Louis, Mo. Copolymer of styrene and a phenyl-vinyl acetate. 2,471,766, May 31.
Mowry, David T., and W. H. Yanko, Dayton, Ohio, assignors to Monsanto Chemical Company, St. Louis, Mo. Preparation of fumaronitrile. 2,471,767, May 31.
Mueller, Alfred, Berwyn, assignor to Crane Co., Chicago, Ill. Hydraulic valve actuating mechanism. 2,471,885, May 31.
Munro, Gordon, Bremerton, Wash. Drill grinder. 2,471,443, May 31.
Murray, George E. R.: *See*—
Wilson, Benjamin J., Machler, Polster, and Murray.

Holmes, Donald H.
Spongberg, Albin V., and Pasholan.
Norton Manufacturing Company, assignee: *See*—
Bradley, William H.
Norton, Wendell P., Jr., assignor to The Fellows Gear Shaper Company, Springfield, Vt. Cam finishing machine. 2,471,493, May 31.
Norwood, Elise R., Fairfax, Calif. Bed table. 2,471,646, May 31.
Nystrom, Axel C., Rutherford, and W. J. Volckhausen, Teaneck, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y. Tape supporting means for strand coverlog machines. 2,471,973, May 31.
Oaks, Orion O., Summit, N. J., assignor, by mesne assignments, to Thermal Liquids, Inc., New York, N. Y. Apparatus for heating and cooling kettles. 2,471,638, May 31.

Oblad, Alex G., and J. U. Messenger, Dallas, Tex. assignors, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Isomerization of olefins in the presence of hydrogen fluoride impregnated alumina. 2,471,647, May 31.

O'Brien, William J., assignor to The Decca Record Company, Limited, London, England. Equisignal radio beacon system. 2,471,648, May 31.

Ohio Crankshaft Company, The, assignee: *See*—
Wood, Alden O.

Ohio State University Research Foundation, The, assignee: *See*—
McFadden, George H.
McFadden, George H., Lyman, and Horney.

Okonite Company, The, assignee: *See*—
Everson, Russell B., and Ward.

Olin Industries, Inc., assignee: *See*—
Roemer, William C.

Olson, Carl W., assignor to Electro Specialty Manufacturing Co., Inc., Minneapolis, Minn. Blower for ventilators. 2,472,024, May 31.

O'Malley, Joseph M., assignor to Morgan Construction Company, Worcester, Mass. Wabbler coupling. 2,471,974, May 31.

Otis, Russell M., Pasadena, assignor to Lane-Wells Company, Los Angeles, Calif. Flowmeter. 2,472,056, May 31.

Overmyer, Perry F., Chicago, Ill., assignor to Universal Atlas Cement Company. Automatic measuring device for bulk material. 2,471,494, May 31.

Packwood, Hesa H., Baton Rouge, La. Lawn mower. 2,471,975, May 31.

Page, Herbert E., Oakwood, Ohio. Toaster-tray combination. 2,471,649, May 31.

Paliwoda, Miriam A., Bayonne, and G. W. Duncan, Westfield, N. J., assignors to Standard Oil Development Company. Rust preventive compositions. 2,471,889, May 31.

Palmer, Frederick A., Wooster, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J. Polymerization of isobutylene in the presence of controlled amounts of promoters for the reaction. 2,471,590, May 31.

Palmer, Rufus N., Pittsburgh, Pa., assignor to American Pearl Button Co., Washington, Iowa. Button-making tubular-saw holder and expeller. 2,471,698, May 31.

Pandolfi, Albert, Milwaukee, assignor to D. F. Lucas, H. A. Milhaupt, and A. Pandolfi, co-partners, doing business under the name and firm style of Lucas-Milhaupt Engineering Sales Co., Cudahy, Wis. Fusible ring and making same. 2,471,650, May 31.

Pantuosco, Anthony F., New York, N. Y. Automatic ignition shutoff device. 2,471,651, May 31.

Paprita, Hans, Berne, assignor to Haag-Streit Werkstatten fur Prasisionsmechanik, Berne-Liebefeld, Switzerland. Ophthalmic perimeter comprising an artificially illuminated concave spherical reflector. 2,471,652, May 31.

Parker, Emmett E., Farmington, assignor to Midwest Tool & Manufacturing Company, Detroit, Mich. Fixture for relief grinding of cutting tools. 2,471,539, May 31.

Parks, John R., and H. Hielen, Olitner, Nebr. Corn picker gathering shoe. 2,471,771, May 31.

Pasholan, Harry O.: *See*—
Spongberg, Albin V., and Pasholan.

Paveal, Louis, and F. F. Rodoni, San Francisco, Calif. Device to form teeth in the edge of a knife. 2,471,899, May 31.

Peake, John S., Bloomington, Ind., and F. E. Robbins, assignors to The Dow Chemical Company, Midland, Mich. Treatment of magnesium-base alloys. 2,472,025, May 31.

Peche, William, assignee: *See*—
Iongerich, Frank L.

Peck, Kenneth L., and R. F. Balmer, U. S. Navy, Philadelphia, Pa., said Balmer assignor to said Peck. Adjustable mooring cable. 2,472,026, May 31.

People in the territory of the United States, dedicated to the free use of the: *See*—
Fitzgerald, Lawrence C.
Meanware, Clement.

Perfect Brassiere Company, Inc., assignee: *See*—
Rubinstein, Abraham.

Perkins, Hiram A., deceased, late of Rochester, N. Y., by Stuart L. Perkins, Rochester, N. Y., and Madeleine P. Hathaway, Essex County, N. J., executors, assignors to Setter Bros., Inc., Cattaraugus, N. Y. Web feeding and cutting machine. 2,471,447, May 31.

Perkins, Stuart L., executor: *See*—
Perkins, Hiram A.

Perrault, Alnalle and L., Tulsa, Okla. Apparatus for treating pipes. 2,471,580, May 31.

Perrault, Lewis: *See*—
Perrault, Alnalle and L.

Peters, Leslie J.: *See*—
Lowber, David D., and Peters.

Peters, Melville F.: *See*—
Rittenhouse, John, and Peters.

Pfau, Julina H., Norristown, Pa. Tooth powder dispenser. 2,471,495, May 31.

Phileo Corporation, assignee: *See*—
Albright, Robert B.
Newbold, William H.
Rundell, Theodore W.

Phillips, Charles L., St. George, N. Y. Trap. 2,471,540, May 31.

Phillips Petroleum Company, assignee: *See*—
Arnold, Philip M.
Axe, William N.
Crouch, Willie W., and Pritchard.
Fleming, Harold W.
Hillyer, John C., and Wilson.
Waddill, Paul M.

Pickholz, Siegfried, Liverpool, and H. O. Dickenson, Warrington, assignors to Ward, Blenkinsop & Company Limited, Brooklands, Halewood, Liverpool, England. Production of sulfonamides. 2,471,772, May 31.

Pillsbury Mills, Inc., assignee: *See*—
Kimball, Mary H., Harrel, and Brown.

Pious, Edward, assignee: *See*—
Yando, Stephen.

Pittsburgh Plate Glass Company, assignee: *See*—
Moffett, Eugene W.

Plass, Raymond B., Berkeley, assignor to Ray Oil Burner Co., San Francisco, Calif. Burner control system, including a viscosity sensitive by-pass valve. 2,471,541, May 31.

Platon, Edmond D. V., Paris, VII, France, assignor to International Standard Electric Corporation, New York, N. Y. Built-in heat exchanger in expansion valve structures. 2,471,448, May 31.

Platz, Elwood T., assignor to Bulldog Electric Products Company, Detroit, Mich. Circuit breaker. 2,471,837, May 31.

Palumbo, Vincent, assignee: *See*—
Price, Albert O.

Podhajsky, Theodore A., Traer, Iowa. Blade lifting device for power hack saws. 2,471,700, May 31.

Poissant, William O., Youngstown, Ohio. Bottle cooling and display device. 2,471,581, May 31.

Polaroid Corporation, assignee: *See*—
Garrett, Elmer E., Steck, and Yasensky.
Ryan, William H., and Walworth.

Pollak, Abraham, Linfield, Pa. Floating motor mount. 2,471,773, May 31.

Polster, Norman E.: *See*—
Wilson, Benjamin J., Machler, Polster, and Murray.

Poole, Ralph, London, England. Heat exchange apparatus for fluids. 2,471,582, May 31.

Poor, Edward N.: *See*—
Barthel, Justus C., Davis, and Poor.

Post, Durrel E., Gates Mills, Ohio. Poultry bag. 2,471,701, May 31.

Potchen, Joseph A., Grand Rapids, Mich., assignor, by mesne assignments, to W. F. Scarborough, Englewood, N. J., as trustee. Method of forming wood assemblies. 2,472,023, May 31.

Potter, James A., Rutherford, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Voltage regulation. 2,471,976, May 31.

Potts, Louis M., deceased, late of Evanston, Ill.; by M. W. C. Potts, executrix, assignor to Teletype Corporation, Chicago, Ill. Two-way regenerative repeater. 2,471,801, May 31.

Potts, Martha W. C., executrix: *See*—
Potts, Louis M.

Powell, Winfred T., assignor to Stromberg-Carlson Company, Rochester, N. Y. Electrical voting system or the like. 2,471,774, May 31.

Power, Albert H., Toronto, Ontario, Canada. Bed partition. 2,471,977, May 31.

Price, Albert O., Leesville, assignor of one-half to V. Palumbo, Cleveland Heights, Ohio. Pump or the like. 2,471,653, May 31.

Price, Nathan C., Hollywood, assignor to Lockheed Aircraft Corporation, Burbank, Calif. Reactive propulsion power plant having radial flow compressor and turbine means. 2,471,892, May 31.

Pritchard, James E.: *See*—
Crouch, Willie W., and Pritchard.

Pro-phy-lac-tic Brush Company, assignee: *See*—
Bird, William C.

Prosperity Company, Inc., The, assignee: *See*—
Neuroth, John.

Pulley, George N., Winter Haven, assignor to Feed Products Laboratories, Inc., Lake Alfred, Fla. Treatment of citrus waste press water. 2,471,893, May 31.

Pulver, Wilfrid A., Sherman Oaks, assignor to Lockheed Aircraft Corporation, Burbank, Calif. Airfoil ice remover. 2,471,894, May 31.

Purdue Research Foundation, assignee: *See*—
McBee, Earl T., Bolt, and Tebbe.
McBee, Earl T., Lindgren, and Ligett.

Pyridium Corporation, assignee: *See*—
Duesel, Bernard F., and Friedman.

Radio Corporation of America, assignee: *See*—
Brown, George H., and Epstein.
Hansell, Clarence W.
Hershberger, William D.
Nerzkard, Leon S.
Reinartz, John L.
Schade, Otto H.
Snyder, Richard L., Jr., and Rajchman.

Radtke, Edward W., Hartford, assignor to United Aircraft Corporation, East Hartford, Conn. Spinner mounting. 2,471,893, May 31.

Rajchman, Jan A.: *See*—
Snyder, Richard L., Jr., and Rjchman.

Randall, Robert L., St. Louis, Mo., assignor, by mesne assignments, to Midwest Rubber Reclaiming Company, East St. Louis, Ill. Reclaiming scrap of natural rubber mixed with Buna-S. 2,471,496, May 31.

Rankin, Mavis J.: *See*—
Griffith, Diasmore L., and Rankin.

Ransom, James W., Lansdowne, Pa. pH indicator. 2,471,896, May 31.

Rapp, Earl J., and H. R. Coon, Sr., Toledo, Ohio, assignors to Lynch Corporation. Molding and packaging machinery. 2,471,702, May 31.

Rapp, Earl J., and H. R. Coon, Sr., Toledo, Ohio, assignors to Lynch Corporation. Molding and packaging machinery. 2,471,703, May 31.

Rappl, Anton, Eggertsville, assignor to Trico Products Corporation, Buffalo, N. Y. Fluid motor packing. 2,471,897, May 31.

Rau, David W., Kirkwood, Mo., assignor to Vickers, Incorporated. Reclamation of selenium rectifier cells. 2,471,898, May 31.

Ray Oil Burner Co., assignee: *See*—
Plass, Raymond B.

Reade, Ralph B., Larchmont, and D. D. Grieg, Forest Hills, assignors to Federal Telephone and Radio Corporation, New York, N. Y. Mixer circuit using cathode follower feed-in stages. 2,471,440, May 31.

Reece, Herbert A., Cleveland Heights, Ohio. Apparatus for supplying air to cupola furnaces. 2,471,775, May 31.

Reece, Herbert A., Cleveland Heights, Ohio. Air supply apparatus for cupola furnaces. 2,471,776, May 31.

Reeves Pulley Company, assignee: *See*—
Malcom, Glen.

Reeves, Richard E., New Orleans, La., and J. E. Oliddens, Washington, D. C., assignors to the United States of America as represented by the Secretary of Agriculture. Stabilization of nitrocellulose. 2,471,583, May 31.

Regner, Albert, assignor to Spolek pro chemickou a hutni vyrobu narodni podnik United Chemical and Metallurgical Works National Corporation, Prague, Czechoslovakia. Separating constituents of alloys by fractional crystallization. 2,471,899, May 31.

Reichard, Arthur E.: *See*—
Grant, Harry C., Jr., and Reichard.

Reimann, Pearle S., assignee: *See*—
Barlock, Everett W.

Reinartz, John L., Lancaster, Pa., assignor to Radio Corporation of America. Making ultra high frequency inductors. 2,471,777, May 31.

Reits, Donald S., assignor to The Hell Co., Milwaukee, Wis. Cam for level winding devices. 2,471,654, May 31.

Renshaw, Ward: *See*—
Farris, Hermen K., and Renshaw.

Republic Steel Corporation, assignee: *See*—
Wallace, Emmet W.

Resa, John J., Vallejo, Calif. Vector solver. 2,471,450, May 31.

Rhoden, Gerald E.: *See*—
Lucas, Fred H., and Rhoden.

Rich, Stanley R., Cambridge, Mass. Phonograph pickup unit using magneto-strictive wire. 2,471,542, May 31.

Richards, Ronald A., Victoria, British Columbia, Canada. Brick clip. 2,471,584, May 31.

Riggs, Walter A., Everett, Wash. Slip-over style of outer garment. 2,471,543, May 31.

Ring, Grant A., West Hartford, assignor to United Aircraft Corporation, East Hartford, Conn. Connecting mooring cables to rotary winged aircraft. 2,471,544, May 31.

Ringer, Luther, assignor to Nineteen Hundred Corporation, St. Joseph, Mich. Fluid responsive control apparatus. 2,471,778, May 31.

Rinkenbach, William H., Dover, and A. J. Clear, Rockaway, N. J. Soldering flux. 2,471,451, May 31.

Rippere, Robert O.: *See*—
Lukacs, Joseph P., and Rippere.

Rittenhouse, John, Norristown, Pa., and M. F. Peters, Baltsville, Md., assignors, by mesne assignments, to C & D Batteries, Inc., Conshohocken, Pa. Explosion-proof battery vent and filler plug. 2,471,585, May 31.

Robbins, Frank E.: *See*—
Peake, John S., and Robbins.

Robbins & Myers, Inc., assignee: *See*—
Cristiano, Angelo M.

Roberts Chemical Company, assignee: *See*—
Sumner, Robert J.

Roberts, Robert P., and K. Jones, Spondon, near Derby, England, assignors, by mesne assignments, to Celanese Corporation of America. Bonding cellulose surfaces. 2,471,497, May 31.

Robertshaw-Fulton Controls Company, assignee: *See*—
Branson, Charles D.
Morgan, David L.

Robiette, Alfred G. E., Bovingdon, and P. F. Hancock, Birmingham, England, assignors to The International Nickel Company, Inc., New York, N. Y. Austenitic cast iron. 2,472,027, May 31.

Robinson, Fred S., Yalesville, assignor to R. Wallace & Sons Manufacturing Company, Wallingford, Conn. Producing flatware. 2,471,900, May 31.

Robinson, Jonas, Clarks Summit, Pa. Compensator. 2,471,586, May 31.

Robson, Duer C., Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y. Apparatus for oiling parts. 2,471,978, May 31.

Rockwood Sprinkler Company of Massachusetts, assignee: *See*—
Freeman, Howard G.

Rodoni, Francis F.: *See*—
Paveal, Louis, and Rodoni.

Roemer, William C., assignor to Olin Industries, Inc., New Haven, Conn. Control-device for automatic and semi-automatic firearms. 2,471,779, May 31.

Rohm & Haas Company, assignee: *See*—
Bortnick, Newman M., and Butterbaugh.
Wooster, Charles B.

Rood, George A., Los Angeles, Calif. Pneumatically operated pump. 2,471,498, May 31.

Rose, Alexander D., Park Ridge, and B. Willach, assignors to Jas. P. Marsh Corporation, Chicago, Ill. Indicating gauge. 2,471,704, May 31.

Rose, Paul R.: *See*—
Walter, Harold J., and Rose.

Rosen, Shy, U. S. Army, Washington, D. C. Roller printer for conveyers. 2,471,452, May 31.

Rosenberg, George, New York, and L. Spiselman, Brooklyn, N. Y. Picture frame having pivoted cornerpieces. 2,471,545, May 31.

Ross, Arthur E., assignor to Cook Electric Company, Chicago, Ill. Pressure switch. 2,471,838, May 31.

Ross, William A., assignor to Weaver Manufacturing Company, Springfield, Ill. Load-lifting appliance. 2,471,901, May 31.

Rossi, Guido J., and E. L. Bonalanza, South San Francisco, Calif. Toothbrush holder. 2,471,979, May 31.

Rubinstein, Abraham, Brooklyn, N. Y., assignor to Perfect Brassiere Company, Inc., Jersey City, N. J. Brassiere. 2,471,587, May 31.

Rude, George H., Laurelton, N. Y. Electrically illuminated advertising device. 2,471,902, May 31.

Ruge, Arthur C., Cambridge, Mass., assignor to The Baldwin Locomotive Works. Electrical load weighing apparatus. 2,472,047, May 31.

Rummelsburg, Alfred L., assignor to Hercules Powder Company, Wilmington, Del. Preparation of terpene phenols. 2,471,458, May 31.

Rummelsburg, Alfred L., assignor to Hercules Powder Company, Wilmington, Del. Catalytic condensation of phenols with monocyclic dihydroterpenes. 2,471,464, May 31.

Rummelsburg, Alfred L., assignor to Hercules Powder Company, Wilmington, Del. Preparation of terpene phenols. 2,471,455, May 31.

Rundell, Theodore W., Abington, assignor, by mesne assignments, to Phileo Corporation, Philadelphia, Pa. Automatic ice maker. 2,471,655, May 31.

Russell, John D., and J. W. Woolf, assignors to Joy Manufacturing Company, Franklin, Pa. Electric circuit controller. 2,472,048, May 31.

Russell, Joseph, Bailey, assignor of one-half to J. Hoefling, Ravenna, Mich. Rodent trap. 2,471,546, May 31.

Rust, John B., Montclair, N. J., assignor to Montclair Research Corporation. Wool shrinkproofing baths containing a chloroprene polymer. 2,471,496, May 31.

Ryan, William H., and V. K. Walworth, assignors to Polaroid Corporation, Cambridge, Mass. Photographic processes for producing multicolor images. 2,471,547, May 31.

Sandilson, Alexander G. S., Brantford, Ontario, Canada. Machine for fabricating strakes for boat construction or the like. 2,471,780, May 31.

Sandoz Ltd., assignee: *See*—
Knecht, Oscar, and Wirth.
Wehrli, Walter, and Kehrer.

Sas, Arthur F., Holland, Mich. Cigarette roller. 2,471,656, May 31.

Saye, John F., Powersite, Mo. Hair drier. 2,471,657, May 31.

Scarborough, William B., assignee: *See*—
Potchen, Joseph A.

Schaaf, Oliver H., Chagrin Falls, assignor to Air-Maze Corporation, Cleveland, Ohio. Zigzag filter construction. 2,471,548, May 31.

Schade, Otto H., West Caldwell, N. J., assignor to Radio Corporation of America. Vertical blanking circuit for television transmitter systems. 2,471,903, May 31.

Schmidt, Wilhelm G., Saltsjobaden, assignor to Allmanna Svenska Elektriska Aktiebolaget, Vasteras, Sweden. Electric accumulator of the bipolar type. 2,471,781, May 31.

Schmitt, Otto H., Mineola, N. Y., assignor to the United States of America as represented by the Secretary of Navy. Variable reactor. 2,471,705, May 31.

Schneck, Frederick W., Pacific Palisades, Calif., assignor to Bendix Aviation Corporation, South Bend, Ind. Relief valve. 2,472,049, May 31.

Schnorr, Charles H., Springdale, Pa. Extension leaf table. 2,471,782, May 31.

Schroeder, Bernard A., Winnetka, Ill. Napkin holder. 2,471,783, May 31.

Schumacher, John H., Alma, Mo. Insulator mounting. 2,471,839, May 31.

Schweitzer, Frank J., Jr.: *See*—
Shaffer, Donald U., and Schweitzer, Jr.

Schwerdle, Arthur: *See*—
Sowa, Frank J., and Schwerdle.

Sears, Richard W., II, Evanston, assignor to Woodstock Typewriter Company, Woodstock, Ill. Typewriter multiple case shift mechanism. 2,471,588, May 31.
Seely, Richard E., Fort Wayne, Ind., assignor to General Electric Company. Electric protective means. 2,471,840, May 31.
Seibel, Charles M., Wichita, Kans. Helicopter rotor drive and control system. 2,471,904, May 31.
Seidens, Le Roy B., Bryan, assignor of 90 per cent to J. R. Hendricks, and 10 per cent to J. W. Kinney, Jr., Cincinnati, Ohio. Magnetic display device. 2,471,981, May 31.
Seifner, Louis P., and R. C. Moreau, Seattle, Wash., said Moreau assignor to said Seifner. Heat exchange unit. 2,471,784, May 31.
Seitz, Harry G., Columbus, Ohio. Multiple circuit switch. 2,471,841, May 31.
Sessions Clock Co., The, assignee: *See*—
Sessions, William K., Jr., and Brightman.
Sessions, William K., Jr., Bristol, and E. D. Brightman, assignors to The Sessions Clock Co., Forestville, Conn. Electric alarm clock. 2,471,549, May 31.
Setter Bros., Inc., assignee: *See*—
Perkins, Hiram A.
Seymour, Raymond B., and J. M. Butler, Dayton, Ohio, assignors to Monsanto Chemical Company, St. Louis, Mo. Copolymers of vinyl aromatic compounds. 2,471,785, May 31.
Shaffer, Donald U., and F. J. Schweitzer, Jr., Brea, Calif., assignors to Shaffer Tool Works. Casing landing head. 2,471,658, May 31.
Shaffer, Harry A., East Cleveland, Ohio. Detachable button. 2,471,589, May 31.
Shaffer Tool Works, assignee: *See*—
Shaffer, Donald U., and Schweitzer, Jr.
Shaw, Joseph A., assignor to Koppers Company, Inc., Pittsburgh, Pa. Treatment of coke-oven gas. 2,471,550, May 31.
Shell Development Company, assignee: *See*—
Broese, Johannes J.
Shellman Products Corporation, assignee: *See*—
De Swart, Jan.
Shepard, Stanley C., London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Time and thermostatically controlled switching arrangement. 2,471,457, May 31.
Shepler, James G., Columbus, Ohio. Safety device for motion-picture projectors. 2,471,786, May 31.
Shipman, Frank G., Shelburn, Ind. Fishing lure. 2,471,499, May 31.
Shulda, Melvin, Cuba, Kans. Splice for crankshaft bearing. 2,471,982, May 31.
Simon, Haroide M., assignor to Utica Radiator Corporation, Utica, N. Y. Grate fastening. 2,471,650, May 31.
Simpson, Herbert S., assignee: *See*—
Granath, Axel G.
Skinner, Robert E.: *See*—
McIntyre, Glenn H., and Skinner.
Skydyne, Inc., assignee: *See*—
Mautner, Steven E.
Slaughter, James A., Kermit, Tex. Stock guard. 2,471,551, May 31.
Smith, A. O., Corporation, assignee: *See*—
Andrus, Orrin E.
Brueckner, Karl K.
Gruetjen, Frederick A.
Smith, Claude C., Oklahoma City, Okla. Leather roughing tool. 2,471,787, May 31.
Smith, Paul A., Mars, Pa. Pulley. 2,471,906, May 31.
Smith, Winthrope C., Elizabeth, N. J., assignor to Standard Oil Development Company. Adhesion of butyl rubber to metal. 2,471,905, May 31.
Snyder, Eugene, Philadelphia, assignor to American Chemical Paint Company, Ambler, Pa. Method of and material for increasing the corrosion resistance of ferriferous metals. 2,471,907, May 31.
Snyder, Eugene, Philadelphia, assignor to American Chemical Paint Company, Ambler, Pa. Method of and material for preparing surfaces of ferriferous metals for the reception of a siccative finishing coat. 2,471,908, May 31.
Snyder, Richard L., Jr., and J. A. Rajchman, Princeton, N. J., assignors to Radio Corporation of America. Electronic computer. 2,471,788, May 31.
Societe d'Electro-Chimique, d'Electro-Metallurgie et des Aciéries Electriques d'Ugine, assignee: *See*—
Castro, Rene, and Lebet.
Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Oblad, Alex G., and Messenger.
Soday, Frank J., Baton Rouge, La., assignor to The United Gas Improvement Company. Rubber plasticizer composition. 2,471,789, May 31.
Son, Anthony J., assignor to Sonco, Inc., Boston, Mass. Sterilizing tray for hypodermic needles and the like. 2,472,028, May 31.
Sonco, Inc., assignee: *See*—
Son, Anthony J.
Southgate, Frank C., San Francisco, Calif. Decorative bow. 2,471,590, May 31.
Sowa, Frank J., Cranford, N. J., and A. Schwerdle, New York, N. Y., said Schwerdle assignor to said Sowa. Insect affecting compositions. 2,471,790, May 31.
Spahr, Floyd W., Palmyra, N. J., and J. S. Haug, Chestnut Hill, assignors to United Engineers and Constructors, Inc., Philadelphia, Pa. Hydraulic drive for rotary grates and the like. 2,471,989, May 31.
Sparklin, Charles H., Chicago, Ill., assignor to Birtman Electric Company. Temperature indicator means for sadirons. 2,471,458, May 31.
Specialties Development Corporation, assignee: *See*—
Grant, Harry C., Jr., and Reichard.
Stroop, John H.
Specter, Benjamin, and J. J. Murray, Washington, D. C. Chart. 2,471,552, May 31.
Spell, Perry W., Roseboro, N. C. Cotton picking apparatus. 2,471,842, May 31.
Sperry Corporation, The, assignee: *See*—
Frost, William F.
Spiselman, Louis: *See*—
Rosenberg, George, and Spiselman.
Spolek pro chemickou a hutni vyrobu narodni podnik-United Chemical and Metallurgical Works National Corporation, assignee: *See*—
Regner, Albert.
Spongberg, Albin V., and H. G. Pashoian, assignors to Norton Company, Worcester, Mass. Crankpin grinding machine. 2,471,706, May 31.
Spruance, Frank P., Jr., assignor to American Chemical Paint Company, Ambler, Pa. Method and materials for producing coated aluminum. 2,471,909, May 31.
Stahly, Edward P., assignee: *See*—
Loker, Elmer H.
Stamper, Hamilton A., Los Angeles, Calif., assignor to Bendix Aviation Corporation, South Bend, Ind. Remote-control system. 2,471,843, May 31.
Standard Cap and Seal Corporation, assignee: *See*—
Fisher, Franklin M., and Hopp.
Standard Oil Development Company, assignee: *See*—
Beach, Leland K., and Connolly.
Eby, Lawrence T.
Gidley, Philip T.
Nelson, Joseph F.
Paliwoda, Miriam A., and Duncan.

Sweetser, Sumner B.
Wurth, Walter A., and Lane.
Stanton, Ernest N., Grosse Ile, Mich. Apron. 2,471,910, May 31.
Staples, Dana R., Ridley Park, Pa., assignor to The Baldwin Locomotive Works. Governing apparatus. 2,472,050, May 31.
Starrett, L. S., Company, The, assignee: *See*—
Hastings, James E.
Stearns Magnetic Mfg. Co., assignee: *See*—
Stearns, Roswell H.
Stearns, Roswell H., Wauwatosa, assignor to Stearns Magnetic Mfg. Co., Milwaukee, Wis. Magnetic separator. 2,471,911, May 31.
Steck, Robert C.: *See*—
Garrett, Elmer E., Steck, and Yasensky.
Steere, George R., Ipswich, Mass. Making water gas. 2,471,791, May 31.
Steere, George R., Ipswich, Mass. Apparatus for making water gas. 2,471,792, May 31.
Stehling, Chas. H., Company, assignee: *See*—
Stehling, Ralph J.
Stehling, Ralph J., assignor to Chas. H. Stehling Company, Milwaukee, Wis. Hydraulic drive for leather-working machines. 2,471,984, May 31.
Steigleman, Forrest E., Baltimore, Md. Repair of dentures. 2,471,501, May 31.
Stelmack, Stanley, Philadelphia, Pa. Storage battery with level indicator. 2,471,660, May 31.
Sterling Industries Limited, assignee: *See*—
Thomas, Percival E.
Stevens-Arnold, Inc., assignee: *See*—
Weightman, Herbert G.
Stevenson, Edward E., Whittier, assignor to Globe Oil Tools Company, Los Nietos, Calif. Apparatus for mounting work in a holder. 2,471,661, May 31.
Stewart, Francis S., Los Angeles, Calif., and V. R. Hardy, Wilmington, Del., assignors to Douglas Aircraft Company, Inc., Santa Monica, Calif. Coated metal structure. 2,471,500, May 31.
Stewart-Warner Corporation, assignee: *See*—
McCollum, Henry J. D.
Tramontini, Vernon N.
Stich, George E., Jacksonville, Fla. Scaffolding bracket. 2,471,459, May 31.
Stoltz, Glenn E., Pittsburgh (18), J. R. Erbe, Mount Lebanon, and R. A. Geiselman, Wilkinsburg, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control of electrolytic processes. 2,471,912, May 31.
Streisoff, Samuel, assignor to Chemical Construction Corporation, New York, N. Y. Conversion of iron chloride into iron oxide and hydrochloric acid. 2,471,844, May 31.
Stromberg-Carlson Company, assignee: *See*—
Powell, Winfred T.
Stroop, John H., New York, N. Y., assignor to Specialties Development Corporation, Bloomfield, N. J. Fire extinguisher. 2,471,460, May 31.

Stull, John S., Chicago, Ill. Fastener feeding and securing apparatus. 2,471,798, May 31.
Sumerford, Simpson D., Baton Rouge, La., assignor to Standard Oil Development Company. Treatment of solid diluent in hydrocarbon synthesis process. 2,471,918, May 31.
Sumner, Robert J., Manchester, N. H., assignor to Roberts Chemical Company, Perth Amboy, N. J. Manufacture of coloring matters of the phthalocyanine series from phthalyl halides. 2,471,794, May 31.
Super-Seal Container Corporation, assignee: *See*—
Glocker, Gustave.
Süsskind, Albert, Lugano-Cassarate, Switzerland. End-piece for slide fastener closures. 2,471,461, May 31.
Sweeney, Joseph, Auburn, N. Y. Lavatory flush valve. 2,471,842, May 31.
Sweetser, Sumner B., Baton Rouge, La., assignor to Standard Oil Development Company. Synthesizing hydrocarbons. 2,471,914, May 31.
Szabo, Edward J., and P. W. Christley, assignors to Industrial Rayon Corporation, Cleveland, Ohio. Loom stopping means. 2,471,845, May 31.
Talamini, Elio J., Kearney, assignor to Joshua Hendy Iron Works, Ampere, N. J. Brush holder. 2,471,591, May 31.
Taylor, James: *See*—
Wright, Harold R., and Taylor.
Taylor, William A., Louisville, Miss. One-way clutch of the pin and socket type. 2,471,795, May 31.
Tebbe, Robert: *See*—
McBee, Earl T., Bolt, and Tebbe.
Teletype Corporation, assignee: *See*—
Potts, Louis M.
Testi, Nicholas, assignor to Gillette Safety Razor Company, Boston, Mass. Blade-dispensing container. 2,472,051, May 31.
Thacher, Alfred B., West Hartford, assignor to United Aircraft Corporation, East Hartford, Conn. Gear pump. 2,471,915, May 31.
Thayer Company, assignee: *See*—
Troendle, William C.
Thermal Liquids, Inc., assignee: *See*—
Oaks, Orion O.
Thiberg, George A., Cedar Knolls, N. J. Air pump for aquarium aerators. 2,471,796, May 31.
Thiry, Leon F., Montclair, N. J., assignor to The General Tire & Rubber Company, Akron, Ohio. Vibration damping mounting. 2,472,029, May 31.
Thomas, Edward B., Middletown, N. Y., assignor, by mesne assignments, to Chrysler Corporation, Highland Park, Mich. Tuyere construction for underfeed stokers. 2,471,797, May 31.
Thomas, Percival E., assignor to Sterling Industries Limited, London, England. Self-closing pipe couplings. 2,471,798, May 31.
Thompson Products, Inc., assignee: *See*—
Ashdown, Thomas J.
Booth, James H.
Colwell, Archie T.
Thompson Products, Inc., assignee: *See*—
Gibian, Emil F., and Bartlett.
Thomson, Homer G., Wauwatosa, assignor to Allen Bradley Company, Milwaukee, Wis. Making insulated resistors. 2,471,592, May 31.
Thulin, Ivar V., Upper Darby, Pa. Bathtub shower bath appliance. 2,472,030, May 31.
Tietz, Herbert D., Maplewood, N. J., assignor to The International Nickel Company, Inc., New York, N. Y. Producing cladded metal cooking utensils. 2,471,663, May 31.
Tincler, George A.: *See*—
Witt, Homer E., and Tincler.
Tombs, Edward W., Pittsburgh, Pa. Rotary turbine type hydraulic transmission. 2,471,790, May 31.
Torstenson, Henry A., assignee: *See*—
Wandel, Oscar A.
Toth, John J., Bridgeport, Conn. Foldable wheelbarrow. 2,471,462, May 31.
Touraton, Emile: *See*—
Ahier, Georges, and Touraton.
Toy, Arthur D. F., Chicago, Ill., assignor to Victor Chemical Works. Plasticizing agents comprising dialkyl phenylphosphonates and compositions containing the same. 2,471,463, May 31.
Toy, Arthur D. F., Chicago, and T. M. Beck, Homewood, Ill., assignors to Victor Chemical Works. Preparing para nitrophenyl diethyl thionophosphate. 2,471,464, May 31.
Toye, Irvin F., Omaha, Nebr. Crossarm lathe wrench. 2,471,593, May 31.
Tramontini, Vernon N., Indianapolis, Ind., assignor to Stewart-Warner Corporation, Chicago, Ill. Heater system. 2,471,840, May 31.
Trico Products Corporation, assignee: *See*—
Rappl, Anton.
Troendle, William C., assignor to Thayer Company, Gardner, Mass. Steerable infant's carriage. 2,471,985, May 31.
Troxel Manufacturing Company, The, assignee: *See*—
Kalter, Harold E.
Turner, Richard G., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Pneumatic thread holder for weft replenishing looms. 2,471,847, May 31.
Union Manufacturing Company, assignee: *See*—
Church, Albert E.
United Aircraft Corporation, assignee: *See*—
Gluharoff, Michael E.
Holmes, Gifford I.
Radtke, Edward W.
Ring, Grant A.
Thacher, Alfred B.
United Engineers and Constructors, Inc., assignee: *See*—
Spahr, Floyd W., and Haug.
United Gas Improvement Company, The, assignee: *See*—
Soday, Frank J.
United States Gypsum Company, assignee: *See*—
Kester, Bruce E.
United States Rubber Company, assignee: *See*—
Axford, Luther.
Kharasch, Morris S., and Urry.
Maneke, Richard H. F.
U. S. Thermo Control Co., assignee: *See*—
Jones, Frederick M.
Universal Atlas Cement Company, assignee: *See*—
Ludwig, Norman C.
Overmyer, Perry F.
Urry, Wilbert H.: *See*—
Kharasch, Morris S., and Urry.
Utica Radiator Corporation, assignee: *See*—
Simon, Haroide M.
Utility Trailer Manufacturing Company, assignee: *See*—
Bennett, Walter.
Van Hasselt, Marc, London, England, assignor to International Standard Electric Corporation, New York, N. Y. Repeater for submarine electric cables. 2,471,465, May 31.
Van Sciver, Herbert D., II, Merion, assignor to The Budd Company, Philadelphia, Pa. Electric control apparatus for variable loads. 2,472,044, May 31.
Van Veen, Anton, Canton Center, and K. B. Noble, Branford, Conn. Door check. 2,471,707, May 31.
Vickers, Incorporated, assignee: *See*—
Rau, David W.
Vickland, John C.: *See*—
Yerrick, William D., and Vickland.
Victor Chemical Works, assignee: *See*—
Toy, Arthur D. F.
Toy, Arthur D. F., and Beck.
Woodstock, Willard H.
Volckhausen, Walter J.: *See*—
Nystrom, Axel C., and Volckhausen.
Volpicelli, Nicholas: *See*—
Gotti, George A., Killian, and Volpicelli.
Vois, Philip E., Orange, assignor to Finch Telecommunications, Inc., Passaic, N. J. Motor speed control. 2,471,916, May 31.
Von Hoorn, Fred G., Bridgeport, Conn., assignor to General Electric Company. Combined switch and fuse. 2,471,848, May 31.
Von Mühlenen, Egbert, Ennetbaden, Switzerland. Shadow image projection indicating apparatus. 2,471,800, May 31.
Waddill, Paul M., Bartlesville, Okla, assignor to Phillips Petroleum Company. Storage of hydrofluoric acid. 2,471,986, May 31.
Wagner Electric Corporation, assignee: *See*—
Dieckmann, Albert.
Fites, Cyril B.
Waite, Philip M., Corry, Pa. Universal joint. 2,471,987, May 31.
Walker, Charles R.: *See*—
Bacon, Walter M., and Walker.
Wallace, Dorothy L., Saginaw, Mich. Automatic frozen cube dispenser for refrigerators. 2,471,801, May 31.
Wallace, Emmet W., Canton, assignor to Republic Steel Corporation, Cleveland, Ohio. Shakeout for coke charging cars. 2,471,849, May 31.
Wallace, R., & Sons Manufacturing Company, assignee: *See*—
Robinson, Fred S.
Wallerstein Company, Inc., assignee: *See*—
Alba, Ralph T., and Wallerstein.
Wallerstein, James S., Farber, and Alba.
Wallerstein, James S., New York, N. Y., and E. Farber, New Haven, Conn., and R. T. Alba, assignors, by mesne assignments, to Wallerstein Company, Inc., New York, N. Y. Improving fermented beverages and product obtained thereby. 2,471,502, May 31.
Walter, Harold J., Uxbridge, Mass., and P. R. Rose, East Orange, N. J. Apparatus for heat-treating air-pervious strip material. 2,471,802, May 31.
Walworth, Vivian K.: *See*—
Ryan, William H., and Walworth.
Wandel, Oscar A., assignor to H. A. Torstenson, Chicago, Ill. Magazine closure for stapling machines. 2,472,032, May 31.
War, United States of America, as represented by the Secretary of, assignee: *See*—
Hickman, Clarence N.
Wilson, Benjamin J., Machler, Polster and Murray.
Ward, Blenkinsop & Company Limited, of Brooklands, assignee: *See*—
Pickhols, Siegfried, and Dickenson.
Ward, George A., and O. Koleske, assignors to Modern Machine Products Co., Springfield, Ill. Rope holder. 2,471,503, May 31.

Ward, William E.: *See*—
Everson, Russell B., and Ward.
Washbond, Harry H., and O. R. Beattie, assignors to The Baker Manufacturing Company, Springfield, Ill. Winch. 2,471,988, May 31.
Wasserman, Rene D., New York, N. Y. Weldrod flux coating. 2,471,803, May 31.
Wayne, Ernest L., Victoria, Tex. Memorandum paper holder. 2,471,504, May 31.
Weaver Engineering Co., assignee: *See*—
Weaver, Ira A.
Weaver, Ira A., Springfield, Ill., assignor to Weaver Engineering Co. Fluid actuated load lifting and lowering mechanism. 2,471,989, May 31.
Weaver Manufacturing Company, assignee: *See*—
Ross, William A.
Weber Dental Manufacturing Company, The, assignee: *See*—
Monnot, Edward L.
Wehrli, Walter, and F. Kebrer, Basel, assignors to Sandoz Ltd., Fribourg, Switzerland. Trimazo dyes. 2,471,664, May 31.
Weightman, Herbert G., Scituate, assignor, by mesne assignments, to Stevens-Arnold, Inc., Boston, Mass. Resonant magnetic switch assembly. 2,471,564, May 31.
Weinberg, Samuel A., Wollaston, Mass. Cake and pie knife. 2,471,466, May 31.
Weiss, Ralph E., Cheektowaga, N. Y. Device for beating time in teaching music. 2,471,990, May 31.
Weiss, Robert H.: *See*—
Conn, Robert C., and Weiss.
Werner, Le Roy L., Washington, D. C. Escape device. 2,471,467, May 31.
Western Electric Company, Incorporated, assignee: *See*—
Johnstone, Harold G.
Nystrom, Axel C., and Volckhausen.
Robson, Duer C.
Westinghouse Electric Corporation, assignee: *See*—
Mierley, George M.
Stoltz, Glenn E., Erbe, and Geiselman.
Weston, William K., London, England, assignor to International Standard Electric Corporation, New York, N. Y. Repeatered submarine signaling cable. 2,471,468, May 31.
Weisel, Earl W., Milwaukee, Wis. Sportsman's bat. 2,472,033, May 31.
Weynand, Paul, San Antonio, Tex. Stone dresser. 2,471,991, May 31.
Wheeler, John, Knox, Ind. Animal trap. 2,471,804, May 31.
White, Albert R., Glendale, Calif. Machine and method of making oil filter packs. 2,471,595, May 31.
White, Stanley E.: *See*—
Melvin, Grant C., Jones, and White.
White, Wilson E., Pontiac, Mich. Floor protector. 2,471,708, May 31.
Whitney, Blake, Company, The, assignee: *See*—
Ingmanson, John H.
Wiebusch, Edmund F., Euclid, Ohio, assignor to Borg-Warner Corporation, Chicago, Ill. Pump with pressure loaded stepped bushing. 2,472,031, May 31.
Wicker, Charles A., Selma, Ala. Mounting for tandem springs for trucks. 2,471,992, May 31.
Wilcock, Donald F., Saugus, Mass., assignor to General Electric Company. Liquid polysiloxane lubricants. 2,471,850, May 31.
Wildbore, Wilfred J. L., and J. M. Keenan, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Wire lapping or like machine. 2,471,469, May 31.
Wilder, Edward A., assignor to S. C. Johnson & Son, Inc., Racine, Wis. Treating ouricury wax and resulting composition. 2,471,905, May 31.
Wilkerson, Claude A., assignor to Commercial Solvents Corporation, Terre Haute, Ind. Solvent extraction of penicillin culture liquors. 2,471,597, May 31.
Wilkie, Harry, Dayton, and F. L. Moseley, Osborn, Ohio. Radio range system. 2,471,470, May 31.
Wilks, Wilbur S.: *See*—
Miller, Carl H., and Wilks.
Willach, Bernhard: *See*—
Rose, Alexander D., and Willach.
Williams, John C., Oakland, Calif. Pump. 2,471,598, May 31.
Williams, Keith, Buffalo, N. Y. Door opening mechanism. 2,472,034, May 31.
Williams, Keith, Buffalo, N. Y. Combined spring and friction shock absorber. 2,472,035, May 31.
Williams, Keith, Buffalo, N. Y. Operating handle lever means for rotary hand brakes. 2,472,036, May 31.
Williams, Vilior P., Chicago, Ill. Cam action universal joint. 2,471,665, May 31.
Willson, Karl S., and D. G. Ellis, assignors to The Harshaw Chemical Company, Cleveland, Ohio. Electrodeposition of copper. 2,471,918, May 31.
Wilson, Benjamin J., Oreland, R. C. Machler, Philadelphia, N. E. Polster, Willow Grove, and G. E. R. Murray, Feasterville, Pa., assignors to the United States of America as represented by the Secretary of War. Thermostatic electric switch. 2,471,806, May 31.
Wilson, Joseph F.: *See*—
Hillyer, John C., and Wilson.
Wilson, Perry J., New Paltz, N. Y., assignor to Electric Boat Company, Groton, Conn. Truck body comprising removable panels. 2,471,917, May 31.
Wilson, Theodore J.: *See*—
Kutzler, Robert J., and Wilson.
Wilt, Homer E., Akron, and G. A. Tincler, Randolph, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y. Tool for installing hollow rivets. 2,471,598, May 31.
Winters & Crampton Corporation, assignee: *See*—
Mark, Vennice E., and Anderson.
Winther, Jerrold B., Kenosha, Wis., assignor to M. P. Winther, as trustee. Punch press. 2,471,505, May 31.
Winther, Martin P., assignee, trustee: *See*—
Winther, Jerrold B.
Winthorp-Atkins Co., Inc., assignee: *See*—
Nichols, Gordon B.
Wirth, Theodore: *See*—
Knecht, Oscar, and Wirth.
Wiswall, Harry B., Los Angeles, Calif. Spray type washing machine for solid objects. 2,471,506, May 31.
Witchger, Eugene J., assignor to The Lufkin Rule Co., Saginaw, Mich. Steel measuring rule. 2,471,709, May 31.
Wood, Alden O., Parma, assignor to The Ohio Crankshaft Company, Cleveland, Ohio. Apparatus for simultaneously inductively heating a plurality of articles. 2,471,471, May 31.
Wood, Fremont E., Long Beach, Calif. Annunciator. 2,471,666, May 31.
Woodstock Typewriter Company, assignee: *See*—
Sears, Richard W., II.
Woodstock, Willard H., Flossmoor, Ill., assignor to Victor Chemical Works. Forming phosphonic and thio-phosphonic acid chlorides. 2,471,472, May 31.
Woolf, James W.: *See*—
Russell, John D., and Woolf, J. W.
Woolley, Lee A., assignor to Kingston Products Corporation, Kokomo, Ind. Fence charging circuit. 2,471,993, May 31.
Wooster, Charles B., assignor to Rohm & Haas Company, Philadelphia, Pa. Pyrolysis of beta-oximino-tert.-butyl pyridinium chloride. 2,471,994, May 31.
Worthington Pump and Machinery Corporation, assignee: Brigham, Nelson E.
Gilman, Frederick C.
MacDonald, Karl.
Wright, Harold R., West Kilbride, and J. Taylor, Saltcoats, Scotland, assignors to Imperial Chemical Industries Limited. Manufacture of high-explosive compositions or charges. 2,471,851, May 31.
Wurth, Walter A., Cranford, and S. C. Lane, Roselle, N. J., assignors to Standard Oil Development Company. Finishing polymers. 2,472,037, May 31.
"X" Laboratories, Inc., assignee: *See*—
Blair, Craig A.
Yando, Stephen, Long Island City, assignor of fifteen per cent to E. Pious, New York, N. Y. Ultra high frequency metering device and method. 2,472,038, May 31.
Yanko, William H.: *See*—
Mowry, David T., and Yanko.
Yarnall-Waring Company, assignee: *See*—
Kinderman, Walter J.
Yasenesky, Alexander T.: *See*—
Garrett, Elmer E., Steck, and Yasenesky.
Yen, Tsheng, Washington, D. C. Typewriter for writing the Chinese language. 2,471,807, May 31.
Yerrick, William D., and J. C. Vickland, Wellsville, assignors to The Air Preheater Corporation, New York, N. Y. Adjustable circumferential seal for preheaters. 2,471,995, May 31.
Young, Norman H., Jr., Jackson Heights, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Transmission system. 2,471,473, May 31.
Young, Sanford C., French Creek, W. Va. Apparatus for connecting and disconnecting heavier-than-air aircraft while in flight. 2,471,599, May 31.
Zacharias, Erhard, New York, N. Y. Electric fan. 2,472,039, May 31.
Zielinski, Leon F.: *See*—
Bleakney, William M., and Zielinski.
Zuckerman, Samuel G., Brooklyn, assignor of one-eighth to A. B. Breslow, New York, N. Y. Collapsible portable cart. 2,471,553, May 31.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 31ST DAY OF MAY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Machine unit for drafting fibers, Textile. F. H. Carman. Re. 23,117, May 31.
Metal salt compositions, Oil-soluble drier. A. Fischer. Re. 23,119, May 31.
Oils, Refining animal and vegetable. F. J. Ewing. Re. 23,118, May 31.

LIST OF PLANT INVENTIONS

Rose plant. J. D. Brownell. 841–3, May 31.
Rose plant. R. L. Byrum. 844, May 31.

LIST OF DESIGN INVENTIONS

Ash tray. A. Jargstorff. 153,944, May 31.
Ash tray. C. Mankouski. 153,962, May 31.
Awning. C. R. Trent. 153,997, May 31.
Bait, Artificial. W. L. Raschke. 153,980, May 31.
Basket, Flower. A. Berra. 153,919, May 31.
Battery charger, Portable. L. A. Medlar. 153,967, May 31.
Belt for wearing apparel. B. J. Bequette. 153,915, May 31.
Billfold, key case, and coin purse, Combined. C. A. Fox. 153,930, May 31.
Book end. J. H. Witzke. 154,009, May 31.
Bracelet or similar article. A. Corbi. 153,924, May 31.
Cabinet, Washing machine. M. H. Boldt. 153,921, May 31.
Cap, Container. L. Baron. 153,912, May 31.
Cap, Container. A. H. Jung. 153,945–51, May 31.
Cap, Screw. J. L. Lay. 153,956, May 31.
Case, Combined eye shadow and rouge. E. N. Graham. 153,938, May 31.
Case, Hand luggage. G. G. Barton. 153,914, May 31.
Chair. J. H. Fraser. 153,932, May 31.
Chest. J. J. Gilmore. 153,933, May 31.
Container for candy or the like. S. H. Berg. 153,916, May 31.
Container or the like, Powder puff. B. Ulvad. 153,999, May 31.
Cooker or the like, Pressure. W. L. Morrison, Jr. 153,968, May 31.
Cooler, Bottled beverage. W. W. Hoople. 153,941, May 31.
Corner piece. H. F. Lange. 153,954, May 31.
Counter, Poker chip. R. D. Nelson. 153,973, May 31.
Cuff link or the like. G. K. Lowe. 153,960, May 31.
Desk or similar article. C. Karstadt and C. M. Abrahamson. 153,952, May 31.
Dictating machine or similar article. E. Berlant. 153,917, May 31.
Dishwashing machine. T. S. Bartlett. 153,918, May 31.
Dispenser or similar article, Beverage. F. F. Guntber. 153,939, May 31.
Dispensing machine, Confectionery. L. Ptrus. 153,975, May 31.
Display container or similar article. H. G. Treles. 153,996, May 31.
Display counter, Record. S. Malkin. 153,961, May 31.
Display figure. M. T. Upson. 154,000, May 31.
Doll or similar article. M. Marcsel and G. Cornell. 153,963, May 31.
Dolly. F. T. Loser. 153,959, May 31.
Dolly for transporting airplanes and the like. M. C. Snyder. 153,989, May 31.
Dress. E. Rosenthal. 153,982, May 31.
Dress. J. F. Strassner. 153,994, May 31.
Dress ensemble. J. Lipman. 153,958, May 31.
Drier, Automatic clothes. R. C. Sandin. 153,985, May 31.
Feeder, Bottle cap. R. Sonnenberg. 153,991, May 31.
Finial, Roof. M. L. Ryadon. 153,983, May 31.
Fork or similar article. F. Wagner. 154,002–5, May 31.
Game board. A. J. Jackson. 153,943, May 31.
Game board. N. Thomas. 153,995, May 31.
Game board. A. Womack. 154,011, May 31.
Gate, Mobile race control. J. S. Goodwin. 153,935–6, May 31.
Guide, Cocktail recipe. L. F. Zimmermann. 154,012, May 31.
Hanger, Pants. W. G. Williams. 154,008, May 31.
Holder, Iron. C. D. Stanley. 153,993, May 31.
Holder or the like, Baby's bottle. M. Grabol. 153,937, May 31.
Holder or the like, Comb. M. W. Bernstein. 153,918, May 31.
Hood, Flight trainer. R. C. Dehmel. 153,925, May 31.
Iron, Collar cuff. H. N. Dixon. 153,926, May 31.
Knife or similar article. F. Wagner. 154,006, May 31.
Knob, Adjusting. J. O. Reinecke. 153,981, May 31.
Lantern. P. Silberhartz. 153,987, May 31.
Light for motor vehicles or similar article, Portable signal. F. K. Hussey. 153,942, May 31.
Light, Taxicab cruising. C. D. Nelson, Jr. 153,971–2, May 31.
Light, Taxi top. W. H. Murray. 153,969, May 31.
Ornament or similar article, Table. L. McDougall. 153,966, May 31.
Oven or similar article, Baking. J. F. Stammler. 153,992, May 31.
Overshoe, Woman's. H. A. Watkins and E. M. Heimerl. 154,007, May 31.
Rack. I. R. Linnard. 153,957, May 31.
Range, Electric. H. L. Porter. 153,976, May 31.
Range, Gas. H. L. Porter. 153,977, May 31.
Resuscitator, Inhalator, and aspirator cabinet, Combination. M. H. Goodner. 153,944, May 31.
Ring, Finger. A. G. Sager. 153,984, May 31.
Ring, Finger. C. J. Scola. 153,986, May 31.
Scrubbing machine, Rug. W. L. Petersen. 153,974, May 31.
Shirt. J. Nachman. 153,970, May 31.
Slip or similar article. S. Wolf. 154,010, May 31.
Spatula, Bar. N. F. Brignola. 153,922, May 31.
Spectacles, Pair of. J. A. Lamber. 153,955, May 31.
Spoon or similar article. E. B. McAlpin. 153,964–5, May 31.
Stand for a hand telephone, Desk. H. Dreyfuss and R. H. Hose. 153,927–8, May 31.
Step plate, Tricycle. C. V. Queen. 153,978, May 31.
Textile fabric or similar article. J. Tricarico. 153,998, May 31.
Tongs, Laundry. P. H. Brown, Sr. 153,923, May 31.
Tool, Combination pocket. H. J. Smoleroff and J. J. Kovacs. 153,988, May 31.
Toy animal figure or other similar article. M. Sohn. 153,990, May 31.
Toy bird. D. J. Ranshan. 153,979, May 31.
Toy pistol. M. Fleishman. 153,929, May 31.
Trailer. P. W. Lane. 153,953, May 31.
Trailer, Automobile carrying. L. M. Francis. 153,931, May 31.
Tray, Chair-arm. M. Higgs and J. W. Crail. 153,940, May 31.
Vise or similar article, Bench. H. W. Vogl. 154,001, May 31.
Washing machine. M. H. Boldt. 153,920, May 31.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 31ST DAY OF MAY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrasive wheel. J. Chudner. 2,471,934, May 31.
Accumulator of the bipolar type, Electric. W. G. Schmidt. 2,471,781, May 31.
Acid, Storage of hydrofluoric. P. M. Waddill. 2,471,986, May 31.
Actuator, Air operated. J. Neuroth. 2,471,579, May 31.
Addition of chlorinated acetic acid derivatives to olefins. M. S. Kharasch and W. H. Urry. 2,471,570, May 31.
Adjustable mooring cable. K. L. Peck and E. F. Balmer. 2,472,026, May 31.
Adjustable ratchet wrench. A. E. Norman. 2,471,537, May 31.
Advertising device, Electrically illuminated. G. H. Rufle. 2,471,002, May 31.
Aircraft control apparatus. R. J. Kutsler and T. J. Willsen. 2,471,821, May 31.
Air gauge. R. S. Fox. 2,471,737, May 31.
Air supply apparatus for cupola furnaces. H. A. Reece. 2,471,776, May 31.
Air treating apparatus. C. D. Graham. 2,472,011, May 31.
Aluminum, Method and materials for producing coated. F. P. Sprunce, Jr. 2,471,909, May 31.
Animal trap. W. R. Horne. 2,471,748, May 31.
Animal trap. J. Wheeler. 2,471,804, May 31.
Annunciator. F. E. Wood. 2,471,666, May 31.
Antenna. G. H. Brown and J. Epstein. 2,471,815, May 31.
Antenna, Parabolic. S. E. Mautner. 2,471,828, May 31.
Apparatus for connecting and disconnecting heavier-than-air aircraft while in flight. S. C. Young. 2,471,599, May 31.
Apparatus for drying and heat-treating. A. J. Kiseksit. 2,471,964, May 31.
Apparatus for handling fluids. A. O. Hubbell. 2,471,623, May 31.
Apparatus for heat-treating air-pervious strip material. H. J. Walter and P. R. Rose. 2,471,802, May 31.
Apparatus for heating air. E. Nicholson. 2,471,972, May 31.
Apparatus for heating and cooling kettles. O. O. Oaks. 2,471,538, May 31.
Apparatus for making structural shapes. D. L. Mercer. 2,471,490, May 31.
Apparatus for making water gas. G. R. Steere. 2,471,792, May 31.
Apparatus for mounting work in a holder. E. E. Stevenson. 2,471,661, May 31.
Apparatus for oiling parts. D. C. Robson. 2,471,978, May 31.
Apparatus for simultaneously inductively heating a plurality of articles. A. O. Wood. 2,471,471, May 31.
Apparatus for supplying abrasive to buffing wheels. J. P. Creamer. 2,471,727, May 31.
Apparatus for supplying air to cupola furnaces. H. A. Reece. 2,471,775, May 31.
Apparatus for treating pipes. A. and L. Petrault. 2,471,580, May 31.
Appliance, Antifreeze. L. W. Breck. 2,471,718, May 31.
Appliance, Bathtub shower bath. I. V. Thulin. 2,472,030, May 31.
Appliance, Load-lifting. W. A. Ross. 2,471,901, May 31.
Applicator, Rotary disk glue. L. C. Fitzgerald. 2,471,519, May 31.
Apron. E. N. Stanton. 2,471,910, May 31.
Aqueous emulsion polymerization of acrylonitrile in the presence of an aromatic hydrocarbon. S. A. Harrison. 2,471,743, May 31.
Arc welding of magnesium, Gas-shielded carbon. P. Klain and R. B. MacPhail. 2,472,020, May 31.
Aromatic derivatives, Production of. W. N. Axe. 2,471,922, May 21.
Attachment for automobile luggage compartments, Table. E. C. Doerr. 2,471,730, May 31.
Austenitic cast iron. A. G. E. Robiette and P. F. Hancock. 2,472,027, May 31.
Awning, Movable. H. G. Jones. 2,471,962, May 31.
Bag: *See*—
Poultry bag.
Bag attachment, Vacuum cleaner. F. S. Howard. 2,471,431, May 31.
Ball bat, Rotatable practice. C. A. Christensen. 2,471,610, May 31.
Band, Adjustable metallic wrist. B. Maestri. 2,471,604, May 31.
Barrel engine mounting. E. S. Hall. 2,471,428, May 31.
Base, Baseball. J. G. Fleming and W. J. Klem. 2,471,736, May 31.
Baths containing a chloroprene polymer, Wool shrink-proofing. J. B. Rust. 2,471,456, May 31.
Battery vent and filler plug, Explosion-proof. J. Rittenhouse and M. F. Peters. 2,471,665, May 31.
Battery with level indicator, Storage. S. Stelmack. 2,471,660, May 31.
Bed partition. A. H. Power. 2,471,977, May 31.
Bed table. E. R. Norwood. 2,471,646, May 31.
Belt and transmission. W. A. Meyer. 2,471,969, May 31.
Beverages and product obtained thereby, Improving fermented. J. S. Wallerstein, E. Farber, and R. T. Alba. 2,471,502, May 31.
Blade-dispensing container. N. Testi. 2,472,051, May 31.
Blower for ventilators. C. W. Olson. 2,472,024, May 31.
Bobbin clutch. G. Magrath. 2,471,574, May 31.
Bodying of oil by heat. E. W. Moffett. 2,471,077, May 31.
Bottle carrier. J. de Swart. 2,472,005, May 31.
Bottle holder. E. W. Barlock. 2,471,512, May 31.
Bow, Decorative. F. C. Southgate. 2,471,590, May 31.
Bowl, Child's rocking. L. E. Kling. 2,471,528, May 31.
Box and corner lock therefor. P. W. Miessler. 2,471,883, May 31.
Bracket: *See*—
Scaffolding bracket.
Brake adjusting mechanism, Dual. A. Dieckmann. 2,471,865, May 31.
Brake cooling means. J. J. Bloomfield. 2,471,858, May 31.
Braking apparatus, Torque equalising. J. W. F. Holl. 2,471,956, May 31.
Braking means for electric motors. G. Malcom. 2,472,046, May 31.
Brassière. A. S. and V. I. Becker. 2,471,670, May 31.
Brassière. A. Rubinstein. 2,471,587, May 31.
Brick clip. R. A. Richards. 2,471,584, May 31.
Bromine trifluoride treatment of halohydrocarbons. E. T. McBee, V. V. Lindgren, and W. B. Ligett. 2,471,831, May 31.
Brush holder. E. J. Talamini. 2,471,591, May 31.
Brush lifter. J. A. Johnson. 2,472,018, May 31.
Brush, Metal-plated plastic. W. C. Bird. 2,471,855, May 31.
Brushes, Making wire. J. F. Cunningham, Jr. 2,472,003, May 31.
Bucket, Aerated minnow. K. L. Lumpkin. 2,471,573, May 31.
Burner control system, including a viscosity sensitive by-pass valve. R. B. Plass. 2,471,541, May 31.
Bushing. J. N. Gladden. 2,471,615, May 31.
Button, Detachable. H. A. Shaffer. 2,471,589, May 31.
Butyl rubber to metal, Adhesion of. W. C. Smith. 2,471,905, May 31.
C-clamp, Quick-acting. E. C. Neal. 2,472,022, May 31.
Cabinet with drawer and work board combination. D. La Barre. 2,471,529, May 31.
Cabinet with table forming front, Kitchen. S. W. Adams. 2,471,506, May 21.
Cable: *See*—
Adjustable mooring cable.
Repeated submarine signaling cable.
Calculator, Tree volume. C. Messavage. 2,471,491, May 31.
Calibrating peak current meter. C. W. Hansell. 2,472,013, May 31.
Cam action universal joint. V. P. Williams. 2,471,665, May 31.
Cam finishing machine. W. P. Norton, Jr. 2,471,493, May 31.
Cam for level winding devices. D. S. Reitz. 2,471,654, May 31.
Car: *See*—
Dump car.
Carbonyl compounds to their corresponding methylene analogues, Reducing. H. Minion. 2,471,697, May 31.
Carriage. G. E. Barcher, Jr. 2,471,658, May 31.
Carriage, Steerable infant's. W. C. Troendle. 2,471,985, May 31.
Carrier: *See*—
Bottle carrier.
Cart, Collapsible golf-bag. T. A. Hutsell. 2,471,751, May 31.
Cart, Collapsible portable. S. G. Zuckerman. 2,471,553, May 31.
Cartridge, Desiccator. F. P. Morf. 2,471,442, May 31.
Case: *See*—
Lipstick case.
Two-part pocket case.
Casing landing head. D. U. Shaffer and F. J. Schweitzer, Jr. 2,471,658, May 31.
Catalytic condensation of phenols with monocyclic dihydroterpenes. A. L. Rummelsburg. 2,471,464, May 31.

Catalytic partial oxidation process. L. K. Beach and G. C. Connolly. 2,471,853, May 31.
Cavity with adjustable walls, Tunable resonant. W. A. Edson and W. F. Kannenberg. 2,471,410, May 31.
Cellulose surfaces, Bonding. R. P. Roberts and K. Jones. 2,471,497, May 31.
Cement, Retarded. N. C. Ludwig. 2,471,632, May 31.
Centrifugally operable clutch. W. and H. Hinden. 2,471,747, May 31.
Chain: *See*—
Link chain.
Chart. B. Specter and J. J. Murray. 2,471,552, May 31.
Cheese and package therefor, Processing. F. M. Fisher and H. C. Hopp. 2,471,867, May 31.
Chuck. J. Bodle. 2,471,407, May 31.
Circuit: *See*—
Fence charging circuit. Modulator circuit.
Heater controlling circuit.
Circuit breaker. E. T. Plats. 2,471,837, May 31.
Circuit controller, Electric. G. B. Lutz. 2,471,633, May 31.
Circuit element for tuning an electric circuit over a plurality of frequency bands. F. B. Gusdorf and A. Horowitz. 2,471,523, May 31.
Circuit for generating a saw-tooth-like current in the deflecting coil of cathode-ray tubes. F. Kerkhof. 2,471,819, May 31.
Circuit for performing a timing function, Electronic control. H. W. Lord. 2,471,826, May 31.
Circuit for television transmitter systems, Vertical blanking. O. H. Schade. 2,471,903, May 31.
Circuit using cathode follower feed-in stages, Mixer. R. B. Reade and D. D. Grieg. 2,471,449, May 31.
Circumcision clamp. T. P. De Palo. 2,471,864, May 31.
Citrus waste press water, Treatment of. G. N. Pulley. 2,471,893, May 31.
Clamp: *See*—
Circumcision clamp. Pipe clamp.
Cleaner: *See*—
Sanitary drinking glass cleaner.
Clip: *See*—
Brick clip.
Clock, Electric alarm. W. K. Sessions, Jr., and E. D. Brightman. 2,471,549, May 31.
Closure and seal, Refrigerator. V. E. Mark and L. L. Judkerson. 2,471,634, May 31.
Closure for stapling machines, Magazine. O. A. Wandel. 2,472,032, May 31.
Clothespin. B. Burns. 2,471,606, May 31.
Clothes-washing and cleaning machine. G. Kuhn. 2,471,876, May 31.
Clothes-washing machine. L. M. Kahn. 2,471,433, May 31.
Clutch: *See*—
Bobbin clutch.
Centrifugally operable clutch.
Clutch of the pin and socket type, One-way. W. A. Taylor. 2,471,793, May 31.
Cobalt from electrolytes, Removing. D. L. Griffith and M. J. Rankin. 2,471,952, May 31.
Code-signaling system, Pulse. C. E. Cleeton. 2,471,413, May 31.
Coil construction and method. I. Gebel. 2,471,869, May 31.
Collapsible steam table. L. N. Hilkin. 2,471,420, May 31.
Collector for shuttle feed conveyers, Dust. M. I. Dorfan. 2,472,053, May 31.
Collet chucking assembly, Spring loaded. T. J. Ashdown. 2,471,921, May 31.
Coloring matters of the phthalocyanine series from phthalyl halides, Manufacture of. R. J. Sumner. 2,471,794, May 31.
Column-stand for supporting apparatus vertically movable along the column particularly X-ray apparatus. D. E. Berggren. 2,471,998, May 31.
Combination lipstick and rouge container. A. B. Moore. 2,471,441, May 31.
Combustion system for turbine engines. R. E. Heald. 2,472,014, May 31.
Compensator. J. Robinson. 2,471,586, May 31.
Composite ornamental strip. S. Matsner. 2,471,576, May 31.
Compressor lubrication supply mechanism. C. B. Fites. 2,471,868, May 31.
Computer, Electronic. R. L. Snyder, Jr., and J. A. Rajchman. 2,471,788, May 31.
Concrete brick press. H. K. Farris and W. Renshaw. 2,471,731, May 31.
Condenser. B. C. Johnson. 2,471,960, May 31.
Connector: *See*—
Electrical connector.
Connector device, Electrical. G. M. Mierley. 2,471,440, May 31.
Connector with spring wire, Electric. H. W. Batcheller. 2,471,923, May 31.
Contact construction, Circuit breaker. A. S. Caswell. 2,471,608, May 31.
Container: *See*—
Blade-dispensing container.
Combination lipstick and rouge container.
Container and closure therefor. G. Glocker. 2,471,565, May 31.

622 O. G.—996

Continuous press. R. T. Anderson. 2,471,920, May 31.
Control apparatus, Coin-operated typewriter. J. B. Graham. 2,471,617, May 31.
Control apparatus, Current. K. A. Lang. 2,471,622, May 31.
Control apparatus, Fluid responsive. L. Ringer. 2,471,778, May 31.
Control apparatus for variable loads, Electric. H. D. Van Sciver, II. 2,472,044, May 31.
Control apparatus, Percentage power. R. S. Davies. 2,472,042, May 31.
Control-device for automatic and semiautomatic firearms. W. C. Roemer. 2,471,779, May 31.
Control mechanism, Ironing machine. W. H. Bradley. 2,471,717, May 31.
Control of electrolytic processes. G. E. Stoltz, J. R. Erbe, and R. A. Geiselman. 2,471,912, May 31.
Control system. P. S. Dickey. 2,471,726, May 31.
Control system, Electrical. E. M. Callender. 2,472,048, May 31.
Control system, Position and speed. W. F. Frost. 2,471,422, May 31.
Control system, Weld. H. R. Davies. 2,472,041, May 31.
Controller, Electric circuit. J. D. Russell and J. W. Woolf. 2,472,048, May 31.
Controller for domestic appliances, Time and temperature. R. R. Candor. 2,471,862, May 31.
Controlling system for condition regulators. W. L. Hunt. 2,471,872, May 31.
Controlling system for propeller blades, Pitch. J. I. Hamilton. 2,471,933, May 31.
Conversion of iron chloride into iron oxide and hydrochloric acid. S. Strelzoff. 2,471,844, May 31.
Converting material. W. S. Martin. 2,471,882, May 31.
Cooling and display device, Bottle. W. G. Poissant. 2,471,581, May 31.
Copolymer of styrene and a phenyl-vinyl acetate. D. T. Mowry and C. L. Mills, Jr. 2,471,766, May 31.
Copolymers of vinyl aromatic compounds. R. B. Seymour and J. M. Butler. 2,471,785, May 31.
Copper, Electrodeposition of. K. S. Willson and D. G. Ellis. 2,471,916, May 31.
Core catcher. J. S. Goodwin. 2,471,616, May 31.
Corrosion resistance of ferriferous metals, Method of and material for increasing the. E. Snyder. 2,471,907, May 31.
Cotton picking apparatus. P. W. Spell. 2,471,842, May 31.
Coupling: *See*—
Pipe coupling. Wabbler coupling.
Trailer coupling.
Covering for aircraft parts, Sheet. F. Nagel. 2,471,768, May 31.
Crib having a movable partition, Child's. F. M. Hurst. 2,471,691, May 31.
Crossarm lathe wrench. I. E. Toye. 2,471,593, May 31.
Cup for mink or other penned animals, Drinking. L. F. Jonas. 2,471,527, May 31.
Cutter for weft replenishing looms, Filling thread. G. C. Beatrice. 2,471,809, May 31.
Cutter mounting. H. A. Fry. 2,471,613, May 31.
Cylinder hydraulic washer. L. Johnston. 2,471,624, May 31.
Damper. J. E. Maynard and P. O. Collins. 2,471,980, May 31.
Damper counterbalance, Dynamic. G. I. Holmes. 2,471,687, May 31.
Damper, Flutter. W. M. Bleakney, L. F. Zielinski, and C. M. Ede. 2,471,857, May 31.
Deluge valve. H. G. Freeman. 2,472,006, May 31.
Dental hand piece. H. E. T. Jensen. 2,471,526, May 31.
Dentures, Repair of. F. E. Steigleman. 2,471,001, May 31.
Derrick, Portable. D. R. Moore. 2,471,402, May 31.
Desiccating orange juice involving freeze drying. E. W. Flosdorf. 2,471,677, May 31.
Detector, Interference reducing amplitude modulation. D. D. Grieg. 2,471,427, May 31.
Detergent composition. M. M. Morris and A. K. Kleeman. 2,471,645, May 31.
Device for beating time in teaching music. R. E. Weiss. 2,471,990, May 31.
Device for controlling the release of high-pressure fluid mediums. H. C. Grant, Jr., and A. E. Reichard. 2,471,425, May 31.
Device for controlling the tightness of expanded tube joints. R. A. Gilman. 2,471,614, May 31.
Device for locating faults in cables. H. S. Dimmick and F. S. Jenkins. 2,471,417, May 31.
Device for producing rectilinear movement of the optical assembly in cinematograph apparatus. A. Bécote. 2,471,715, May 31.
Device for simulating runway localizer and glide path beams for training purposes. G. C. Melvin, P. C. Jones, and S. B. White. 2,471,430, May 31.
Device for straightening toes. B. M. Baltor. 2,471,997, May 31.
Device to form teeth in the edge of a knife. L. Pavesi and P. P. Rodoni. 2,471,699, May 31.
Diaper holder. C. B. Birkle. 2,471,556, May 31.
Diluent in hydrocarbon synthesis process, Treatment of solid. S. D. Sumerford. 2,471,913, May 31.
Direction finder, Frequency controlled. T. H. Clark. 2,471,412, May 31.

Dispenser: *See*—
Lighted cigarette dis- Tooth powder dispenser.
penser.
Dispenser for refrigerators, Automatic frozen cube. D. L. Wallace. 2,471,801, May 31.
Dispenser with flow restricting valve. R. G. Ban. 2,471,852, May 31.
Display device, Magnetic. L. E. Selders. 2,471,981, May 31.
Door check. A. Van Veen and K. B. Noble. 2,471,707, May 31.
Door closure and seal, Magnetic. V. E. Mark and L. L. Anderson. 2,471,635, May 31.
Door construction. R. Cadwallader. 2,471,811, May 31.
Door opening mechanism. K. Williams. 2,472,034, May 31.
Dresser, Stone. P. Weynand. 2,471,991, May 31.
Dressing, Surgical. W. J. Gardner. 2,472,009, May 31.
Drier: *See*—
Hair drier.
Drive for leatherworking machines, Hydraulic. R. J. Stehling. 2,471,984, May 31.
Drive for rotary grates and the like, Hydraulic. F. W. Spahr and J. S. Haug. 2,471,983, May 31.
Dry cleaning. C. S. Arnold. 2,471,667, May 31.
Dump car. H. W. Johns. 2,471,874, May 31.
Dye composition comprising an alkylol amine, Liquid sulfur. R. C. Conn. 2,472,052, May 31.
Dyes, Monoazo pyrazolone. O. Knecht and T. Wirth. 2,471,628, May 31.
Dyes, Trinuclear iminol cyanine. A. W. Anish. 2,471,996, May 31.
Dyes, Trisazo. W. Wehrli and F. Kehrer. 2,471,664, May 31.
Dyestuffs, Cyanine. J. D. Kendall and F. P. Doyle. 2,471,488, May 31.
Earring or other ornament, Aromatic. B. Gilowitz. 2,471,949, May 31.
Easel. G. E. Nichols. 2,471,536, May 31.
Eggs by freezing, Preservation of. S. A. Kaloyereas. 2,471,626, May 31.
Electric generator. R. C. Harris. 2,471,741, May 31.
Electric immersion heater. A. P. Charbonneau. 2,471,609, May 31.
Electric insect and rodent trap. L. M. McFadden. 2,471,640, May 31.
Electric motor. A. M. Cristiano. 2,471,812, May 31.
Electric razor holder. M. Long. 2,471,825, May 31.
Electric switch. J. A. Favre. 2,471,815, May 31.
Electrical connector. D. C. Hubbard. 2,471,957, May 31.
Electrode. G. H. McIntyre and R. E. Skinner. 2,471,531, May 31.
Electrode for dry electrical testing of insulated wire, Sparking. R. B. Everson and W. E. Ward. 2,471,560, May 31.
Electrode for hard facing, Welding. R. Castro and A. Lebet. 2,471,931, May 31.
Electrode for welding, Flexible. K. K. Brueckner. 2,471,478, May 31.
Electromagnetic reciprocating motor. E. Dieboid. 2,471,729, May 31.
Electron discharge device. J. J. Glauber. 2,471,424, May 31.
Electronic signal generator. D. E. Norgaard. 2,471,836, May 31.
Element for coaxial transmission lines, Resistance. E. Feenberg. 2,471,732, May 31.
Endpiece for slide fastener closures. A. Süsskind. 2,471,461, May 31.
Engine with lateral support for burners, Atmospheric pressure. O. Z. Frazier. 2,471,421, May 31.
Equipment for electric arcs, Supply. J. C. Milne. 2,471,641, May 31.
Escape device. L. L. Werner. 2,471,467, May 31.
Ethylene diformate, Production of. H. W. Fleming. 2,471,520, May 31.
Extension leaf table. C. H. Schnorr. 2,471,782, May 31.
Fan. R. D. Moore. 2,471,578, May 31.
Fan, Air circulating. J. H. Beckert. 2,471,671, May 31.
Fan, Electric. E. Zacharias. 2,472,039, May 31.
Fastener feeding and securing apparatus. J. S. Stull. 2,471,793, May 31.
Feedback system. L. S. Nergaard. 2,471,535, May 31.
Fence charging circuit. L. A. Woolley. 2,471,993, May 31.
Fence post, Electric. B. Grob. 2,471,662, May 31.
Ferrous sulfate pretreatment in emulsion polymerization of conjugated diolefins. W. W. Crouch and J. E. Pritchard. 2,471,938, May 31.
Filter: *See*—
Liquid filter.
Filter construction, Zigzag. O. H. Schaaf. 2,471,548, May 31.
Finishing polymers. W. A. Wurth and S. C. Lane. 2,472,037, May 31.
Fire extinguisher. J. H. Stroop. 2,471,460, May 31.
Fishing lure. F. G. Shipman. 2,471,499, May 31.
Fishing reel. R. L. Cannon. 2,471,723, May 31.
Fixture for relief grinding of cutting tools. E. E. Parker. 2,471,539, May 31.
Flatware, Producing. F. S. Robinson. 2,471,900, May 31.
Floor protector. W. E. White. 2,471,708, May 31.
Flowmeter. R. M. Otis. 2,472,056, May 31.
Flux coating, Weldrod. R. D. Wasserman. 2,471,803, May 31.
Flux, Soldering. W. H. Rinkenbach and A. J. Clear. 2,471,451, May 31.
Folding table. H. V. Gandette. 2,471,564, May 31.
Following and recording. W. J. Kinderman. 2,472,019, May 31.
Food preservation. F. L. Jungerich. 2,472,017, May 31.
Forming wells, Method of and apparatus for. I. J. McCullough. 2,471,695, May 31.
Frame: *See*—
Thermoplastic luggage frame.
Frame and double sash unit, Window. P. M. Henderson and L. H. Gatter. 2,471,685, May 31.
Frame having pivoted corner-pieces, Picture. G. Rosenberg and L. Spiselman. 2,471,545, May 31.
Fumaronitrile, Preparation of. D. T. Mowry and W. H. Yanko. 2,471,767, May 31.
Furfuryl alcohol-phenol aldehyde resinous products and making the same. H. H. Lebach. 2,471,831, May 31.
Furfuryl alcohol resin, Making a. P. L. McWhorter, Jr. 2,471,438, May 31.
Furfuryl alcohol resinous products and the product, Making. W. H. Adams, Jr., and H. H. Lebach. 2,471,600, May 31.
Furnace. E. O. Howle. 2,471,749, May 31.
Furniture, Metal. B. F. Hamilton. 2,471,740, May 31.
Gap-aligning device, Piston ring. A. H. Bates. 2,471,402, May 31.
Garment hanger. H. H. Fernald. 2,471,944, May 31.
Garment, Slip-over style of outer. W. A. Riggs. 2,471,543, May 31.
Gas, Treatment of coke-oven. J. A. Shaw. 2,471,550, May 31.
Gas washer. N. C. Christensen. 2,471,724, May 31.
Gauge: *See*—
Air gauge. Machinist's gauge.
Indicating gauge.
Gear blank, Welded. J. R. Mahan. 2,471,827, May 31.
Gear pump. A. B. Thacher. 2,471,915, May 31.
Generator: *See*—
Electric generator.
Electronic signal generator.
Generator for telemetering systems, Impulse. G. M. Giannini. 2,471,947, May 31.
Glassmeter, Photoelectric. R. S. Hunter. 2,471,750, May 31.
Governing apparatus. D. R. Staples. 2,472,050, May 31.
Grate fastening. H. M. Simon. 2,471,659, May 31.
Grater with horizontal axis disk, Food. W. A. Moran. 2,471,643, May 31.
Grinder, Drill. G. Munro. 2,471,443, May 31.
Grinding machine. G. Brinkmann. 2,471,406, May 31.
Grinding machine, Crankpin. A. V. Spongberg and H. G. Pasholine. 2,471,706, May 31.
Guard, Chick fountain. J. R. Morton. 2,471,765, May 31.
Guard for grinding machines and the like. E. C. Fielding. 2,471,561, May 31.
Guard, Stock. J. A. Slaughter. 2,471,551, May 31.
Gun sight. D. S. McMillan. 2,471,761, May 31.
Handle: *See*—
Toothbrush handle.
Hanger: *See*—
Garment hanger.
Hair drier. R. K. Boyer. 2,471,405, May 31.

Heater system. V. N. Tramontini. 2,471,846, May 31.
Heater with fuel retaining trough and igniter pocket, Combustion. H. J. D. McCollum. 2,471,833, May 31.
Heater with Knipp's singing tubes, Internal-combustion. H. J. D. McCollum. 2,471,832, May 31.
Heating unit, Electrical. A. Cote. 2,471,674, May 31.
Helicopter rotor drive and control system. C. M. Seibel. 2,471,904, May 31.
High-explosive compositions or charges, Manufacture of. H. R. Wright and J. Taylor. 2,471,851, May 31.
Holder: *See*—
Bottle holder. Motor brush holder.
Brush holder. Napkin holder.
Diaper holder. Photographic film holder.
Electric razor holder. Rope holder.
Memorandum paper holder. Toothbrush holder.
Holder and expeller, Button-making tubular-saw. R. N. Palmer. 2,471,098, May 31.
Holder for drills and the like, All-purpose work. E. Dion. 2,471,940, May 31.
Holder for weft replenishing looms, Pneumatic thread. R. G. Turner. 2,471,847, May 31.
Hood control, Automatic welder's. W. S. Broffitt. 2,471,719, May 31.

House, Poultry. P. De Jongh. 2,471,675, May 31.
Hydraulic jack. S. V. Noble. 2,471,770, May 31.
Hydrocarbonoxybis trifluoromethyl benzenes. E. T. McBee, R. O. Bolt, and R. Tebbe. 2,471,829, May 31.
Hydrocarbonoxy(trifluoromethyl)-benzene synthesis. E. T. McBee, R. O. Bolt, and R. Tebbe. 2,471,830, May 31.
Hydrocarbons, Synthesizing. S. B. Sweetser. 2,471,914, May 31.
Hydrocarbons, Treatment of. P. M. Arnold. 2,471,602, May 31.
Ice maker, Automatic. T. W. Rundell. 2,471,655, May 31.
Identification system, Telephone calling line. G. Deakin, W. Hatton, and L. A. B. Cabes. 2,471,415, May 31.
Illuminator, Vertical. D. D. Lowber and L. J. Peters. 2,471,870, May 31.
Impedance unit, Preassembled. D. H. Mitchell. 2,472,021, May 31.
Improving the tensile strength of grey cotton yarn. L. Axford. 2,471,554, May 31.
Indicating device. J. D. McCullough. 2,471,968, May 31.
Indicating gauge. A. D. Rose and B. Willach. 2,471,704, May 31.
Indicating system and method, Plan position. N. W. Bryant. 2,471,516, May 31.
Indicator: *See*—
pH indicator.
Indicator means for sadirons, Temperature. C. H. Sparklin. 2,471,458, May 31.
Inductors, Making ultra high frequency. J. L. Reinartz. 2,471,777, May 31.
Ingredient for prepared food mixes and preparing same. M. H. Kimball, C. G. Harrel, and R. G. Brown. 2,471,435, May 31.
Insect-affecting compositions. F. J. Sowa and A. Schwerdle. 2,471,790, May 31.
Installation for the granulation of slag. R. Dolezal. 2,471,559, May 31.
Instrument and bearing therefor. S. S. Green. 2,471,618, May 31.
Instrument, Celestial navigation. W. F. Hiltner. 2,471,886, May 31.
Instrument, Musical. W. and J. Muth, Jr. 2,471,534, May 31.
Insulator mounting. J. H. Schumacher. 2,471,839, May 31.
Iron: *See*—
Austenitic cast iron.
Isoalloxazines, Preparing. W. G. Farkas and L. A. Flexser. 2,472,007, May 31.
Isomerization of olefins in the presence of hydrogen fluoride impregnated alumina. A. G. Oblad and J. U. Messenger. 2,471,647, May 31.
Jack: *See*—
Hydraulic jack.
Jacket for molds, Slip-on. A. B. Henkel. 2,472,015, May 31.
Jig for manufacturing laminated timbers, Adjustable. C. D. Donker. 2,472,006, May 31.
Joint: *See*—
Cam action universal joint. Universal joint.
Joint assembly. J. H. Booth. 2,471,672, May 31.
Jumper line and clamp therefor, Electrical. T. H. Bowen. 2,472,000, May 31.
Knife, Cake and pie. S. A. Weinberg. 2,471,466, May 31.
Lavatory flush valve. J. Sweeney. 2,471,662, May 31.
Lawn mower. H. H. Packwood. 2,471,975, May 31.
Leak-stopping compositions. C. A. Blair. 2,471,856, May 31.
Leather roughing tool. C. C. Smith. 2,471,787, May 31.
Lemon and lime juices, Desiccating. E. W. Flosdorf. 2,471,678, May 31.
Lift, Bench stand table. R. L. Hatch. 2,471,955, May 31.
Lifter: *See*—
Brush lifter.
Lifter and carrier, Lid. A. M. Lewis. 2,471,878, May 31.
Lifting device for power hack saws, Blade. T. A. Podhajsky. 2,471,700, May 31.
Lighted cigarette dispenser. M. Kirsch. 2,471,820, May 31.
Lime, Making stabilized gel-type hydrated. B. E. Kester. 2,471,875, May 31.
Line producing device for typewriters. M. G. Lemos. 2,471,757, May 31.
Linings for books and for analogous purposes, Creasing. L. J. R. R. French. 2,471,482, May 31.
Link chain. G. A. Gotti, A. Killian, and N. Volpicelli. 2,471,950, May 31.
Lipstick case. S. Frydlender. 2,471,483, May 31.
Liquid filter. R. G. Hanneman. 2,472,012, May 31.
Listing attachment, Telephone number. G. A. Higbee. 2,471,430, May 31.
Load lifting and lowering mechanism, Fluid actuated. I. A. Weaver. 2,471,980, May 31.
Loading machine. E. M. McElhinney. 2,471,639, May 31.
Lock for trailers, Fifth wheel. P. H. Bles and F. M. Cruthers. 2,471,854, May 31.
Lock for vises, Base. R. M. Nelson. 2,471,444, May 31.
Locking and aligning system, Conveyer. A. B. Bogle. 2,471,513, May 31.
Loom stopping means. E. J. Szabo and P. W. Christley. 2,471,845, May 31.
Machine agitator, Oscillatory washing. R. H. Marsh. 2,471,760, May 31.
Machine and method of making oil filter packs. A. R. White. 2,471,595, May 31.
Machine for fabricating strakes for boat construction or the like. A. G. S. Sandison. 2,471,780, May 31.
Machine for separating spent hops from wort. E. L. Chaffee. 2,471,517, May 31.
Machinist's gauge. J. E. Hastings. 2,471,684, May 31.
Magnesium-base alloys, Treatment of. J. S. Peake and F. E. Robbins. 2,472,025, May 31.
Magnetic band pickup tool. C. H. Miller and W. S. Wilks. 2,471,764, May 31.
Magnetic separator. R. H. Stearns. 2,471,911, May 31.
Mailbox, Signaling. G. Aindl. 2,471,910, May 31.
Mandrel with means for clamping and spreading tubes. F. A. Gruetjen. 2,471,485, May 31.
Measuring device, Fluid pressure. C. H. Gibbons. 2,472,045, May 31.
Measuring device for bulk material, Automatic. P. F. Overmyer. 2,471,494, May 31.
Measuring microwave power. W. D. Hershberger. 2,471,744, May 31.
Mechanism for injection molding machines, Multiple nozzle. E. W. Halbach. 2,471,683, May 31.
Melting machine, Snow and ice. A. Fiduccia. 2,471,733, May 31.
Memorandum paper holder. E. L. Wayne. 2,471,504, May 31.
Mending device. D. C. Hungerford. 2,472,016, May 31.
Mercury compounds and making same. M. Hartmann and W. Bosshard. 2,471,621, May 31.
Mercury compounds and preparing same. M. Hartmann and W. Bosshard. 2,471,622, May 31.
Metal disks and the like, Method of and apparatus for inspecting and assorting. F. H. Lucas and G. E. Rhodes. 2,471,489, May 31.
Metal structure, Coated. F. S. Stewart and V. R. Hardy. 2,471,600, May 31.
Metallurgical slags, Utilizing. G. R. Fitterer. 2,471,562, May 31.
Meter: *See*—
Calibrating peak current meter.
Metering apparatus for drill pipe and the like, Length. J. F. Moore, Jr. 2,471,644, May 31.
Metering device and method, Ultra high frequency. S. Yando. 2,472,038, May 31.
Methacrylonitrile from α-aminoisobutyraldoximes, Preparation of. N. M. Bortnick and D. J. Butterbaugh. 2,471,927, May 31.
Methacrylonitrile, Preparation of. N. M. Bortnick and G. W. Cannon. 2,471,928, May 31.
Minerals for film concentration, Conditioning. J. Dasher and J. E. Norman. 2,471,414, May 31.
Mirror attachment, Antiglare rearview. W. L. Hendricks. 2,471,524, May 31.
Mixer. A. G. Granath. 2,471,467, May 31.
Mixing valve. W. B. Clifford. 2,471,725, May 31.
Modulator circuit. D. E. Norgaard. 2,471,835, May 31.
Molded articles, Method and apparatus for making. J. Gregg. 2,471,739, May 31.
Molding and packaging machinery. E. J. Rapp and H. R. Coon, Sr. 2,471,702–3, May 31.
Molding apparatus, Injection. W. P. Cousino. 2,471,813, May 31.
Mooring cables to rotary winged aircraft, Connecting. G. A. Ring. 2,471,544, May 31.
Motor: *See*—
Electric motor.
Electromagnetic reciprocating motor.

Relay, Piezoelectric type switching. W. P. Mason. 2,471,967, May 31.
Relay, Thermal. J. D. Bolesky. 2,471,924, May 31.
Relief valve. F. W. Schneck. 2,472,049, May 31.
Remote-control system. H. A. Stamper. 2,471,843, May 31.
Remover, Airfoil ice. W. A. Pulver. 2,471,894, May 31.
Repeater for submarine electric cables. M. van Hasselt. 2,471,465, May 31.
Repeater, Two-way regenerative. L. M. Potts. 2,471,891, May 31.
Repeatered submarine signaling cable. W. K. Weston. 2,471,468, May 31.
Resinous esters, Depolymerized copal-like. W. Krumbhaar. 2,471,629, May 31.
Resins and making same, Carboxylated. M. J. Hunter and W. C. Bauman. 2,471,818, May 31.
Resistors, Making insulated. H. G. Thomson. 2,471,592, May 31.
Ring and making same, Fusible. A. Pandolfi. 2,471,650, May 31.
Ring assembly, Collector. J. H. Baker. 2,471,808, May 31.
Rodent trap. J. Russell. 2,471,546, May 31.
Roller, Cigarette. A. F. Sas. 2,471,656, May 31.
Rope holder. G. A. Ward and O. Koleske. 2,471,503, May 31.
Rosin size composition, Stabilized dry. J. C. Barthel, A. R. Davis and E. N. Poor. 2,471,714, May 24.
Rubber-like articles and making same. G. H. McFadden. 2,472,054, May 31.
Rubber-like articles and making same. G. H. McFadden, J. F. Lyman, and A. G. Horney. 2,472,055, May 31.
Rule, Steel measuring. E. J. Witchger. 2,471,709, May 31.
Rust preventive compositions. P. R. McCarthy. 2,471,638, May 31.
Rust preventive compositions. M. A. Pallwoda and G. W. Duncan. 2,471,889, May 31.
Safety device for motion-picture projectors. J. G. Shepler. 2,471,786, May 31.
Safety device for pneumatic tools. C. F. Boyer. 2,471,604, May 31.
Salad dressing, Dry. M. H. Kimball, C. G. Harrel, and R. O. Brown. 2,471,434, May 31.
Sanitary drinking glass cleaner. F. W. Bunch. 2,471,721, May 31.

Sapphire hollow articles, Method and apparatus for producing. R. H. Lester and M. C. Cannon. 2,471,437, May 31.
Scaffolding bracket. G. E. Stich. 2,471,459, May 31.
Screw and nut release, Automatic. H. F. Clark. 2,472,002, May 31.
Seal for floating roofs. I. E. Boberg. 2,471,404, May 31.
Seal for preheaters, Adjustable circumferential. W. D. Yerrick and J. C. Vickland. 2,471,995, May 31.
Seal, Oil. A. F. Gardner. 2,471,679, May 31.
Sealing device. N. A. Christensen. 2,471,933, May 31.
Selvage forming mechanism. C. F. Libby. 2,471,758, May 31.
Separating charged particles of different masses, Method and apparatus for. N. D. Coggeshall and M. Muskat. 2,471,935, May 31.
Separating constituents of alloys by fractional crystallization. A. Regner. 2,471,899, May 31.
Separator: *See*—
Magnetic separator.
Separator. G. O. Kimmell. 2,471,571, May 31.
Shakeout for coke charging cars. E. W. Wallace. 2,471,849, May 31.
Shaker, Salt. M. L. Adams. 2,471,507, May 31.
Sheet metal bending tool. T. J. Nicholas. 2,471,445, May 31.
Shelf. J. F. Cserulewicz. 2,472,004, May 31.
Shift mechanism, Typewriter multiple case. R. W. Sears, II. 2,471,588, May 31.
Ship's log transmission regulator. E. F. Britten, Jr. 2,471,930, May 31.
Shock absorbing mechanism, Friction. G. E. Dath. 2,471,481, May 31.
Shockproof gauge mounting. A. H. Jones. 2,471,961, May 31.
Shoe, Corn picker gathering. J. R. Parks and H. Hielen. 2,471,771, May 31.
Shoes, Machineless manufacture of. L. Milchen. 2,471,696, May 31.
Shutoff device, Automatic ignition. A. F. Pantuosco. 2,471,651, May 31.
Silver from residues containing the same, Recovery of. H. A. Liebhafsky and L. B. Bronk. 2,471,824, May 31.
Slasher, Weed. N. E. Brooke. 2,471,720, May 31.
Spindle, Bobbin. C. L. Hamm. 2,471,816, May 31.
Spinner mounting. E. W. Radtke. 2,471,895, May 31.
Splice for crankshaft bearing. M. Shnida. 2,471,982, May 31.
Splitting machine, Mica. C. Goodman. 2,471,738, May 31.
Spring and friction shock absorber, Combined. K. Williams. 2,472,035, May 31.
Sput, Barrel. L. M. Bell. 2,471,716, May 31.
Stand for tire changing, Wheel supporting. B. E. Moltz. 2,471,642, May 31.
Steering control, Automatic. A. M. MacCallum. 2,471,637, May 31.
Stitching machine, Shoe. C. N. Lestakis. 2,471,877, May 31.
Stop for helicopter blades. M. E. Gluhareff. 2,471,681, May 31.
Strainer. A. J. Granberg. 2,471,951, May 31.
Stretcher, Curtain. J. J. Dvorak. 2,471,943, May 31.
Sulfonamides, Production of. S. Pickholz and H. G. Dickenson. 2,471,772, May 31.
Support and guard for accordions. W. S. Borek. 2,471,926, May 31.
Support for lens drilling machines, Work. C. T. Grant. 2,471,871, May 31.
Surfaces of ferriferous metals for the reception of a siccative finishing coat, Method of and material for preparing. E. Snyder. 2,471,908, May 31.
Switch: *See*—
Electric switch. Thermal switch.
Multiple circuit switch. Thermostatic electric switch.
Pressure switch.
Switch and fuse, Combined. F. G. van Hoorn. 2,471,848, May 31.
Switch assembly, Resonant magnetic. H. G. Weightman. 2,471,504, May 31.
Switching arrangement, Time and thermostatically controlled. S. C. Shepard. 2,471,457, May 31.
Switching device, Electrical. W. J. D. Harrison. 2,471,568, May 31.
Systems for comparing synchronized wave signals. S. Lovel. 2,471,530, May 31.
Table: *See*—
Bed table. Folding table.
Collapsible steam table. Heated dental instrument table.
Extension leaf table.
Table reciprocating mechanism, Hydraulic. D. H. Holmes. 2,471,688, May 31.
Tank connection, Hot-water. O. E. Andrus. 2,471,475, May 31.
Tape supporting means for strand covering machines. A. C. Nystrom and W. J. Volckhausen. 2,471,973, May 31.
Teetering device. E. H. Loker. 2,471,572, May 31.
Teletypewriter system, Intercommunication. W. M. Bacon and C. R. Walker. 2,471,712, May 31.
Tensiometer, Cable. A. Boos. 2,471,999, May 31.
Terpene phenols, Preparation of. A. L. Rummelsburg. 2,471,453, May 31.
Terpene phenols, Preparation of. A. L. Rummelsburg. 2,471,455, May 31.
Tester for bearings. H. Glaser. 2,471,423, May 31.
Testing of solutions. F. J. Cahn. 2,471,661, May 31.
Thermal switch. J. D. Bolesky. 2,471,925, May 31.
Thermoplastic luggage frame. H. Freeman. 2,471,612, May 31.
Thermostat, Safety type. C. D. Branson. 2,471,514, May 31.
Thermostatic electric switch. B. J. Wilson, R. C. Machler, N. E. Polster, and O. E. R. Murray. 2,471,806, May 31.
Thionyl chloride, Making. E. F. Fricke. 2,471,946, May 31.
Time cycling device. R. H. Grant. 2,471,420, May 31.
Timer. W. L. Hunt. 2,471,873, May 31.
Toaster-tray combination. H. E. Page. 2,471,649, May 31.
Toggle operated slidable jaw wrench. F. C. Fisch. 2,471,734, May 31.
Toggle press and molding articles from granular material. M. E. Gates. 2,471,563, May 31.
Tool: *See*—
Leather roughing tool. Oil seal removing tool.
Magnetic hand pickup tool. Sheet metal bending tool.
Tool for installing hollow rivets. H. E. Wilt and G. A. Tincler. 2,471,598, May 31.
Tool for timing diesel engines, Gauge. R. Hilbert. 2,471,746, May 31.
Toolholder. D. W. Brookfield. 2,472,040, May 31.
Tool post, Turret-type. G. J. Benes. 2,471,403, May 31.
Toothbrush handle. G. A. Gibson, Jr. 2,471,680, May 31.
Toothbrush holder. G. J. Rossi and E. L. Bonalanza. 2,471,979, May 31.
Tooth powder dispenser. J. H. Pfau. 2,471,495, May 31.
Toy, Extensible figure wheeled. D. A. Campbell. 2,471,722, May 31.
Toy, Hat trick. E. L. Enochs. 2,471,676, May 31.
Toy paddle, Basketball. S. Axelrod. 2,471,511, May 31.
Trailer connection. W. E. Martin. 2,471,658, May 31.
Trailer coupling. W. Bennett. 2,471,555, May 31.
Trailer coupling. T. Hotchkiss, Sr. 2,471,689, May 31.
Trainer for aircraft personnel, Ground. J. J. Lukacs and R. O. Rippere. 2,471,966, May 31.
Transmission. M. S. Baker. 2,471,668, May 31.
Transmission, Rotary turbine type hydraulic. E. W. Tombs. 2,471,799, May 31.
Transmission system. N. H. Young, Jr. 2,471,473, May 31.
Transmitter, Hydraulic pressure. G. W. Hardy. 2,471,619, May 31.
Transmitter-receiver system. E. Labin. 2,471,436, May 31.
Transmitting energy, Process and apparatus for. A. F. Benning and F. B. Downing. 2,471,476, May 31.
Transmitting mechanism, Hermetically sealed power. F. C. Gilman. 2,472,010, May 31.
Trap: *See*—
Animal trap. Rodent trap.
Electric insect and rodent trap.
Trap. C. L. Phillips. 2,471,540, May 31.
Trap for rockets, Spacer. C. N. Hickman. 2,471,745, May 31.
Tray for hypodermic needles and the like, Sterilizing. A. J. Son. 2,472,028, May 31.
Treating barium sulfate with carbonates. J. E. Norman. 2,471,446, May 31.
Treating ouricury wax and resulting composition. E. A. Wilder. 2,471,805, May 31.
Tripod head, Camera. R. I. Nielsen. 2,471,886, May 31.
Truck body comprising removable panels. P. J. Wilson. 2,471,917, May 31.
Tube system, Indicating. H. G. Busignies. 2,471,409, May 31.
Tuyère construction for underfeed stokers. E. B. Thomas. 2,471,797, May 31.
2,4-dichlorophenoxy-acetic acid, Preparing. R. H. F. Manske. 2,471,575, May 31.
Two-part pocket case. M. Kaplan. 2,471,663, May 31.
Typewriter for writing the Chinese language. T. Yen. 2,471,807, May 31.
Universal joint. P. M. Waite. 2,471,987, May 31.
Utensils, Producing cladded metal cooking. H. D. Tietz. 2,471,663, May 31.
Valve: *See*—
Deluge valve. Pressure regulating valve.
Lavatory flush valve. Relief valve.
Mixing valve.
Pressure controlled injection valve.
Valve. K. MacDonald. 2,471,880, May 31.
Valve actuating mechanism, Hydraulic. A. Mueller. 2,471,855, May 31.
Valve and liner therefor. G. T. Downey. 2,471,041, May 31.
Valve control, Auxiliary throttle. P. L. Howland. 2,471,690, May 31.
Valve mechanism with associated turbocharger, Inlet and exhaust. K. V. Anderson. 2,471,509, May 31.
Valves, Making hollow poppet. A. T. Colwell. 2,471,937, May 31.

Valves, Making poppet. A. T. Colwell. 2,471,936, May 31.
Valves, Making poppet. E. F. Gibian and K. M. Bartlett. 2,471,946, May 31.
Variable impedance device. A. Herz. 2,471,817, May 31.
Vector solver. J. J. Reza. 2,471,450, May 31.
Vegetable beverages, Clarifying and purifying. R. T. Alba and J. S. Wallerstein. 2,471,474, May 31.
Vehicle with elevating means, Semitrailer. G. A. Fleischmann. 2,471,735, May 31.
Venetian blind. C. Adler. 2,471,710, May 31.
Ventilator system, Refrigerator. L. M. Mitchell. 2,471,971, May 31.
Vibration damping mounting. L. F. Thiry. 2,472,029, May 31.
Vise, Jack operable and supported. F. W. Coffing. 2,471,726, May 31.
Volatile materials, Recovering. E. F. Drew. 2,471,942, May 31.
Voltage regulation. J. A. Potter. 2,471,976, May 31.
Voting machine. A. N. Gustavson. 2,471,567, May 31.
Voting system or the like, Electrical. W. T. Powell. 2,471,774, May 31.
Wabbler coupling. J. M. O'Malley. 2,471,974, May 31.
Washer: *See*—
Cylinder hydraulic washer. Gas washer.
Washing machine for solid objects, Spray type. H. B. Wiswall. 2,471,506, May 31.
Water gas, Making. G. R. Steere. 2,471,791, May 31.
Wavemeter to calibrate panoramic receivers. L. F. Jaggi. 2,471,482, May 31.
Web feeding and cutting machine. H. A. Perkins. 2,471,447, May 31.
Weighing and sorting machine, Automatic. W. F. Altenpohl. 2,471,711, May 31.
Weighing apparatus, Electrical load. A. C. Ruge. 2,472,047, May 31.
Weight-operated air pump. C. Colé. 2,471,673, May 31.
Welding device, Portable. M. J. Manning and P. F. Elsen. 2,471,881, May 31.
Wetting agent. H. G. Figdor. 2,471,945, May 31.
Wheel: *See*—
Abrasive wheel.
Wheelbarrow, Foldable. J. J. Toth. 2,471,462, May 31.
Whipping machine. F. S. Nanna. 2,471,769, May 31.
Winch. H. H. Washbond and O. R. Beattie. 2,471,988, May 31.
Window, Door construction receiving slidable. R. Cadwallader. 2,471,810, May 31.
Wire conductors, Covering. J. H. Ingmanson. 2,471,752, May 31.
Wire lapping or like machine. W. J. L. Wildbore and J. M. Keenan. 2,471,469, May 31.
Wiring device. H. A. Miloche. 2,471,970, May 31.
Wood assemblies, Forming. J. A. Poichen. 2,472,023, May 31.
Workholder for piston ring heat-treatment. C. F. Jones. 2,471,754, May 31.
Wrench: *See*—
Adjustable ratchet wrench. Toggle operated slidable Crossarm lathe wrench. jaw wrench.
Power actuated wrench.
Zinc of high purity, Electrolytically producing. S. P. Lowe, G. W. Long, G. H. Kent, and K. W. Downes. 2,471,965, May 31.

CLASSIFICATION OF PATENTS

ISSUED MAY 31, 1949

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number=class, second number=subclass, third number=patent number

1— 49: 2,472,032

Total	1,296			

Patents expiring: Patent Numbers 1,861,432 to 1,862,517, inclusive, issued June 7, 1932, expire June 7, 1949

Condition of Applications Under Examination at Close of Business May 20, 1949

Total number of patent applications awaiting action, 147,132. Date of oldest new application, June 25, 1947; date of oldest amended application, Nov. 16, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
1. GOLDBERG, A. J., Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons; Sewerage.	4-4-46	7-28-47	2874
2. BEERMANN, D., Fishing, Trapping and Vermin Destroying; Presses; Tobacco; Textile Wringers	2-16-46	8-6-47	2726
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	10-23-46	10-11-46	744
4. BISHOP, WALTER C., Power Driven Conveyors; Hoists; Handling Apparatus; Excavating; Fire Escapes; Ladders; Scaffolds; Mining, Quarrying, and Ice Harvesting.	11-26-47	7-10-47	3289
5. ROBINSON, C. W., Harvesters; Bee Culture; Dairy; Knotters; Animal Husbandry; Butchering	3-15-46	9-26-47	1422
6. SURLE, H., Carbon Chemistry (part)	5-28-46	6-10-46	1907
7. HANLIN, GEORGE, Optics; Photographic Apparatus	5-30-46	6-3-46	1470
8. LEWIS, R. O., Beds; Chairs, Seats; Racks, Cabinets; Miscellaneous Furniture	5-1-47	4-26-47	4075
9. BENSON, R. B., Pumps and Fans; Fluid and Fluid Current Motors	2-5-46	7-10-47	2063
10. ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters Tuners); Music; Modulators; Piezo-electric Crystals.	5-7-46	6-17-46	1304
11. BENHAM, E. V., Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Cutlery, Leather Manufactures; Nailing and Stapling.	5-1-46	10-4-47	1986
12. SPINTMAN, S., Machine Elements (part); Engine Starters; Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	7-22-46	6-14-47	1987
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	8-6-47	9-9-47	2078
14. FREEHOF, H. B., Metal Working (Bending; Sheet Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	8-14-46	8-13-46	1251
15. HENKIN, B., Plastics; Plastic Block and Earthenware Apparatus; Glass	8-31-46	1-2-46	1764
16. LOVEWELL, N. N., Television; Telephony	9-1-46	9-4-46	1562
17. LEIGHEY, R. A., (Acting), Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Associating or Folding; Sheet or Web Feeding.	11-26-47	1-4-47	2207
18. KURZ, J. A., Motors, Expansible Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal Combustion Engines.	4-19-45	9-20-47	3420
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	5-28-46	1-2-46	1649
20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	4-1-46	8-26-47	1976
21. MADER, R. C., Textiles	4-10-46	2-25-46	1328
22. CARPENTER, B. H., Aeronautics; Firearms; Ordnance; Ammunition and Explosive Devices (part)	2-26-46	9-5-47	1479
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	4-23-46	7-15-47	1139
24. LUSBY, CHARLES, Apparel; Apparel Apparatus; Package and Article Carriers; Sewing Machines	5-6-46	5-3-46	2340
25. BLAKELY, O. F., Classifying Solids; Centrifugal Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Distillation.	5-20-46	12-9-47	1631
26. YOUNG, R. R., Electricity—Generation, Motive Power, Transmission to Vehicles; Elevators	5-21-46	1-30-46	1086
27. JAMES, S., Brushing, Scrubbing; Fluid Treatment of Textiles (Apparatus) Liquid Treatment of Solids; General Cleaning; Brush, Broom and Mop Making.	12-18-47	6-25-47	3265
28. BRAUNER, R. H., Internal Combustion Engines (part); Cylinders; Pistons; Spring, Weight and Horsepower Motors; Dumping Vehicles, Wheel Substitutes; Vehicle Fenders; Hand and Hoist Line Implements; Chutes, Skids, Guides, Ways; Fluid Current Conveyors; Pneumatic Dispatch; Store Service.	10-27-47	7-14-47	1777
29. HABECKER, LEONE B., Baggage; Cloth, Leather, and Rubber Receptacles; Button Making; Woodworking; Tools.	9-18-47	9-4-47	3308
30. BISHOFF, A., Automatic Temperature and Humidity Regulation; Thermostats and Humidostats; Heating; Heating Systems; Heat Exchange (part); Illuminating Burners.	11-1-45	11-2-46	627
31. DUNCOMBE, C. S., Mineral Oils; Carbocyclic or Acyclic Carbon Compounds (part)—e. g., Ketones, Aldehydes, Ethers, Hydroxy Compounds, Hydrocarbons, Halogenated Hydrocarbons.	9-26-46	9-27-46	1930
32. LESH, KARL R., Gas and Liquid Contact Apparatus; Heat Exchange; Gas Separation; Agitating	12-13-47	9-15-47	1840
33. KAUFFMAN, H. E., Bridges; Hydraulic and Earth Engineering; Building Structures; Roads and Pavements	9-9-47	8-26-47	3720
34. SAPERSTEIN, S., Railways; Track Sanders; Signals and Indicators	5-17-46	2-12-46	1261
35. BROMLEY, E. D., Card and Sign Exhibiting; Dispensing; Filling and Closing Portable Receptacles; Ammunition and Explosive Charge Making.	2-25-46	9-5-47	3586
36. McFADYEN, A. D., Automatic Weighers; Measuring and Testing; Force Measuring	5-4-47	6-6-47	1992
37. WEAVER, M. E., Electricity, Circuit Makers and Breakers	5-26-46	9-2-46	1322
38. ARNOLD, D., Coating Processes and Apparatus; Coating or Plastic Compositions (part); Rubber	6-10-46	4-17-46	1671
39. WHITNEY, F. I., Fluid Pressure Regulators; Valves; Water Distribution	7-20-46	8-9-47	3045
40. DRUMMOND, E. J., Receptacles (part); Packages	9-2-46	9-11-47	3210
41. GURLEY, E. B., Check Controlled Apparatus; Coin Handling; Article Dispensing Cabinets; Deposit Receptacles; Buckles, Buttons, Clasps.	6-7-46	8-19-47	2500
42. MARANS, H., Telegraphy (part); Electric Signaling; Electricity, Voltage Magnitude and Phase Control Systems; Variable Transformer and Reactor Structure.	10-16-46	10-9-46	949
43. STONE, I. G., Medicines, Poisons and Cosmetics; Explosive Compositions; Sugar and Starch; Bleaching and Dyeing; Fluid Treatment of Textiles; Hides, Skins and Leathers.	9-9-46	5-26-46	1138
44. HARVEY, L. F., Refrigeration	2-9-46	6-30-47	946
45. MANTER, W. B., Shafting and Flexible Shaft Couplings; Wheels, Tires and Axles; Railway Wheels and Axles; Lubrication; Bearings and Guides; Belt and Sprocket Gearing; Spring Devices; Animal Draft Appliances.	5-26-46	9-15-47	2677
46. MUSHAKE, W. I., Concentrating Evaporators; Fluid Sprinkling, Spraying and Diffusing; Fire Extinguishers; Liquid Heaters and Vaporizers; Kitchen and Table Articles.	3-16-46	5-9-47	1838

Condition of Applications Under Examination—Continued

Total number of patent applications awaiting action, 147,132. Date of oldest new application, June 25, 1947; date of oldest amended application, Nov. 16, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action: New	Amended	Applications awaiting action
47. KANOF, WM. J., Motor Vehicles; Land Vehicles (part); Fluid Pressure Brakes	8-25-48	8-10-48	1978
48. BERNSTEIN, S., Electricity, General Applications; Conversion Systems; Electric Igniters	8-30-48	11-12-47	1485
49. SHEFFIELD, E. L., Drying and Gas or Vapor Contact with Solids; Ventilation; Textiles, Ironing or Smooth ing; Wells; Earth Boring.	1-2-48	9-4-47	2342
50. LEVIN, SAMUEL, Synthetic Resins	10-15-48	6-18-48	1844
51. FRIEDMAN, M. H., Radiant Energy (part, e. g., Radio Transmission and Reception, Transmitters, Receivers, Antennae); Radiant Energy Communications.	8-26-48	7-1-48	1437
52. KNOTTS, M. K., Supports; Chucks; Joint Packing; Pipe and Rod Joints or Couplings; Tool Handle Fastenings; Pipes and Tubular Conduits.	5-19-48	8-1-47	3642
53. BRINDISI, M. V., Label Pasting and Paper Hanging; Book Making; Manifolding; Printed Matter, Stationery; Paper Files and Binders; Closures, Partitions and Panels, Flexible and Portable; Harness; Whip Apparatus.	4-15-48	7-31-47	2188
54. STRACHAN, O. W., Electric Lamp and Discharge Devices, Systems, Structures, Manufacture and Repair; Light Sensitive Circuits; Ray Energy Applications	8-31-48	9-25-47	1390
55. HERTZ, M., Artificial Body Members; Dentistry; Surgery; Toilet	6-21-48	2-13-48	1660
56. COCKERILL S., Electrical and Wave Energy Chemistry; Paper Making; Liquid Separation or Purification	5-18-48	8-25-48	1967
57. MILLER, A. B., Cutting and Punching; Bolt, Nut, Rivet, Nail, Screw, Chain, and Horseshoe Making; Driven and Screw Fastenings; Nut and Bolt Locks; Jewelry; Toys	8-5-48	5-3-47	3390
58. DOWELL, E. F., Abrading Processes and Apparatus; Food Apparatus; Bottles and Jars; Stone Working; Making Metal Tools and Implements.	6-25-47	10-20-47	1722
59. SHEPARD, P. W., Inorganic Chemistry; Fertilizers; Gas, Heating and Illuminating; Preserving	5-24-48	2-24-48	1490
60. BAXTER, H. M., (Acting), Electricity—Heating; Welding; Furnaces; Battery Charging and Discharging; Consumable Electrode Lamp and Discharge Devices; Resistances and Rheostats; Prime Mover Dynamo Plants.	5-18-48	5-7-48	1101
61. LANNAN, J., Winding and Reeling; Pushing and Pulling; Horology; Time Controlling Apparatus; Railway Mail Delivery; Boats, Buoys, Ships and Marine Propulsion.	6-27-47	1-8-47	3666
62. LOWE, D. B., (Acting), Games; Tables; Amusement and Exercising Devices; Mechanical Guns and Projectors.	8-14-48	4-14-48	1497
63. WINKELSTEIN, A. H., Fermentation; Foods and Beverages; Carbon Chemistry (part)	5-6-48	12-17-47	2140

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE CREMER ET AL.

No. 5584. Decided March 7, 1949

[173 F.2d 376; 81 USPQ 160]

1. PATENTABILITY—INVENTION—CHANGE IN OPERATION.

Held that having the teaching of biasing to the "good" position there is no invention in appellants' change to bias to the "bad" position.

2. APPEAL TO COURT OF CUSTOMS AND PATENT APPEALS—REASONS OF APPEAL—ABANDONMENT.

Where a reason of appeal is in good and sufficient form, but it is not discussed in the brief of appellant, *Held* that the rejection of the claim must be sustained.

3. PATENTABILITY—PARTICULAR SUBJECT MATTER—METHOD AND APPARATUS FOR TESTING RUBBER ARTICLES.

Certain claims for a method and apparatus for testing a body made of insulating material *Held* properly rejected on the art of record.

APPEAL from the Patent Office. Serial No. 469,436.

AFFIRMED.

Asher Blum (*Ben Cohen* of counsel) for Cremer et al.

W. W. Cochran (*J. Schimmel* of counsel) for the Commissioner of Patents.

GARRETT, *C. J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office, affirming that of the Primary Examiner rejecting six claims numbered respectively 1, 10, 13, 18, 19, and 25, embraced in appellants' application for patent, Serial No. 469,436, for both a method and an apparatus for testing rubber articles and other articles made of insulating material, such as rubber sheath prophylactics, to ascertain whether such articles have minute holes too small to be seen.

Ten claims stand allowed, all being apparatus claims. Of the appealed claims only claim 10 is directed to method.

Claims 1, 10, 13, and 25 were grouped by the Board as relating to testing and classifying, or sorting, the rubber or like articles, and claims 18 and 19 grouped as relating to the mechanism used at what is referred to as the loading station. We here reproduce claims 1, 10, and 18:

1. Mechanism for testing a body which is made of insulating material, said mechanism including an electrical testing station and also including a succeeding classifying station, said mechanism also including conveyor means for moving said body to said electrical testing station and then to said classifying station, said classifying station having movable classifying means, said classifying means being movable to respective "bad" and "good" positions which correspond respectively to the location of respective bad and good objects at said preceding testing station, said classifying means being biased to the "bad" position, electro-mechanical means having a normally open circuit, said electro-mechanical means being connected to said classifying means and moving said classifying means to the "good" position only when said circuit is closed, means for subjecting spaced parts of said body to a difference in potential at said testing station in order to pass through said body a testing current which is inversely proportional to the resistance of said body, said circuit having circuit-closing means which are biased to circuit-opening position, electrical actuating means for moving said circuit-closing means to circuit-closing position when said electrical actuating means are energized, said electrical actuating means having a normally open circuit, control means operated and controlled by said testing current to close the circuit of said electrical actuating means only when said testing current is less than a predetermined minimum, said mechanism also having means for removing said body from said conveyor means, at a station which succeeds said classifying station.

10. A method of testing and classifying an object which is made of insulating material, which consists in transporting said object on a conveyor through a predetermined path which includes a testing station and a succeeding classifying station which has movable classifying means which are biased to the "bad" position and which are movable to a "good" position, which consists in subjecting said object at said testing station to a leakage current test and controlling the respective position of said classifying means by said leakage current to move said classifying means to the "good" position only if the leakage current is less than a predetermined minimum, and removing said objects from said conveyor in separate batches according to said classification of said objects, said objects being thus removed after said leakage current test has been wholly completed.

18. Mechanism for testing objects made of insulating material, comprising an endless conveyor, means adapted to guide and to actuate said conveyor in a predetermined path, spaced carriers tiltably connected to said conveyor, said path including a loading station, automatic movable means located anterior said loading station and constructed and operative to tilt selected carriers in one lateral direction relative to said conveyor and to tilt other selected carriers in the opposite lateral direction.

Claim 19, in addition to the elements in claim 18, specifies "automatic means located after said loading station to bring said carriers into substantial parallel relation."

The following patents were cited as references: Hazard, 1,254,690, January 29, 1918; Barton, 1,983,892, December 11, 1934; Purdy, 2,016,455, October 8, 1935; Braden, 2,084,186, June 15, 1937; Youngs et al., 2,244,591, June 3, 1941.

Of these the patent to Youngs et al. was regarded as the principal reference.

The following descriptive matter is taken from the decision of the Examiner:

The subject matter of the rejected claims is an apparatus for testing and assorting rubber articles to ascertain the presence of imperfections such as minute perforations. The article in the form of a rubber tube is carried on a mandrel formed of electrically conducting material tiltably mounted on an endless conveyor and electrically insulated therefrom. During the movement of the conveyor the articles are immersed in a conducting liquid and while so immersed they are subjected to an electric potential impressed between the conducting mandrel and the conducting liquid. The potential is impressed by brushes which contact an exposed portion of the mandrel extending above the article above the surface of the liquid. If the article is free from imperfections, such as minute perforations, this impressed potential will remain on the mandrel as a negative electrostatic charge of a definite potential.

Vol. 623 • No. 1 Tuesday, June 7, 1949 Price $17.50 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $17.50 per annum, including annual index, $21.00; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

After passing these brushes the exposed portion of the mandrel is brought into contact with a brush which is electrically connected to the grid of a vacuum tube which is normally maintained nonconductive by the grid having periodically impressed thereon a negative bias. If the rubber article is defective, the negative potential applied to the mandrel will have leaked off to the conducting liquid by the time that the mandrel is brought into contact with the brush in circuit with the grid. Thus the negative charge on the grid is decreased to an extent to render the vacuum tube conductive. The plate of this tube is connected through a resistance to a circuit including a condenser and the grid of another electronic tube. While latter tube is normally conducting when the first tube is maintained nonconducting. However if by reason of the passage of a defective article the first tube is rendered conducting, the drop in voltage across the resistance in circuit with the plate of the first tube causes an increase of the negative bias of the second tube so that the latter is rendered nonconducting. The circuit of the second tube includes a relay which controls the operation of an electromagnet operating a deflector, normally biased by a spring into position to engage the mandrels and to tilt them on a horizontal axis into position indicating the article as defective. If the article is good, and the first tube thus rendered nonconductive, the second tube will be rendered conductive and will close its relay to energize the operating magnet to set the deflector into position to tilt the mandrel to an opposite position on the conveyor so as to indicate that the article is good. Thus the articles when removed from the conveyor at a succeeding station are separated into the two groups, one group composing the perfect articles and the other group composing the imperfect articles.

It is pointed out by the Board that the Youngs et al. patent "shows a similar organization for exactly the same purpose" as that of appellants here involved, and a description of the patent is given which we reproduce, omitting the numerals as indicated by asterisks and making some insertions in brackets:

* * * A mandrel with the article to be tested [is] passed successively to [an] electrode * * * grounding any charge, then to [a second] electrode * * * impressing a negative charge, and finally to [a third] electrode * * *, connected to the grid of [a] vacuum tube * * *. A negative charge "blocks" the tube. A failure of the insulation due to imperfection of the rubber article removes the charge from the grid causing current to flow through the tube. This actuates [a] solenoid * * * which in turn displaces a switch pin on the timing disk * * *. At an appropriate point in the travel of the conveyor the switch pin closes a circuit which opens air valves which in turn remove the defective article from the mandrel. The "good" articles are then removed at a later point on the conveyor. It will be noted that the Youngs et al. mechanism is biased toward the "good" or insulating articles rather than the "bad" or conducting articles. The claims under discussion are said to distinguish from Youngs et al. primarily in this "bias" and in the means required to accomplish this result, and this distinction is urged as of patentable significance.

The description of the Youngs et al. patent, given by the Examiner in his statement following the appeal to the Board, goes into greater detail but it is thought that all the essential features are embraced in the Board's description as quoted.

Except for a special reference to claim 10, the Board discussed claims 1, 10, 13, and 25 as a group (group 1) and claims 18 and 19 as group 2. The Examiner, however, discussed each claim of group 1 separately and rejected them as follows: Claim 1 on Youngs et al. (referring to Braden upon a question of amplification hereinafter discussed); claim 10, first, as drawn to the function of the apparatus and, second, as not patentably distinguishable from either Youngs et al. or Purdy "especially in view of Hazard"; claim 13 as unpatentable over Youngs et al. in view of Braden; and claim 25 on Youngs et al. in view of Braden. He considered claims 18 and 19, constituting the second group, together and rejected them, first, as being incomplete and functional and, second, as "not patentably distinguished from Barton."

The Board disapproved the rejection of claims 18 and 19 on the ground of incompleteness and functionality. So, that question is not before us. The rejection on Barton was affirmed.

In the course of his decision the Examiner analyzed the several claims and read claims 1 and 13 upon the Youngs et al. disclosure. His analysis of claim 1 reads as follows:

1. Mechanism for testing a body which is made of insulating material,

(a) said mechanism including an electrical testing station

(b) and also including a succeeding classifying station,

(c) said mechanism also including conveyor means for moving said body to said electrical testing station and then to said classifying station,

(d) said classifying station having movable classifying means, said classifying means being movable to respective "bad" and "good" positions which correspond respectively to the location of respective bad and good objects at said preceding testing station, said classifying means being biased to the "bad" position,

(e) electro-mechanical means having a normally open circuit, said electro-mechanical means being connected to said classifying means and moving said classifying means to the "good" position only when said circuit is closed,

(f) means for subjecting spaced parts of said body to a difference in potential at said testing station in order to pass through said body a testing current which is inversely proportional to the resistance of said body,

(g) said circuit having circuit-closing means which are biased to circuit-opening position,

(h) electrical actuating means for moving said circuit-closing means to circuit-closing position when said electrical actuating means are energized,

(i) said electrical actuating means having a normally open circuit,

(j) control means operated and controlled by said testing current to close the circuit of said electrical actuating means only when said testing current is less than a predetermined minimum,

(k) said mechanism also having means for removing said body from said conveyor means, at a station which succeeds said classifying station.

It is not deemed necessary to set forth in detail the text of the Examiner's application of claim 1 to the Youngs et al. disclosure because it is not disputed on behalf of appellants that some features of the claim are met by the patent disclosures. Except for purposes of explanation or clarification, we need consider only the challenged features.

The brief for appellants in its analysis of claim 1, although, in most instances, using different phraseology, follows generally the order followed by the Examiner and points out the particular features which, it is claimed, are not disclosed by the prior art.

As may be observed from the Examiner's analysis, claim 1 requires a testing station, a classifying station, and a station where the articles, after being tested and classified, are removed from the conveyor, the last requirement being the final clause of the claim.

The Examiner found the testing station in the Youngs et al. patent to be at a tank which, with its accompanying features, is fully described in the specification. The classifying station he found to be shown in a sub-combination, made up of numerous elements, identified in Figure 1 of the Youngs et al. drawings by the term "Rejection." Each material feature of the sub-combination also is described in the specification. The removal station required, as stated in the Examiner's analysis—(*k*), supra—was found by him to be shown in the Youngs et al. patent by the arrangement, or sub-combination, shown in Figure 1 of the drawings, marked "Visual inspection and take off station." In the patent, the classifying station designated by the Examiner succeeds the testing station and the removal station succeeds the classifying station. All three appear at different points passed by the conveyor (which consists of an endless chain or the like) and are separate from each other.

Appellants have not challenged the correctness of the Examiner's finding as to the three elements designated by the Examiner as (*a*), (*b*), and (*k*), supra, but the brief on their behalf asserts (1) "No reference shows a classifying station, as distinguished from an ejection station," and (2) "No reference shows a classifier, as distinguished from an ejector."

A careful examination of the appealed claims reveals that neither the term "ejector" nor the phrase "ejection station" is used in any one of them, nor have we found those terms in the specification. The brief for appellants, however, states that the final element of claim 1, supra, reading "* * * means for removing said body from said conveyor means, at a station which succeeds said classifying station," refers to certain features shown in a figure of appellants' drawings and defined in their specification as "strippers." It is taught that by means of the strippers (the stripping mechanism as a whole is somewhat complicated) the articles which have been tested and classified are stripped from their forms, the good ones being deposited in one bin and the defective ones in another bin. It is assumed that the stripper mechanism by which the articles are removed from the conveyor is what appellants had in mind when, in their brief, they referred to "ejector" and "ejection station." We find nothing else in their specification to which the terms would seem to relate. The stripper mechanism succeeds the classifying station and is separate from it.

As has been stated, the Examiner held removal means to be shown at Youngs et al's "take off station." Concerning the removal means he held (and appellants do not challenge the correctness of the holding):

* * * Whether this means is mechanical, as that of applicants, or manual, as that of Youngs et al., is a matter of indifference from the standpoint of patentability, in view of such authorities as *In re Gill*, 1930 C. D. 91; also *Jones & General Fireproofing Co.*, 254 F. 97; 1919 C. D. 241.

It is noted that the specification of the Youngs et al. patent does not mention the "take off station" but it does recite that "the invention provides for the removal or segregation of defective articles from the system and those articles which are not imperfect by entirely automatic means free from any element of human error." It further discloses that the good articles remain on the mandrels until after they have passed the jets hereinbefore referred to where the imperfect articles were blown off their mandrels, and "may then be removed from their mandrels, by any of several customary conventional methods such as, for example, angularly disposed revolving brushes, for packaging and shipment to the trade."

It is clear from the location of the part identified in the drawing as the "Visual inspection and take off station" that it represents the point where Youngs et al. remove the good articles from the mandrels and from the conveyor. There is no limitation in the claim which requires that both the bad and good articles be removed from the conveyor at the same point.

The "take off station" shown by Youngs et al., like the stripper system of appellants, succeeds the classifying station and is separate from it. The particular features of the stripper system are hereinafter considered in connection with claims 18 and 19.

We think it unnecessary to dwell at greater length upon the allegation that no reference discloses a classifier as distinguished from an ejector, nor a classifying station as distinguished from an ejection station, because we do not find any contention in either appellants' reasons of appeal or in their brief that such a condition of itself would render any one of the appealed claims patentable. We assume the discussion was advanced in the brief because the alleged situation was thought to have some relation to the matter upon which appellants place most emphasis.

That matter relates to the requirement (as set forth in claim 1, supra, and specified in paragraphs (*d*) and (*e*), supra, of the Examiner's analysis of that claim) for a movable classifier, or, to be more exact, "movable classifying means"—that is, movable to respective "bad" and "good" positions which correspond to the location of respective bad and good rubber articles at the preceding testing station. It will be observed that no particular structure entering into the movable classifier is set forth in the claim. So, the claim is satisfied in this respect by any classifying means movable as defined. The claim also defines the classification means as being biased to the "bad" position.

The Youngs et al. patent describes in its specification and discloses in drawings a sub-combination composed of a number of elements which, as has been stated herein, the Examiner held constituted the classifying station. One of the elements composing it is a valve identified in the drawing by the numeral 44. The valve had a movable part with which three jets are opened so that compressed air is driven through the jets whereby the rubber articles found defective at the preceding testing station are blown off the mandrels as the latter, carried by the conveyor, pass the jets. The Examiner held the valve so identified constituted the classifier, or classification means, of the Youngs et al. patent, pointing out that when opened the valve is moved to a "bad" position or (when not opened) remains in "good" position in accordance with the test made at the preceding testing station—that is, at the tank station.

[1] As for the biasing of the classifying means, appellants' device biases such means to the "bad" position, while in the Youngs et al. patent the valve is biased to the "good" position. The Examiner considered appellants' reversal of the patent plan a variation "which may be made without exercise of

invention." The Board expressed the view that the matter of bias in favor of the "bad" articles "is a matter of choice rather than invention."

Another requirement of claim 1 is that the classifier be connected with electro-mechanical means, having a normally open circuit, by which means the classifier is moved to the "good" position only when the circuit is closed. The Youngs et al. patent discloses a solenoid connected with the valve which the Examiner held to be the classifier. The solenoid is described by the Examiner (and the correctness of his description does not seem to be challenged by appellants) as having a "normal open circuit" at a designated switch and as being connected to the valve (that is, to the classifier) "to move it to the 'bad' position when the circuit is closed." That is, as we understand it, when the circuit is open, as is normal, the valve or classifier is in "good" position and, when the circuit is closed, the valve is moved to "bad" position. The Examiner said of the recital of electro-mechanical means, etc. that it "is merely repeating the statement of the reversal of operations as above noted in regard to element (*d*)."

In connection with the discussion of the requirement of claim 1 (see paragraph (*f*) of the Examiner's analysis, supra) for control means operated and controlled by the testing current to close the circuit of certain electrical actuating means only when the testing current is less than a predetermined minimum (a feature named also in claims 13 and 25) the Examiner said (identifying numerals being deleted):

> • • • element (*f*) is [a] relay • • • which is operated and controlled by the testing current, or the charge remaining on the mandrel which is impressed on the grid of [a] tube • • •; and closes the circuit of [a] solenoid • • • only if the testing current which passes thru the article is more than a predetermined minimum i. e. if there is a certain amount of leakage in the article. This is the same reversal as above stated, that is closing the reject circuit if the article tests bad instead of closing the discharge circuit if the article tests good. This reversal involves only another stage of amplification, which Youngs et al. state may be done.

In a "Reply to Brief," filed before the Board, the Examiner elaborated upon the disclosure relative to vacuum tube amplification by the Youngs et al. patent and upon the question of biasing, citing the Braden patent as authority for the assertion that an additional amplification such as Youngs et al., taught in their specification to be feasible if desired, "is a well known characteristic of vacuum tube amplifiers." As to this phase of the case, the Board said:

> We are of the opinion that the amplification suggested by Youngs et al. does not necessarily require reversal, but that taken with Braden, the Youngs et al. suggestion is sufficient to teach a means of accomplishing reversal.

All the findings of the Examiner with respect to claim 1 so far recited herein, which seem to us to be in anywise material, were either expressly or impliedly approved by the Board, and we are not convinced that it erred in so doing.

Our conclusion respecting appellants' allegations concerning "ejector" and "ejector stations" has been stated and need not be repeated. The matter of the Youngs et al. patent disclosing a testing station is not in dispute. We concur in the view that the subcombination shown by Youngs et al., under the designation "Rejector," constitutes a classifying station; that the valve identified by the numeral 44 with its attendant features constitutes a movable classifier, or, using the exact words of the claim, "movable classifying means"; that the solenoid shown by Youngs et al. meets the requirement for electro-mechanical means having a normally open circuit and connected to the classifier; that the control means operated and controlled by the testing current is taught by Youngs et al. in combination with Braden; and that the means for removing the articles from the conveyor at a station succeeding the classifying station is met by the take off station disclosed by Youngs et al.

With respect to the biasing feature, we agree that having the teaching of biasing to the "good" position there is no invention in appellants' change to bias to the "bad" position.

Claim 13, rejected upon Youngs et al. in view of Braden, also was analyzed minutely by the Examiner and applied element by element to the Youngs et al. disclosure. After applying it, the Examiner said:

> It is thus seen that claim 13 is readable on the disclosure of Youngs et al., including the use of an additional amplifying stage, except for the specific circuit which includes the resistor and condenser in the plate circuit of the control tube. However this device is shown to be well known in the electronic tube amplifying art, as shown by Braden, and may be substituted for the amplifying circuit as an expedient known to the worker in this art.

The Board held the particular arrangement of amplifying tubes described in the claim to be "within the skill of the art as exemplified by Braden," and declared that "Proper poling or biasing of the first [the control] tube, or the use of a phase invertor appears to be a matter of choice."

We do not find any satisfactory answer to the foregoing quoted holdings of the tribunals of the Patent Office although such holdings are expressly challenged in the reasons of appeal. All that is said in that portion of the brief for appellants spectfic to claim 13 is:

> Amongst other distinctions which need not be repeated, the last clause calls for a classifier which is operated by the main electronic tube. Neither Youngs nor Braden suggest a classifier.

The reference obviously does not refer to the circuit of the control electronic tube but to the main electronic tube.

The last clause of claim 13 reads:

> • • • classifying means operated by the current which passes through said main electronic tube only when said current exceeds a predetermined minimum.

So far as a classifier not being suggested by Youngs et al. nor by Braden is concerned, we do not regard that as being a matter of any moment here. The valve of Youngs et al. hereinbefore described constitutes a classifier, and appellants have not questioned the correctness of the Examiner's finding that the element under discussion is answered by the solenoid connected with the valve.

The Board approved the rejection by the Examiner of claims 18 and 19, the second group, upon the patent to Barton, which discloses an apparatus for testing and assorting eggs according to their weight.

It said further that, "Interpreted as appellants suggest [i. e., tilting the successive mandrels to opposite sides of the conveyor to an angle convenient for loading], we see no material difference in claims 18 and 19 over the mechanism described by Youngs et al. as the 'loading station'," and rejected them upon that reference also.

It is argued in the brief for appellants (*a*) that the claims refer to an automatic selector or classifier and cannot be interpreted to read upon Youngs et al., and (*b*) that Barton does not show any tilting means to tilt one group in one direction and another group in the opposite direction.

From an inspection of one of the drawings of Youngs et al., it is clearly discernible that the mandrels, upon which the rubber articles are fitted for testing (shown in what is designated in the drawing as "Loading Station"), are tilted in different directions and at different angles. This may not be done automatically, but the tilting shown by Barton is evidently automatic.

We are not convinced of error in the Board's holding as to claims 18 and 19 being rejectable on Barton.

Claim 25 is very similar to claim 1, except that it does not require means for removing the articles from the conveyor after their classification, and is obviously rejectable.

Claim 10, the only method claim, was grouped by the Board with apparatus claims 1, 13, and 25 for discussion and action and also was discussed separately in connection with its rejection on Purdy in view of Hazard.

[2] The Examiner rejected the claim, first, "as drawn to the function of [the] apparatus." What the Board thought of this ground of rejection is not disclosed in its decision. The assumption, under the well settled rule is that it agreed with the Examiner. See *In re Boyce*, 32 CCPA (Patents) 718, 144 F.2d 896, 63 USPQ 80, 1944 C. D. 609, 568 O. G. 568, to which the Board specifically directed attention in the concluding paragraph of its decision in this case, as it is happily accustomed to do in all cases appealed from it to this court.

In their reason of appeal 21 appellants allege that the Board "erred in failing to reverse the ruling of the Examiner, which held that claim 10 was drawn to the function of an apparatus." This assignment of error is in good and sufficient form, but it is not discussed—not even referred to directly or indirectly—in the brief for appellants before us, and the Solicitor for the Patent Office makes the point that this allegation of error must be assumed to be abandoned here.

The situation presented is practically on all fours with that which has confronted us in a number of cases, a comparatively recent one being that of *In re Krasnow et al.*, 35 CCPA (Patents) 939, 166 F.2d 196, 76 USPQ 567, 609 O. G. 692, where we said (at page 942):

> • • • [1] While in their notice of appeal the proper reasons of appeal were assigned to the Board's holding in respect to those patents, those reasons may not be relied upon because they were not discussed in the brief and are assumed to be abandoned here. *In re McCabe*, 24 CCPA (Patents) 1224, 90 F.2d 111, 33 USPQ 539.

Under the well established rule the rejection of the claim as being drawn to no more than the function of the apparatus must be sustained.

The claim was rejected also by the Examiner upon Youngs et al. and upon Purdy in view of Hazard, and those rejections were expressly approved by the Board but it is unnecessary for us to review them in view of our conclusion upon the functional question.

[3] Appellants' invention—they evidently have an invention as evidenced by allowed claims—is in a technical mechanical field. The rejected claims obviously have received the careful study of experts in the Patent Office. From our study of them, we are not convinced that their rejection was erroneous.

The decision of the Board is, therefore, affirmed.

AFFIRMED.

U. S. Court of Customs and Patent Appeals

LEVER BROTHERS COMPANY *v.* GEO. A. HORMEL & COMPANY

No. 5547. Decided March 1, 1945

[— F.2d —; — USPQ —]

1. TRADE-MARKS — OPPOSITION — WEIGHT GIVEN PRIOR DECISION.

   Held that the citation of prior decisions is of little value in an opposition proceeding for the reason that each case must rest upon its own distinctive facts.

2. SAME—CONFUSION—CRITERIA.

   Held that specific differences in goods which are of the same general descriptive character should be considered together with differences in marks in fairly determining the question of likelihood of confusion.

3. SAME—SAME—"SPRY" AND "SPIC."

   Since the notations here involved are not spelled alike, do not sound alike and do not look alike, *Held* that "Spry" and "Spic" are not confusingly similar.

4. SAME—SAME—SAME.

   Since the notations here involved are not spelled alike, do not sound alike and do not look alike, *Held* that appellee's use of "Spic" as a trade-mark for its animal fat shortening concurrently with appellant's use of the trade-mark "Spry" as applied to its vegetable oil shortening would not be likely to cause confusion or mistake in the mind of the public or to deceive purchasers.

APPEAL from the Patent Office. Opposition No. 24,423.

AFFIRMED.

Spencer A. Studwell for Lever Brothers Company.

Franklin M. Warden for Geo. A. Hormel & Company.

JOHNSON, *J.*:

This is an appeal from the decision of the First Assistant Commissioner of Patents reversing the decision of the Examiner of Interferences sustaining the opposition of appellant to the application of appellee filed March 5, 1945, for registration of the notation "Spic," continuously used by the appellee since February 22, 1945, as a trade-mark for animal fat shortening.

The opposition is based upon section 5 of the Trade-Mark Act of February 20, 1905, the pertinent part of which reads as follows:

" " " That trade-marks which " " " so nearly resemble a registered or known trade-mark owned and in use by another and appropriated to merchandise of the same descriptive properties as to be likely to cause confusion or mistake in the mind of the public or to deceive purchasers shall not be registered: " " "

In its notice of opposition, appellant relies upon its ownership of the trade-mark "Spry," registered on June 14, 1932, and continuously used by appellant since February 1932 as a trade-mark for vegetable oil shortening. In its brief, the appellant states, "" " " the sole issue presented here is whether in view of the facts established by the record 'SPIC' so resembles 'SPRY' as to be likely, when applied to goods which are for all practical purposes identical with those in connection with which 'SPRY' has been used and registered since 1932, to cause confusion or mistake or to deceive purchasers."

The Examiner stated in his opinion that "With respect to the goods, applicant has called particular attention to the fact that its shortening is an animal product composed of pork and beef fat whereas opposer's product is an all vegetable shortening. Because applicant's product contains pork fat it is not adapted for sale to the kosher trade. On the other hand, opposer's shortening is sold to such purchasers and specific advertisements have been directed to this group and the product has been specifically packaged for this trade. It does not seem to the Examiner, however, that these differences distinguish the goods as to their descriptive properties. As far as the great majority of purchasers are concerned who observe no dietary laws the goods of the parties are competitive, are very similar in physical characteristics, similarly packaged, and have identical uses. The goods are therefore deemed to be clearly of the same descriptive properties."

In his decision, the First Assistant Commissioner stated, "The goods of the parties are not identical; but obviously they comprise closely related merchandise of the same descriptive properties, and save for the possible exception of the kosher trade are directly competitive."

[1] Both the appellant and the appellee have cited many cases involving trade-marks; however, the citation of prior decisions is of little value in an opposition proceeding for the reason that each case must rest upon its own distinctive facts. *Magitex Co., Inc.*, v. *John Hudson Moore, Inc.*, 33 CCPA (Patents) 956, 154 F.2d 177, 69 USPQ 133, 588 O. G. 192; *McKesson & Robbins, Inc.* v. *American Foundation For Dental Science*, 32 CCPA (Patents) 1235, 150 F.2d 420, 66 USPQ 252, 581 O. G. 174; *Lactona, Inc.* v. *Lever Brothers Company*, 32 CCPA 704, 144 F.2d 891, 63 USPQ 62, 568 O. G. 386. Likelihood of confusion from similar marks is largely a matter of opinion. *The Procter & Gamble Co.* v. *J. L. Prescott Co.*, 18 CCPA (Patents) 1433, 49 F.2d 959, 9 USPQ 454, 413 O. G. 1105; *In re Southern Metal Products Corp.*, 26 CCPA (Patents) 725, 99 F.2d 761, 39 USPQ 440, 499 O. G. 261.

The products here involved are not food, rather they are ingredients of food. They are used in the preparation and the cooking of food.

In its brief, appellant states that "shortening is a relatively inexpensive product which is purchased with little care by consumers of all grades of intelligence, " " "."

Appellee contends that people who purchase shortening, a product used in the preparation and the cooking of food, are particular as to the kind of shortening they purchase; that they know what kind of shortening they desire, and are not easily deceived, misled, or confused.

[2] People are more careful in purchasing a product used in the preparation and the cooking of food than they are in the purchase of food. One product here involved is made from animal fat, and the other is made from vegetable oil. While both are used for ordinary cooking purposes, there is a difference between them, and purchasers usually know whether they want a shortening made from animal fat or one made from vegetable oil. Specific differences in goods which are of the same general descriptive character should be considered together with differences in marks in fairly determining the question of likelihood of confusion. *Joseph Tetley & Co. Inc.* v. *Fant Milling Co., Etc.*, 27 CCPA (Patents) 1180, 111 F.2d 485, 45 USPQ 433, 520 O. G. 795; *Puerto Rico Distilling Co.* v. *The Coca-Cola Co.*, 28 CCPA (Patents) 1143, 120 F.2d 370, 49 USPQ 660, 531 O. G. 797.

[3] The notations here involved are not spelled alike, do not sound alike, and do not look alike. The specimen of appellant's label filed with its notice of opposition shows the notation "Spry" prominently in three places on the label, spelled with a large "S" with "pry" in smaller letters of uniform size. The label also includes the following: "TRIPLE-CREAMED FOR EASIER MIXING," "MADE OF HYDROGENATED VEGETABLE OIL BY EXCLUSIVE PATENTED PROCESS," and, in larger type, "PURE VEGETABLE SHORTENING." The word "Spic" appears on appellee's label prominently but once, and is spelled with large letters of uniform size. Under the "Spic" notation on the label appears the description, "Pork and Beef Fats."

[4] For the reasons hereinbefore set out, we do not believe that the notations here involved are confusingly similar, or that appellee's use of "Spic" as a trade-mark for its animal fat shortening would be likely to cause confusion or mistake in the mind of the public, or to deceive purchasers, because of appellant's use of the trade-mark "Spry" as applied to its vegetable oil shortening.

The decision of the First Assistant Commissioner of Patents is affirmed.

AFFIRMED.

NOTICES

Restoration of Patent Rights in Japan

The Patent Office has been advised by the Department of State that the Japanese Government has been directed to provide the necessary procedures for restoration of patent rights of Allied nationals. The rights to be revived or restored include the following:

(a) Patents existing in Japan on December 7, 1941, owned by U. S. nationals, which have lapsed or been taken away from their owners are to be revalidated and restored upon request made by the owner.

(b) The term of the patent may be extended for a period from the date of loss to the date of restoration or, in the alternative, royalties for the use of the patent during the period of loss may be claimed.

(c) Applications filed by U. S. nationals which were pending on December 7, 1941, are to be reinstated as pending applications upon request of the applicant.

(d) The right of priority of one year is extended in favor of nationals of countries at war with Japan and any such person who filed an application for patent not earlier than 12 months before December 7, 1941, may apply for a patent in Japan with a right of priority based upon the previous first filed application. A period of one year commencing May 1, 1949, is to be allowed within which to make a request for revalidation and restoration, or for filing an application with the extended right of priority.

The Civil Property Custodian in Japan has stated that inquiries should be made direct to him and he will reply giving sufficient information to initiate appropriate action to protect the rights and necessary instructions to file the appropriate papers. The address of the Civil Property Custodian is:

Civil Property Custodian
GHQ SCAP
APO 500
% Postmaster
San Francisco, Calif.

After the initial inquiry the next correspondence will be through:

Office of United States Reparations and Restitution Delegation
% U. S. Political Advisor
Tokyo, Japan

The Civil Property Custodian requests that inquiries regarding patent property be made as soon as possible in view of the time limitations for initiating action.

LAWRENCE C. KINGSLAND,
May 23, 1949. *Commissioner of Patents.*

Disclaimers

2,424,482.—*Bert Mechur* and *Walter Riedler*, New York, N. Y. SHOULDER PAD AND METHOD OF MAKING THE SAME. Patent dated July 22, 1947. Disclaimer filed Apr. 26, 1949, by the inventors.

Hereby enters this disclaimer to claims 1, 3, 6, 10, 15, 16, and 17 of said Letters Patent.

2,466,634.—*Stanley Breen*, Elgin, Ill. ELECTRICAL APPARATUS. Patent dated Apr. 5, 1949. Disclaimer filed Apr. 19, 1940, by the inventor and the assignee, *Operadio Manufacturing Co.*

Hereby enter this disclaimer to claim 12 in said specification.

Interference Notices

Weldon M. Ward, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Portis Style Industries, Inc., 320 West Ohio St., Chicago, Ill., for registration of a trade-mark and Registration No. 285,034, issued December 10, 1929, to Weldon M. Ward, 18 East 27th St., New York, N. Y., and the notice of such declaration sent by registered mail to the said Ward at the said address having been returned by the post office undeliverable, notice is hereby given that unless Weldon M. Ward, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the interference will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.
May 9, 1949.

Levy, Forman & Co., Inc., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Powell & Campbell, Inc., 122 Duane St., New York, N. Y., for registration of a trade-mark and Registration No. 286,758, issued September 1, 1931, to Levy, Forman & Co., Inc., 710 Broadway, New York, N. Y. The assignment records of this Office show a transfer of title to this registration to Robert J. Levy, % Maurice Schwartz & Co., 1450 Broadway, New York, N. Y., who has been substituted for said Levy, Forman & Co., Inc. to defend the registration concerned. The notice of such declaration sent by registered mail to the said Robert J. Levy, at the said address of record having been returned by the post office undeliverable, notice is hereby given that unless said Robert J. Levy, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

JOE E. DANIELS,
April 29, 1949. *Assistant Commissioner of Patents.*

Cancellation Notice

Nathan Manis, his assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by Perfect Negligee Co., 16 East 34th St., New York, N. Y., to effect the cancellation of trade-mark registration of Nathan Manis, c/o Marna Undergarment Co., 37 East 28th St., New York 16, N. Y., No. 502,764, dated October 5, 1948, and the notice of such proceeding sent by registered mail to the said Manis at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Nathan Manis, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.
May 9, 1949.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,461,748. CHRISTMAS TREE STAND OR HOLDER. Patented Feb. 15, 1949. A pyramid-shaped stand for supporting a Christmas tree. Made from one flat piece of cardboard, pasteboard, or light sheet metal. The blank is formed with score lines and slots and tabs that interlock when folded for use. A square hole is provided at center of blank to receive a tree. The holder can be made in various sizes, with three, four, or five legs. Packed flat for shipping and assembled without tools. Inexpensive enough to be discarded after one use. (Owner) William H. Looker, Burlington, Iowa. Groups 26—91; 33—73; 34—41; 40. Reg. No. 19,585.

Pat. 2,436,556. LEVELING TOOL. Patented Mar. 30, 1948. This patent relates to an attachment for a standard boring machine adapted for leveling from below the surface around a hole to form a suitable seat for bolt heads or nuts. A laterally displaceable cutter is swingably fixed on a piston in a cylindrical lower portion so that it may be readily pushed through a hole in retracted position. In use, the cutter is extended through an axial slot in the cylindrical portion and pressed into working position, after which it returns to its initial retracted position. The procedure is repeated until desired results are attained, manipulation allegedly taking only one-third the time required with the usual tools. (Owner) A. B. V. Lowener. Correspondence to Richardson, David and Nordon, 41 Park Row, New York 7, N. Y. Group 35—43. Reg. No. 19,586.

Pat. 2,433,980. MEANS FOR AUTOMATICALLY SUPPLYING DISTILLED WATER TO STORAGE BATTERIES. Patented Jan. 6, 1948. An automatic filling device for replenishing distilled water to storage batteries to maintain the battery grids submerged in the electrolyte at all times. The device is a glass or transparent plastic container having an automatic valve which is attached to the battery opening. The valve maintains the container "spill-proof" and automatically opens when attached to the battery to establish water passage between the container and the cells, closing when the cells are filled. Since the container is transparent, the water level may be observed so that the supply may be replenished when necessary. (Owner) Hans J. Hansen, 343 North Lorel Ave., Chicago, Ill. Group 36—91. Reg. No. 19,587.

Pat. 2,126,063. PERMUTATION LOCK. Patented Aug. 9, 1938. A combination padlock wherein the locking action is effected through the cooperation of the housing and locking mechanism. Consists of a casing and cover plate, which form a housing for the locking mechanism. A hub in the casing carries a three-armed spider, each arm having an arcuate dog and a detent arm. The long arm of the shackle is pivotally attached to one arm of the spider by a stud. Flanged tumblers rotatably mounted on the face of the casing are provided with necessary pins, face plates, springs, etc., to actuate the locking mechanism. (Owner) H. E. Van Dine, 520 Ritchie Ave., Silver Spring, Md. Group 83—59. Reg. No. 19,588.

Pat. 2,409,095. RETORT TYPE OIL BURNER. Patented Oct. 8, 1946. A portable oil burner has a two-part vaporising chamber, circular in cross section and oval in elevation, with a web between the parts. Each part is completely curved throughout the interior. The parts are removably secured together by a bolt passing through openings in the web and a plate on each side of chamber. A wedge key in end of bolt overlying one plate allows parts to be taken apart for cleaning. Oil is admitted through a supply pipe to top of unit, only a small quantity being admitted at first. Starting fuel in a pan at bottom of unit is ignited to heat unit to vaporising temperature. As the oil vaporizes and burns, the flames pass through burner openings between the plates, while openings outside the plates admit air for combustion. (Owner) Ernest J. Ashby. Correspondence to J. Herbert Hartman, 1004 Inland Bldg., Indianapolis 4, Ind. Group 33—62—63. Reg. No. 19,589.

Pat. 2,453,362. NONINTERLOCKING BUMPER GUARD. Patented Nov. 9, 1948. A noninterlocking guard for attachment to bumper of automobile has outwardly curved upper and lower portions and a resilient insert center section. The rear of guard is straight and dished-in at center to fit over standard bumper, secured thereto by a bolt. The bolt also supports a leaf spring within the guard to urge the resilient center outwardly when not in use. A cushioning bumper at end of bolt limits the inward movement of the insert. When the bumpers of two cars meet, the impact will push the insert section of the guard in, and the other bumper will be engaged by the concave portion and centered by it, thus preventing an upward or downward interlocking movement. (Owner) Harvey R. Connor. Correspondence to Smith & Tuck, Central Bldg., Seattle 4, Wash. Groups 33—59; 38—31. Reg. No. 19,590.

Pat. 2,460,557. CONVERTIBLE CHILD'S SEAT AND CAR. Patented Feb. 1, 1949. A child's three-wheel car has a collapsible frame for carrying in an automobile, and a seat and steering wheel which may be removed as a unit and placed on an automobile cushion. The triangular frame is collapsed by swinging the side bars together. The seat is secured to the frame by hooks at ends of side bars inter-engaging with openings in a flange at rear of seat. The steering wheel is pivoted to a bracket at front of seat and engages a trunnion at upper end of front wheel shaft. When seat is used in an automobile, the flange engages the back of a seat cushion, and the steering wheel may be tilted toward the seat to support and amuse a child while traveling. (Owner) Florence White, 265 Wetope North, Bound Brook, N. J. Group 30—43. Reg. No. 19,591.

Pat. 2,460,571. APPARATUS AND METHOD FOR MAKING A PLASTIC COMPOSITION AND PRODUCT. Patented Feb. 1, 1949. This patent describes a plastic material of great strength that may be sawed, drilled, or shaped with the usual wood-working tools. It may be made in various densities, and used as an acoustic tile, roofing sheet, insulating core, etc., or molded into toys, fan blades, bat-

tery cases, and the like. Basically, ligno-cellulose fibers, such as excelsior, hemp, cotton, etc., are coated with a soy bean or peanut flour having a protein content of at least 50%, from which oil has been removed. Unhydrated lime and water are added, the fibers heated at a temperature ranging from 250° to 400° F., and the whole compressed into a plastic mass. The apparatus used for processing the material consists of a chamber with inlet and outlet openings through which a conveyor loaded with filler passes. The conveyor is appropriately provided with openings from top to bottom from which air is supplied by blowers, material in powder form is sprayed, etc. (Owner) Randolph W. Chaffee, 176 Curtis Drive, Avon Lake, Ohio. Groups 28—83; 39—81. Reg. No. 19,592.

Pat. 2,452,387. PLOWSHARE. Patented Oct. 26, 1948. A metal plowshare for attachment to a standard mouldboard has an integrally formed leading point and trailing rectilinear blade. Is designed especially to retain point in position in hard ground. The point has a lower front cutting edge and a flat land-side guiding surface, but no cutting edges on furrow side. The blade, extending laterally at an oblique angle, has a straight lower edge adapted to travel in a horizontal plane above the point edge. Both point and blade have convex upper and concave lower surfaces adjoining the edges adjacent the point, to aid the mouldboard in holding the point in the ground and turning the loosened earth. (Owner) Edward R. Mocsak, Sr., Route 1, Box 306, South Milwaukee, Wis. Groups 33—92; 35—22. Reg. No. 19,593.

Pat. 2,460,170. PAGE END INDICATOR FOR TYPEWRITERS. Patented Jan. 25, 1949. An attachment for a typewriter which sounds a bell when end of paper has been reached. A housing has a removable cover with a dial and a co-acting pointer mounted on a shaft. A gear on shaft supports a bell and rotates in unison with a gear secured to the axle supporting the platen roller. A clapper rotates with the gear and has an arm to engage a striker on housing. The typist sets pointer at any desired gradation on dial, and when the clapper engages the striker the bell is sounded. (Owner) John G. Furehak, 166 Almonte Blvd., Mill Valley, Calif. Group 35—72. Reg. No. 19,594.

Pat. 2,460,937. PIPE SMOKER'S DIBBLER. Patented Feb. 8, 1949. A pipe smoker's dibbler for cleaning a pipe bowl. A handle has a tamping plate at one end (with an arcuate flange and a series of projections) and a spoon-like member with a blunt point at the other end. The dibbler is moved up and down within the bowl, and the spoon removes relatively inaccessible particles of dross. (Owner) Ralph G. Kaufman, 50 Wolcott Terrace, Newark 8, N. J. Groups 30—32; 33—73; 39—95. Reg. No. 19,595.

Pat. 2,461,977. DETACHABLE SHOE HEEL ORNAMENT. Patented Feb. 15, 1949. An ornamental body portion to encompass the outside of a woman's shoe heel has a pronged clip pivoted to each end to engage the front face of heel. A spring within the pivotal connection holds the body portion on the heel. The device is released by a finger catch on the clips. Various modifications of ornamental designs are shown. (Owner) Thomas Gilmour, King's County Hospital, c/o Mr. Monahan's Office, 451 Clarkson Ave., Brooklyn, N. Y. Groups 31—32; 39—71—81; 40. Reg. No. 19,596.

Pat. 2,449,629. CHILD'S FOLDING SEAT. Patented Sept. 21, 1948. Lightweight folding toilet seat for use by a child may be carried in a small case. Rigid front and rear frame members are hingedly connected to sides, and seat of flexible sheet material is removably attached to front and back of frame. Depending elements at front and rear hold the frame in position on a conventional toilet seat. By means of hinges the frame folds upon itself, and the seat wraps around the frame. (Owner) Edward B. Thompson, 4600 Highland Ave., Downers Grove, Ill. Groups 23—99; 25—19—99. Reg. No. 19,597.

Pat. 2,458,804. SELF-TIGHTENING ROPE CLAMP. Patented Jan. 4, 1949. A self-tightening clamp for gripping and holding two portions of wire rope may be used repeatedly without injuring the rope. A hollow flattened cylindrical shell receives for sliding movement therein two pairs of shoes. Each pair of shoes, for engaging a portion of rope, comprises a wedge-shaped outer shoe which slidably engages the face or bore of shell, and an inner shoe of substantially uniform thickness in a longitudinal direction. The wedge-shaped outer shoes are tapered in opposite directions, and the inner shoes are in sliding contact with each other. The sliding movement of shoes in opposite directions causes rope portions to be gripped. To prevent release of clamp in event of sudden slack in rope, a latch means is provided with ratchet teeth on outer shoes co-acting with a spring-metal resilient key or abutment extending through the wall. (Owner) Kenneth R. Runde, Route 9, Box 441, Lemay 23, Mo. Groups 33—49; 34—95; 35—69. Reg. No. 19,598.

Pat. 2,454,309. BOLT HOLDING TOOL. Patented Nov. 23, 1948. A tool resembling a pair of pliers for gripping a projecting bolt during re-threading when the head of the bolt is inaccessible. The jaws are in offset relation to the handles so that the jaws may be close to the wall through which the bolt projects while the handles are spaced from the wall and may be readily gripped. A bar joining the rear end portions of handles is screwed up to force the handles toward each other to tighten the grip of the jaws. A spur projecting from the inner side of one handle is adapted to be embedded in the wall for holding the tool against movement when turning strain is applied to the bolt during re-threading. (Owner) Evan W. Davis, W. 120 Waverly Place, Spokane 13, Wash. Group 33—52. Reg. No. 19,599.

Pat. 2,461,174. AUTO VACUUM CLEANER. Patented Feb. 8, 1949. Vacuum cleaner may be easily connected to engine block and permanently carried by vehicle. When installed, a suction pipe forming part of the fan housing of the device terminates substantially flush with inner face of dash of vehicle, and a push rod protrudes slightly beyond dash. The usual type of flexible suction conduit may be detachably connected to the pipe by simply inserting a fitting carried on end of conduit into the pipe and turning fitting. When such connection is effected, a flange of union will thrust push rod forwardly to bring a pulley on a flexible drive shaft of fan of device into operative engagement with fan belt of engine to operate fan. The push rod actuates a long (encased) rod-like flexible shaft to turn a bearing in which the fan shaft of device is eccentrically mounted. (Owner) Harry A. R. Peterman, 1901 Winona St., Chicago 40, Ill. Groups 36—21; 38—31. Reg. No. 19,600.

Pat. 2,165,461. SHIFTING DEVICE FOR AUTOMOBILES. Patented July 11, 1939. Parking mechanism may be connected to and permanently carried by automobile to raise rear wheels off ground and laterally shift rear end into and out of parking place. A pair of transverse parking wheels adjacent rear axle of vehicle, normally held in retracted substantially horizontal position, may be extended or retracted by manually depressing or raising a vertically reciprocating rack bar. These wheels may be swung downwardly into extended position to raise both rear vehicle wheels off ground and bring one parking wheel into tractive engagement with inner side of the tire on left rear vehicle wheel to be frictionally driven thereby to laterally shift vehicle. As parking wheels are extended, a valve mechanism incorporated into the usual hydraulic brake system of vehicle is automatically actuated to block the flow of fluid to right front and left rear vehicle wheels to leave these wheels free to rotate when vehicle brakes are applied to restrain other vehicle wheels against rotation. (Owner) Charles A. Dreisbach, 83–85 Warburton Ave., Yonkers 2, N. Y. Group 38—31. Reg. No. 19,601.

Pat. 2,456,756. SHOE TREE. Patented Dec. 21, 1948. Shoe tree consists of a hollow toe portion and an integral narrow resilient shank portion preferably with a curled end for bearing against heel of shoe. A central depressed channel extending longitudinally in shank and toe may be interrupted by forming spaced holes in the channel. When tree is placed in shoe, the shank is arched upwardly. When shank is pressed downwardly, a powerful camming or toggle action is obtained to extend shoe as the direction of curvature of shank is reversed. Modification shown. (Owner) Chester Tietig, 1110 Mt. Allen Road, Park Hills, Covington, Ky. Groups 25—95; 33—73; 39—81; 40. Reg. No. 19,602.

Pat. 2,457,347. ELECTRICAL OUTLET STRUCTURE. Patented Dec. 28, 1948. Weather-proof outlet box primarily intended for trailer camps will reduce to a minimum shocks and fire hazards. The box has a hinged inclined panel inside carrying a plurality of electrical units, such as switches, plug sockets, etc., on its outer face. The panel may be swung outwardly and downwardly to expose the back to connect circuit wires introduced into box to the electrical units. When panel is swung back into the box, all circuit wires are concealed behind panel. A cover hinged at its upper end to upper end of box has end and side walls to close with a friction fit and render box waterproof. When cover is open, it may be removed by simply lifting it off its hinge. (Owners) Leslie R. Casler and Leslie Fred Milner, 4722 Winthrop Ave., Indianapolis, Ind. Group 36—11. Reg. No. 19,603.

Pat. 2,286,000. CALENDAR CLOCK. Patented June 9, 1942. This patent pertains to a step movement type of actuating mechanism for automatically changing the date indicators in a calendar clock at the required times, except for a manual setting in leap years. (Owner) Telechron Inc., Ashland, Mass. Groups 34—61; 35—71. Reg. No. 19,604.

Re. 19,851. RADIO PROGRAM SELECTING APPARATUS. Reissued Feb. 11, 1936. (Original Patent 1,939,267; dated Dec. 12, 1933.) This patent relates to a time switch clock mechanism arranged with control buttons about the dial for the purpose of automatically turning on a radio circuit for predetermined, selected time intervals. (Owner) Telechron Inc., Ashland, Mass. Groups 34—61; 36—21—61. Reg. No. 19,605.

Miles Laboratories, Inc., offers the following five patents for license or sale on reasonable terms. Inquiries concerning these patents should be addressed to Miles Laboratories, Inc., 1127 Myrtle St., Elkhart, Ind.

Pat. 2,280,916. PREPARATION OF ORTHO-HYDROXYCINNAMIC ACID. Patented Apr. 28, 1942. Ortho-hydroxycinnamic acid, valuable as an intermediate in the manufacture of coumarin (used as a flavoring material) may be obtained by reacting an alkaline solution of salicylalacetone with sodium hypochlorite and acidifying the resultant sodium o-hydroxycinnamate. Several modifications are cited. Neither expensive equipment nor high temperatures are necessary in the process. Groups 20—95; 28—34. Reg. No. 19,606.

Pat. 2,314,831. PREPARATION OF D-TARTARIC ACID BY FERMENTATION. Patented Mar. 23, 1943. A compound containing the acid radical of dextro-tartaric acid is produced by fermenting an aqueous solution of glucose with a culture of *Acetobacter suboxydans* in the presence of a vanadium compound. The fermenting mixture is aerated with an oxygen-containing gas at a temperature ranging from 10°–40° C., and the pH value maintained from 8.0 to 12.0 by the addition of sodium carbonate, or the like. The dextro-tartaric acid formed is precipitated as an insoluble potassium salt. Group 28—31—34—89. Reg. No. 19,607.

Pat. 2,346,261. TITRATION REACTION VESSEL. Patented Apr. 11, 1944. This patent provides a single titration-reaction vessel in the form of a test tube for such laboratory tests as determining reducible carbohydrates or sugars in blood, urine, spinal fluids, etc. The tube is calibrated with reference to standardized procedure, the calibrations including one to limit the volume of the reagent, and a series of marks to indicate the titer value. Upon completing titration, the accurate titer is read by the final volume in the tubes. Notes and coordinated specimens (as is usual procedure) are not required. Group 39—11. Reg. No. 19,608.

Pat. 2,378,559. SYNTHETIC ELASTOMERS. Patented June 19, 1945. Rubber-like substances characterized by the presence of polysulfide linkages within their molecular structure. Several examples are shown in the patent. A mixture of one mole of ethylene dichloride, from 0.05 to one mole of vinyl acetate, and one mole of sodium polysulfide is heated at reaction temperature in an aqueous medium. The product obtained, according to the patent, shows not only good extensibility and tensile strength, but resistance to organic solvents such as benzene and gasoline. Group 28—83. Reg. No. 19,609.

Pat. 2,406,774. SYNTHESIS OF RIBOFLAVIN AND INTERMEDIATES THEREFOR. Patented Sept. 3, 1946. This patent cites several methods of synthesizing riboflavin not requiring pentose sugar d-ribose, which contributed largely to the high cost of former processes. An example of one of the processes is as follows: 3, 4-dimethyl, 6-arylasophenyl-d-isoarabinosamine is reduced to 3, 4-dimethyl, 6-aminophenyl-d-ribamine by the action of a reducing agent selected from the group consisting of sodium amalgam, and hydrogen acting in the presence of a hydrogenation catalyst. Group 28—31. Reg. No. 19,610.

Pat. 2,460,394. FENDER PROTECTOR. Patented Feb. 1, 1949. This patent provides an elongated flexible sheet, which may be treated to make it oil-resistant, wound on a spring roller and mounted within the engine compartment of an automobile. In use, the sheet is pulled out to cover the fender for protecting the finish when the motor is being given minor repairs, servicing, etc. (Owner) Erin B. Peatross, 807 Whittier Place N. W., Washington 12, D. C. Groups 38—31; 40. Reg. No. 19,611.

Pat. 2,349,515. ASTRONOMICAL EDUCATIONAL DEVICE. Patented May 23, 1944. A device that shows the stars in their relative positions and brightness in an artificial heaven and horizon as they would appear at any desired time of the night in the year. It consists chiefly of a transparent sphere (upon which the stars are permanently located) rotating within an opaque semi-sphere or dome. The observer looks up into the dome through the exposed area of the sphere and senses he is looking up into the natural heavens. Stars appearing and identified in the device can thus be easily identified with their respective positions in the natural heavens for that night. (Owner) Edward Ernest Oberst, 100 Howe St., New Haven, Conn. Group 39—11. Reg. No. 19,612.

Pat. 2,456,300. NOISEMAKING DEVICE. Patented Jan. 18, 1949. Toy pistol will emit a sharp report by rapid separation of a pair of vacuum cups when trigger is pulled. A vertical pivoted lever inside gun carrying one of the cups and connected to the rear end of a coil spring has a finger piece protruding through an elongated slot in top of gun. The lever may be pulled rearwardly to force the cups into face-to-face engagement and cock gun. (Owner) D. M. Wolf, 14852 Jefferson St., Midway City, Calif. Group 39—41. Reg. No. 19,613.

Notice

Pat. 2,155,295. AIRPORT LIGHTING SYSTEM. Patented Apr. 18, 1939. (Reg. No. 19,260, in March 29 and May 3, 1949, issues of the Official Gazette.) By agreement with Bartow Beacons, Inc., all inquiries concerning sub-licenses for this patent should now be directed to the Airport Lighting Division, The Weisbach Corporation, 1500 Walnut St., Philadelphia 2, Pa.

Patents Removed from Register

The following three patents, listed by E. I. du Pont de Nemours and Company in the November 30, 1948, issue of the Official Gazette, have been licensed exclusively and are, therefore, withdrawn from the Register.

Pat. 1,958,012. PROCESS FOR THE MANUFACTURE OF ALKALI METAL HYDRIDS.

Pat. 2,372,670. PRODUCTION OF ALKALI METAL HYDRIDS.

Pat. 2,372,671. PRODUCTION OF ALKALI METAL HYDRIDS.

Patent Restored to Register

Pat. 2,274,945. PLIERS. Patented Mar. 3, 1942. This patent, which was withdrawn from the Register under a lease, is again available for sale or license. It was published as Reg. No. 476, among a group of patents relating to Hand Tools, in the Official Gazette of October 23, 1945. (Owner) Mrs. Marie S. Van Keuren, 1445 Spring Road N. W., Washington 10, D. C.

TRADE-MARKS

OFFICIAL GAZETTE, JUNE 7, 1949

[VOL. 623. No. 1]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 486,628. PHILLIPS CHEMICAL COMPANY, Chicago, Ill. Filed Aug. 2, 1945.

SWIRT

FOR LIQUID KEROSENE BASE EMULSION ONLY FOR INDUSTRIAL USE IN DEGREASING METAL ARTICLES PRELIMINARY TO PLATING, PAINTING, AND FINISHING OPERATIONS.

Claims use since Oct. 14, 1944.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Ser. No. 501,147. ARCH HOTCHKISS, JR., doing business as Universal Engineering Company, San Diego, Calif. Filed Apr. 29, 1946.

The representation of a man is fanciful.

FOR GUN EQUIPMENT—NAMELY, GUN RODS AND GUN BRUSHES.

Claims use since Jan. 4, 1946.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 523,549. LOU SOLED, doing business as Soled Paint Co., New York, N. Y. Filed June 4, 1947.

FOR READY-MIXED LIQUID PAINTS USED ON BUILDING WALLS AND SURFACES.

Claims use since Jan. 3, 1947.

Ser. No. 525,020. OREFRACTION INCORPORATED, Pittsburgh, Pa. Filed June 27, 1947.

FOR SAND DERIVATIVES AND COMPOSITIONS COMPOSED PRINCIPALLY OF SAND DERIVATIVES, USED IN MAKING PAINTS, PIGMENTS, GLAZES, AND ENAMELS.

Claims use since May 14, 1940.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 493,844. SWALLOW AIRPLANE COMPANY, INC., Wichita, Kans. Filed Dec. 22, 1945.

TUFFY

FOR SCREW DRIVERS.

Claims use since Dec. 6, 1945.

Ser. No. 499,871. UNIT CRANE & SHOVEL CORP., West Allis, Milwaukee, Wis. Filed Apr. 8, 1946.

FOR POWER SHOVELS AND CRANES.
Claims use since Jan. 2, 1930.

Ser. No. 507,307. ENGLISHTOWN CUTLERY, LTD., New York, N. Y. Filed Aug. 13, 1946.

The term "Forge" is disclaimed apart from the combination shown.
FOR TABLEWARE—NAMELY, KNIVES, FORKS, SPOONS, AND CARVING SETS OF BASE METAL.
Claims use since Jan. 1, 1939.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Ser. No. 508,108. GEMEX COMPANY, Union, N. J. Filed Aug. 27, 1946.

Lady Princeton

FOR JEWELRY FOR PERSONAL WEAR (NOT INCLUDING WATCHES)—NAMELY, WATCH BRACELETS.
Claims use since Aug. 8, 1946.

Ser. No. 508,109. GEMEX COMPANY, Union, N. J. Filed Aug. 27, 1946.

Lord Princeton

FOR JEWELRY FOR PERSONAL WEAR (NOT INCLUDING WATCHES)—NAMELY, WATCH BRACELETS.
Claims use since Aug. 8, 1946.

Ser. No. 513,232. JOSEPH BERLAND, New York, N. Y. Filed Nov. 26, 1946.

LOVELAND

FOR FINGER RINGS.
Claims use since Jan. 2, 1946.

CLASS 37

PAPER AND STATIONERY

Ser. No. 517,790. ROBERT E. MARRIOTT, Battle Creek, Mich. Filed Feb. 19, 1947.

FOR CORRESPONDENCE PAPER AND STATIONERY.
Claims use since Feb. 12, 1947.

CLASS 39

CLOTHING

Ser. No. 508,591. FISHBACK MANUFACTURING COMPANY, Denver, Colo. Filed Sept. 6, 1946.

The girl's picture is fanciful.
FOR OUTER CLOTHING—NAMELY, JACKETS AND RIDING PANTS FOR WOMEN, MISSES, AND JUNIOR MISSES.
Claims use since June 1938.

Ser. No. 519,914. ALEXANDER & SONS, INC., New York, N. Y. Filed Apr. 1, 1947.

The word "Furs" is disclaimed.
FOR GARMENTS MADE OF FUR—NAMELY, COATS, SCARFS, AND MUFFS.
Claims use since Apr. 23, 1945.

CLASS 44

DENTAL, MEDICAL, AND SURGICAL APPLIANCES

Ser. No. 520,508. FRED HURTLEY LIMITED, Keighley, England. Filed Apr. 11, 1947.

LITESOME

FOR ATHLETIC SUPPORTERS.
Claims use since October 1939.

CLASS 45

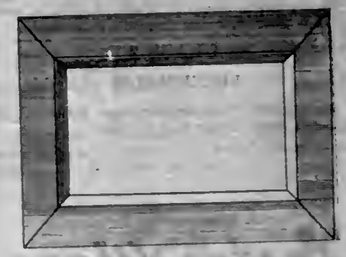
SOFT DRINKS AND CARBONATED WATERS

Ser. No. 518,460. THE GRAPETTE COMPANY, INCORPORATED, Camden, Ark. Filed Mar. 4, 1947.

Grapette

FOR NON-ALCOHOLIC, MALTLESS FRUIT BEVERAGE.
Claims use since 1911.

CLASS 46



FOODS AND INGREDIENTS OF FOODS

Ser. No. 512,977. WOODROW MILLER, doing business as Woodrow Miller and Company and Woodrow Miller Honey Company, Alhambra, Calif. Filed Nov. 21, 1946.

The name "Rita Miller's" is a facsimile of the handwriting of Rita Miller, wife of the applicant. The stippling of the drawing is for shading only.
FOR HONEY.
Claims use since Aug. 1, 1944.

Ser. No. 518,825. CHURCH & DWIGHT CO. INC., New York, N. Y. Filed Mar. 11, 1947.

Applicant owns Reg. Nos. 59,095, 426,956, and 426,957. The drawing is lined for the color blue which is claimed as an essential feature of applicant's mark. The inner portion of the frame is lined for shading only.
FOR BAKING SODA (BICARBONATE OF SODA) FOR USE AS AN INGREDIENT IN THE PREPARATION OF FOODS.
Claims use since March 1930.

Ser. No. 520,289. JAMES STOREY MARSHALL, Totnes, Devonshire, England. Filed Apr. 7, 1947.

No claim is made to the exclusive use of the word "Widdecombe" and the word "Marshall's."
FOR CANDY.
Claims use since July 14, 1945.

ACT OF 1946

The following trade-marks are published in compliance with section 12(a) of the Trade-Mark Act of 1946. Notice of opposition under section 13 may be filed within thirty days of this publication. See Rules 20.1 to 20.8.

As provided by section 21 of said act, a fee of twenty-five dollars must accompany each notice of opposition.

CLASS 2

RECEPTACLES

Ser. No. 551,362. COLUMBUS PLASTIC PRODUCTS, INC., Columbus, Ohio. Filed Mar. 6, 1948.

Lustro-Ware

No claim is made to the term "Ware" apart from the mark as shown. Applicant claims ownership of Registration No. 416,862.

FOR DRINKING TUMBLERS, SHAKER-TYPE FOOD AND BEVERAGE MIXER CUPS, BATH TUB SOAP DISHES FOR BAR SOAP, ORNAMENTAL BOX DISPENSERS FOR TOILET OR FACIAL TISSUE, TRAYS FOR THE RECEPTION OF SILVERWARE, EGG TRAYS OF CELLULAR CONSTRUCTION, BUTTER-RECEIVING DISHES, REFRIGERATOR HYDRATOR PANS AND DISHES, ALL COMPOSED OF THERMOPLASTIC AND/OR THERMOSETTING SYNTHETIC RESINS.

Claims use since Feb. 1, 1945.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 539,268. BUCHNER IMPORT CO., INC., New York, N. Y. Filed Oct. 28, 1947.

Kanette by Buchner

The applicant disclaims the right to the exclusive use of the word "Buchner" apart from the mark as shown.

FOR TOILET ARTICLE KITS OF METAL, PLASTIC, OR OTHER SUITABLE MATERIALS, THESE BEING CAN SHAPED KITS INTENDED TO HOLD A VARIETY OF ARTICLES SUCH AS CHANGE, KEYS, HANDKERCHIEF, LIPSTICK, SMALL COMB, ETC.; THE REMOVABLE TOP HAVING A ROUGE COMPACT BUILT THEREIN; SAID TOILET KIT BEING PROVIDED WITH A CHAIN SO THAT IT MAY BE SUSPENDED FROM THE ARM.

Claims use since Oct. 17, 1947.

Ser. No. 551,114. NEW BEDFORD LUGGAGE COMPANY, New Bedford, Mass. Filed Mar. 3, 1948.

The words "New Bedford, Mass." and the representation of the peninsula are disclaimed apart from the mark.

FOR TRAVELING BAGS, OVERNIGHT BAGS, VALISES, GLADSTONE BAGS, CLUB BAGS FOR TRAVELING, TRAIN CASES, UTILITY BAGS FOR TRAVELING.

Claims use since Jan. 5, 1948.

Ser. No. 563,768. HAZEL WASHINGTON, Los Angeles, Calif. Filed Aug. 19, 1948.

FOR PORTFOLIOS, POCKETBOOKS, AND LUGGAGE—NAMELY, LEATHER TRAVELLING CASES, FORTNIGHTERS, SUITCASES, HAT CASES, AND SHOE CASES.

Claims use since 1938.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 521,879. EWALD A. BUSSE, doing business as Gridd Stone Company, Canton, Ohio, assignee of Gridd Stone Company. Original filed May 5, 1947, under the act of 1905, amended to application under act of 1946, Feb. 27, 1948.

-PCF-

FOR ABRASIVE SCOURING BLOCK.

Claims use since August 1946.

Ser. No. 531,863. EDWARD R. TAYLOR, doing business as Taylor Precision Manufacturing Co., Rocky River, Ohio. Filed Aug. 19, 1947.

ARVISOL

FOR DETERGENT FOR CLEANING GLASSES AND BEER SYSTEMS.

Claims use since 1939.

Ser. No. 533,595. CHARLES P. MOORE, doing business as Moore & Son, Tucson, Ariz. Filed Sept. 5, 1947.

L-BO GREASE

The word "Grease" is disclaimed apart from the mark. The drawing is lined for the color blue.

FOR HOUSEHOLD CLEANER IN POWDERED AND LIQUID FORM, FOR USE IN CLEANING PAINTED SURFACES, LINOLEUM, FABRIC, AND UPHOLSTERY.

Claims use since June 30, 1947.

Ser. No. 535,539. WILFRED G. KINO, doing business as Spray Brite Co., Minneapolis, Minn., assignor to Spray-Brite Company, Minneapolis, Minn., a firm. Filed Sept. 24, 1947. Under section 2f of the act of 1946.

SPRAY BRITE

Applicant claims ownership of Registration No. 333,866.

FOR LIQUID GLASS CLEANER FOR WINDSHIELDS, WINDOWS, MIRRORS, SHOWCASES, AND THE LIKE.

Claims use since Sept. 1, 1934.

Ser. No. 535,872. QUAKER CHEMICAL PRODUCTS CORPORATION, Conshohocken, Pa. Filed Sept. 26, 1947.

FOR SYNTHETIC ORGANIC DETERGENTS, SOAPS, SOLVENT CLEANSERS FOR CLEANING TEXTILES, FABRICS AND FIBERS PREPARATORY TO FURTHER PROCESSING; FOR DETERGENTS FOR GENERAL WASHING PURPOSES FOR HOUSEHOLD AND INDUSTRIAL WASHING OR CLEANING; FOR OILS AND CHEMICALS USED FOR CONDITIONING, WATERPROOFING, AND SOFTENING LEATHER AND FURS PREPARATORY TO FURTHER PROCESSING; SOAPS MADE FROM SULPHONATED OILS AND/OR ORGANIC SYNTHETIC DETERGENTS HAVING GENERAL CLEANSING PROPERTIES, EXCEPT FOR SODIUM SILICATE AS SUCH.

Claims use since May 1, 1928.

Ser. No. 539,619. ARMSTRONG PAINT & VARNISH WORKS, doing business as Nickel Plate Stove Polish Company, Chicago, Ill. Filed Oct. 31, 1947.

BLACK EAGLE

The word "Black" is disclaimed apart from the mark.

FOR STOVE POLISH.

Claims use since 1925.

Ser. No. 540,145. ARMOUR & COMPANY, Chicago, Ill. Filed Nov. 5, 1947.

FLOTILLA

FOR SOAPS.

Claims use since 1903.

Ser. No. 540,966. ARMOUR AND COMPANY, Chicago, Ill. Filed Nov. 13, 1947.

BULL'S HEAD

FOR COATED ABRASIVES.

Claims use since 1920.

Ser. No. 542,001. F. L. & J. C. CODMAN COMPANY, Rockland, Mass. Filed Nov. 22, 1947.

SAVA-SENTA

FOR BUFFING WHEELS AND COMPONENT PARTS THEREOF.

Claims use since Oct. 30, 1947.

Ser. No. 542,535. CLEAN TIM, LIMITED, Toronto, Ontario, Canada. Filed Nov. 28, 1947.

CLEAN TIM

The word "Clean" is disclaimed apart from the mark. Applicant claims ownership of Canadian Registration No. 91.

FOR SOLUBLE CLEANER, CLEANSER, AND DETERGENT.

Ser. No. 542,723. THE FITCH DUSTDOWN COMPANY, Baltimore, Md. Filed Oct. 13, 1947. Under section 2f of the act of 1946.

Dustdown

THERE'S ONLY ONE

No claim is made to the words "There's Only One," apart from the mark shown. Applicant claims ownership of Registration No. 217,542.

FOR LIQUID SOAP, SWEEPING COMPOUND, DUST-COLLECTING SWEEPING POWDER, AND POWDER FOR DUSTLESS SWEEPING.

Claims use since Nov. 3, 1904.

Ser. No. 543,995. ROYCE CHEMICAL COMPANY, Carlton Hill, N. J. Filed Dec. 10, 1947.

ROYCE CHEMICAL CO.

FOR GENERAL CLEANING AND SCOURING COMPOUND.

Claims use since July 21, 1936.

Ser. No. 545,923. EARL C. WEST, doing business as Dr. West Company, Mora, Minn. Filed Dec. 31, 1947.

24-S

FOR CLEANER FOR DENTAL PLATES.

Claims use since Oct. 15, 1947.

Ser. No. 546,425. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio. Filed Jan. 7, 1948.

Chase-O

Applicant claims ownership of Registration No. 94,425 (renewed).

FOR SOLUBLE CLEANER, CLEANSER AND DETERGENT.

Claims use since Aug. 1, 1912.

Ser. No. 546,965. DETREX CORPORATION, Detroit, Mich. Filed Jan. 14, 1948.

DETREX

FOR DRYCLEANING SOLVENTS, METAL CLEANING SOLVENTS, ALKALI CLEANERS, FLOOR CLEANERS, METAL CLEANERS, EMULSION CLEANERS, SPOT REMOVER, WATER EMULSION CLEANERS, SPRAY BOOTH CLEANER, ACID CLEANERS, SOAP POWDERS, GREASE REMOVERS, AND SOLVENT CLEANING COMPOUNDS.

STAR AND CRESCENT

FOR SOLDERING FLUX IN PASTE FORM AND IN STICK FORM.

Claims use since 1904.

Ser. No. 550,708. LABORATORIES OM S. A., Geneva, Switzerland. Filed Feb. 27, 1948.

OXIREA

Right of priority claimed under section 44d. Applicant claims ownership of Swiss Registration No. 122,562 dated Oct. 11, 1947.

FOR PHARMACEUTICAL AND VETERINARY PREPARATIONS AND SUBSTANCES—NAMELY, AMPOULES CONTAINING A STERILE SOLUTION—STABILIZED AT 190 MILLIVOLTS—OF SODIUM SALTS OF SULPHUROUS ACIDS WITH 2.89% OF ACTIVE REDUCING SULPHUR.

Ser. No. 552,754. DE KAMA, INC., Los Angeles, Calif. Filed Mar. 23, 1948.

De-Kar-Mone

Applicant claims ownership of Registration No. 280,088.
FOR FACE CREAM.
Claims use since 1929.

Ser. No. 552,918. MARGUERITT BETTIS BERRY, Cleveland, Ohio. Filed Mar. 10, 1948.

MADAM W. F. BETTIS

The portrait and the name is that of the applicant's deceased mother.
FOR HAIR DRESS PREPARATION IN THE NATURE OF A SALVE AND AN OIL FOR THE SCALP TO RELIEVE DRYNESS AND DANDRUFF SCALES.
Claims use since Feb. 23, 1948.

Ser. No. 554,929. R. T. VANDERBILT COMPANY, INC., New York, N. Y. Filed Apr. 17, 1948.

Bismate

FOR RUBBER ACCELERATORS.
Claims use since Mar. 26, 1948.

Ser. No. 554,930. R. T. VANDERBILT COMPANY, INC., New York, N. Y. Filed Apr. 17, 1948.

"Tabform"

FOR RUBBER ACCELERATORS.
Claims use since Mar. 26, 1948.

Ser. No. 559,400. WEST VIRGINIA PULP AND PAPER COMPANY, New York, N. Y. Filed Feb. 21, 1948.

CALTEC

Applicant claims ownership of Registration No. 438,713.
FOR PRECIPITATED CALCIUM CARBONATE TECHNICAL GRADE.
Claims use since May 1946.

Ser. No. 559,568. CARL J. BARTON, doing business as Barton Products, Chicago, Ill. Filed June 18, 1948.

SOLVITE

FOR COMPOSITION CONTAINING CHEMICAL INGREDIENTS FOR RESTORING LOST POWER IN AUTOMOBILE ENGINES BY DISSOLVING GUM AND FREEING STICKY VALVES AND RINGS, AND FOR DISSOLVING GUM AND SLUDGE IN THE CRANKCASE.
Claims use since August 1946.

Ser. No. 560,069. THE UPJOHN COMPANY, Kalamazoo, Mich. Filed June 23, 1948.

Depo

Applicant claims ownership of Registration No. 355,089.
FOR MEDICINAL PREPARATION FOR INJECTION CONTAINING PEANUT OIL, OTHER OILS, GELATIN, AND DEXTROSE, AND HAVING PROLONGED THERAPEUTIC ACTIVITY.
Claims use since Mar. 12, 1948.

Ser. No. 561,152. THE STANDARD OIL COMPANY, Cleveland, Ohio. Filed July 10, 1948.

INDEX

FOR ANTI-DETONATION FLUID FOR INTERNAL COMBUSTION ENGINES.
Claims use since May 19, 1948.

Ser. No. 562,764. CLOVER FARM STORES CORPORATION, Cleveland, Ohio. Filed Aug. 4, 1948. Under section 2f of the act of 1946.

Mrs. Lowe's

FOR BLEACH, AMMONIA, AND BLUING.
Claims use since Nov. 1, 1935.

Ser. No. 564,820. DOME CHEMICALS, INC., New York, N. Y. Filed Aug. 28, 1948.

Domeboro

Applicant claims ownership of Registration No. 382,555.
FOR ASTRINGENT AND ANTISEPTIC PREPARATIONS AND OINTMENTS.
Claims use since Apr. 1, 1940.

Ser. No. 564,679. THE WM. S. MERRELL COMPANY, Cincinnati, Ohio. Filed Apr. 10, 1948.

CRINOGEN

Applicant claims ownership of Registration No. 204,258.
FOR PHARMACEUTICAL PRODUCT, COMBINING ESTROGENIC SUBSTANCES, AND PROGESTERON FOR THE TREATMENT OF SECONDARY AND PRIMARY AMENORRHEA.
Claims use since Feb. 16, 1925.

Ser. No. 565,044. CONSOLIDATED COSMETICS, Chicago, Ill. Filed Sept. 13, 1948.

DISTRACTION

Applicant claims ownership of Registration No. 435,752.
FOR BRILLIANTINE, CREAM COLOGNE, FACE POWDER, AND LIPSTICK.
Claims use since Sept. 1, 1948.

Ser. No. 565,658. J. C. SULLIVAN, doing business as No-Way Products Co., North Little Rock, Ark. Filed Sept. 22, 1948.

NURATEX

FOR PERMANENT TYPE ANTI-FREEZE WITH PROPYLENE GLYCOL BASE.
Claims use since Aug. 12, 1948.

Ser. No. 565,911. COOK CHEMICAL COMPANY, Kansas City, Mo. Filed Sept. 27, 1948.

CERT-O-CIDE

FOR GRAIN FUMIGANT.
Claims use since July 29, 1942.

Ser. No. 566,337. CHARLES B. HAGAMAN, doing business as Medi-Phragm Products, Arvada, Colo. Filed Oct. 2, 1948.

MEDIM

FOR DOUCHE POWDER.
Claims use since Jan. 25, 1946.

Ser. No. 567,331. CUTTER LABORATORIES, Berkeley, Calif. Filed Aug. 24, 1948.

Diptussis (Alhydrox)

Applicant claims ownership of Registration No. 439,299.
FOR ALUMINUM HYDROXIDE ADSORBED BIOLOGICAL PRODUCTS FOR ACTIVE IMMUNIZATION AGAINST DIPHTHERIA AND WHOOPING COUGH.
Claims use since June 1943.

Ser. No. 567,334. CUTTER LABORATORIES, Berkeley, Calif. Filed Aug. 24, 1948.

PEN-TROCHE

The word "Troche" is disclaimed. Applicant claims ownership of Registration No. 439,450.
FOR CALCIUM PENICILLIN TABLETS.
Claims use since September 1945.

Ser. No. 572,379. A. H. ROBINS COMPANY, INC., Richmond, Va. Filed Jan. 18, 1949.

ROBITUSSIN

FOR ANTITUSSIVE PREPARATION PREFERABLY DISPENSED IN LIQUID FORM.
Claims use since Jan. 6, 1949.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Ser. No. 528,185. BENJAMIN AIR RIFLE COMPANY, St. Louis, Mo. Filed July 9, 1947. Under section 2f of the act of 1946.

BENJAMIN

FOR AIR RIFLES AND AIR PISTOLS.
Claims use since June 20, 1899.

Ser. No. 528,187. BENJAMIN AIR RIFLE COMPANY, St. Louis, Mo. Filed July 9, 1947. Under section 2f of the act of 1946.

"BENJAMIN FRANKLIN"

FOR AIR RIFLES AND AIR PISTOLS.
Claims use since Apr. 27, 1934.

Ser. No. 528,188. BENJAMIN AIR RIFLE COMPANY, St. Louis, Mo. Filed July 9, 1947. Under section 2f of the act of 1946.

H C
BENJAMIN

FOR PELLETS FOR AIR RIFLES AND AIR PISTOLS.
Claims use since May 3, 1941.

Ser. No. 526,189. BENJAMIN AIR RIFLE COMPANY, St. Louis, Mo. Filed July 9, 1947. Under section 2f of the act of 1946.

BENJAMIN

FOR PELLETS AND SHOT FOR AIR RIFLES AND PISTOLS.
Claims use since Jan. 4, 1934.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 535,262. THE ROLL-O-MATIC SCREEN COMPANY, Cleveland, Ohio. Filed Sept. 22, 1947.

Roll-O-Matic

The word "Roll" is disclaimed.
FOR COMPLETE WINDOW SCREENS.
Claims use since June 28, 1947.

Ser. No. 549,362. CURTIS COMPANIES INCORPORATED, Clinton, Iowa. Filed Nov. 17, 1947. Under section 2f of the act of 1946

CURTIS

Applicant claims ownership of Registration No. 229,010.

ARMLAC

FOR LACQUER.
Claims use since 1922.

Ser. No. 540,679. KLIMATE-PRUF PAINT COMPANY, INC., Greensboro, N. C. Filed Nov. 10, 1947. Under section 2f of the act of 1946.

Klimate-Pruf

FOR INTERIOR AND EXTERIOR PASTE AND READY-MIXED PAINTS, PAINT ENAMELS, VARNISHES, STAINS, SPAR VARNISH, FLOOR ENAMELS, FLOOR WAX, PAINT OILS, AND THINNERS, MILL WHITE, MASONRY AND ALUMINUM PAINTS, AND WATERPROOFING PREPARATIONS IN THE NATURE OF PAINT.

Claims use since June 9, 1926.

Ser. No. 540,857. THE NORTH AMERICAN FIBRE PRODUCTS CO., Cleveland, Ohio. Filed Nov. 12, 1947.

FOR INDUSTRIAL HEAT AND FLAME PROTECTED METAL PAINT; READY MIXED HOUSE PAINT; BARN, ROOF, AND BRIDGE PAINT; HEAT RESISTING PAINT; CONCRETE WATERPROOFING CEMENT PAINT; PORCH AND FLOOR PAINT; WHITE PASTE PAINT; AMMONIA PIPE PAINT; ASBESTOS FIBRE FIRE-RESISTING, LEAK-PROOFING AND WATERPROOFING COATING MATERIAL; UNDER-COATING COMPOUND AND PRIMER FOR COATING MATERIAL; INTERIOR VARNISH; FLOOR AND LINOLEUM VARNISH; EXTERIOR VARNISH; FURNITURE VARNISH; TINNER'S RED; SHINGLE STAINS; ALUMINUM PAINT, VEHICLE, AND/OR PASTE THEREFOR.

Claims use since Oct. 18, 1915.

Ser. No. 540,877. REPUBLIC PAINT & VARNISH CO., Chicago, Ill. Filed Nov. 12, 1947. Under section 2f of the act of 1946.

JIFFY-CUT

FOR PAINT AND VARNISH REMOVER SOLD IN PASTE FORM.
Claims use since Apr. 15, 1937.

Ser. No. 541,382. ARMSTRONG PAINT & VARNISH WORKS, Chicago, Ill. Filed Nov. 17, 1947.

PLASTIFLAT

FOR READY-MIXED PAINTS SOLD IN LIQUID FORM PARTICULARLY SUITABLE AS INTERIOR WALL PAINT.
Claims use since Sept. 15, 1943.

Ser. No. 541,451. REPUBLIC PAINT & VARNISH CO., Chicago, Ill. Filed Nov. 17, 1947.

VANI-TONE

Applicant disclaims exclusive use of the word "Tone" apart from the mark as shown.

FOR WATER-MIXED, WASHABLE, QUICK DRYING EMULSIFIED RESIN PAINTS SUITABLE FOR INTERIOR FINISH AND READY-MIXED PAINTS SOLD IN LIQUID FORM.

Claims use since Dec. 3, 1942.

Ser. No. 541,453. REPUBLIC PAINT & VARNISH CO., Chicago, Ill. Filed Nov. 17, 1947.

TUNG-ALTUM

The word "Tung" is disclaimed apart from the mark.

FOR UTILITY PAINT AND ASPHALT BASE ALUMINUM PAINT.

Claims use since 1922.

Ser. No. 541,460. REPUBLIC PAINT & VARNISH CO., Chicago, Ill. Filed Nov. 17, 1947. Under section 2f of the act of 1946.

SUR-FILL

FOR FLOOR SURFACE COATING IN THE NATURE OF VARNISH AND WHICH MAY BE USED IN PLACE OF SHELLAC OR VARNISH, BOTH AS A FIRST COAT OR UNDERCOAT FINISH FOR VARNISH.

Claims use since 1922.

Ser. No. 541,701. PRODUITS CHIMIQUES DE LIEGE, Bois-de-Breux (near Liege), Belgium. Filed Nov. 19, 1947.

Watteau

The mark "Watteau" refers to the celebrated French painter, Antoine Watteau, deceased. Applicant claims ownership of Belgian Registration No. 5,590, dated Jan. 12, 1944.

FOR COLORING MATERIALS FOR ARTISTS, SUCH AS PREPARED WITH OIL OR WATER, GOUACHES, WATER-COLORS, PASTELS, VARNISHES, PAINT DRYING AGENTS FOR ART WORK AND ALL PAINT USES.

Ser. No. 544,182. VANE-CALVERT PAINT COMPANY, St. Louis, Mo. Filed Dec. 11, 1947. Under section 2f of the act of 1946.

VANE-CALVERT'S

FOR READY-MIXED OIL PAINTS, VARNISHES, VARNISH STAINS, OIL STAINS, PAINT ENAMELS, AND WALL FINISHES FOR INTERIORS.

Claims use since 1867.

Ser. No. 544,274. PITTSBURGH PLATE GLASS COMPANY, Pittsburgh, Pa. Filed Dec. 13, 1947.

FORITE

FOR LIQUID LACQUERS AND ENAMELS.
Claims use since Mar. 28, 1938.

Ser. No. 544,281. PITTSBURGH PLATE GLASS COMPANY, Pittsburgh, Pa. Filed Dec. 13, 1947.

WEBITE

FOR LIQUID PAINT ENAMELS.
Claims use since Apr. 4, 1938.

Ser. No. 549,022. EDWARD SMITH & CO., INC., New York, N. Y. Filed Feb. 6, 1948.

IXL

FOR INTERIOR VARNISH.
Claims use since 1890.

Ser. No. 549,023. EDWARD SMITH & CO., INC., New York, N. Y. Filed Feb. 6, 1948.

LOXOIL

FOR VARNISH EXTENDER.
Claims use since 1934.

Ser. No. 551,162. CARBOLITE CORPORATION, Maywood, Ill. Filed Mar. 4, 1948.

SWAX

FOR CLEANSING AND WAXING PREPARATION FOR WALLS, FLOORS, FURNITURE, AND OTHER SURFACES.

Claims use since July 1947.

Ser. No. 552,618. ROBERT MATHEW STEPHENSON, doing business as Stephenson Air Brush Paint Co., Oakland, Calif. Filed Mar. 20, 1948.

PERMA-DRI

The word "Dri" is disclaimed apart from the mark.

FOR READY-MIXED, LIQUID, AND OIL PAINTS AND PAINT COATINGS.

Claims use since Sept. 18, 1947.

Ser. No. 553,044. C. A. WOOLSEY PAINT & COLOR CO. INC., New York, N. Y. Filed Mar. 25, 1948.

Vimlast

FOR READY-MIXED PAINTS AND PAINT THINNER OR SOLVENT RECOMMENDED FOR USE IN PAINTING SHIP BOTTOMS AND HULLS.

Claims use since February 1948.

CLASS 19

VEHICLES

Ser. No. 526,668. FRANK E. GAINES, doing business as Aerol Co., Los Angeles, Calif., assignor to Aerol Co. Inc., Los Angeles, Calif., a corporation of California. Filed July 6, 1947.

AEROL

FOR HAND TRUCKS AND WHEELS THEREFOR.
Claims use since July 1946.

Ser. No. 545,809. AMERICAN STEEL FOUNDRIES, Chicago, Ill. Filed Dec. 31, 1947.

SIMPLEX

Applicant claims ownership of Registrations Nos. 217,699 and 296,593.
FOR RAILWAY CAR SPRINGS, DAMPERS, SNUBBERS, COUPLERS, AND BRAKE RIGGING AND PARTS THEREOF—NAMELY, BRAKE HEADS, BRAKE BEAMS, BRAKE HANGERS, AND BRAKE LEVERS.
Claims use since Aug. 1, 1897.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 508,390. REINHARD BROTHERS COMPANY, Minneapolis, Minn. Original filed Aug. 31, 1946, under the act of 1905; amended to application under act of 1946, Mar. 3, 1948. Under section 2f of the act of 1946.

HOUSE OF REINHARD

FOR RADIO RECEIVING AND TRANSMITTING SETS, RADIO TUBES, AND PARTS USED IN THE MAINTENANCE OF SUCH APPARATUS.
Claims use since Apr. 15, 1925.

Ser. No. 516,776. LEWYT CORPORATION, Brooklyn, N. Y. Original filed Feb. 1, 1947, under the act of 1905; amended to application under act of 1946, Oct. 1, 1947. Under section 2f of the act of 1946.

Lewyt

FOR ELECTRICALLY DRIVEN VACUUM CLEANERS AND ACCESSORIES AND ATTACHMENTS THEREFOR, INCLUDING RUG NOZZLES, FLOOR AND WALL BRUSHES, UPHOLSTERY AND DRAPERY NOZZLES, DUSTING BRUSHES, CREVICE TOOLS, LIQUID SPRAYERS, AND MOTH SUFFOCATORS SOLD AS A UNIT.
Claims use since Oct. 3, 1946.

Ser. No. 526,934. KWIKON COMPANY, Chicago, Ill. Filed July 19, 1947. Under section 2 of the act of 1946.

NO-BOLT

Applicant claims ownership of Registration No. 212,018.
FOR FIXTURE STUDS FOR SECURING ELECTROLIERS AND THE LIKE TO ELECTRICAL OUTLET BOXES.
Claims use since Mar. 8, 1921.

Ser. No. 532,088. AMERICAN BATTERY MFG. COMPANY, Kansas City, Mo. Filed Aug. 22, 1947.

Nitro

FOR ELECTRIC STORAGE BATTERIES.
Claims use since Aug. 26, 1926.

Ser. No. 532,834. THE LEECE-NEVILLE COMPANY, Cleveland, Ohio. Filed Aug. 29, 1947. Under section 2f of the act of 1946.

ELECTRICAL EQUIPMENT
LEECE-NEVILLE
CLEVELAND · OHIO · U.S.A.

All of the wording other than the words "Leece-Neville" is disclaimed. Applicant claims ownership of Registration No. 426,051.
FOR ELECTRICAL APPARATUS—NAMELY, CRANKING MOTORS; GENERATORS; ARMATURES; COMMUTATORS; FIELD COILS; FIELD RINGS; BRUSH RIGGINGS; MOTOR AND GENERATOR HOUSINGS; BRUSHES; RELAYS; CIRCUIT BREAKERS; SWITCHES; CUTOUT RELAYS; VOLTAGE REGULATORS; ELECTRIC MOTORS; MAGNETIC SWITCHES; AND FLEXIBLE DRIVE COUPLINGS FOR GENERATORS.
Claims use since February 1910.

Ser. No. 535,380. THE BRISTOL MOTOR COMPANY, Bristol, Conn. Filed Sept. 23, 1947.

CIRCLE B BRISTOL

No claim is made to the exclusive right to the word "Bristol" apart from the mark as shown.
FOR ELECTRICAL SYNCHRONOUS TIMING MOTOR AND COMPONENT PARTS THEREOF.
Claims use since Sept. 20, 1946.

Ser. No. 540,222. WESTINGHOUSE ELECTRIC CORPORATION, East Pittsburgh, Pa. Filed Nov. 5, 1947.

Precipitron

Applicant claims ownership of Registration No. 359,506.
FOR CLEANING AND CONDITIONING APPARATUS FOR THE REMOVAL BY ELECTROSTATIC PRECIPITATION OF PARTICULATE MATTER FROM GASES AND PARTICULARLY AIR FOR HOMES, OFFICES, AND PUBLIC AND INDUSTRIAL BUILDINGS.
Claims use since Nov. 9, 1937.

Ser. No. 542,103. EAGLE ELECTRONICS, INC., Irvington, N. Y. Filed Nov. 24, 1947.

PICT-O-GRAPH

Applicant makes no claim to the word "Radio Kits," apart from the mark.
FOR ELECTRONIC EQUIPMENT CONSTRUCTION KITS—NAMELY, RADIO RECEIVER CONSTRUCTION KITS, AMPLIFIER CONSTRUCTION KITS, CODE RECEIVING OSCILLATOR CONSTRUCTION KITS, WIRELESS PHONOGRAPH OSCILLATOR CONSTRUCTION KITS, TELEVISION RECEIVER CONSTRUCTION KITS, AND FOR RADIO DIAL SCALES AND CHASSIS AND FOR TELEPHONE AND RADIO RECEIVERS, AMPLIFIERS, CODE RECEIVER OSCILLATORS, AND WIRELESS PHONOGRAPH OSCILLATORS.
Claims use since April 1947.

Ser. No. 542,702. UNITED STATES TELEVISION MANUFACTURING CORPORATION, New York, N. Y. Filed Nov. 28, 1947.

The lining in the drawing is intended to represent the colors blue and gold. Applicant claims ownership of Registration No. 423,519.
FOR TELEVISION RECEIVERS.
Claims use since Oct. 16, 1945.

Ser. No. 550,615. SEARS, ROEBUCK AND CO., Chicago, Ill. Filed Feb. 26, 1948.

FOR ELECTRIC BLANKETS.
Claims use since Nov. 1, 1946.

Ser. No. 552,163. PREMIER INDUSTRIES CORPORATION, New York, N. Y. Filed Mar. 17, 1948.

PIC A CHAMPION

FOR ELECTRICALLY DRIVEN MIXER FOR LIQUID DRINKS.
Claims use since Feb. 16, 1948.

Ser. No. 552,971. GENERAL CERAMICS & STEATITE CORPORATION, Keasbey, N. J. Filed Mar. 25, 1948.

ISOLANTITE

FOR CERAMIC COMPOSITIONS USED FOR ELECTRICAL INSULATION.
Claims use since Mar. 2, 1948.

Ser. No. 553,457. THE E. W. CARPENTER MANUFACTURING COMPANY, Bridgeport, Conn. Filed Mar. 31, 1948.

ROYSON

FOR ELECTRICALLY OPERATED SIGNAL LIGHTS FOR USE ON AUTOMOBILES.
Claims use since May 23, 1947.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 527,773. THE WORTHINGTON BALL COMPANY, Elyria, Ohio. Filed July 5, 1947.

SUPER-CHARGED

Applicant claims ownership of Registration No. 397,142.
FOR GOLF BALLS.
Claims use since May 10, 1940.

Ser. No. 535,809. CHILDHOOD INTERESTS, INC., Roselle Park, N. J. Filed Sept. 26, 1947.

CRADLE BOUNCE

The letters of the words constituting the mark as applied to the goods are ordinarily of red color, but no limitation to this color is intended. Applicant claims ownership of Registrations Nos. 403,047 and 428,732.
FOR TOY FOR CHILDREN COMPRISING A TETHERED BALL ADAPTED FOR SUSPENSION FROM THE SIDE OF A CRIB, PLAY PEN, OR THE LIKE.
Claims use since Oct. 15, 1946.

Ser. No. 549,007. SCHUCO TOY CO. INC., New York, N. Y. Filed Feb. 6, 1948.

Schuco

FOR MECHANICAL TOYS—NAMELY, MANUALLY OPERATED, SPRING OPERATED, OR ELECTRICALLY OPERATED VEHICLES, TOOLS, MACHINES, TOY GARAGES, STATIONS, AND OTHER BUILDING STRUCTURES; ANIMAL AND HUMAN TOY FIGURES WITH AND WITHOUT DRIVE MECHANISM; PARTS OF MECHANICAL TOYS AND FIGURES; EDUCATIONAL TOYS INCLUDING ELECTRICAL OR MECHANICAL ACTUATING MEANS; MANUALLY, MECHANICALLY, OR ELECTRICALLY ACTUATED TABLE GAMES FOR CHILDREN.
Claims use since Aug. 22, 1921.

Ser. No. 551,909. JOHN S. NORRINGTON, San Francisco, Calif. Filed Mar. 13, 1948.

D Tee

The representation of a golf tee and the word "Tee" are disclaimed apart from the mark as shown.
FOR GOLF TEES.
Claims use since Jan. 3, 1948.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 501,221. WESTERN GEAR WORKS, Seattle, Wash. Original filed Apr. 30, 1946, under the act of 1905; amended to application under act of 1946, Jan. 24, 1948.

TORQ-MASTER

The expression "Torq" is disclaimed separate and apart from the mark as shown.
FOR MACHINE PROVIDING CHANGE-SPEED GEARS IN COMPLEMENT WITH A FLY-WHEEL AND EMPLOYED FOR TRANSMITTING THE POWER OF A FLUID-DRIVE ENGINE, THE MACHINE BEING ESPECIALLY APPLICABLE TO LOGGING OPERATIONS AS A YARDER.
Claims use since June 28, 1945.

Ser. No. 516,913. E. PAILLARD & CIE S. A., Sainte-Croix and Yverdon, Switzerland, now by change of name Paillard S. A. (Paillard A. G., Paillard Limited). Original filed Feb. 4, 1947, under the act of 1905; amended to application under act of 1946, Feb. 13, 1948. Under section 2f of the act of 1946.

paillard

Applicant claims ownership of Swiss Registration No. 116,110, dated July 1, 1946.
FOR TYPEWRITERS, OFFICE MACHINES—NAMELY, ERASING MACHINES, BOOK BINDING MACHINES, MULTIGRAPHING MACHINES, MACHINES FOR SEALING ENVELOPES, ADDRESSING MACHINES, MACHINES FOR OPENING ENVELOPES, CHECK WRITERS, AND PARTS AND ACCESSORIES THEREFOR, STAPLING MACHINES FOR APPLYING STAPLES OR CLIPS TO PAPER OR LIKE SHEET MATERIAL, PERFORATING MACHINES FOR PUNCHING HOLES IN PAPER OR LIKE SHEET MATERIAL, CUTTING AND SHEARING MACHINES FOR CUTTING OR TRIMMING PAPER OR LIKE SHEET MATERIAL.

Ser. No. 524,463. HOLLY MOLDING DEVICES, INC., Chicago, Ill. Original filed June 19, 1947, under the act of 1905; amended to application under act of 1946, Feb. 14, 1948.

Holly matic

FOR AUTOMATIC ELECTRICALLY OPERATED HAMBURGER PATTY MOLDING MACHINE.
Claims use since July 19, 1945.

Ser. No. 529,111. SUNNEN PRODUCTS COMPANY, St. Louis, Mo. Filed July 21, 1947. Under section 2f of the act of 1946.

SUNNEN

FOR CYLINDER GRINDERS, HONING, GRINDING, AND ABRADING MACHINES AND PARTS THEREOF, EXHAUST DEVICES FOR CYLINDER GRINDERS, VALVE SPRING LIFTERS, VALVE SPRING COMPRESSORS, VALVE SPRING CLIPS, SPLIT LOCK COMPRESSORS, SPLIT LOCK CATCHERS, SPLIT LOCK REPLACERS, AND HAND TOOLS FOR USE IN REPAIRING ENGINES.
Claims use since Apr. 15, 1928.

Ser. No. 530,970. ARTHUR R. SEGAL, doing business as North American Products Company, Milwaukee, Wis. Filed Aug. 9, 1947.

NORTH AMERICAN WOODSMAN

No claim is made for use of the words "North American" apart from the mark as shown.
FOR CARBIDE TIPPED CIRCULAR SAWS.
Claims use since May 1947.

Ser. No. 532,840. MADISON-KIPP CORPORATION, Madison, Wis. Filed Aug. 29, 1947. Under section 2f of the act of 1946.

Kipp

Applicant claims ownership of Registration No. 286,075.
FOR PRESSURE-FLUID OPERATED GRINDING, CUTTING, BUFFING, CLEANING, AND POLISHING TOOLS, PARTS, REPLACEMENTS, AND ACCESSORIES—NAMELY, CUTTERS, MOUNTED WIRE BRUSHES, WIRE BRUSH HOLDERS, ABRASIVE SLEEVE HOLDERS, ABRASIVE TUBES, MOUNTED TIPS, MOUNTED GRINDING WHEELS, MOUNTED POINTS, MOUNTED SMOOTHING STONES, FELT BUFFING TIPS, TOOL POST ADAPTERS, GRINDING WHEEL GUARDS, DIAMOND POINT WHEEL DRESSERS, OIL GUNS, GRINDING HOODS, TOOL HOLDERS, AND TOOL SET HOLDERS.
Claims use since Feb. 3, 1930.

Ser. No. 533,041. THE MOTO-MOWER COMPANY, Detroit, Mich. Filed Sept. 2, 1947. Under section 2f of the act of 1946 as to "Moto".

Moto-Mower

The word "Mower" is disclaimed apart from the mark as shown. Applicant claims ownership of Registrations Nos. 148,261 and 387,855.
FOR POWER-DRIVEN LAWNMOWERS.
Claims use since Sept. 1, 1919.

Ser. No. 533,189. MUTUAL STATIONERS SUPPLY CORPORATION, New York, N. Y. Filed Sept. 3, 1947.

Centamatic

FOR HAND OPERATED HAND PUNCHES.
Claims use since July 1, 1947.

Ser. No. 533,560. GENERAL BINDING CORPORATION, Chicago, Ill. Filed Sept. 5, 1947.

G. B. C.

FOR MACHINES FOR ATTACHING METAL AND/OR PLASTIC BINDING ELEMENTS TO THE ARTICLE TO BE BOUND.
Claims use since November 1942.

Ser. No. 533,777. ROBBINS & MYERS, INC., Springfield, Ohio. Filed Sept. 8, 1947.

ACE

FOR OVERHEAD HOISTS.
Claims use since Dec. 1, 1929.

Ser. No. 534,062. SPARTAN SAW WORKS, INC., Springfield, Mass. Filed Sept. 10, 1947.

Sparground

FOR TOOL BITS.
Claims use since July 28, 1947.

Ser. No. 534,208. THE TORRINGTON MANUFACTURING COMPANY, Torrington, Conn. Filed Sept. 11, 1947. Under section 2f of the act of 1946.

TORRINGTON

FOR SHEET METAL COILING MACHINES, SHEET METAL EDGE TRIMMING MACHINES, SHEET METAL FLATTENING MACHINES, SHEET METAL SLITTING MACHINES, SLAB MILLING MACHINES, STRAIGHTENING AND SANDING MACHINES FOR METAL BARS, STRETCHING MACHINES FOR LEVELING OR FLATTENING SHEET METAL, TUBE AND ROD STRAIGHTENING MACHINES, WIRE DRAWING MACHINES, WIRE SPRING FORMING MACHINES, WIRE SPRING GRINDING MACHINES, AND WATER COOLED MOLDS FOR CASTING NON-FERROUS METALS.
Claims use since 1928.

Ser. No. 539,624. ATHENS PLOW COMPANY, Athens, Tenn. Filed Oct. 31, 1947. Under section 2f of the act of 1946.

ATHENS

FOR PLOWS, HARROWS, TILLERS, AND SUBSOILERS.
Claims use since 1921.

Ser. No. 541,198. FRANS KARL SCHNEIDER, doing business as Albion Engineering Co., Philadelphia, Pa. Filed Nov. 14, 1947. Under section 2f of the act of 1946.

ALBION

FOR CAULKING GUNS.
Claims use since Dec. 23, 1932.

Ser. No. 545,338. THE CAPEWELL MANUFACTURING COMPANY, Hartford, Conn. Filed Dec. 24, 1947.

TECHNAGON

FOR HANDLES OF HAMMERS.
Claims use since Dec. 12, 1947.

Ser. No. 551,309. POWER DEVELOPMENT CO., INC., Cleveland, Ohio. Filed Mar. 5, 1948.

SCIMITAR

FOR LAWN MOWERS, POWER DRIVEN.
Claims use since June 1947.

Ser. No. 551,483. SIMPLEX PISTON RING MFG. COMPANY, Cleveland, Ohio. Filed Mar. 8, 1948.

SIMPLEX

Applicant claims ownership of Registrations Nos. 211,249, 263,541, 305,248, 315,244, and 426,110.
FOR PISTON SKIRT EXPANDERS.
Claims use since April 1933.

Ser. No. 552,357. NATIONAL SEWING MACHINE COMPANY, Belvidere, Ill. Filed Dec. 20, 1947.

SEAMSTRESS

Applicant claims ownership of Registration No. 32,278.
FOR SEWING MACHINES AND ATTACHMENTS.
Claims use since October 1890.

Ser. No. 552,358. NATIONAL SEWING MACHINE COMPANY, Belvidere, Ill. Filed Dec. 20, 1947.

REVERSEW

Applicant claims ownership of Registration No. 333,126.
FOR SEWING MACHINES AND ATTACHMENTS.
Claims use since Mar. 6, 1935.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 516,045. WESTERN FEATURES SYNDICATE, INC., Rosemead, Calif. Original filed Jan. 20, 1947, under the act of 1905; amended to application under act of 1946, June 29, 1948.

Hollywood PIC-TOURS

The word "Hollywood" is disclaimed apart from the mark.
FOR TRANSPARENCIES FOR USE IN VIEWERS AND PROJECTORS.
Claims use since Oct. 23, 1946.

Ser. No. 516,046. WESTERN FEATURES SYNDICATE, INC., Rosemead, Calif. Original filed Jan. 20, 1947, under the act of 1905; amended to application under act of 1946, June 29, 1948.

PIC-TOURS

FOR TRANSPARENCIES FOR USE IN VIEWERS AND PROJECTORS.
Claims use since Oct. 23, 1946.

Ser. No. 526,692. WALTER KIDDE & COMPANY, INC., Belleville, N. J. Filed July 5, 1947.

K Kidde

FOR SUBMERSION ACTUATORS FOR ACTUATING VALVES FOR THE RELEASE OF GAS UNDER PRESSURE FROM CONTAINERS TO INFLATE BAGS WHICH FORM BUOYANT FLOATS FOR SUPPORTING DISABLED AIRCRAFT, SUCH DEVICES INCLUDING A CASING HAVING AN EXPANSIBLE MEDIUM WHICH IS EXPANDED WHEN THE CASING IS BROUGHT INTO CONTACT WITH A LIQUID, WHEREBY TO GENERATE PRESSURE TO ACTUATE THE RELEASE VALVES; ALSO ACTUATORS COMPRISING A PERFORATED CASING ENCLOSING ELECTRODES WHICH UPON CONTACT WITH WATER COMPLETES AN ELECTRIC ACTUATING CIRCUIT TO OPERATE ELECTRICALLY RELEASABLE VALVES; HEAT RESPONSIVE APPARATUS—NAMELY, FIXED TEMPERATURE THERMOSTATS; FUSIBLE LINK DETECTORS; AND RATE-OF-TEMPERATURE-RISE DETECTORS COMPRISING A SMALL METAL AIR CHAMBER, THE AIR IN WHICH EXPANDS UPON A SUDDEN CHANGE IN TEMPERATURE; EACH OF THESE DEVICES BEING CONNECTED TO RELEASE MECHANISM, WHEREBY UPON ACTUATION OF THE DEVICE, THE RELEASE MECHANISM IS OPERATED TO RELEASE A FIRE EXTINGUISHING MEDIUM; AUTOMATIC WEIGHT INDICATORS AND SCALES, AND TIMING APPARATUS ADAPTED FOR INSTALLATION IN FIRE EXTINGUISHING SYSTEMS AND OPERABLE THEREBY, FOR THE PURPOSE OF PROVIDING FOR OR CAUSING DELAY BETWEEN THE GIVING OF AN ALARM AND THE DISCHARGE OF FIRE EXTINGUISHING MEDIUM.
Claims use since Dec. 1, 1940.

Ser. No. 526,694. WALTER KIDDE & COMPANY, INC., Belleville, N. J. Filed July 5, 1947.

Kidde

Applicant claims ownership of Registration No. 334,376.
FOR SUBMERSION ACTUATORS FOR ACTUATING VALVES FOR THE RELEASE OF GAS UNDER PRESSURE FROM CONTAINERS TO INFLATE BAGS WHICH FORM BUOYANT FLOATS FOR SUPPORTING DISABLED AIRCRAFT, SUCH DEVICES INCLUDING A CASING HAVING AN EXPANSIBLE MEDIUM WHICH IS EXPANDED WHEN THE CASING IS BROUGHT INTO CONTACT WITH A LIQUID, WHEREBY TO GENERATE PRESSURE TO ACTUATE THE RELEASE VALVES; ALSO ACTUATORS COMPRISING A PERFORATED CASING ENCLOSING ELECTRODES WHICH UPON CONTACT WITH WATER COMPLETES AN ELECTRIC ACTUATING CIRCUIT TO OPERATE ELECTRICALLY RELEASABLE VALVES; HEAT RESPONSIVE APPARATUS—NAMELY, FIXED TEMPERATURE THERMOSTATS; FUSIBLE LINK DETECTORS; AND RATE-OF-TEMPERATURE-RISE DETECTORS COMPRISING A SMALL METAL AIR CHAMBER, THE AIR IN WHICH EXPANDS UPON A SUDDEN CHANGE IN TEMPERATURE; EACH OF THESE DEVICES BEING CONNECTED TO RELEASE MECHANISM, WHEREBY UPON ACTUATION OF THE DEVICE, THE RELEASE MECHANISM IS OPERATED TO RELEASE A FIRE EXTINGUISHING MEDIUM; AUTOMATIC WEIGHT INDICATORS AND SCALES, AND TIMING APPARATUS ADAPTED FOR INSTALLATION IN FIRE EXTINGUISHING SYSTEMS AND OPERABLE THEREBY, FOR THE PURPOSE OF PROVIDING FOR OR CAUSING DELAY BETWEEN THE GIVING OF AN ALARM AND THE DISCHARGE OF FIRE EXTINGUISHING MEDIUM.
Claims use since Dec. 1, 1940.

Ser. No. 548,711. AUTOMATIC TEMPERATURE CONTROL CO., INC., Philadelphia, Pa. Filed Sept. 19, 1947.

atcotran

FOR ELECTRICAL MEASURING AND CONTROL APPARATUS AND INSTRUMENTS TO SUPERVISE AND CONTROL PHYSICAL CONDITIONS SUCH AS PRESSURE, VELOCITY, FLOW, MIXTURES, TEMPERATURES, POSITIONS, MOTIONS AND FORCES, AND COMPONENT PARTS THEREOF—NAMELY, DIFFERENTIAL TRANSFORMERS THEREFOR, AMPLIFIERS THEREFOR, INDICATORS, RECORDERS, AND CONTROLLERS, SUCH APPARATUS BEING DESIGNED FOR BOTH SCIENTIFIC USE AND IN INDUSTRIAL PLANTS.
Claims use since May 1, 1947.

Ser. No. 552,096. THE L. S. STARRETT COMPANY, Athol, Mass. Filed Mar. 16, 1948. Under section 2f of the act of 1946.

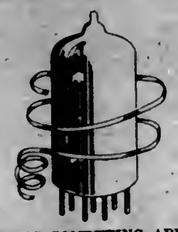
TIME SAVER

Applicant claims ownership of Registration No. 147,250.
FOR TAP, DRILL, AND WIRE GAGES.
Claims use since Jan. 1, 1898.

Ser. No. 552,557. HERBERT RICHARD SHAW, Hints, England. Filed Mar. 18, 1948.

PINK MOUSE

Applicant claims ownership of British Registration No. 653,327, dated Nov. 6, 1946.
FOR TESTING INSTRUMENTS FOR THE ELECTRIC WIRING OF AUTOMOBILES.



Ser. No. 553,136. SCIENTIFIC GLASS APPARATUS CO., INC., Bloomfield, N. J. Filed Mar. 26, 1948. Under section 2f of the act of 1946.

INTER-JOINT

Applicant claims ownership of Registration No. 386,689.
FOR INTERCHANGEABLE TUBULAR GLASS PARTS, STOPPERS, AND STOP-COCKS FOR GLASS CHEMICAL APPARATUS, AND GLASS SCIENTIFIC APPLIANCES FOR LABORATORY USES.
Claims use since Feb. 21, 1940.

Ser. No. 553,627. ECKERT-MAUCHLY COMPUTER CORPORATION, Philadelphia, Pa. Filed Apr. 5, 1948.

UNIVAC

FOR ELECTRONIC COMPUTING APPARATUS AND COMPONENTS THEREOF.
Claims use since Feb. 27, 1948.

Ser. No. 554,556. EXACT LEVEL & TOOL MFG. CO., INC., High Bridge, N. J. Filed Apr. 14, 1948.

ECONOMAT

FOR SPIRIT LEVELS.
Claims use since Apr. 5, 1948.

Ser. No. 557,137. THE KONO MANUFACTURING COMPANY, Woodside, N. Y. Filed May 15, 1948.

FORTY-NINER

FOR EYEGLASS AND SPECTACLE FRAMES.
Claims use since May 3, 1948.

Ser. No. 557,138. THE KONO MANUFACTURING COMPANY, Woodside, N. Y. Filed May 15, 1948.

TUFFY

FOR EYEGLASS AND SPECTACLE FRAMES.
Claims use since May 3, 1948.

Ser. No. 557,367. LUGENE, INC., New York, N. Y. Filed May 19, 1948. Under section 2f of the act of 1946.

LUGENE

Applicant claims ownership of Registration No. 280,347.
FOR LORGNETTES, EYEGLASSES, AND SPECTACLES, AND OPERA GLASSES, MARINE GLASSES, FIELD GLASSES, INSTRUMENTS FOR EXAMINING, TESTING, AND MEASURING THE EYES; OPTICAL LENSES, OPTICAL FRAMES, OPTICAL INSTRUMENTS, CAMERAS, CAMERA AND MOTION PICTURE FILMS.
Claims use since June 1922.

Ser. No. 557,496. BELL & HOWELL COMPANY, Chicago, Ill. Filed May 21, 1948.

LUMAX

FOR PHOTOGRAPHIC LENSES.
Claims use since July 22, 1938.

Ser. No. 558,537. VICTORY OPTICAL MANUFACTURING COMPANY, Newark, N. J. Filed June 4, 1948.

The representation of the eyeglasses is disclaimed.
FOR SPECTACLE FRAMES MADE OF PLASTIC MATERIAL.
Claims use since Jan. 1, 1942.

Ser. No. 558,726. THE KONO MANUFACTURING COMPANY, Woodside, N. Y. Filed June 8, 1948.

AL-KO

FOR EYEGLASS AND SPECTACLE FRAMES.
Claims use since Feb. 19, 1947.

Original filed Sept. 22, 1944, under the act of 1905; amended to application under act of 1946, Dec. 18, 1947, Serial No. 474,510. Published Mar. 1, 1949. Class 6.

510,478. FOOD PROCESSING MACHINES AND EQUIPMENT—VIZ., APPARATUS FOR THE CONTINUOUS PASTEURIZATION AND DEAERATION OF LIQUID AND SEMI-LIQUID FOODS, ETC. CHAIN BELT COMPANY, Milwaukee, Wis.
Original filed Aug. 20, 1945, under the act of 1905; amended to application under act of 1946, Sept. 29, 1947, Serial No. 487,308. Published Feb. 22, 1949. Class 23.

510,479. PROPANE, OXYGEN, HYDROGEN, ACETYLENE, CARBON DI-OXIDE, AND COMPRESSED AIR. KAY GASES CO., Chicago, Ill.
Original filed Dec. 8, 1945, under the act of 1905; amended to application under act of 1946, Apr. 17, 1946, Serial No. 492,925. Published Nov. 23, 1948. Class 6.

510,480. COTTON PICKERS, COTTON HARVESTERS, AND PARTS THEREOF. INTERNATIONAL HARVESTER COMPANY, Chicago, Ill.
Original filed Jan. 18, 1946, under the act of 1905; amended to application under act of 1946, July 12, 1947, Serial No. 494,973. Published Feb. 8, 1949. Class 23.

510,481. ELECTRONIC AND LIGHTING DEVICES—NAMELY, PHOTO-ELECTRIC TUBES, RECTIFIER TUBES, CHARGER BULBS, ELECTRONIC TUBES, PROJECTOR LAMPS, SPACE DISCHARGE LAMPS, NEON LAMPS, AND GAS DISCHARGE LAMPS. CONTINENTAL ELECTRIC COMPANY, Geneva, Ill.
Original filed May 28, 1946, under the act of 1905; amended to application under act of 1946, Dec. 16, 1947, Serial No. 502,856. Published Feb. 15, 1949. Class 21.

510,482. METALLIC FITTINGS AND ALLOYS INCLUDING ANODE RODS FOR PREVENTING CORROSION OF TANKS, LIQUID CONTAINERS, AND WATER HEATERS. THE CLEVELAND HEATER COMPANY, Cleveland, Ohio.
Original filed May 29, 1946, under the act of 1905; amended to application under act of 1946, Nov. 5, 1947, Serial No. 502,948. Published Mar. 1, 1949. Class 21.

510,483. AXES, HAMMERS, HATCHETS, SPADES, SHOVELS, HOES, AND RAKES. THE AMERICAN FORK AND HOE COMPANY, Cleveland, Ohio.
Original filed July 25, 1946, under the act of 1905; amended to application under act of 1946, July 5, 1947, Serial No. 506,222. Published Feb. 22, 1949. Class 28.

510,484. CIGARS. JOSEPH B. MCGINTY, doing business as McGinty Cigar Company, Minneapolis, Minn.
Original filed Aug. 19, 1946, under the act of 1905; amended to application under act of 1946, July 5, 1947, Serial No. 507,647. Published Feb. 8, 1949. Class 17.

510,485. OIL WELL TOOLS—NAMELY, WHIPSTOCKS AND KNUCKLE JOINTS FOR WELL DRILLING AND SELF-ORIENTING DEFLECTING TOOLS FOR WELL DRILLING. EASTMAN OIL WELL SURVEY COMPANY, Denver, Colo.
Original filed Aug. 20, 1946, under the act of 1905; amended to application under act of 1946, Aug. 22, 1947, Serial No. 507,874. Published Feb. 22, 1949. Class 23.

510,486. HAND ACTUATED TOOLS FOR TRUING AND UNDERCUTTING COMMUTATORS. RITE TOOL, INC., Fall River, Mass.
Original filed Sept. 20, 1946, under the act of 1905; amended to application under act of 1946, Sept. 30, 1947, Serial No. 509,471. Published Feb. 22, 1949. Class 23.

510,487. RADIO RECEIVING SETS. THE AEOLIAN COMPANY, New York, N. Y.
Original filed Oct. 16, 1946, under the act of 1905; amended to application under act of 1946, Sept. 6, 1947, Serial No. 510,922. Published Mar. 1, 1949. Class 21.

510,488. DYE COMPOSITION FOR COLORING NATURAL FLOWERS. DWIGHT S. KEARNEY, doing business as The Color-Craft Co., Buffalo, N. Y.
Original filed Nov. 18, 1946, under the act of 1905; amended to application under act of 1946, Nov. 29, 1947, Serial No. 512,781. Published Mar. 1, 1949. Class 6.

510,489. COMBINATION MECHANICALLY AND ELECTRICALLY OPERATED DOOR OPENING MECHANISM. THE VENDO COMPANY, Kansas City, Mo.
Original filed Dec. 9, 1946, under the act of 1905; amended to application under act of 1946, Aug. 2, 1948, Serial No. 518,958. Published Mar. 1, 1949. Class 21.

510,490. WASHING POWDER. ALEXANDER R. PATTERSON, doing business as Lyman-Ross Co., Seattle, Wash.
Original filed Dec. 28, 1946, under the act of 1905; amended to application under act of 1946, Mar. 1, 1948, Serial No. 514,964. Published Feb. 22, 1949. Class 4.

510,491. MOLDED PLASTIC ARTICLES—NAMELY, RELAY BASES, BOBBINS FOR ELECTRICAL RELAYS AND SOLENOIDS, TERMINAL HEADS FOR ELECTRICAL CONNECTORS, ETC. INDUSTRIAL MOLDED PRODUCTS CO., INC., Chicago, Ill.
Original filed Jan. 3, 1947, under the act of 1905; amended to application under act of 1946, Sept. 10, 1947, Serial No. 515,226. Published Feb. 22, 1949. Class 21.

510,492. CAKE MAKE-UP AND CREME-PAK FACE POWDER. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio.
Original filed Feb. 4, 1947, under the act of 1905; amended to application under act of 1946, Jan. 6, 1948, Serial No. 516,918. Published Mar. 1, 1949. Class 6.

510,493. FRESH VEGETABLES. RUSKIN VEGETABLE DISTRIBUTORS, Ruskin, Fla.
Original filed Feb. 8, 1947, under the act of 1905; amended to application under act of 1946, Nov. 17, 1947, Serial No. 517,200. Published Feb. 22, 1949. Class 46.

510,494. PORTABLE AND STATIONARY AIRCRAFT REFUELING SYSTEMS, ETC. THE WAYNE PUMP COMPANY, Fort Wayne, Ind.
Original filed Mar. 29, 1947, under the act of 1905; amended to application under act of 1946, Jan. 10, 1948, Serial No. 519,846. Published Feb. 22, 1949. Class 23.

510,495. FLOWER PLANTS. R. M. KELLOGG COMPANY, Three Rivers, Mich.
Original filed Apr. 7, 1947, under the act of 1905; amended to application under act of 1946, Feb. 19, 1948, Serial No. 520,281. Published Mar. 1, 1949. Class 1.

510,496. LAUNDRY MACHINERY AND EQUIPMENT—NAMELY, CLOTHES-SOAKING APPARATUS AND TANKS. DEVERS COMPANY, Racine, Wis.
Original filed Apr. 22, 1947, under the act of 1905; amended to application under act of 1946, Nov. 5, 1947, Serial No. 521,119. Published Mar. 1, 1949. Class 24.

510,497. ELECTRIC PHONOGRAPHS. SANDWICK-BOWEN CORPORATION, Bethesda, Md.
Original filed May 26, 1947, under the act of 1905; amended to application under act of 1946, Nov. 10, 1947, Serial No. 523,029. Published Mar. 1, 1949. Class 21.

510,498. COATED ABRASIVES. BEHR-MANNING CORPORATION, Troy, N. Y.
Original filed June 6, 1947, under the act of 1905; amended to application under act of 1946, July 17, 1947, Serial No. 523,643. Published Nov. 23, 1948. Class 4.

510,499. FIBER BOARD CARTONS. HUMMEL AND DOWNING COMPANY, Milwaukee, Wis.
Original filed June 6, 1947, under the act of 1905; amended to application under act of 1946, Aug. 15, 1947, Serial No. 523,872. Published Feb. 1, 1949. Class 2.

510,500. COAL. PEABODY COAL COMPANY, Chicago, Ill.
Original filed June 13, 1947, under the act of 1905; amended to application under act of 1946, Feb. 10, 1948, Serial No. 524,147. Published Mar. 1, 1949. Class 1.

510,501. POWER TRANSMISSION CHAINS AND PARTS THEREOF, INCLUDING BUT NOT LIMITED TO BICYCLE CHAINS, AND MOTORCYCLE CHAINS, ETC. DIAMOND CHAIN COMPANY, INC., Indianapolis, Ind.
Filed July 5, 1947, Serial No. 526,532. Published Feb. 22, 1949. Class 23.

510,502. COAL. PITTSBURGH CONSOLIDATION COAL COMPANY, Pittsburgh, Pa.
Filed July 5, 1947, Serial No. 526,576. Published Mar. 1, 1949. Class 1.

510,503. GAS ABSORBENTS, SPECIFICALLY, SODIUM-CALCIUM-HYDRATE. DEWEY AND ALMY CHEMICAL COMPANY, North Cambridge, Mass.
Filed July 5, 1947, Serial No. 526,701. Published Mar. 8, 1949. Class 9.

510,504. SAL SODA, WASHING SODA, MONOHYDRATED CARBONATE OF SODA, BAKING SODA, AND BICARBONATE OF SODA. CHURCH & DWIGHT CO., INC., New York, N. Y.
Filed July 5, 1947, Serial No. 526,778. Published Sept. 14, 1948. Class 6.

510,505. FLUSHING APPARATUS COMPOSED OF A PUMP, A FILTER, A HOSE, VALVES, AND A TANK CONTAINING A HEATING ELEMENT, FOR INTERNAL COMBUSTION ENGINES. STANDARD UTILITIES, INC., Pasadena, Calif.
Filed July 5, 1947, Serial No. 526,840. Published Feb. 22, 1949. Class 23.

510,506. PAPER BAGS. BEMIS BRO. BAG COMPANY, St. Louis, Mo.
Filed July 5, 1947, Serial No. 526,845. Published Feb. 22, 1949. Class 2.

510,507. BAGS AND SACKS MADE OF TEXTILE MATERIALS, PAPER, LAMINATED TEXTILE MATERIAL AND/OR PAPER AND MOISTURE RESISTANT MATERIAL. BEMIS BRO. BAG COMPANY, St. Louis, Mo.
Filed July 5, 1947, Serial No. 526,857. Published Feb. 22, 1949. Class 2.

510,508. FABRIC BAGS AND SACKS. BEMIS BRO. BAG COMPANY, St. Louis, Mo.
Filed July 5, 1947, Serial No. 526,860. Published Feb. 22, 1949. Class 2.

510,509. FABRIC AND PAPER BAGS AND SACKS FOR CONTAINING PULVERIZED OR GRANULAR MATERIAL AND THE LIKE. BEMIS BRO. BAG COMPANY, St. Louis, Mo.
Filed July 5, 1947, Serial No. 526,874. Published Feb. 22, 1949. Class 2.

510,510. OLEOMARGARINE. ARMOUR AND COMPANY, doing business as Friedman Manufacturing Company, Chicago, Ill.
Filed July 5, 1947, Serial No. 526,978. Published Mar. 1, 1949. Class 46.

510,511. FABRIC AND PAPER BAGS AND SACKS FOR CONTAINING PULVERIZED OR GRANULAR MATERIAL AND THE LIKE. BEMIS BRO. BAG COMPANY, St. Louis, Mo.
Filed July 5, 1947, Serial No. 526,889. Published Feb. 22, 1949. Class 2.

510,512. ACETAMIDE, ACETIC ANHYDRIDE, ACETONE, ACID ACETIC, ACID ARSENIC, ETC. MALLINCKRODT CHEMICAL WORKS, St. Louis, Mo.
Filed July 5, 1947, Serial No. 526,919. Published Mar. 1, 1949. Class 6.

510,513. CHLORINATED LIME. H. M. SINCLAIR, JR., trustee for the partnership, The Sinclair Manufacturing Company, Toledo, Ohio.
Filed July 5, 1947, Serial No. 527,004. Published Feb. 22, 1949. Class 6.

510,514. ELECTRIC-LIGHTING FIXTURES. THE EDWIN F. GUTH COMPANY, St. Louis, Mo.
Filed July 5, 1947, Serial No. 527,019. Published Feb. 22, 1949. Class 21.

510,515. ELECTRIC LIGHTING FIXTURES. THE EDWIN F. GUTH COMPANY, St. Louis, Mo.
Filed July 5, 1947, Serial No. 527,024. Published Feb. 22, 1949. Class 21.

510,516. FIXTURES FOR ELECTRIC LIGHTS. THE EDWIN F. GUTH COMPANY, St. Louis, Mo.
Filed July 5, 1947, Serial No. 527,098. Published Mar. 1, 1949. Class 21.

510,517. QUICK-RELEASE PORTABLE WIRE SLACK PULLERS FOR TENSIONING ELECTRIC WIRE AND CABLE, ETC. W. N. MATTHEWS CORPORATION, St. Louis, Mo.
Filed July 5, 1947, Serial No. 527,130. Published Jan. 18, 1949. Class 23.

510,518. FIXTURES FOR ELECTRIC LIGHTS. THE EDWIN F. GUTH COMPANY, St. Louis, Mo.
Filed July 5, 1947, Serial No. 527,161. Published Mar. 1, 1949. Class 21.

510,519. ELECTRICAL DOMESTIC AND COMMERCIAL SUCTION CLEANERS AND PARTS THEREFOR. THE HOOVER COMPANY, North Canton, Ohio.
Filed July 5, 1947, Serial No. 527,225. Published Mar. 1, 1949. Class 21.

510,520. WRITING INK. THE PARKER PEN COMPANY, Janesville, Wis.
Filed July 5, 1947, Serial No. 527,344. Published Feb. 22, 1949. Class 11.

510,521. LUBRICATING OILS AND GREASES. THE PURE OIL COMPANY, Chicago, Ill.
Filed July 5, 1947, Serial No. 527,353. Published Jan. 18, 1949. Class 15.

510,522. LUBRICATING OILS AND GREASES. JENKIN-GUERIN INC., St. Louis, Mo.
Filed July 5, 1947, Serial No. 527,420. Published Feb. 22, 1949. Class 15.

510,523. FLEXIBLE SHAFTS OF METAL FOR DRIVING ROTARY TOOLS, ETC. WYRENBEEK & STAFF, INC., Chicago, Ill.
Filed July 5, 1947, Serial No. 527,657. Published Feb. 22, 1949. Class 23.

510,524. SUDSING CLEANER, CLEANSER, AND DETERGENT. THE HEWITT SOAP COMPANY, INC., Dayton, Ohio.
Filed July 5, 1947, Serial No. 527,932. Published Feb. 15, 1949. Class 4.

510,525. AGRICULTURAL IMPLEMENTS—NAMELY, GRAIN DRILLS AND SEEDING MACHINES. MINNEAPOLIS-MOLINE POWER IMPLEMENT COMPANY, Minneapolis, Minn., now by merger Minneapolis-Moline Company, Hopkins, Minn., a corporation of Minnesota.
Filed July 11, 1947, Serial No. 528,359. Published Feb. 22, 1949. Class 23.

510,526. LUBRICATING OILS. QUAKER PETROLEUM COMPANY, also doing business as The Quaker Petroleum Co. Inc., Omaha, Nebr.
Filed July 12, 1947, Serial No. 528,509. Published Jan. 18, 1949. Class 15.

510,527. SELF-CONTAINED FIRE EXTINGUISHER VALVES, VALVE RESEATING TOOLS, RETHREADING DIES, SPECIAL REAMERS, REFACING TOOLS, VALVE WRENCHES, AND END WRENCHES. THE BARNIAN-BLESSING COMPANY, Chicago, Ill.
Filed July 16, 1947, Serial No. 528,686. Published Feb. 22, 1949. Class 23.

510,528. SEALING MACHINES FOR WRAPPED PACKAGES. QUIK-SEAL, INC., Kansas City, Mo.
Filed July 17, 1947, Serial No. 528,817. Published Feb. 22, 1949. Class 23.

510,529. FLUORESCENT LAMPS AND LIGHTING FIXTURES, USED FOR INDOOR ILLUMINATION. ELECTRO MANUFACTURING CORPORATION, Chicago, Ill.
Filed July 19, 1947, Serial No. 528,917. Published Mar. 1, 1949. Class 21.

510,530. VEGETABLE OILS FOR COOKING AND SALADS. VERONICA OLIVE OIL COMPANY, Oakland, Calif.
Filed July 21, 1947, Serial No. 529,115. Published Sept. 14, 1948. Class 46.

510,531. ROTARY PLOWS ADAPTED TO PERFORM PLOWING, DISKING, AND HARROWING OPERATIONS ON THE SOIL AND TO BE DRAWN THROUGH THE SOIL BY ADDITIONAL POWER MEANS AND PARTS OF SUCH PLOWS. CLIMAX INDUSTRIES, INC., Clinton, Iowa, assignor to Liberty Products Mfg. Co., Inc., Kansas City, Mo., a corporation of Missouri.
Filed July 25, 1947, Serial No. 529,436. Published Jan. 4, 1949. Class 23.

510,532. ELECTRIC LUMINAIRES AND ELECTRIC LIGHTING FIXTURES. THE F. W. WAKEFIELD BRASS COMPANY, Vermilion, Ohio.
Filed July 25, 1947, Serial No. 529,509. Published Mar. 1, 1949. Class 21.

510,533. MUSICAL, VARIOUS SOUND-EMITTING AND PERCUSSION INSTRUMENTS, ETC. C. G. CONN, LTD., Elkhart, Ind.
Filed July 18, 1947, Serial No. 529,528. Published Feb. 8, 1949. Class 35.

510,534. FILLING-LIQUIDS FOR LIQUID LEVEL GAUGE INSTRUMENTS. THE RELIANCE GAUGE COLUMN COMPANY, Cleveland, Ohio.
Filed July 26, 1947, Serial No. 529,697. Published Feb. 22, 1949. Class 6.

510,535. CONCRETE BURIAL VAULT HOIST APPARATUS. WILBERT W. HAASE, doing business as Winnebago Steel Products Company, Fond du Lac, Wis.
Filed July 31, 1947, Serial No. 530,066. Published Feb. 22, 1949. Class 23.

510,536. IMPREGNATING OR FILLING COMPOUNDS FOR PAPER OR VARNISHED CAMBRIC INSULATED ELECTRIC POWER CABLES, ETC. THE OKONITE-CALLENDER CABLE COMPANY, INCORPORATED, Paterson, N. J.
Filed July 31, 1947, Serial No. 530,116. Published Feb. 22, 1949. Class 21.

510,537. BUTTER AND EGGS. NATIONAL TEA CO., Chicago, Ill.
Filed Aug. 1, 1947, Serial No. 530,238. Published Mar. 1, 1949. Class 46.

510,538. IRONING TABLES, IRONING TABLE PAD AND COVER SETS, AND CLOTHES DRYING RACKS. THE J. R. CLARK COMPANY, Minneapolis and Spring Park, Minn.
Filed Aug. 4, 1947, Serial No. 530,374. Published Mar. 1, 1949. Class 24.

510,539. CONCRETE MIXING AND PAVING MACHINES. KOEHRING COMPANY, Milwaukee, Wis.
Filed Aug. 5, 1947, Serial No. 530,518. Published Feb. 22, 1949. Class 23.

510,540. SUDSING DETERGENT IN PASTE FORM. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio.
Filed Aug. 5, 1947, Serial No. 530,563. Published Feb. 22, 1949. Class 4.

510,541. PREPARED BABY FOOD, PRINCIPALLY CONSISTING OF STRAINED OATMEAL, AND OTHER CEREALS. THE QUAKER OATS COMPANY, Chicago, Ill.
Filed Aug. 6, 1947, Serial No. 530,681. Published Feb. 22, 1949. Class 46.

510,542. METAL VENTILATORS TO BE INSTALLED IN DOORS, WINDOWS, WALLS, TRANSOMS, ETC. ELLISON LOUVRE COMPANY, INC., Marietta, Ohio.
Filed Aug. 7, 1947, Serial No. 530,748. Published Feb. 8, 1949. Class 12.

510,543. ALUMINUM AND STEEL PREFABRICATED BUILDING STRUCTURES. COWIN & CO. INC., Minneapolis, Minn.
Filed Aug. 9, 1947, Serial No. 530,921. Published Feb. 15, 1949. Class 12.

510,544. CONSTRUCTION MACHINES—I. E., CONCRETE MIXERS, ETC. THE JAEGER MACHINE COMPANY, Columbus, Ohio.
Filed Aug. 9, 1947, Serial No. 530,937. Published Feb. 22, 1949. Class 23.

510,545. ELECTRICALLY POWERED DISH WASHING MACHINES, AND GLASS WASHING MACHINES, ETC. G. S. BLAKESLEE & CO., Chicago, Ill.
Filed Aug. 13, 1947, Serial No. 531,193. Published Feb. 22, 1949. Class 23.

510,548. SHREDDED COCONUT. FAR EASTERN MANUFACTURING CO., Long Island City, N. Y.
Filed Aug. 14, 1947, Serial No. 531,320. Published Feb. 22, 1949. Class 46.

510,547. CANNED VEGETABLES, CANNED BERRIES, AND JAMS MADE OF FRUITS. CLEMENT PAPPAS & CO., Cedarville, N. J.
Filed Aug. 14, 1947, Serial No. 531,358. Published JAN. 11, 1949. Class 46.

510,548. OFFICE COMPOSING MACHINES, AND REPAIR PARTS THEREFOR. RALPH C. COXHEAD CORPORATION, New York, N. Y.
Filed Aug. 18, 1947, Serial No. 531,653. Published Feb. 22, 1949. Class 23.

510,549. FRAMES FOR CARRYING PRINTING PLATES, AND INDEX TABS. ADDRESSOGRAPH-MULTIGRAPH CORPORATION, Cleveland, Ohio.
Filed Aug. 20, 1947, Serial No. 531,874. Published Feb. 22, 1949. Class 23.

510,550. BOTTLE CRUSHERS FOR BREAKING INTO FRAGMENTS BEVERAGE BOTTLES AND THE LIKE. WILLIAM CARMEL, Chicago, Ill.
Filed Aug. 20, 1947, Serial No. 531,888. Published Feb. 15, 1949. Class 33.

510,551. CANNED FRUITS, VEGETABLES, APPLESAUCE, FRUIT COCKTAIL, SALMON, TUNA FISH, PORK AND BEANS, CATSUP, VINEGAR, COFFEE, SANDWICH SPREAD, PREPARED MUSTARD, MAYONNAISE, AND SPICES. H. P. LAU CO., Lincoln, Nebr.
Filed Aug. 22, 1947, Serial No. 532,139. Published Mar. 1, 1949. Class 46.

510,552. MACHINES FOR PREPARING, TILLING, AND CULTIVATING SOIL. ARIENS COMPANY, Brillion, Wis.
Filed Aug. 23, 1947, Serial No. 532,190. Published Feb. 22, 1949. Class 23.

510,553. PETROLEUM WAXES. THE ATLANTIC REFINING COMPANY, Philadelphia, Pa.
Filed Aug. 25, 1947, Serial No. 532,265. Published Feb. 8, 1949. Class 15.

510,554. ROTATABLE SPATULA. PAUL GRANCELL, doing business as Paul Grancell Co., Los Angeles, Calif.
Filed Aug. 25, 1947, Serial No. 532,288. Published Feb. 22, 1949. Class 23.

510,555. WATER HEATERS USING GAS AS A FUEL. SOUTHERN HEATER CORPORATION, Compton, Calif.
Filed Aug. 25, 1947, Serial No. 532,355. Published Jan. 18, 1949. Class 34.

510,556. SUNTAN OIL. VERNON AND VERMONT PHARMACY, doing business as Betan Company, Los Angeles, Calif.
Filed Aug. 26, 1947, Serial No. 532,529. Published Feb. 22, 1949. Class 6.

510,557. PORTABLE CONTROL MECHANISM FOR RADIO-RECEIVING SETS DESIGNED FOR TURNING ON OR OFF COMMERCIAL PROGRAMS AT THE WILL OF THE OPERATOR. BOSTON IMPLEMENT CO., Boston, Mass.
Filed Aug. 27, 1947, Serial No. 532,551. Published Mar. 1, 1949. Class 21.

510,558. CARPET WOOLS. LAHUSEN & CIA. LTDA., Buenos Aires, Argentina.
Filed July 5, 1947, Serial No. 532,664. Published Mar. 1, 1949. Class 1.

510,559. BABY CHICKS. IOWA MASTER BREEDERS, INCORPORATED, Onawa and Sioux City, Iowa.
Filed Sept. 2, 1947, Serial No. 533,026. Published Mar. 1, 1949. Class 1.

510,560. DETERGENT COMPOUND FOR USE IN INDUSTRIAL AND DOMESTIC CLEANING. WYANDOTTE CHEMICALS CORPORATION, Wyandotte, Mich.
Filed Sept. 2, 1947, Serial No. 533,097. Published Feb. 22, 1949. Class 4.

510,561. ALKALINE DETERGENT COMPOUND FOR INDUSTRIAL CLEANING AND WASHING PURPOSES, ESPECIALLY FOR BOTTLE WASHING IN THE FOOD AND BEVERAGE INDUSTRIES. WYANDOTTE CHEMICALS CORPORATION, Wyandotte, Mich.
Filed Sept. 2, 1947, Serial No. 533,098. Published Feb. 22, 1949. Class 4.

510,562. ALKALINE DETERGENT COMPOUND FOR INDUSTRIAL LAUNDERING. WYANDOTTE CHEMICALS CORPORATION, Wyandotte, Mich.
Filed Sept. 2, 1947, Serial No. 533,099. Published Feb. 22, 1949. Class 4.

510,563. CLEANING COMPOUND ESPECIALLY ADAPTED FOR METAL CLEANING. WYANDOTTE CHEMICALS CORPORATION, Wyandotte, Mich.
Filed Sept. 2, 1947, Serial No. 533,102. Published Feb. 22, 1949. Class 4.

510,564. BARRELS AND DRUMS OF STEEL AND FIBER OR BOTH. THE GRAY BROS. COOPERAGE CORPORATION, Cleveland, Ohio.
Filed Sept. 5, 1947, Serial No. 533,561. Published Feb. 22, 1949. Class 2.

Filed Dec. 11, 1947, Serial No. 544,063. Published Feb. 22, 1949. Class 46.

510,651. HORMONE CONTAINING LIQUID FOR PARENTERAL USE. WILLIAM R. WARNER & CO., INC., New York, N. Y.
Filed Dec. 12, 1947, Serial No. 544,232. Published Feb. 22, 1949. Class 6.

510,652. HORMONE CONTAINING LIQUID FOR PARENTERAL USE. WILLIAM R. WARNER & CO., INC., New York, N. Y.
Filed Dec. 12, 1947, Serial No. 544,233. Published Mar. 1, 1949. Class 6.

510,653. CANNED DOG FOOD. DOYLE PACKING COMPANY, Los Angeles, Calif.
Filed Dec. 16, 1947, Serial No. 544,426. Published Feb. 22, 1949. Class 46.

510,654. CIGARS. WOLF BROS. & Co., Red Lion, Pa.
Filed Dec. 16, 1947, Serial No. 544,491. Published Mar. 1, 1949. Class 17.

510,655. ODOR MASK FOR USE IN ALL MANNER OF MANUFACTURING PROCESSES AND PRODUCTS, PARTICULARLY THOSE INVOLVING ELEVATED TEMPERATURES, FOR EXAMPLE, PLASTICS, LEATHER, RUBBER, ETC. FRITZSCHE BROTHERS, INC., New York, N. Y.
Filed Dec. 17, 1947, Serial No. 544,563. Published Mar. 1, 1949. Class 6.

510,656. MECHANICALLY GROOVED PHONOGRAPH RECORDS AND PHONOGRAPH RECORD ALBUMS SOLD EMPTY IN THE TRADE. RAZOR CORPORATION, New York, N. Y.
Filed Dec. 18, 1947, Serial No. 544,765. Published Feb. 22, 1949. Class 36.

510,657. HYDROGENATED WHOLE COCOANUT OIL, FOR USE IN THE MANUFACTURE OF CANDY. THE CAPITAL CITY PRODUCTS COMPANY, Columbus, Ohio.
Filed Dec. 19, 1947, Serial No. 544,846. Published Feb. 22, 1949. Class 46.

510,658. CHEMICALS—NAMELY, CALCIUM CHLORIDE, SODIUM HYDROXIDE AND POTASSIUM FERROCYANIDE; MEDICINES—NAMELY, LIVER EXTRACT; AND PHARMACEUTICAL PREPARATIONS—NAMELY, CALCIUM LACTATE, SODIUM BROMIDE AND POTASSIUM PHOSPHATE. MAXIM CHEMICAL COMPANY, INC., New York, N. Y.
Filed Dec. 19, 1947, Serial No. 544,890. Published Mar. 1, 1949. Class 6.

510,659. FLEXIBLE HOSE (METALLIC), FLEXIBLE HOSE (PARTLY METALLIC), FLEXIBLE HOSE (NON-METALLIC), FLEXIBLE HOSE (PARTLY NON-METALLIC). TECALEMIT LIMITED, Middlesex, England.
Filed Dec. 19, 1947, Serial No. 544,931. Published Mar. 1, 1949. Class 35.

510,660. CANNED VEGETABLES AND CANNED TOMATO JUICE. THE WINDER CANNING COMPANY, Circleville, Ohio.
Filed Dec. 19, 1947, Serial No. 544,953. Published Feb. 22, 1949. Class 46.

510,661. WHITE SHOE CLEANER AND SHOE CREAM. BELL CHEMICAL CO., Chicago, Ill.
Filed Dec. 24, 1947, Serial No. 545,334. Published Mar. 1, 1949. Class 4.

510,662. ELECTRONICALLY TIMED TELEGRAPH KEY WITH AUTOMATIC KEYING RELAY AND MONITOR. ELECTRIC EYE EQUIPMENT CORPORATION, Danville, Ill.
Filed Dec. 24, 1947, Serial No. 545,359. Published Feb. 8, 1949. Class 21.

510,663. STOGIES. AUGUSTUS POLLACK, INCORPORATED, Wheeling, W. Va.
Filed Dec. 24, 1947, Serial No. 545,391. Published Mar. 1, 1949. Class 17.

510,664. HYDROCARBON SOLVENT FOR HYDROCARBON-SOLUBLE INSECTICIDES, WHICH SOLVENT ITSELF HAS INSECTICIDAL PROPERTIES. SOCONY-VACUUM OIL COMPANY, INCORPORATED, New York, N. Y.
Filed Dec. 24, 1947, Serial No. 545,403. Published Mar. 1, 1949. Class 6.

510,665. GARAGE DOORS. CARR, ADAMS & COLLIER COMPANY, Dubuque, Iowa.
Filed Dec. 27, 1947, Serial No. 545,580. Published Feb. 8, 1949. Class 12.

510,666. SALT TOOTH POWDER. SELTO (EASTBOURNE) LIMITED, Eastbourne, England.
Filed Dec. 30, 1947, Serial No. 545,779. Published Mar. 1, 1949. Class 6.

510,667. WASHBOARDS. VICTORY ENGINEERING & MACHINE WORKS, INC., J. Marvin Krause, trustee of Victory Engineering & Machine Works, Inc., Bankrupt, St. Louis, Mo., assignor to B. J. Menkhaus, House Springs, Mo.
Filed Dec. 31, 1947, Serial No. 545,918. Published Mar. 1, 1949. Class 24.

510,668. SOAP. JOHN WANAMAKER NEW YORK, New York, N. Y.
Filed Dec. 31, 1947, Serial No. 545,919. Published Feb. 15, 1949. Class 4.

510,669. DRY CLEANING PREPARATION FOR CLEANING FABRICS AND PAINTED AND VARNISHED SURFACES, GLASS, BATHTUBS, AND THE LIKE. THE PERFEX CO., Shenandoah, Iowa.
Filed Jan. 2, 1948, Serial No. 546,025. Published Mar. 1, 1949. Class 4.

510,670. COMPRESSED GASES—NAMELY, OXYGEN, NITROGEN, HYDROGEN, HELIUM, AIR, CARBON DIOXIDE, NITROUS OXIDE, HYDROCARBONS, VARIOUS MIXTURES OF THE FOREGOING GASES, AND CHEMICAL FLUXES. NATIONAL CYLINDER GAS COMPANY, Chicago, Ill.
Filed Jan. 3, 1948, Serial No. 546,122. Published Mar. 1, 1949. Class 6.

510,671. STORAGE BATTERIES. HESTER BATTERY MANUFACTURING COMPANY, INC., Nashville, Tenn.
Filed Jan. 5, 1948, Serial No. 546,222. Published Mar. 1, 1949. Class 21.

510,672. SHEETS, PILLOWCASES, AND BLANKETS. PEPPERELL MANUFACTURING COMPANY, Boston, Mass.
Filed Jan. 5, 1948, Serial No. 546,237. Published Mar. 1, 1949. Class 42.

510,673. MACHETES. O. B. HIRSCH & Co. INC., New York, N. Y.
Filed Mar. 31, 1948, Serial No. 546,448. Published Feb. 8, 1949. Class 23.

510,674. SODIUM HYPOCHLORITE SOLUTION FOR BLEACHING, DISINFECTING, AND DEODORANT PURPOSES. KENNETH L. MUELLER, doing business as Mueller Chemical Works, Kasota, Minn.
Filed Jan. 8, 1948, Serial No. 546,508. Published Mar. 1, 1949. Class 6.

510,675. CALKING AND GLAZING COMPOUND. DETROIT GRAPHITE COMPANY, Detroit, Mich.
Filed Jan. 10, 1948, Serial No. 546,680. Published Feb. 15, 1949. Class 12.

510,676. PIANOS. KOHLER & CAMPBELL, INC., New York, N. Y.
Filed Jan. 10, 1948, Serial No. 546,709. Published Mar. 8, 1949. Class 36.

510,677. BULLETIN COLOR PAINTS AND EXTERIOR HOUSE PAINTS. R. N. NASON & Co., San Francisco, Calif.
Filed Jan. 13, 1948, Serial No. 546,861. Published Jan. 11, 1949. Class 16.

510,678. SMOKING TOBACCO. SUTLIFF TOBACCO COMPANY, San Francisco, Calif.
Filed Jan. 13, 1948, Serial No. 546,884. Published Mar. 1, 1949. Class 17.

510,679. SUPER-QUICK DRYING WAVESET, NAIL POLISH, NAIL POLISH REMOVER, ETC. THE F. E. I. CORPORATION, Pittsburgh, Pa., and Dover, Del.
Filed Jan. 14, 1948, Serial No. 546,988. Published Mar. 1, 1949. Class 6.

510,680. TELEVISION RECEIVERS. INDUSTRIAL TELEVISION, INC., Clifton, N. J.
Filed Jan. 15, 1948, Serial No. 547,126. Published Feb. 22, 1949. Class 21.

510,681. TRADE CATALOG PUBLISHED FROM TIME TO TIME. S-M-S CORPORATION, Detroit, Mich.
Filed Jan. 15, 1948, Serial No. 547,153. Published Feb. 15, 1949. Class 38.

510,682. PAINT CLEANER. JOHN T. BARTLEY & Co., Beaver Falls, Pa.
Filed Jan. 19, 1948, Serial No. 547,420. Published Mar. 8, 1949. Class 4.

510,683. PREFABRICATED, WOOD, FRAME, BUILDINGS—NAMELY, LOG CABINS, MILK HOUSES, AND BUNGALOWS. TIMMERMAN LUMBER & MFG. Co., Hibbing, Minn.
Filed Jan. 19, 1948, Serial No. 547,496. Published Feb. 15, 1949. Class 12.

510,684. CLEANING COMPOUND IN POWDERED FORM HAVING INCIDENTAL WATER SOFTENING PROPERTIES. THE DIVERSEY CORPORATION, Chicago, Ill.
Filed Jan. 20, 1948, Serial No. 547,520. Published Feb. 15, 1949. Class 4.

510,685. NERVE PREPARATION. HENRY LABORATORIES, INC., Nashville, Tenn.
Filed Jan. 20, 1948, Serial No. 547,543. Published Mar. 1, 1949. Class 6.

510,686. ELECTRIC MOTORS. URBANA MANUFACTURING COMPANY, Urbana, Ohio.
Filed Jan. 20, 1948, Serial No. 547,594. Published Feb. 22, 1949. Class 21.

510,687. ASPHALT COMPOSITION ROOFING SHINGLES. THE RUBBEROID Co., New York, N. Y., and Bound Brook, N. J.
Filed Jan. 22, 1948, Serial No. 547,776. Published Feb. 8, 1949. Class 12.

510,688. MONOHYDRIC ALCOHOL, POLYHYDRIC ALCOHOL, AND GLYCOL ESTERS. KESSLER CHEMICAL Co., INC., Philadelphia, Pa.
Filed Jan. 26, 1948, Serial No. 548,000. Published Mar. 1, 1949. Class 6.

510,689. PECTORALS AND THROAT TABLETS. AKTIESELSKABET LAGERMAN JUNR., Glostrup, Denmark.
Filed Jan. 29, 1948, Serial No. 548,224. Published Feb. 22, 1949. Class 6.

510,690. PERFUME, TOILET WATER, COLOGNE, FACE POWDER, LIPSTICK, ROUGE, MASCARA, EYE SHADOW, FACE AND SKIN CREAMS, AND TALCUM POWDER. BENARD & HONNORAT, doing business as Molinard, Grasse (Alpes Maritimes), France.
Filed Jan. 30, 1948, Serial No. 548,320. Published Mar. 1, 1949. Class 6.

510,691. BELT DRESSINGS. THE BLACK DIAMOND PAINT & VARNISH WORKS, INC., Cincinnati, Ohio.
Filed Jan. 30, 1948, Serial No. 548,322. Published Feb. 15, 1949. Class 4.

510,692. LIQUID USED IN X-RAY AND ROENTGEN RAY PHOTOGRAPHY FOR DIAGNOSTIC PURPOSES. E. FOUGERA & COMPANY, INC., New York, N. Y.
Filed Jan. 30, 1948, Serial No. 548,357. Published Jan. 22, 1949. Class 6.

510,693. SKIN AND FACE OINTMENTS, LOTIONS, FACIAL CREAMS, AND TABLETS FOR HYPERACIDITY. CANAMIN CORPORATION, New York, N. Y.
Filed Feb. 3, 1948, Serial No. 548,636. Published Mar. 1, 1949. Class 6.

510,694. ESTER OF TALL OIL. NATIONAL SOUTHERN PRODUCTS CORPORATION, New York, N. Y.
Filed Feb. 3, 1948, Serial No. 548,665. Published Mar. 1, 1949. Class 6.

510,695. PREPARATION CONTAINING MANGANESE SALICYLATE, ASPIRIN, CAFFEINE, AND THIAMIN CHLORIDE, FOR USE IN THE TEMPORARY RELIEF OF MUSCULAR ACHES AND PAINS. RHODES PHARMACAL CO., INC., Cleveland, Ohio.
Filed Feb. 5, 1948, Serial No. 548,846. Published Mar. 8, 1949. Class 6.

510,696. COMPOSITION OF MATTER INCLUDING AN INGREDIENT WHICH CHANGES COLOR UPON CONTACT WITH WATER, AND WHICH IS USEFUL TO DETERMINE THE PRESENCE OF WATER COLLECTING IN A TANK OR OTHER CONTAINER FOR GASOLINE AND OTHER MINERAL OIL PRODUCTS. RUDOLPH L. SCHWARTZ, doing business as Watertecter Company, Buffalo, N. Y.
Filed Feb. 6, 1948, Serial No. 549,008. Published Feb. 22, 1949. Class 6.

510,697. TOILET SOAP. THE ANDREW JERGENS COMPANY, Cincinnati, Ohio.
Filed Feb. 9, 1948, Serial No. 549,154. Published Feb. 15, 1949. Class 4.

510,698. POLISHING WHEELS OF CORK, CORK COMPOSITION, AND CORK AND SYNTHETIC RUBBER COMPOSITION. ARMSTRONG CORK COMPANY, Lancaster, Pa.
Filed Feb. 10, 1948, Serial No. 549,221. Published Mar. 1, 1949. Class 4.

510,699. LIQUID AIR PURIFIER AND CLEANSER OF A CHEMICAL NATURE SUITABLE FOR RESIDENTIAL OR OFFICE USE. GIFT OF THE MONTH, INC., New York, N. Y.
Filed Feb. 13, 1948, Serial No. 549,630. Published Mar. 1, 1949. Class 6.

510,700. HAND DEODORANT CREAM. BLOCK DRUG COMPANY, INC., Jersey City, N. J.
Filed Feb. 14, 1948, Serial No. 549,695. Published Mar. 8, 1949. Class 6.

510,701. DISINFECTANT. MURPHY LABORATORIES, INC., Clifton Heights, Pa.
Filed Feb. 16, 1948, Serial No. 549,828. Published Mar. 1, 1949. Class 6.

510,702. PERFUMES, TOILET WATERS, COLOGNES, LIPSTICKS, FACE POWDER, ROUGE, EYE SHADOW, MASCARA, BRILLIANTINE, AND TALCUM POWDER. SOCIETE ANONYME SOCIETE TECHNIQUE DE PARFUMERIE F. MILLOT, Paris, France.
Filed Feb. 25, 1948, Serial No. 550,563. Published Feb. 22, 1949. Class 6.

510,703. SOAPS. D'ORSAY PERFUMERIES CORPORATION, New York, N. Y.
Filed Feb. 26, 1948, Serial No. 550,586. Published Mar. 8, 1949. Class 4.

510,704. LIQUID PREPARATION FOR REMOVING SPOTS FROM FABRICS, CLOTHING, CARPETS, AND UPHOLSTERY AND A CLEANING PREPARATION IN POWDER FORM FOR GENERAL HOUSEHOLD AND LAUNDRY USE. THE GREAT AMERICAN TEA COMPANY, New York, N. Y.
Filed Feb. 27, 1948, Serial No. 550,687. Published Feb. 15, 1949. Class 4.

510,705. LAUNDRY WASHING POWDER HAVING INCIDENTAL BLUING PROPERTIES. THE GREAT AMERICAN TEA COMPANY, New York, N. Y.
Filed Feb. 27, 1948, Serial No. 550,688. Published Mar. 1, 1949. Class 4.

510,706. SOAP POWDER COMBINED WITH MINERAL INGREDIENTS. THE CUDAHY PACKING COMPANY, Chicago, Ill.
Filed Feb. 28, 1948, Serial No. 550,791. Published Feb. 15, 1949. Class 4.

510,707. MEDICINAL PREPARATION HAVING THERAPEUTIC ACTION FOR USE IN THE TREATMENT OF PARKINSON'S DISEASE. SOCIETE DES USINES CHIMIQUES RHONE-POULENC, Paris, France.
Filed Feb. 28, 1948, Serial No. 550,836. Published Mar. 1, 1949. Class 6.

510,708. RUBBER FABRIC OR METAL REINFORCED OR JACKETED HOSE (KNOWN IN THE TRADE BY THE FOLLOWING ACCEPTED TERMS: FIRE, GARDEN, OIL SUCTION AND DISCHARGE, PAPER MILL, AND VACUUM). CONTINENTAL RUBBER WORKS, Erie, Pa.
Filed Mar. 1, 1948, Serial No. 550,897. Published Mar. 1, 1949. Class 35.

510,709. WALLBOARD. SMITH & KANSLER COMPANY, Linden, N. J.
Filed Mar. 8, 1948, Serial No. 551,487. Published Feb. 22, 1949. Class 12.

510,710. INJECTABLE MEDICINAL SOLUTION INDICATED AS A TONIC IN DEBILITATED CONDITIONS. BUFFINGTON'S, INCORPORATED, Worcester, Mass.
Filed Mar. 9, 1948, Serial No. 551,514. Published Feb. 22, 1949. Class 6.

510,711. MEDICINAL PREPARATION FOR RELIEF OF GASTROINTESTINAL DISORDERS—NAMELY, DIARRHEA, INTESTINAL FERMENTATION, EXCESSIVE ACIDITY, AND FLATULENCE. BUFFINGTON'S, INCORPORATED, Worcester, Mass.
Filed Mar. 9, 1948, Serial No. 551,515. Published Feb. 22, 1949. Class 6.

510,712. MEDICINAL TABLET FOR THE TREATMENT OF HIGH BLOOD PRESSURE. BUFFINGTON'S, INCORPORATED, Worcester, Mass.
Filed Mar. 9, 1948, Serial No. 551,516. Published Feb. 22, 1949. Class 6.

510,713. MEDICINAL OINTMENT FOR RELIEF OF HEMORRHOIDS. BUFFINGTON'S, INCORPORATED, Worcester, Mass.
Filed Mar. 9, 1948, Serial No. 551,517. Published Feb. 22, 1949. Class 6.

510,714. MEDICINAL TABLET CONTAINING AN IRON SALT AND VITAMIN B-COMPLEX INDICATED IN THE TREATMENT OF SECONDARY ANEMIA. BUFFINGTON'S, INCORPORATED, Worcester, Mass.
Filed Mar. 9, 1948, Serial No. 551,518. Published Feb. 22, 1949. Class 6.

510,715. INHALANT PREPARATION FOR USE IN THE TREATMENT OF COUGHS, COLDS, AND BRONCHITIS IN POULTRY. IOWA MASTER BREEDERS, INCORPORATED, Onawa and Sioux City, Iowa.
Filed Mar. 9, 1948, Serial No. 551,562. Published Mar. 1, 1949. Class 6.

510,716. VITAMIN CAPSULES, FERROUS SULFATE TABLETS, ETC. BOYLE AND COMPANY, Los Angeles, Calif.
Filed Mar. 11, 1948, Serial No. 551,686. Published Mar. 1, 1949. Class 6.

510,717. STROPPER OUTFITS, EACH OUTFIT COMPRISING A RAZOR-BLADE STROPPER AND A BLADE HOLDER SOLD AS A UNIT. DURHAM-ENDERS RAZOR CORPORATION, Mystic, Conn.
Filed Mar. 15, 1948, Serial No. 551,956. Published Mar. 1, 1949. Class 4.

510,718. TOILET SOAP. COLGATE-PALMOLIVE-PEET COMPANY, Jersey City, N. J.
Filed Mar. 17, 1948, Serial No. 552,122. Published Mar. 8, 1949. Class 4.

510,719. SOAP, SOAP POWDER, WASHING POWDER, LIQUID DETERGENTS FOR THE REMOVAL OF OIL, GREASE, TAR, MILDEW, AND DIRT STAINS FROM FABRICS AND ARTICLES OF WEARING APPAREL, LIQUID CLEANING AND SPOTTING AGENTS. CARMAN & CO., INC., New York, N. Y.
Filed Mar. 18, 1948, Serial No. 552,221. Published Mar. 8, 1949. Class 4.

510,720. SOAP, SOAP POWDER, WASHING POWDER, POWDERED DETERGENTS FOR THE REMOVAL OF OIL, GREASE, TAR, MILDEW, AND DIRT STAINS FROM FABRICS AND ARTICLES OF APPAREL, AND LIQUID CLEANING AND SPOTTING AGENTS. CARMAN & CO., INC., New York, N. Y.
Filed Mar. 18, 1948, Serial No. 552,222. Published Mar. 8, 1949. Class 4.

510,721. CHEMICAL FLUXES AND COMPRESSED GASES—NAMELY, OXYGEN, NITROGEN, HYDROGEN, ETC. NATIONAL CYLINDER GAS COMPANY, Chicago, Ill.
Filed Mar. 19, 1948, Serial No. 552,477. Published Mar. 1, 1949. Class 6.

510,722. CHEMICAL FLUXES AND COMPRESSED GASES—NAMELY, OXYGEN, NITROGEN, HYDROGEN, ETC. NATIONAL CYLINDER GAS COMPANY, Chicago, Ill.
Filed Mar. 19, 1948, Serial No. 552,485. Published Mar. 1, 1949. Class 6.

510,723. RESIN SUSPENSIONS OR DISPERSIONS SUITABLE FOR USE IN WAX FORMULATIONS, POLISHES, AND THE LIKE, AND ALSO FOR USE AS STARCH SUBSTITUTES IN LAUNDERING OPERATIONS. ROHM & HAAS COMPANY, Philadelphia, Pa.
Filed Mar. 23, 1948, Serial No. 552,803. Published Feb. 22, 1949. Class 6.

510,724. HOUSE ORGAN PUBLISHED BI-MONTHLY. MCGRAW-HILL PUBLISHING COMPANY, INC., New York, N. Y.
Filed Mar. 25, 1948, Serial No. 552,997. Published Feb. 8, 1949. Class 38.

510,725. TRANSMISSION BELTING. BERNARD L. JERRY, doing business as Richmond Belting Company, Richmond, Va.
Filed Mar. 29, 1948, Serial No. 553,284. Published Mar. 1, 1949. Class 35.

510,726. CLOTH BUFFING WHEELS. J. C. MILLER COMPANY, Grand Rapids, Mich.
Filed Mar. 29, 1948, Serial No. 553,302. Published Mar. 1, 1949. Class 4.

510,727. STRIPPER PREPARATION, CONTAINING TITANIUM TRICHLORIDE, ETC. STAUFFER CHEMICAL COMPANY, San Francisco, Calif.
Filed Mar. 30, 1948, Serial No. 553,417. Published Mar. 1, 1949. Class 6.

510,728. BATH SALTS, COLOGNE, CAKE MAKE-UP, DUSTING POWDER, DEPILATORIES, EYE MASCARA, EYE WASH, EYEBROW PENCIL, FACE CREAM, FACE POWDER, ETC. UNIVERSAL LABORATORIES, INC., East Orange, N. J.
Filed Apr. 3, 1948, Serial No. 553,791. Published Mar. 8, 1949. Class 6.

510,729. SKIN LOTION. HALL & RUCKEL, INC., New York, N. Y.
Filed Apr. 6, 1948, Serial No. 553,853. Published Feb. 22, 1949. Class 6.

510,730. WOOLEN PIECE GOODS. WAWAK COMPANY, INC., Chicago, Ill.
Filed Apr. 7, 1948, Serial No. 554,055. Published Mar. 1, 1949. Class 42.

510,731. MEDICINAL BITTERS HAVING A LAXATIVE PREPARATION. PASTENE & CO., INC., New York, N. Y.
Filed Apr. 12, 1948, Serial No. 554,405. Published Mar. 1, 1949. Class 6.

510,732. HOSE AND FLANGE AND JOINT SHEET PACKING MADE OF SYNTHETIC RUBBER COMPOUND. QUAKER RUBBER CORPORATION, Philadelphia, Pa.
Filed Apr. 14, 1948, Serial No. 554,604. Published Feb. 22, 1949. Class 35.

510,733. FATTY ACIDS. GENERAL MILLS, INC., Wilmington, Del., and Minneapolis, Minn.
Filed Apr. 15, 1948, Serial No. 554,660. Published Mar. 8, 1949. Class 6.

510,734. IMMUNOGENIC PREPARATIONS FOR HUMAN USE IN THE TREATMENT AND PREVENTION OF DISEASES OF BACTERIAL ORIGIN INCLUDING DIPHTHERIA, TETANUS, PERTUSSIS, AND STAPHYLOCOCCAL AND STREPTOCOCCAL INFECTIONS. SHARP & DOHME, INCORPORATED, Philadelphia, Pa.
Filed Apr. 15, 1948, Serial No. 554,819. Published Feb. 22, 1949. Class 6.

510,735. MATERIALS FOR THE MANUFACTURING OF GASKETING, CONSISTING OF A FELT SHEETING IMPREGNATED WITH A WATERPROOFING AND FLAME-PROOFING COMPOSITION. PRODUCTS RESEARCH CO., Los Angeles, Calif.
Filed Apr. 19, 1948, Serial No. 555,014. Published Mar. 1, 1949. Class 35.

510,736. CANNED FRUITS, CANNED VEGETABLES, CANNED FISH, ETC. TWIN CITY WHOLESALE GROCER CO., St. Paul, Minn.
Filed Oct. 2, 1947, Serial No. 555,903. Published Feb. 1, 1949. Class 46.

510,737. CHEMICALS FOR TREATING AND PRESERVING FLOWERS AND FOLIAGE. JOFLEUR, INC., Paterson, N. J.
Filed Apr. 30, 1948, Serial No. 555,944. Published Mar. 1, 1949. Class 6.

510,738. FABRICS OF NYLON SOLD BY THE SQUARE YARD. BLUE RIDGE TEXTILE CO., INC., Bangor, Pa.
Filed May 5, 1948, Serial No. 556,243. Published Mar. 1, 1949. Class 42.

510,739. OINTMENT MEDICINAL PREPARATION USED FOR ATHLETE'S FOOT AND FUNGUS INFECTION OF THE SKIN. WESTERFIELD PHARMACAL CO. INC., Dayton, Ohio.
Filed May 11, 1948, Serial No. 556,858. Published Mar. 1, 1949. Class 6.

510,740. COSMETIC ITEMS—NAMELY, FINGERNAIL POLISH, FINGERNAIL ENAMEL, LIP ROUGE, AND PREPARATION FOR REMOVING THE CUTICLE. SCHNEPEL BROS. CORPORATION, Newark, N. J.
Filed May 13, 1948, Serial No. 556,990. Published Feb. 22, 1949. Class 6.

510,741. SEDATIVE COUGH PREPARATION. G. D. SEARLE & CO., Chicago, Ill.
Filed May 15, 1948, Serial No. 557,159. Published Mar. 1, 1949. Class 6.

510,742. LIQUID INJECTION FOR TREATMENT OF STRAINS AND SPRAINS TO MUSCLES, ETC. MCKAY MAXLIN COMPANY, West Allis, Wis.
Filed May 18, 1948, Serial No. 557,295. Published Mar. 8, 1949. Class 6.

510,743. HYDROABIETYL ALCOHOL FOR USE IN RESINS AS A PLASTICIZER FOR SYNTHETIC RESINS, AND FOR THE MANUFACTURE OF DETERGENTS. HERCULES POWDER COMPANY, Wilmington, Del.
Filed May 19, 1948, Serial No. 557,356. Published Feb. 22, 1949. Class 6.

510,744. CHEMICAL COMPOUND USEFUL AS AN EMULSIFYING AND DISPERSING AGENT FOR INSECTICIDES, ROAD OILS, AND OTHER USES. ROBERSON PROCESS COMPANY, New York, N. Y.
Filed May 19, 1948, Serial No. 557,389. Published Mar. 1, 1949. Class 6.

510,745. TOILET CREAM (NOT MEDICATED). SCIENTIFIC PHARMACALS LIMITED, London N. 1, England.
Filed May 20, 1948, Serial No. 557,470. Published Mar. 1, 1949. Class 6.

510,746. CLEANING COMPOUND IN POWDERED FORM FOR CLEANING ALUMINUM SURFACES AND HAVING INCIDENTAL WATER SOFTENING PROPERTIES. THE DIVERSEY CORPORATION, Chicago, Ill.
Filed May 25, 1948, Serial No. 557,734. Published Feb. 22, 1949. Class 4.

510,747. PREPARATION FOR HOME TREATMENT AND RELIEF OF DRUNKENNESS. MILTON HACKER, doing business as Health-Aids Research, Chicago, Ill.
Filed May 27, 1948, Serial No. 557,923. Published Mar. 1, 1949. Class 6.

510,748. GENERAL CLEANSER IN POWDER FORM. VIRGINIA-CAROLINA CHEMICAL CORPORATION, Richmond, Va.
Filed June 3, 1948, Serial No. 558,425. Published Feb. 22, 1949. Class 4.

510,749. DETERGENT FOR GENERAL HOUSEHOLD USE. HANS JACOB HECKMANN, doing business as Hans J. Heckmann Company, Towson, Md.
Filed June 9, 1948, Serial No. 558,786. Published Mar. 1, 1949. Class 4.

510,750. PREPARATIONS CONTAINING VITAMIN, MINERAL, AND/OR DESICCATED GLANDULAR PRODUCTS, USEFUL AS A DIETARY SUPPLEMENT. ANABOLIC FOOD PRODUCTS, INC., Glendale, Calif.
Filed June 10, 1948, Serial No. 558,845. Published Mar. 1, 1949. Class 6.

510,751. TOILET SOAPS. LES PARFUMS DE DANA, INC., New York, N. Y.
Filed June 10, 1948, Serial No. 558,899. Published Mar. 1, 1949. Class 4.

510,752. TOILET SOAPS. LES PARFUMS DE DANA, INC., New York, N. Y.
Filed June 10, 1948, Serial No. 558,902. Published Mar. 1, 1949. Class 4.

510,753. BLEACH HAVING INCIDENTAL CLEANSING, DEODORIZING, AND DISINFECTING PROPERTIES. WAPLES-PLATTER & COMPANY, Fort Worth, Tex.
Filed June 10, 1948, Serial No. 558,974. Published Mar. 1, 1949. Class 6.

510,754. LIQUID SOAP. THE LINCOLN INDUSTRIAL CHEMICAL CO. INC., Lincoln Park, Pa.
Filed June 15, 1948, Serial No. 559,284. Published Feb. 15, 1949. Class 4.

510,755. LIQUID SOAP HAVING STERILIZING PROPERTIES. THE LINCOLN INDUSTRIAL CHEMICAL CO. INC., doing business as The Lincoln Industrial Insecticide Co., Lincoln Park, Pa.
Filed June 15, 1948, Serial No. 559,285. Published Feb. 15, 1949. Class 4.

510,756. CRUDE TALL OIL (TALLOEL) SOAP DERIVED FROM THE FATS AND RESINS OF PINE WOOD. WEST VIRGINIA PULP AND PAPER COMPANY, New York, N. Y.
Filed Feb. 21, 1948, Serial No. 559,408. Published Feb. 22, 1949. Class 4.

510,757. TOILET SOAP. BURROUGHS WELLCOME & CO. (U. S. A.) INC., Tuckahoe, N. Y.
Filed June 18, 1948, Serial No. 559,578. Published Mar. 1, 1949. Class 4.

510,758. SOAP. BURROUGHS WELLCOME & CO. (U. S. A.) INC., Tuckahoe, N. Y.
Filed June 18, 1948, Serial No. 559,579. Published Mar. 1, 1949. Class 4.

510,759. TOILET AND LAUNDRY SOAP IN CAKE, POWDERED, AND LIQUID FORM. COMPANIA SWIFT DE MONTEVIDEO, S. A., Montevideo, Uruguay.
Filed June 22, 1948, Serial No. 559,902. Published Mar. 8, 1949. Class 4.

510,760. WHITE, CRYSTALLINE ALKALI, USED IN AQUEOUS SOLUTION FOR CLEANING METAL. HAAS-MILLER CORPORATION, Philadelphia, Pa.
Filed June 24, 1948, Serial No. 560,104. Published Mar. 1, 1949. Class 4.

510,761. BACTERIOSTATIC AGENT USED IN CHEMOTHERAPY. CIBA PHARMACEUTICAL PRODUCTS, INC., Summit, N. J.
Filed June 30, 1948, Serial No. 560,449. Published Mar. 1, 1949. Class 6.

510,762. ACCELERATORS FOR THE VULCANIZATION OF RUBBER. THE GOODYEAR TIRE & RUBBER COMPANY, Akron, Ohio.
Filed July 3, 1948, Serial No. 560,701. Published Mar. 1, 1949. Class 6.

510,763. PREPARATION USED IN TANNING AND FOR CONTROL OF RESINOUS MATTERS IN THE MANUFACTURE OF PAPER. ALLIED CHEMICAL & DYE CORPORATION, New York, N. Y.
Filed July 9, 1948, Serial No. 560,954. Published Mar. 1, 1949. Class 6.

510,764. CHEMICAL COMPOUNDS FOR RENDERING TEXTILES FIRE RETARDANT. SUN CHEMICAL CORPORATION, New York, N. Y.
Filed July 14, 1948, Serial No. 561,350. Published Feb. 22, 1949. Class 6.

510,765. CHEMICAL CLEANING POWDER FOR GENERAL CLEANING PURPOSES, INCLUDING CLEANING OF GLASS, PORCELAIN, TILE, MARBLE, WOOD, LINOLEUM, COMPOSITION FLOORS, PAINTED OR ENAMELED WALLS AND SIMILAR SURFACES. HYSAN PRODUCTS COMPANY, Chicago, Ill.
Filed July 23, 1948, Serial No. 562,062. Published Feb. 15, 1949. Class 4.

510,766. SHAVING SOAP. INTHOLINE LIMITED, Brentford, Middlesex, England.
Filed Aug. 11, 1948, Serial No. 563,184. Published Feb. 15, 1949. Class 4.

510,767. HOUSEHOLD CLEANSER. KBG PRODUCTS COMPANY, Narberth, Pa.
Filed Aug. 11, 1948, Serial No. 563,188. Published May 8, 1949. Class 4.

510,768. DEGREASING SOLVENTS, MORE PARTICULARLY CHLORINATED HYDROCARBON SOLVENTS. WESTVACO CHEMICAL CORPORATION, New York, N. Y., now by merger to Food Machinery and Chemical Corporation, New York, N. Y., a corporation of Delaware.
Filed Aug. 24, 1948, Serial No. 563,961. Published Mar. 8, 1949. Class 4.

510,769. FUNCTIONAL CHEMICAL FLUIDS—NAMELY, HYDRAULIC FLUIDS FOR USE IN HYDRAULIC POWER TRANSMISSION SYSTEMS AND HAVING GENERAL USE IN THE INDUSTRIAL ARTS. MONSANTO CHEMICAL COMPANY, St. Louis, Mo.
Filed Nov. 3, 1948, Serial No. 568,111. Published Mar. 8, 1949. Class 6.

Certification Marks

510,770. GAS LAUNDRY APPLIANCES AND MACHINES—NAMELY, GAS IRONERS AND GAS CLOTHES DRYERS. AMERICAN GAS ASSOCIATION, INC., New York, N. Y.
Filed Oct. 6, 1947, Serial No. 536,865. Published Mar. 1, 1949. Class 24.

510,771. USE ON WOODEN BARRELS. COOPERS INTERNATIONAL UNION OF NORTH AMERICA, Boston, Mass.
Filed Oct. 7, 1947, Serial No. 537,015. Published Feb. 22, 1949. Class 2.

ACT OF 1946, SUPPLEMENTAL REGISTER

These registrations are not subject to opposition.

510,772. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) HARPER AND KENSELL, Bethany, Okla. Filed Sept. 23, 1948, Serial No. 482,533.

DYNA THERAPY

FOR SHORT WAVE CURRENT GENERATING APPARATUS USED FOR THERAPEUTIC PURPOSES, AND REPAIR AND REPLACEMENT PARTS FOR SAID APPARATUS.
Claims use since Apr. 5, 1945.

510,773. (CLASS 39. CLOTHING.) MOZUS MILLS INC., Nashville, Tenn. Filed Feb. 4, 1948, Serial No. 484,577.

MOER-EASE

Applicant claims ownership of Registration No. 416,311.
FOR ANKLETS OR BOBBY SOCKS AND MEN'S, WOMEN'S, AND CHILDREN'S HOSIERY.
Claims use since Apr. 29, 1945.

510,774. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) VICTOR MANUFACTURING & GASKET CO., Chicago, Ill. Original filed Oct. 12, 1945, under the act of 1905; amended to application under act of 1946, Mar. 16, 1948, Serial No. 489,888.

METALATEX

FOR GASKETS MADE OF METAL, LATEX COVERED.
Claims use since Aug. 21, 1945.

510,775. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) PEERLESS PRODUCTS COMPANY, Jersey City, N. J. Filed Mar. 12, 1949, Serial No. 500,568.

Nu Nile

FOR COMBS FOR PRESSING THE HAIR AFTER THE COMBS HAVE BEEN HEATED.
Claims use since Nov. 20, 1945.

510,776. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) IRVING SCHOENWALD, doing business as Press Comb Co., Kansas City, Mo. Filed Jan. 6, 1949, Serial No. 501,946.

HEAT-HOLDER

FOR HAIR STRAIGHTENING COMBS.
Claims use since Apr. 15, 1946.

510,777. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) DAN PERKINS COMPANY, Memphis, Tenn. Original filed June 11, 1946, under the act of 1905; amended to application under act of 1946, Mar. 25, 1948, Serial No. 503,662.

BINDRITE

FOR BINDER FOR SAUSAGE AND SAUSAGE MEATS MADE OF CORN STARCH AND GROUND WHEAT.
Claims use since Jan. 1, 1934.

510,778. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) DAN PERKINS COMPANY, Memphis, Tenn. Original filed June 11, 1946, under the act of 1905; amended to application under act of 1946, Mar. 25, 1948, Serial No. 503,667.

MIXRITE

FOR BINDER FOR SAUSAGE AND SAUSAGE MEATS MADE OF CORN STARCH AND GROUND WHEAT.
Claims use since Jan. 1, 1934.

510,779. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) DAN PERKINS COMPANY, Memphis, Tenn. Original filed June 11, 1946, under the act of 1905; amended to application under act of 1946, Mar. 25, 1948, Serial No. 503,668.

SEASONRITE

FOR MIXTURE OF SPICES FOR SEASONING ALL TYPES OF SAUSAGE MEATS.
Claims use since Jan. 1, 1934.

510,780. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) FLUID SYSTEMS, INCORPORATED, Hamden, Conn. Filed Feb. 24, 1948, Serial No. 504,480.

Fluid Systems INC.

FOR APPARATUS CONSISTING OF AN ELECTRICAL TRANSFORMER, AN ELECTRICAL CONTROL PANEL AND A TANK UNIT FOR USE IN ELECTRICALLY HEATING CONDUCTORS OR PIPE-LINES IN WHICH VISCOUS LIQUIDS, SUCH AS FUEL OIL, ASPHALT, CORN SYRUP, ETC., ARE TRANSPORTED OR CONDUCTED FROM A STORAGE OR SUPPLY TANK TO AN OIL BURNER OR OTHER DEVICE TO USE OR RECEIVE THE LIQUID.
Claims use since Mar. 1, 1946.

510,781. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) E Z THREAD COMPANY, New York, N. Y. Filed Mar. 8, 1948, Serial No. 510,580.

Gerry Nufoam

FOR SHOULDER PADS FOR GARMENTS.
Claims use since Sept. 15, 1946.

510,782. (CLASS 2. RECEPTACLES.) NOBLE ANDRE, doing business as Andre Paper Box Co., San Francisco, Calif. Filed Mar. 27, 1948, Serial No. 511,129.

Foillyne

FOR PAPER BOXES.
Claims use since Aug. 19, 1946.

510,783. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) REVLON PRODUCTS CORPORATION, New York, N. Y. Original filed Jan. 24, 1947, under the act of 1905; amended to application under act of 1946, Sept. 9, 1948, Serial No. 516,310.

GOLDSTICK

FOR LIPSTICKS.
Claims use since Jan. 24, 1946.

510,784. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LUCILA SALAZAR, Los Angeles, Calif., assignee of V. R. Canalez, doing business as Phoenix Pharmacal Company. Filed Oct. 23, 1948, Serial No. 516,888.

Kontra KASPA

FOR PREPARATION FOR THE TREATMENT OF DANDRUFF.
Claims use since Dec. 30, 1946.

Applicant claims ownership of Registration No. 416,311.
FOR ANKLETS OR BOBBY SOCKS AND MEN'S, WOMEN'S, AND CHILDREN'S HOSIERY.
Claims use since Apr. 29, 1945.

FOR COMBS FOR PRESSING THE HAIR AFTER THE COMBS HAVE BEEN HEATED.
Claims use since Nov. 20, 1945.

FOR APPARATUS CONSISTING OF AN ELECTRICAL TRANSFORMER, AN ELECTRICAL CONTROL PANEL AND A TANK UNIT FOR USE IN ELECTRI-

DANDRUFF.
Claims use since Dec. 30, 1946.

510,785. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) BLOOMTINT PRODUCTS, INC., Chicago, Ill. Original filed Feb. 14, 1947, under the act of 1905; amended to application under act of 1946, Feb. 12, 1948, Serial No. 517,451.

Bloomdye

FOR LIQUID DYE WHICH IS USED IN ITS ORIGINAL FORM FOR COLORING FLOWERS BY DIPPING THE FLOWERS INTO THE DYE.
Claims use since Feb. 7, 1947.

510,786. (CLASS 39. CLOTHING.) ROY W. WILSON, Chicago, Ill. Filed June 16, 1948, Serial No. 519,612.

Kiddi Kover

FOR CHILDREN'S ONE-PIECE SLEEPER SUITS.
Claims use since Feb. 12, 1947.

510,787. (CLASS 2. RECEPTACLES.) MILES C. T. LEWIS, doing business as Select Shaker Co., Berkeley, Calif. Filed Feb. 27, 1948, Serial No. 520,634.

SELECT

FOR COMBINATION SALT AND PEPPER SHAKERS MADE OF PLASTIC.
Claims use since Dec. 15, 1946.

510,788. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SOCIETE A RESPONSABILITE LIMITEE: COTTAN, PARFUMEUR, Asnieres, France. Filed Apr. 13, 1949; original filed Apr. 28, 1947, Serial No. 521,478.

Société Hydrolique
Cottan

Applicant claims ownership of French Registration No. 211,415 dated July 21, 1922.
FOR PERFUME.

510,789. (CLASS 38. PRINTS AND PUBLICATIONS.) THE AMERICAN LAW BOOK COMPANY, New York, N. Y. Filed Jan. 25, 1949, Serial No. 522,027.

THE LAWYER
and
LAW NOTES

Applicant claims ownership of Registrations Nos. 379,573 and 247,129.
FOR LEGAL MAGAZINE PUBLISHED PERIODICALLY.
Claims use since Oct. 3, 1946.

510,790. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CUDAHY BROTHERS CO., Cudahy, Wis. Filed Jan. 24, 1949, Serial No. 522,087.

TOPSAL

FOR HOG FOOD OF WHICH TANKAGE, SOYBEAN MEAL, HOMINY FEED, ALFALFA MEAL, DISTILLERS' SOLUBLES, LIMESTONE, IRRADIATED YEAST AND IODIZED SALT ARE THE PRINCIPAL INGREDIENTS.
Claims use since Apr. 15, 1947.

510,791. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) ATLANTIC BRASS & COPPER CO., INC., New York, N. Y. Filed Oct. 10, 1947; original filed July 1, 1947, Serial No. 525,279.

ATLANTIC BRASS & COPPER

The words "Brass & Copper" are disclaimed apart from the mark shown.
FOR BRASS, COPPER, ALUMINUM, NICKEL SILVER, CUPRO-NICKEL, AND ALL NON-FERROUS METALS IN VARIOUS SHAPES AND FORMS.
Claims use since Dec. 28, 1935.

510,792. (CLASS 7. CORDAGE.) THE GRADY-TRAVERS COMPANY, INCORPORATED, New York, N. Y. Filed Oct. 20, 1948, original filed July 17, 1947, Serial No. 528,786.

Hy-Grade

Applicant claims ownership of Registration No. 179,420.
FOR COTTON TWINE; COTTON ROPE; JUTE, HEMP, FLAX ROPES AND TWINES; SASH-CORDS; COTTON CLOTHES-LINES AND CHALK LINES.
Claims use since Dec. 10, 1922.

510,793. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS, AND SUBSTITUTES THEREFOR.) PILGRIM CURTAIN CO., INC., New York, N. Y. Filed Sept. 27, 1948, Serial No. 531,944.

PEKO-PEKO

FOR WINDOW CURTAINS.
Claims use since Jan. 2, 1947.

510,794. (CLASS 24. LAUNDRY APPLIANCES AND MACHINES.) WORLDSBEST INDUSTRIES, INC., Cudahy, Wis. Filed Feb. 11, 1949, Serial No. 532,896.

WORLDSBEST

FOR CURTAIN STRETCHERS.
Claims use since Aug. 13, 1947.

510,795. (CLASS 3. BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS.) BOYLE LEATHER GOODS CO. INC., New York, N. Y. Filed Mar. 26, 1949, Serial No. 534,238.

LONGFELLOW

FOR WARDROBE TRAVELLING BAGS, WARDROBE TRUNKS, SUIT CASES, HANDBAGS, TRAIN CASES, OVERNIGHT CASES, AND TOILET CASES.
Claims use since Nov. 1, 1946.

SWIVEL BELT CONTROL LEG

Applicant claims ownership of Registration No. 407,567.
FOR ARTIFICIAL LEGS.
Claims use since June 1941.

510,797. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIAL.) CLOROX CHEMICAL CO., Oakland, Calif. Application filed Nov. 19, 1945; original filed Nov. 25, 1947, Serial No. 542,281.

"A BOON TO HOUSEWIVES!"

Applicant claims ownership of Registration No. 430,265.
FOR LIQUID PREPARATION FOR GENERAL CLEANING PURPOSES.
Claims use since Apr. 28, 1946.

510,798. (CLASS 3. BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS.) B. T. CRUMP COMPANY, INC., Richmond, Va. Filed Apr. 8, 1949, Serial No. 542,290.

Ever-Lite

FOR HARNESS AND SADDLERY.
Claims use since Nov. 15, 1947.

510,799. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) P. S. MURPHY & CO., INC., New York, N. Y. Filed Dec. 7, 1948, Serial No. 542,330.

TRIM-AIDS

FILE STICKS FOR FILING FINGER NAILS SOLD IN PACKETS SIMILAR TO MATCH PACKETS.
Claims use since Nov. 26, 1946.

510,800. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) VANDERBILT TIRE & RUBBER CORP., New York, N. Y. Filed Dec. 4, 1947, Serial No. 543,342.

VANDERBILT
Cushion Master

Applicant claims ownership of Registration No. 383,535.
FOR AUTOMOBILE TIRES AND TUBES.
Claims use since June 15, 1947.

510,801. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) FELS & COMPANY, Philadelphia, Pa. Filed Sept. 29, 1946; original filed Dec. 17, 1947, Serial No. 544,562.

THE GOLDEN CHIPS WITH THE CLEAN NAPTHA ODOR

FOR SOAP.
Claims use since October 1935.

510,802. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) CLEO CLARK, Selma, Ala. Filed Jan. 18, 1949, Serial No. 547,102.

FOGLESS ALBRIGHT

FOR CLEANING PREPARATION FOR EYE GLASSES, CAR GLASS, WINDSHIELDS, AND BATH ROOM MIRRORS.
Claims use since Jan. 5, 1948.

510,803. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) THE DIME SILVER CLUB, INC., Atlanta, Ga. Filed Jan. 14, 1949, Serial No. 549,135.

The DIME CO. SILVER CLUB Inc.

FOR SILVER PLATED TABLEWARE—NAMELY, KNIVES, FORKS, SPOONS, AND HOLLOW WARE CONTAINERS AND LADLES.
Claims use since Jan. 2, 1948.

510,804. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THOMSON-SMELTZLY CORPORATION, Chicago, Ill. Filed Feb. 16, 1949, Serial No. 549,594.

FLUSHbrite

FOR PREPARATION TO BE USED AS A DISINFECTANT, GERMICIDE, AND DEODORANT PRODUCT WITH INCIDENTAL CLEANSING PROPERTIES FOR TOILETS.
Claims use since Nov. 25, 1947.

510,805. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE KENNEL FOOD SUPPLY COMPANY, INCORPORATED, Fairfield, Conn. Filed Feb. 14, 1948, Serial No. 549,733.

FAIRFIELD

Applicant claims ownership of Registration No. 415,608.
FOR DOG FOOD.
Claims use since July 18, 1943.

510,806. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) THE BOYE NEEDLE COMPANY, Chicago, Ill. Filed Feb. 21, 1949. Serial No. 550,579.

"EZY - KNIT"

FOR KNITTING PINS.
Claims use since Feb. 13, 1948.

510,807. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DOUGLAS B. PINGUELY, doing business as Pinguely Chemical & Drug Co., Erie, Pa. Filed Feb. 11, 1949; original filed Mar. 12, 1948, Serial No. 551,819.

PINGUELY'S

FOR HEALING SALVE.
Claims use since January 1920.

510,808. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) EATON MANUFACTURING COMPANY, Cleveland, Ohio. Filed Mar. 13, 1948. Serial No. 551,878.

SPRING LOX

FOR LOCK WASHERS.
Claims use since June 1941.

510,809. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) DENSCO, INCORPORATED, Denver, Colo. Filed Dec. 1, 1947, Serial No. 552,307.

"DENSCO Service"

Applicant claims ownership of Registrations Nos. 295,447, 420,678, and 426,600.
FOR METHYL METHACRYLATE DENTURE MATERIAL (BOTH LIQUID AND POWDER FORMS).
Claims use since Jan. 1, 1939.

510,810. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) R. G. BARRY CORP., Columbus, Ohio. Filed Mar. 10, 1949, Serial No. 552,912.

Barry Bra Straps

FOR SHOULDER STRAPS.
Claims use since Feb. 25, 1948.

510,811. (CLASS 7. CORDAGE.) WRIGHT SALES COMPANY, INC., Cleveland, Ohio. Filed Mar. 16, 1949, Serial No. 553,162.

CUSTOM-CRAFT

FOR VENETIAN BLIND CORD.
Claims use since Dec. 12, 1947.

510,812. (CLASS 31. FILTERS AND REFRIGERATORS.) WILSON CABINET CO., INC., Smyrna, Del. Filed Jan. 27, 1949; original filed Mar. 29, 1948, Serial No. 553,327.

STOR SAFE

FOR NORMAL TEMPERATURE REACH-IN REFRIGERATORS.
Claims use since Sept. 27, 1946.

510,813. (CLASS 31. FILTERS AND REFRIGERATORS.) WILSON CABINET CO., INC., Smyrna, Del. Filed Jan. 26, 1949; original filed Mar. 29, 1948, Serial No. 553,328.

STOR-VAULT

FOR NORMAL TEMPERATURE WALK-IN REFRIGERATED ROOMS.
Claims use since Nov. 22, 1946.

510,814. (CLASS 31. FILTERS AND REFRIGERATORS.) WILSON CABINET CO., INC., Smyrna, Del. Filed Mar. 25, 1949; original filed Mar. 29, 1948, Serial No. 553,329.

ZERO SAFE

FOR LOW TEMPERATURE REACH-IN REFRIGERATORS.
Claims use since Jan. 28, 1946.

510,815. (CLASS 31. FILTERS AND REFRIGERATORS.) WILSON CABINET CO., INC., Smyrna, Del. Filed Jan. 27, 1949, Serial No. 553,330.

ZERO-VAULT

FOR LOW TEMPERATURE WALK-IN REFRIGERATED ROOMS.
Claims use since Aug. 13, 1947.

510,816. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) STA-RITE GINNIE-LOU, INC., Shelbyville, Ill. Filed Apr. 5, 1949, Serial No. 555,777.

Bead-Ette

FOR HAIR CLASPS.
Claims use since June 13, 1947.

510,817. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) ALPHA METALS, INC., Brooklyn, N. Y. Filed Mar. 14, 1949, Serial No. 557,579.

LEAK-PRUF

FOR SOLDERS COMPRISED PRIMARILY OF LEAD AND TIN.
Claims use since Mar. 3, 1948.

510,818. (CLASS 3. BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS.) PLATT LUGGAGE, INC., Chicago, Ill. Filed Sept. 1, 1948, Serial No. 564,524.

PLATT

FOR MEN'S HAND LUGGAGE—NAMELY, COMPANION OR OVERNIGHT CASES, ONE SUITERS, TWO SUITERS, AND THREE SUITERS OR OVERSIZE CASES, AND WOMEN'S HAND LUGGAGE—NAMELY, VICTORIA CASES, HAT AND SHOE CASES, OVERNIGHT CASES, WARDROBE CASES, PULLMAN CASES, TRAY PULLMAN CASES, AND FORTNIGHTERS AND JACKKNIFF CASES.
Claims use since January 1946.

510,819. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS, AND SUBSTITUTES THEREFOR.) D. B. FULLER & CO., INC., New York, N. Y. Filed Nov. 12, 1948, Serial No. 568,605.

Fuller Fabrics

FOR TEXTILE FABRICS IN THE PIECE, OF COTTON, RAYON, PROTEIN FIBRES AND MIXTURES THEREOF.
Claims use since May 13, 1946.

TRADE-MARK REGISTRATIONS RENEWED

Reg. No. 345,719. Registered May 4, 1937. TOBACCO BY-PRODUCTS AND CHEMICAL CORPORATION, Louisville, Ky., a corporation of Delaware. Republished by registrant.

VAPO-FUME

FOR PARASITICIDES—NAMELY, INSECTICIDES, FUNGICIDES, AND PLANT BACTERICIDES.
Claims use since Nov. 16, 1936.

Reg. No. 345,721. Registered May 4, 1937. TOBACCO BY-PRODUCTS AND CHEMICAL CORPORATION, Louisville, Ky., a corporation of Delaware. Republished by registrant.

VAPO-FUME

FOR PARASITICIDES—NAMELY, INSECTICIDES, FUNGICIDES, AND PLANT BACTERICIDES.
Claims use since Nov. 16, 1936.

Reg. No. 350,813. Registered Sept. 28, 1937. PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

BJ

FOR SILICATE OF SODA, EITHER ANHYDROUS, HYDRATED, OR IN SOLUTION.
Claims use since Apr. 11, 1935.

Reg. No. 354,530. Registered Feb. 15, 1938. H. KOHNSTAMM & CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

ATLAS

FOR COLORS IN THE FORM OF POWDER AND PULP USED IN THE MANUFACTURE OF COSMETICS.
Claims use since about 1882.

Reg. No. 361,935. Registered Nov. 8, 1938. H. KOHNSTAMM & CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

ATLAS

FOR PIGMENT COLORS AND LAKE COLORS FOR GENERAL MANUFACTURING PURPOSES.
Claims use since about 1882.

Reg. No. 369,502. Registered July 25, 1939. THE SCHOLL MFG. CO., INC., Chicago, Ill., a corporation of New York. Republished by registrant.

SEAL-TIP

FOR ADHESIVE MEDICATED SHIELDS, PADS, OR PLASTERS FOR CORNS, CALLOUSES, AND BUNIONS.
Claims use since Feb. 27, 1939.

Reg. No. 379,299. Registered July 9, 1940. H. KOHNSTAMM & CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

CARMINOLINE

FOR COAL-TAR DYES.
Claims use since June 23, 1884.

Reg. No. 379,300. Registered July 9, 1940. H. KOHNSTAMM & CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

SOLUBLE AMBERINE YELLOW

FOR COAL-TAR COLORS.
Claims use since Dec. 19, 1889.

Reg. No. 380,322. Registered Aug. 20, 1940. H. KOHNSTAMM & CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

ATLAS

FOR COAL-TAR DYES.
Claims use since Jan. 1, 1884.

Reg. No. 380,423. Registered Aug. 20, 1940. ASSOCIATED DISTRIBUTORS, INC., Chicago, Ill. Republished by James L. Younghusband, Chicago, Ill.

LINGER

FOR LIPSTICK, ROUGE, FACE POWDER, EYELASH AND EYEBROW MASCARA, PADS IMPREGNATED WITH DEODORANT AND ANTIPERSPIRANT LOTION, CREAMS FOR THE HANDS AND FACE, CLEANSING PADS IMPREGNATED WITH LOTION, PREPARATIONS FOR SKIN, HAIR AND FINGER NAILS, PERFUMES, COLOGNES AND DEODORANT COLOGNES.
Claims use since Mar. 18, 1938.

Reg. No. 386,107. Registered Mar. 25, 1941. THE SCHOLL MFG. CO., INC., Chicago, Ill., a corporation of New York. Republished by registrant.

ADHESEX

FOR CHEMICAL PREPARATION FOR REMOVING ADHESIVE TAPE AND ADHESIVE MASS FROM THE SKIN.
Claims use since May 17, 1938.

Reg. No. 396,710. Registered July 28, 1942. CHICAGO PHARMACAL COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

CHIMEDIC

FOR PREPARATIONS FOR THE TREATMENT OF DISEASES OF THE SKIN, THE TREATMENT OF ANTI-ARTHRITIC AND ANTI-RHEUMATIC CONDITIONS, USED IN CONTROLLING HYPERTENSION, A PHARMACEUTICAL PREPARATION FOR THE PROMOTION OF URINARY ANTISEPSIS AND SEDATION IN THE TREATMENT OF GENITO-URINARY INFECTION, AND A SEDATIVE USED IN THE TREATMENT OF PERTUSSIS.
Claims use since Jan. 27, 1942.

Reg. No. 400,154. Registered Feb. 16, 1943. JOHNSON & JOHNSON, New Brunswick, N. J., a corporation of New Jersey. Republished by registrant.

Johnson's

FOR BABY OIL.
Claims use since Mar. 19, 1935.

Reg. No. 401,372. Registered May 11, 1943. THE NATIONAL LIME & STONE COMPANY, Findlay, Ohio, a corporation of Ohio. Republished by registrant.

CAL-MAG

FOR PRODUCT FOR NEUTRALIZING AN ACID INGREDIENT IN THE MANUFACTURE OF COMMERCIAL FERTILIZERS.
Claims use since Nov. 8, 1942.

Reg. No. 406,534. Registered Apr. 11, 1944. THE SCHOLL MFG. CO., INC., Chicago, Ill., a corporation of New York. Republished by registrant.

Zino-pads

The word "Pads" is disclaimed apart from the mark as shown.
FOR ADHESIVE MEDICATED SHIELDS OR PADS FOR CORNS, CALLOUSES, AND BUNIONS.
Claims use since June 16, 1921.

Reg. No. 414,150. Registered May 29, 1945. H. KOHNSTAMM & CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

STARTEX

FOR WATER SOFTENER AND LAUNDRY BREAK COMPOUND FOR LAUNDRY PURPOSES.
Claims use since about November 1930.

Reg. No. 415,711. Registered Aug. 14, 1945. H. KOHNSTAMM & CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

BORO-CHLOR

FOR LIQUID BLEACH USED FOR LAUNDRY PURPOSES.
Claims use since about 1912.

Reg. No. 417,164. Registered Oct. 16, 1945. H. KOHNSTAMM & CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

Levelon

FOR BLUING USED FOR LAUNDRY PURPOSES.
Claims use since about January 1938.

Reg. No. 419,493. Registered Feb. 19, 1946. M. V. C. LABORATORIES, INC., Toledo, Ohio, a corporation of Ohio. Republished by registrant.

JIFFY-DRY

The word "Dry" is disclaimed apart from the mark as shown.
FOR NAIL POLISH DRIER.
Claims use since Mar. 22, 1945.

Reg. No. 421,946. Registered June 25, 1946. BONWIT TELLER INC., New York, N. Y., assignor to Consolidated Cosmetics, Chicago, Ill. Republished by Consolidated Cosmetics, Chicago, Ill., a firm.

Sultry

FOR PERFUMES.
Claims use since Nov. 28, 1944.

Reg. No. 422,362. Registered July 16, 1946. H. KOHNSTAMM & CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

ATLAS COLORS

The word "Colors" is disclaimed apart from the mark as shown.
FOR COLORS IN THE FORM OF POWDER AND PULP USED IN THE MANUFACTURE OF COSMETICS; PIGMENT COLORS AND LAKE COLORS FOR GENERAL MANUFACTURING PURPOSES; AND COAL-TAR DYES.
Claims use since about 1882.

Reg. No. 434,050. Registered Nov. 4, 1947. ONYX OIL & CHEMICAL COMPANY, Jersey City, N. J., a corporation of Delaware. Republished by registrant.

PHI-O-SOL

FOR WETTING AND EMULSIFYING AGENT AND PENETRANT USED IN THE TEXTILE INDUSTRY AND IN OTHER INDUSTRIES RELATED TO OR ALLIED WITH IT.
Claims use since on or about March 1940.

Reg. No. 438,818. Registered May 11, 1948. PACIFIC CHEMICAL COMPANY, Los Angeles, Calif. Republished by American-Marietta Company, Los Angeles, Calif., a corporation of Illinois.

PACIFIC

FOR INSECTICIDES, DEODORANTS IN LIQUID AND CAKE FORM USED TO ABSORB AND MASK ODORS; DISINFECTANTS, AUTOMOBILE MOTOR AND CARBURETOR AND SMALL PARTS CLEANER IN LIQUID FORM, USED TO DISSOLVE OIL AND GREASE AND REMOVE CARBON; AND A CHEMICAL RUST PREVENTATIVE AND REMOVER PREPARATION IN LIQUID FORM.
Claims use since 1904.

Reg. No. 439,806. Registered July 27, 1948. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

Stran

FOR SHAMPOO.
Claims use since July 24, 1944.

Reg. No. 439,913. Registered July 27, 1948. LEHN & FINK PRODUCTS CORPORATION, Bloomfield, N. J., corporation of Delaware. Republished by registrant.

SAVOIR FAIRE

FOR CLEANSING CREAM AND TOILET WATER.
Claims use since Mar. 12, 1947.

Reg. No. 439,925. Registered July 27, 1948. WEST DISINFECTING COMPANY, Long Island City, N. Y., a corporation of New York. Republished by registrant.

GRAINOSECT

FOR INSECTICIDE.
Claims use since December 1930.

Reg. No. 440,105. Registered Aug. 10, 1948. VAN PELT & BROWN, INC., Richmond, Va., a corporation of Virginia. Republished by registrant.

Bellaspro

FOR ANALGESIC TABLETS.
Claims use since 1936.

CLASS 10
FERTILIZERS

Reg. No. 260,267. Registered Aug. 20, 1929. CONSOLIDATED RENDERING COMPANY, Boston, Mass., a corporation of Maine. Republished by registrant.

SUPERLAWN

FOR PLANT FOOD.
Claims use since about Jan. 1, 1929.

Reg. No. 262,656. Registered Oct. 22, 1929. THE NATIONAL LIME & STONE COMPANY, Findlay, Ohio, a corporation of Ohio. Republished by registrant.

MONARCH

FOR AGRICULTURAL LIME.
Claims use since about Mar. 5, 1929.

Reg. No. 321,749. Registered Feb. 12, 1935. CONSOLIDATED RENDERING COMPANY, Boston, Mass., a corporation of Maine. Republished by registrant.

CORENCO IRO

FOR FERTILIZERS, PLANT FOOD, AND AGRICULTURAL CHEMICALS.
Claims use since about July 1920.

Reg. No. 356,994. Registered May 24, 1938. CONSOLIDATED RENDERING COMPANY, Boston, Mass., a corporation of Maine. Republished by registrant.

At the Bottom of Good Crops

FOR FERTILIZERS.
Claims use since February 1934.

Reg. No. 404,484. Registered Nov. 30, 1943. CONSOLIDATED RENDERING COMPANY, Boston, Mass., a corporation of Maine. Republished by registrant.

SPURZ-ON

FOR FERTILIZER.
Claims use since July 21, 1942.

CLASS 11

INKS AND INKING MATERIALS

Reg. No. 354,375. Registered Feb. 8, 1938. H. KOHNSTAMM & Co., INC., New York, N. Y., a corporation of New York. Republished by registrant.

ATLAS

FOR COLORS IN THE FORM OF POWDER AND PULP USED IN THE MANUFACTURE OF INKS.
Claims use since about 1862.

CLASS 12

CONSTRUCTION MATERIALS

Reg. No. 246,871. Registered Sept. 18, 1928. PORCELAIN TILE COMPANY, Chicago, Ill. Republished by Clyde Porcelain Steel Corporation, Clyde, Ohio, a corporation of Ohio.

Porstelain

FOR TILES AND FOUNDATION SHEETS PREPARED FOR THE CEMENTING OF TILES THERETO.
Claims use since Jan. 31, 1928.

Reg. No. 273,617. Registered Sept. 23, 1930. THE NATIONAL LIME & STONE COMPANY, Findlay, Ohio, a corporation of Ohio. Republished by registrant.

MONARCH

FOR FINISHING LIME, POWDERED LIME, MASON'S LIME, LUMP LIME, AND BRICK MORTAR.
Claims use since about March 1904.

Reg. No. 275,618. Registered Sept. 23, 1930. THE NATIONAL LIME & STONE COMPANY, Findlay, Ohio, a corporation of Ohio. Republished by registrant.

FOR FINISHING LIME, POWDERED LIME, MASON'S LIME, LUMP LIME, AND BRICK MORTAR.
Claims use since about March 1904.

Reg. No. 283,220. Registered May 19, 1931. PORCELAIN TILE COMPANY, Chicago, Ill. Republished by Clyde Porcelain Steel Corporation, Clyde, Ohio, a corporation of Ohio.

Porstelain

FOR WALL AND FLOOR TILES AND FOUNDATION SHEETS FOR TILES.
Claims use since Feb. 26, 1930.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 178,179. Registered Jan. 8, 1924. HOWE CHAIN COMPANY, Muskegon, Mich. Republished by Link-Belt Company, Chicago, Ill., a corporation of Illinois.

XS

FOR DRIVE CHAINS.
Claims use since on or about Oct. 1, 1921.

Reg. No. 220,199. Registered Nov. 2, 1926. LINK-BELT COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

H

FOR CHAINS.
Claims use since about Jan. 1, 1908.

Reg. No. 220,207. Registered Nov. 2, 1926. LINK-BELT COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

MR

FOR CHAINS.
Claims use since about Jan. 1, 1910.

Reg. No. 379,005. Registered June 25, 1940. THE DENISON COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

DENCO

FOR NAILS.
Claims use since June 15, 1939.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Reg. No. 108,579. Registered Feb. 15, 1916. SYRACUSE SMELTING WORKS, Brooklyn, N. Y., a corporation of New York. Republished by registrant.

MANGANESE

FOR BABBITT METAL.
Claims use since Jan. 2, 1895.

Reg. No. 113,312. Registered Oct. 10, 1916. SYRACUSE SMELTING WORKS, Brooklyn, N. Y., a corporation of New York. Republished by registrant.

MASTER

FOR BABBITT METAL.
Claims use since Apr. 10, 1916.

Reg. No. 124,064. Registered Dec. 31, 1918. SYRACUSE SMELTING WORKS, Brooklyn, N. Y., a corporation of New York. Republished by registrant.

FOR BABBITT METAL.
Claims use since 1897.

Reg. No. 139,906. Registered Feb. 22, 1921. UNITED AMERICAN METALS CORPORATION, Brooklyn, N. Y., a corporation of New York. Republished by registrant.

STONEWALL

FOR NON-FERROUS ALLOYS.
Claims use since June 1, 1919.

CLASS 15

OILS AND GREASES

Reg. No. 306,514. Registered Sept. 19, 1933. HOUDE ENGINEERING CORPORATION, Buffalo, N. Y. Republished by Houdaille-Hershey Corporation, Detroit, Mich., a corporation of Michigan.

HOO DYE

FOR SHOCK ABSORBER FLUID WITH A PETROLEUM BASE.
Claims use since Jan. 1, 1928.

Reg. No. 306,515. Registered Sept. 19, 1933. HOUDE ENGINEERING CORPORATION, Buffalo, N. Y. Republished by Houdaille-Hershey Corporation, Detroit, Mich., a corporation of Michigan.

HOUDAILLE

FOR SHOCK ABSORBER FLUID WITH A PETROLEUM BASE.
Claims use since Jan. 1, 1928.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 71,334. Registered Nov. 17, 1908. ERNECKE AND SALMSTEIN, Chicago, Ill. Republished by Ernecke & Salmstein Co., Chicago, Ill., a corporation of Illinois.

FOR ENAMEL-PAINT.
Claims use since Nov. 5, 1907.

Reg. No. 135,778. Registered Oct. 19, 1920. THE PRUETT-SCHAFFER CHEMICAL COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

Kealin

FOR READY-MIXED PAINTS, DRY COLORS, ASPHALT PAINT, PAINT-OIL, PAINT REDUCING OILS, DRIERS, VARNISHES, AND JAPANS.
Claims use since 1911.

Reg. No. 230,115. Registered Feb. 21, 1928. YANKEE POLISH CO. INC., New York, N. Y., a corporation of New York. Republished by registrant.

FOR POLISHES AND DRESSINGS FOR CLEANING AND POLISHING PAINTED AND VARNISHED SURFACES OF AUTOMOBILES, FLOORS, AND FURNITURE.
Claims use since Jan. 2, 1915.

Reg. No. 300,927. Registered Feb. 14, 1933. CHILTON PAINT COMPANY, College Point, N. Y., a corporation of Maine. Republished by registrant.

CHILTON

FOR READY-MIXED, LIQUID, SEMI-PASTE, AND PASTE PAINTS; PAINT ENAMELS; VARNISHES; LACQUERS; JAPANS; STAINS; COLORS IN JAPAN; COLORS IN OIL; PREPARED SHELLAC; PREPARED SHELLAC SUBSTITUTE; WHITE ZINC; WAX FOR POLISHING PURPOSES; AND FILLERS.
Claims use since 1884.

Reg. No. 422,748. Registered Aug. 13, 1946. HALL HARDWARE COMPANY, Minneapolis, Minn., a corporation of Minnesota. Republished by registrant.

PLASTI-SPAR

The term "Spar" is disclaimed apart from the mark as shown.
FOR VARNISH.
Claims use since Dec. 12, 1944.

Reg. No. 425,247. Registered Nov. 12, 1946. BETTER FINISHES AND COATINGS, INC., Newark, N. J., a corporation of New Jersey. Republished by registrant.

BFC

FOR COATING MATERIALS—NAMELY, READY MIXED PAINTS, VARNISHES, PAINT ENAMELS, AND PLASTIC PAINTS.
Claims use since May 1, 1940.

Reg. No. 425,521. Registered Nov. 26, 1946. BETTER FINISHES AND COATINGS, INC., Newark, N. J., a corporation of New Jersey. Republished by registrant.

LIQUID ENVELOPE

The word "Liquid" is disclaimed apart from the mark as shown.
FOR RESINOUS COATING COMPOSITIONS FOR APPLICATION AS PROTECTIVE COATING MEDIA FOR GOODS TO BE PLACED IN STORAGE, IN TRANSIT OR IN USE ALSO AS PROTECTIVE MEDIA IN PACKAGING OF GOODS TO BE PLACED IN STORAGE OR IN TRANSIT.
Claims use since Jan. 7, 1944.

CLASS 17

TOBACCO PRODUCTS

Reg. No. 251,404. Registered Jan. 8, 1929. JOHN SINCLAIR LIMITED, Newcastle-on-Tyne, England, a corporation of Great Britain. Republished by registrant.

JOLLY BOAT

FOR SMOKING TOBACCO, CIGARETTES, AND CIGARS.
Claims use since July 15, 1895.

Reg. No. 427,153. Registered Jan. 28, 1947. JOHN SINCLAIR LIMITED, Newcastle-on-Tyne, England, a corporation of Great Britain. Republished by registrant.

PUNCHBOWLE

FOR SMOKING TOBACCO AND CIGARETTES.
Claims use since Feb. 15, 1909.

Reg. No. 431,415. Registered July 22, 1947. JOHN SINCLAIR LIMITED, Newcastle-on-Tyne, England, a corporation of Great Britain. Republished by registrant.

PARSON'S PLEASURE

FOR SMOKING TOBACCO AND CIGARETTES.
Claims use since May 31, 1905.

Reg. No. 432,230. Registered Aug. 26, 1947. JOHN SINCLAIR LIMITED, Newcastle-on-Tyne, England, a corporation of Great Britain. Republished by registrant.

BARNEYS

FOR SMOKING TOBACCO AND CIGARETTES.
Claims use since May 31, 1905.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 300,644. Registered Jan. 31, 1933. THE GAMEWELL COMPANY, Newton and Newton Upper Falls, Mass., a corporation of Massachusetts. Republished by registrant.

GAMEWELL

FOR ELECTRICAL FIRE ALARM SYSTEMS, ELECTRICAL POLICE SIGNALING SYSTEMS, AND ELECTRICAL TELEPHONE SYSTEMS, AND PARTS OF SUCH SYSTEMS.
Claims use since prior to the year 1881.

Reg. No. 342,027. Registered Dec. 29, 1936. EAGLE ELECTRIC MFG. CO., INC., Brooklyn, N. Y., a corporation of New York. Republished by registrant, present address, Long Island City, N. Y.

FOR ELECTRIC ATTACHMENT PLUGS.
Claims use since about December 1934.

Reg. No. 426,624. Registered Jan. 7, 1947. LINK-BELT COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

LINK-BELT
Electrofluid

The terms "Electrofluid" and "The Symbol of Quality" are disclaimed apart from the mark as shown.
FOR COMBINED ELECTRIC MOTOR AND HYDRAULIC COUPLING DRIVES FOR MECHANICAL DEVICES.
Claims use since June 21, 1945.

Reg. No. 439,156. Registered June 3, 1948. DONALD E. CAMPBELL, doing business as The Ace Company, Ocala, Fla. Republished by registrant.

ACE

FOR PORTABLE HAND-MANIPULATED ELECTRIC BLOWER FOR BLOWING DIRT AND OTHER PARTICLES FROM INDUSTRIAL MACHINERY OPERATING IN FACTORIES.
Claims use since May 8, 1945.

Reg. No. 439,814. Registered July 27, 1948. SUN VACUUM STORES, Los Angeles, Calif., a firm. Republished by registrant.

AIR-CHIEF

FOR ELECTRIC VACUUM CLEANERS.
Claims use since April 1940.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 187,770. Registered Aug. 12, 1924. THE BRUNSWICK-BALKE-COLLENDER COMPANY, Wilmington, Del., and Chicago, Ill., a corporation of Delaware. Republished by registrant, present address Chicago, Ill.

Manhattan Club

FOR BILLIARD CHALK.
Claims use since Sept. 1, 1905.

Reg. No. 281,183. Registered Mar. 10, 1931. JOHNSON SUTURE CORPORATION, Chicago, Ill. Republished by Johnson & Johnson, New Brunswick, N. J., a corporation of New Jersey.

The trade-mark comprises a spiral green strand or stripe unaccompanied by any color other than that of the natural (yellowish) gut color and extending lengthwise of the string. The representation of the string is disclaimed apart from the mark as shown.
FOR GUT STRINGS FOR RACKETS.
Claims use since July 24, 1929.

Reg. No. 282,429. Registered Apr. 21, 1931. JOHNSON SUTURE CORPORATION, Chicago, Ill. Republished by Johnson & Johnson, New Brunswick, N. J., a corporation of New Jersey.

4 BAR

FOR GUT STRINGS FOR RACKETS.
Claims use since Nov. 26, 1930.

Reg. No. 295,617. Registered July 5, 1932. JOHNSON SUTURE CORPORATION, Chicago, Ill. Republished by Johnson & Johnson, New Brunswick, N. J., a corporation of New Jersey.

FOR GUT STRINGS FOR RACKETS.
Claims use since Nov. 26, 1930.

Reg. No. 340,345. Registered Nov. 3, 1936. JOHNSON SUTTER CORPORATION, Chicago, Ill. Republished by Johnson & Johnson, New Brunswick, N. J., a corporation of New Jersey.

The drawing is lined for green.
FOR RACKET STRINGS.
Claims use since Mar. 31, 1931.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 42,225. Registered Mar. 8, 1904. THE BOSS MANUFACTURING COMPANY, Kewanee, Ill., a corporation of Illinois. Republished by registrant.

BOSS

FOR HUSKING DEVICES AND IMPLEMENTS.
Claims use since on or about Oct. 1, 1888.

Reg. No. 90,838. Registered Mar. 25, 1913. RED JACKET MANUFACTURING CO., Davenport, Iowa, a corporation of Iowa. Republished by registrant.

RED JACKET

FOR WELL-PUMPS, WELL-PUMP PIPES, WELL-PUMP-PIPE COUPLINGS, AND CYLINDERS FOR WELL-PUMPS.
Claims use since January 1881.

Reg. No. 94,664. Registered Dec. 23, 1913. PENNSYLVANIA FLEXIBLE METALLIC TUBING CO., Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

PENFLEX

FOR BARREL FILLERS.
Claims use since May 1, 1911.

Reg. No. 113,986. Registered Nov. 14, 1916. THE BOSS MANUFACTURING COMPANY, Kewanee, Ill., a corporation of Illinois. Republished by registrant.

BOSS

FOR CORN HUSKING IMPLEMENTS.
Claims use since 1901.

Reg. No. 204,153. Registered Oct. 6, 1925. LINK-BELT COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

➢DOUBLE DUTY➣

FOR SPROCKET WHEELS.
Claims use since about Mar. 1, 1925.

Reg. No. 280,761. Registered Feb. 24, 1931. LINK-BELT COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

DS

FOR TAKE-UPS, SCREW TAKE-UPS, AND PARTS THEREOF FOR USE IN CONNECTION WITH TAKING THE SLACK OUT OF AND TENSIONING CHAINS AND BELTS USED IN CONNECTION WITH ELEVATORS AND CONVEYORS OF THE CHAIN AND BELT TYPE AND FOR TAKING UP SLACK IN ANY BELT OR CONVEYOR AND IS MOVED LATERALLY BY THE TAKE-UP MECHANISM FOR TAKING UP SLACK.
Claims use since about January 1927.

Reg. No. 352,214. Registered Nov. 23, 1937. KING PLOW COMPANY, Atlanta, Ga., a corporation of Georgia. Republished by registrant.

"GEORGIA CRACKER"

FOR FERTILIZER-DISTRIBUTORS, STALK CUTTER AND PLOWS, COTTON AND CORN PLANTERS, COTTON PLANTERS, AND PLOW STOCKS.
Claims use since July 1909.

Reg. No. 352,399. Registered Nov. 30, 1937. KING PLOW COMPANY, Atlanta, Ga., a corporation of Georgia. Republished by registrant.

H.D. TERRELL
THICK CENTER

FOR AGRICULTURAL SCRAPES.
Claims use since July 1890.

Reg. No. 370,044. Registered AUG. 15, 1939. RED JACKET MANUFACTURING CO., Davenport, Iowa, a corporation of Iowa. Republished by registrant.

The cross-hatching indicates the color black.
FOR WATER SYSTEMS—NAMELY, SHALLOW WELL WATER SYSTEMS, PUMPING UNITS, DEEP WELL PUMPING HEADS, DEEP WELL WATER SYSTEMS, PUMPS—NAMELY, PITCHER PUMPS, SUCTION LIFT PUMPS, HAND PUMPS, WINDMILL PUMPS, FORCE PUMPS, CISTERN PUMPS, PUMP JACKS, TANK PUMPS, GEAR PUMPS, PUMP CYLINDERS, CENTRIFUGAL PUMPS, JET PUMPS, AND MECHANICALLY OPERATED BASE EXCHANGE WATER SOFTENERS, AND PARTS FOR EACH OF SAID DEVICES.
Claims use since about Sept. 1, 1937.

Reg. No. 379,364. Registered July 9, 1940. RED JACKET MANUFACTURING CO., Davenport, Iowa, a corporation of Iowa. Republished by registrant.

CENTRI-JET

The word "Jet" is disclaimed apart from the mark as shown.
FOR PUMPS—NAMELY, INJECTOR TYPE PUMPS, CENTRIFUGAL PUMPS AND TURBINE TYPE PUMPS, AND PARTS THEREOF.
Claims use since about Jan. 19, 1940.

Reg. No. 389,854. Registered Aug. 26, 1941. RED JACKET MANUFACTURING CO., Davenport, Iowa, a corporation of Iowa. Republished by registrant.

FOR WATER SYSTEMS—NAMELY, SHALLOW WELL WATER SYSTEMS, PUMPING UNITS, DEEP WELL PUMPING HEADS, DEEP WELL WATER SYSTEMS; PUMPS—NAMELY, PITCHER PUMPS, SUCTION LIFT PUMPS, HAND PUMPS, WINDMILL PUMPS, FORCE PUMPS, CISTERN PUMPS, PUMP JACKS, TANK PUMPS, GEAR PUMPS, PUMP CYLINDERS, CENTRIFUGAL PUMPS, JET PUMPS, TURBINE PUMPS; WATER WELL ACCESSORIES—NAMELY, SUCTION STRAINERS, WELL RODS, WELL ROD COUPLINGS, WELL SEALS, FOOT VALVES, AND PUMP STANDS; AND MECHANICALLY OPERATED BASE EXCHANGE WATER SOFTENERS, AND PARTS FOR EACH OF SAID DEVICES.
Claims use since about Sept. 1, 1937.

Reg. No. 412,519. Registered Mar. 13, 1945. GEO. J. MEYER MANUFACTURING CO., Cudahy, Wis., a corporation of Wisconsin. Republished by registrant.

Squ-Cro-Mix

The term "Mix" is disclaimed apart from the mark as shown.
FOR VACUUM TYPE LIQUID DEAERATOR AND BEVERAGE MIXER OF THE TYPE HAVING ROTARY METERING APPARATUS FOR COMBINING BEVERAGE FORMING LIQUIDS IN PRE-DETERMINED PROPORTIONS.
Claims use since Feb. 25, 1944.

FOR FRESH CITRUS FRUITS.

Claims use since Apr. 30, 1941.

Reg. No. 397,842. Registered Sept. 22, 1942. SUNFLOWER PACKING CORP., Porterville, Calif. Republished by Sunflower Packing Association, Porterville, Calif., a corporation of California.

Battle Front

FOR FRESH CITRUS FRUIT.

Claims use since May 18, 1942.

Reg. No. 403,996. Registered Oct. 26, 1943. MOR-PAK PRESERVING CORPORATION, San Francisco, Calif., a corporation of Nevada. Republished by registrant.

MOR-PAK

The word "Pak" is disclaimed apart from the mark as shown.
FOR CANNED FRUIT AND VEGETABLES.
Claims use since Aug. 29, 1925.

Reg. No. 417,848. Registered Nov. 20, 1945. REDLANDS FOOTHILL GROVES, Redlands, Calif., a corporation of California. Republished by registrant.

BRONCO

FOR FRESH CITRUS FRUITS.
Claims use since Dec. 1, 1909.

Reg. No. 418,404. Registered Dec. 18, 1945. THE EUCLID UNDERWRITING CORPORATION, Brooklyn, N. Y. Republished by The Euclid Candy Company, Inc., Brooklyn, N. Y., a corporation of New York.

DOLLY DIMPLE

FOR CANDY.
Claims use since Sept. 10, 1926.

Reg. No. 423,807. Registered Sept. 10, 1946. SHRODE-NELSON PRODUCE CO., Goleta, Calif., a firm. Republished by registrant.

SN

The word "Brand" is disclaimed apart from the mark as shown.
FOR FRESH VEGETABLES—NAMELY, TOMATOES.
Claims use since Oct. 1, 1944.

Reg. No. 427,548. Registered Feb. 11, 1947. STALEY MILLING COMPANY, North Kansas City, Mo., a corporation of Missouri. Republished by registrant.

FOUR BELLS ATOMS

FOR CHICK FEED IN MASH FORM.
Claims use since Mar. 29, 1946.

Reg. No. 434,203. Registered Nov. 11, 1947. STALEY MILLING COMPANY, North Kansas City, Mo., a corporation of Missouri. Republished by registrant.

BLESSED EVENT

FOR HOG AND PIG FEED.
Claims use since June 1939.

Reg. No. 434,596. Registered Nov. 25, 1947. LAKE COVE GROWERS, INC., Finley, Calif., a corporation of California. Republished by registrant.

PIRATE'S COVE

FOR FRESH DECIDUOUS FRUITS.
Claims use since July 25, 1931.

Reg. No. 434,803. Registered Dec. 9, 1947. CINDERELLA FOODS, Dawson, Ga., assignor, by mesne assignments, to Cinderella Foods Division of Stephens Industries, Inc. Republished by Cinderella Foods, Division of Stevens Industries, Inc., Dawson, Ga., a corporation of Georgia.

Fairylan

FOR PEANUT BUTTER, MAYONNAISE, SALAD DRESSING, OLEOMARGARINE, PEANUT BUTTER SANDWICHES, SALTED PEANUTS, AND CANDY.
Claims use since Nov. 12, 1945.

Reg. No. 438,575. Registered May 4, 1948. SOMIS LEMON ASSOCIATION, Oxnard, Calif., a corporation of California. Republished by registrant.

SEA GROVES

The word "Groves" is disclaimed apart from the mark as shown.
FOR FRESH CITRUS FRUITS.
Claims use since Apr. 8, 1946.

Reg. No. 438,961. Registered May 25, 1948. ALLIED FOOD CORPORATION OF AMERICA, New York, N. Y., a corporation of New York. Republished by registrant.

FOR GUAVA JELLY.
Claims use since Jan. 1, 1946.

Reg. No. 439,173. Registered June 8, 1948. JOHN MORRELL & Co., Ottumwa, Iowa, a corporation of Maine. Republished by registrant.

MORRELL

E-Z-Q

FOR CANNED PORK PRODUCT WITH BARBECUE SAUCE, THE INGREDIENTS OF WHICH ARE CHOPPED PORK, VINEGAR, SALT, CORN FLOUR, FLAVORING AND SUGAR.
Claims use since Mar. 30, 1946.

Reg. No. 439,688. Registered July 13, 1948. LAKE COVE GROWERS, INC., Finley, Calif., a corporation of California. Republished by registrant.

Lakecove

FOR FRESH DECIDUOUS FRUITS.
Claims use since July 25, 1931.

CLASS 47

WINES

Reg. No. 392,750. Registered Jan. 13, 1942. SALVATORE A. SALOMONE, doing business as Riverbank Wine Co., Brooklyn, N. Y. Republished by Riverbank Wine Company, Brooklyn, N. Y., a firm.

The drawing is lined for the colors red and black.
FOR WINES.
Claims use since Dec. 6, 1933.

CLASS 48

MALT BEVERAGES AND LIQUORS

Reg. No. 439,974. Registered Aug. 3, 1948. THE ERIE BREWING COMPANY, Erie, Pa., a corporation of Pennsylvania. Republished by registrant.

OLD DOBBIN

The word "Old" is disclaimed apart from the mark as shown.
FOR ALE.
Claims use since April 1933.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 371,011. Registered Sept. 12, 1939. THE BRUNSWICK-BALKE-COLLENDER COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

DE-LUXE

FOR BILLIARD TABLE COVERS, COMPOSED OF RUBBERIZED CLOTH, TO PROTECT THE TABLE FROM DUST, ETC.
Claims use since Feb. 15, 1939.

Reg. No. 373,031. Registered Nov. 21, 1939. MARCALUS MANUFACTURING CO., INC., Elizabeth, N. J., a corporation of New Jersey. Republished by registrant.

MARCAL

FOR DRINKING STRAWS.
Claims use since April 1939.

Reg. No. 417,444. Registered Oct. 30, 1945. JOHNSON & JOHNSON, New Brunswick, N. J., a corporation of New Jersey. Republished by registrant.

PADOCOTT

FOR FIBROUS WADDING OR BATTING MADE PRINCIPALLY FROM COTTON, CELLULOSE, OR SYNTHETIC FIBERS AND USED PRINCIPALLY FOR WRAPPING, PACKING OR PADDING.
Claims use since Apr. 30, 1940.

PLANT PATENTS

GRANTED JUNE 7, 1949

Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.

845

ROSE PLANT

Josephine D. Brownell, Little Compton, R. I.

Application April 22, 1946, Serial No. 663,870

1 Claim. (Cl. 47—61)

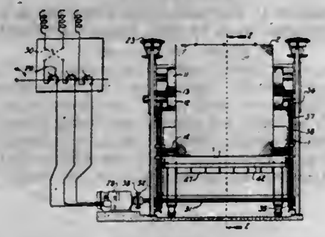
The variety of rose plant substantially as shown and described, characterized by its resistance to winter injury, its continuity and intensity of florescence, its pleasing fragrance, its long keeping character, the form of its petals, its character of long holding its flower form, the unique color combinations of red, its large number of petals, all in association with its habit of branching and cumulative growth, from the base by stems or canes.

846

ROSE PLANT

Josephine D. Brownell, Little Compton, R. I.

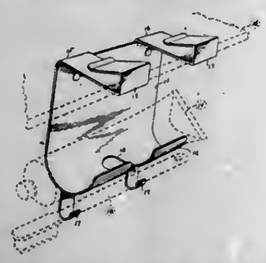
Application April 22, 1946, Serial No. 663,871



1 Claim. (Cl. 47—61)

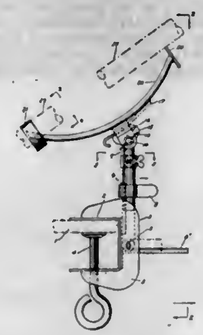
The hardy hybrid *Rosa wichuraiana* hybrid tea rose plant variety characterized by its resistance to winter injury, with leaves frequently of seven leaflets, of light red shades, averaging about 35 petals informally arranged that open to show the stamens, of fragrance closely resembling that of the carnation, all substantially as described.

PATENTS



GRANTED JUNE 7, 1949

2,472,057
APPARATUS FOR THE TREATMENT OF FABRICS
Raymond P. Allen, Akron, Ohio, assignor to Seiberling Rubber Company, Barberton, Ohio, a corporation of Delaware
Application November 20, 1945, Serial No. 629,802
7 Claims. (Cl. 91—17)

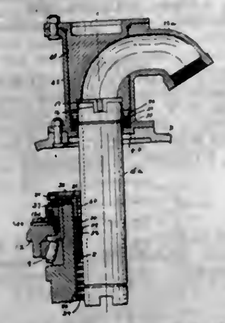


7. Means for treating tire fabric while spread flat which comprises fabric-dipping means with facilities for conveying fabric therethrough while spread flat; drying means which comprises rotatable means of large diameter adapted for the passage of fabric thereover while the fabric is spread flat; and between these freely rotatable means of uniform diameter which, in effect, is movable lineally with respect to said dipping and drying means over which the fabric passes while spread flat, and mechanism which includes a stalled torque motor connected with a reversible switch and a rheostat for maintaining said freely rotatable means in a substantially constant position lineally with respect to said dipping and drying means whereby the tension on the fabric is controlled and maintained substantially constant.

2,472,058
TUBE AND INSTRUMENT HOLDER
Wayne C. Artley, Des Moines, Iowa
Application February 6, 1947, Serial No. 726,869
4 Claims. (Cl. 248—108)

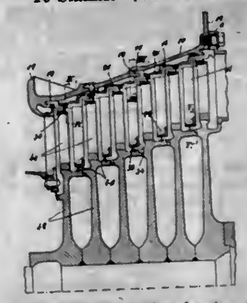
1. In a device of the class described, a base member having its lower free end portion bent outwardly to provide a shelf, and two elongated members spaced apart and secured to the back of said base member; said last two members having their lower end portions curved outwardly below said first-mentioned member and their upper end portions bent over the top of said first-mentioned member and then back upon themselves to form shelf engaging members.

2,472,059
FISHING ROD HOLDER
James A. Arwood, Birmingham, Ala.
Application June 11, 1946, Serial No. 676,026
1 Claim. (Cl. 248—42)



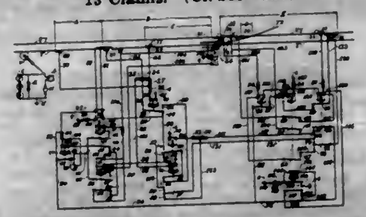
A fishing rod holder of the class described comprising; a U-shaped clamp, a groove in the body of the clamp, two extending arms integral with and leading from the groove and at right angle to each other, a piece of tube with one end swingably attached in the said groove and adapted to be set parallel with either of said extending arms, a sleeve positioned slidable on said tube and adapted to hold the tube parallel with and adjacent either of said extending arms, a wing handle integral with the sleeve; slits cut in the free end of said swingable tube; a second piece of tube with one end telescoped into the free end of the swingable tube, a clamping collar mounted around the said tubes and adapted by manual means to clamp the second tube within the swingable tube; a third piece of tube attached across the outer end of the second tube, a bracket swingably attached to the cross tube, a curved arm attached to the said swingable bracket, a loop portion formed on one end of the curved arm, a slot formed in the other end of the curved arm, a flange attached to the cross tube, a plurality of holes in the flange, a spring with one end thereof attached to the curved arm, an extension formed in and with the middle portion of the spring, the said spring extension adapted to be set into any hole in the said flange; a bolt positioned through the bracket on the cross tube and through the cross tube, a wing nut on the bolt, said bolt and nut adapted for clamping the bracket in any one of a plurality of positions on the cross tube.

2,472,060
METHOD OF SIMULATING SURFACE STRUCTURES
Berdge K. Beylerian, Los Angeles, Calif.
Application October 22, 1945, Serial No. 623,817
5 Claims. (Cl. 18—53)



1. A method of forming a surface structure simulating an original surface structure having areas wherein hollows and high spots are of different depths comprising the steps of making a mold of the original surface structure wherein the hollows and high spots are reversed, then applying to the areas of shallower depth in the mold a predetermined quantity of plastic rubber-like material having a predetermined density, applying to the areas of greater depth a quantity of said plastic material having a lesser density so that all portions of the original surface will be covered to substantially the same depth and provide a virtually flat reverse side, then applying a backing material to the reverse side before said material has jelled, causing the material applied to the mold to jell and a skin to form on the surface adjacent the mold, and removing the material from the mold.

2,472,061
ROTARY SWIVEL FOR DRILLING RIGS
Richard R. Bloss and Archie R. McLerran, Beaumont, Tex., assignors to International Derrick & Equipment Company, Columbus, Ohio, a corporation of Ohio
Application March 18, 1946, Serial No. 655,182
3 Claims. (Cl. 285—90)



1. In a swivel having stationary parts provided with a tubular inflow connection and having a rotatable stem mounted on one of said stationary parts, a tubular wash pipe arranged to conduct fluid from said connection to the stem, one end of said wash pipe being reduced in outside diameter and having notches therein, means on said connection loosely extending into said notches, said wash pipe having an external annular groove and at least one of said stationary parts having a counterbore, a resilient sealing ring in said counterbore around the wash pipe occupying less volume than the counterbore and a retaining ring engaging with said sealing ring and removably extending into said groove to form a support for said pipe whereby the latter is free to reciprocate axially and gyrate relative to the stationary parts.

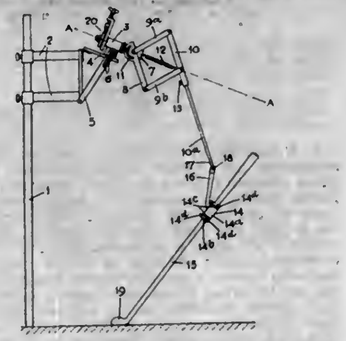
2,472,062
TURBINE CASING CONSTRUCTION
Gustav Karl William Boestad, Lidingo, and Hans Robert Nilsson, Fredhall, Stockholm, Sweden, assignors, by mesne assignments, to Jarvis C. Marble, New York, N. Y., Leslie M. Merrill, Westfield, N. J., and Percy H. Batten, Racine, Wis., as trustees
Application July 5, 1944, Serial No. 543,510
In Sweden August 24, 1943
10 Claims. (Cl. 253—69)

1. An elastic fluid turbine having an external casing and an internal annular member carrying turbine guide blades, said member being divided longitudinally of the turbine to provide a plurality of elements with longitudinally extending clearance spaces therebetween to permit peripheral expansion and contraction of the elements, cooperating guide surfaces on said casing and said elements for centering the latter relative to the casing, said surfaces engaging to restrain the member against radial movement thereof relative to the casing and to cause relative movement between the engaged parts due to differential expansion and contraction to take place peripherally at constant radius and sealing means engaging said elements to close said clearance spaces while permitting relative peripheral movement between adjacent ones of said elements.

2,472,063
SAFETY CONTROL FOR TRACK SWITCHES
Henry A. Brown, Cleveland, Ohio
Application June 8, 1944, Serial No. 539,329
13 Claims. (Cl. 246—227)

1. In combination with a road system including a road forming an approach to a junction having branch roads extending therefrom; directing means for traffic including means for de-

termining the branch road that may be taken by a vehicle from the junction; control means selectively operable from the vehicle for controlling selectively the operation of the determining means; and means supervising the selective operation of the determining means, said supervisory means operating in response to a vehicle entering a fixed portion of the approach road and utilizing any period of time greater than a certain predetermined period of substantial duration in passing over another portion of the approach road in advance of the said fixed portion, to operate the determining means in accordance with the selective operation of the control means, and in response to a vehicle entering the said fixed portion and utilizing any period of time less than the aforesaid predetermined period in passing over the said another portion of the approach road, to operate the determining means independently of the control means to direct passage of the vehicle onto a predetermined one of the branch roads.

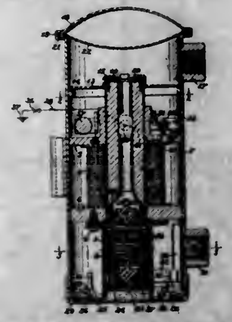


2,472,064
TOY BANK
Frank Damiano, Newburgh, N. Y.
Application May 14, 1947, Serial No. 748,091
4 Claims. (Cl. 46—2)

1. A toy comprising a human figurine having a movable leg, a movable arm and a movable head operatively connected together, said figurine including an eye, an electric lamp in the head of said figurine, the light from said lamp being visible through said eye, an accordion carried by said figurine, said accordion being connected to said arm and being actuated by the movement of said leg, and an electric switch in circuit with said lamp, said switch being alternately opened and closed by the movement of said leg.

2,472,065
GOLF EXERCISING APPARATUS
Rufus Frank Cettingham, Scunthorpe, England
Application October 31, 1946, Serial No. 706,853
In Great Britain August 24, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires August 24, 1965
5 Claims. (Cl. 273—35)

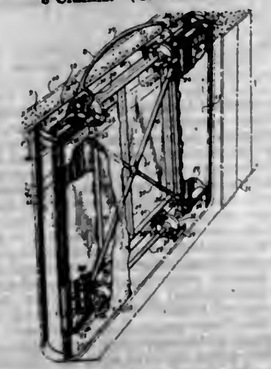
1. Apparatus for use in practising golf comprising a fixed structure, a stub shaft rotatably and angularly mounted on said fixed structure, a control device mounted by one end for rotation with said stub shaft, a combined swivel and pivot joint on the other end of said control device, club carrier means adapted to support a club with freedom to rotate about the longitudinal axis of its shaft, said carrier means being mounted by means of said swivel and pivot joint to said control device and adapted to swivel and pivot in relation thereto as the club supported in said



carrier means is gripped and swung by the player and braking means adapted for co-operation with the stub shaft to resist the turning of the control device and the associated carrier means and club to impose restraint on the swing of the club during the operative down stroke thereof.

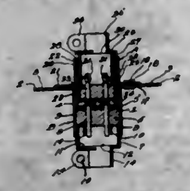
2,472,066
2-ARYLAMINO-4-HALOGENOQUINOLINES
Francis Henry Swinden Curd, Clifford Gordon Raison, and Francis Leslie Rose, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application July 31, 1945, Serial No. 608,087. In Great Britain August 31, 1944
1 Claim. (Cl. 260—288)

2-p-chloroanilino-4-chloro-quinoline.



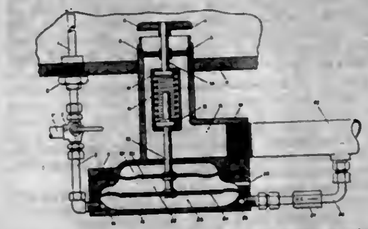
2,472,067
ELECTROMAGNETIC PUMP
John W. Dickey, Newfield, and Norwood S. Trout, Jr., Elmira, N. Y., assignors to Bendix Aviation Corporation, a corporation of Delaware
Application March 24, 1947, Serial No. 736,862
6 Claims. (Cl. 103—53)

1. In an electromagnetic pump, a cylinder of nonmagnetic material, a hollow piston of magnetic material therein, a spring for actuating



the piston on its discharge stroke, means including a solenoid surrounding the cylinder for retracting the piston, a casing surrounding the cylinder and solenoid and providing an inlet chamber at one end of the cylinder having an inlet opening and an outlet chamber at the other end having an outlet opening, means preventing backward flow of liquid through the cylinder and piston, a removable cap closing the inlet end of the casing, means in the casing closing the inlet opening, and means on the cap for opening the closure when the cap is attached to the casing.

2,472,068
EXPANSIBLE CORE FOR USE IN MOLDING HOLLOW CONCRETE WALLS
Kathryn Farley, Chicago, Ill.
Application May 22, 1946, Serial No. 671,615
8 Claims. (Cl. 25—128)

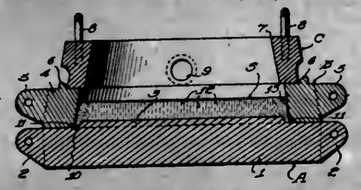


1. In a molding form of the character described including side plates and end sections, expanding and contracting means comprising, cam shafts provided with cam grooves and rotatably secured to hubs of the said end sections, shoulder screws secured to the said hubs their extensions engaging the said cam grooves in the said cam shafts, cam discs secured to the said cam shafts, roller brackets secured to the said side plates and engaging the said cam discs, transmission means interconnecting the said cam shafts, and rotatable manipulative means secured to one of the said cam shafts.

2,472,069
TRACTOR TRAILER ELECTRICAL COUPLING
Wayne O. Folger, Wichita, Kans.
Application November 1, 1946, Serial No. 707,248
2 Claims. (Cl. 173—328)

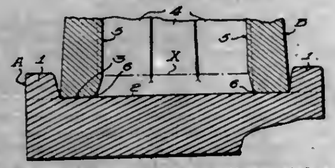
1. An electrical connector comprising two members, one of said members constituting a plug and the other a socket, the plug member including a shell, a sleeve telescopically engaging within said shell, means for constantly urging the sleeve outwardly beyond an end of the shell, an insulating medium within the shell, contact members carried by said medium, a second sleeve freely insertable within the shell through the end thereof remote from the first sleeve, and providing means for holding the insulating medium within the first sleeve, and contact members within the socket member with which the contact members of the plug member engage when the two members are in assembly.

2,472,070
PRESSURE CONTROLLED LIQUID OUTLET VALVE
Owen L. Garretson, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application April 15, 1946, Serial No. 662,370
4 Claims. (Cl. 137—68)



3. In a valve of the class described in combination: a valve body having a fluid conduit therethrough; a moveable valve head adapted to be moved to open and close said conduit; means for transmitting force not exceeding a predetermined maximum to said valve head tending to move the same to open said conduit and for transmitting force to said valve head tending to move the same to close said valve comprising in combination a moveable rigid thrust member, a compressible resilient member carried by said thrust member, a moveable valve stem attached to said valve head adapted to rest upon and receive thrust from said compressible resilient member, a housing disposed to enclose said compressible resilient member and to receive slidably said valve stem and said rigid thrust member adapted to limit separation of said valve stem and said thrust member; a fluid actuated diaphragm attached to said rigid thrust member adapted to move the same in a direction to transmit force to said valve head tending to close said valve; and a second gas actuated diaphragm attached to said rigid thrust member adapted to move the same in a direction to transmit force to said valve head tending to open said valve.

2,472,071
MOLD ASSEMBLY FOR PRODUCING CAST METAL SLABS
Emil Gathmann, Baltimore, Md., assignor to Gathmann Research Incorporated, Catonsville, Md., a corporation of Maryland
Application August 6, 1945, Serial No. 609,066
2 Claims. (Cl. 22—139)

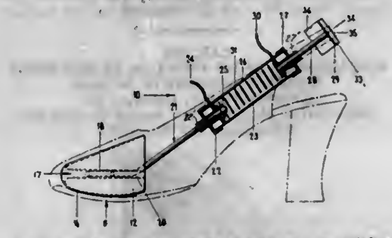


1. In a mold assembly for casting an easily shatterable metal slab, a mold proper the matrix walls of which are highly tapered; a supporting stool having a high heat absorptive capacity as compared to that of said matrix walls; and a substantially flat pad on said stool of less height

than said matrix walls extending up into the matrix and having its margin spaced inwardly from the lower portions of the matrix walls to provide a space for forming a narrow marginal rim cast integrally with the slab, whereby said pad and said rim will maintain the slab centered

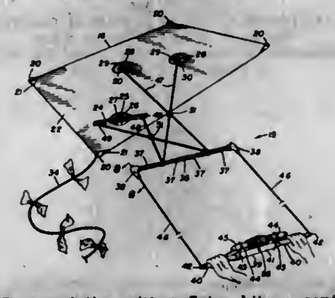
with respect to the matrix walls to provide for the formation of a substantially uniform dead air space between the slab edges and the matrix walls when the slab contracts on cooling, the ratio of the mold matrix horizontal dimension to the mold matrix height being much greater than two-to-one so that a casting formed in said matrix will be in the form of a thin slab.

2,472,072
INGOT MOLD
Emil Gathmann, Baltimore, Md., assignor to Gathmann Research Incorporated, Catonsville, Md., a corporation of Maryland
Application September 4, 1945, Serial No. 614,377
5 Claims. (Cl. 22—139)



1. In a mold assembly for casting metal, a big-end-down mold proper; and a stool on which the mold proper is supported, the matrix walls of the mold proper and the lower face of the mold proper merging in a smoothly rounded convex edge.

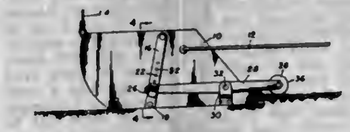
2,472,073
DOUGH CUTTING AND PLACING MACHINE
Erwin Haecks, San Francisco, Calif.
Application January 30, 1946, Serial No. 644,384
2 Claims. (Cl. 107—7)



1. In a machine of the kind described, a main endless belt conveyor having an upper horizontal run for carrying dough and provided with a belt carrying roll at its delivery end whereby dough from the conveyor will move from horizontal to vertical position, a pair of downwardly converging endless belt guides positioned at the delivery end of said main conveyor to receive dough delivered therefrom, said guides having spaced belt rolls at their upper ends gear connected for simultaneous rotary movement, one of said guides being swingingly supported from its upper end, a counterweight carried by said last mentioned dough guide urging its lower end yieldably toward the other dough guide, driving means connecting said main belt roll with one of the dough guide gears, and means to drive said main belt.

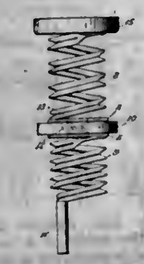
2,472,074
FINGER-GRIP SHOE TREE
Leonard B. Harris and Vito E. Pascale, New York, N. Y.
Application October 15, 1946, Serial No. 703,436
2 Claims. (Cl. 12—128.2)

1. In a one-hand actuated shoe tree comprising an angularly shaped strut member one leg of which comprises a loop-shaped end portion, a composite toe member comprising two toe engaging arms pivotally mounted on said loop-shaped end for movement to and from each other, the other leg of said angularly-shaped strut member carrying an arcuate member adapted to engage the upper extremity of the heel portion of a shoe, and spring actuated means urging said toe and heel members in opposite directions, said spring actuated means comprising a tubular housing having a longitudinal slot in its upper surface, bearings secured respectively at each end of said housing, two finger grips slidable in said housing, and passing through said slot, said arcuate heel member being integral with one of said finger grips, one leg of said strut member being integral with the other finger grip, a compression coil spring in said tubular housing pressing against said finger-grip arms for extending said toe and heel members, said strut being of an obtuse angular shape to cause said finger-grip members to extend above a shoe, whereby said shoe tree is insertable into or removable from a shoe while actuated by one hand of the user.



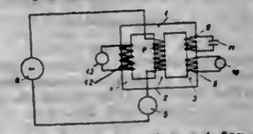
2,472,075
FLYING KITE AND CONTROL
Harvey K. Hole, Dayton, Ohio
Application December 12, 1946, Serial No. 715,765
3 Claims. (Cl. 244—153)

1. In association with a flying kite, a control comprising a guiding rod, pairs of crossed cables



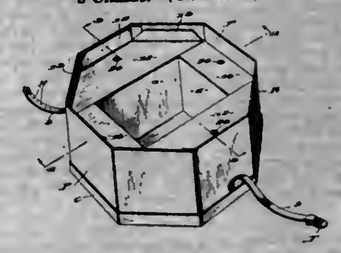
connecting said rod in spaced relation to said kite, an actuating rod, and a pair of spaced cords operatively connecting said rods together.

2,472,076
SCRAPER GUIDE
George R. Howe, Medaryville, Ind.
Application May 20, 1947, Serial No. 749,247
2 Claims. (Cl. 37—135)



1. A scraper guide comprising a drag line bucket having sides, a back, a bottom and an open front, brackets, means securing one of said brackets on each side in spaced relation relative to said sides, said brackets having apertures therein, arms, means pivotally securing said arms intermediate their ends to said sides for swinging movement in a travel above and below said bottom, means carried by one pair of ends of said arms for controlling the depth of cut taken by said bucket, means disposed in selected apertures associated with the opposite ends of said arms for limiting pivotal travel of said arms, said depth control means including a ground engaging member rotatively secured to said arms across the open end of said bucket.

2,472,077
CATHODE STRUCTURE FOR ELECTRIC DISCHARGE DEVICES
John H. Hutchings, Geneva, Ill., assignor to Continental Electric Company, Geneva, Ill., a corporation of Illinois
Application March 27, 1945, Serial No. 585,029
17 Claims. (Cl. 250—27.5)



1. A cathode for an electric discharge device comprising a filament structure having an elongated surrounding shield and adapted to emit electrons to a plurality of anodes located on different sides of the shield, said shield having a plurality of openings in different sides thereof respectively spaced lengthwise of the shield and out of alignment with each other transversely of the cathode structure, said shield being imperforate to electronic transmission at other than said perforated side thereof in the same transverse plane.

2,472,078
ELECTRIC HEADLIGHTING FOR VEHICLES
Břetislav Hybler, Hubalov, Czechoslovakia
Application May 3, 1946, Serial No. 666,889
In Czechoslovakia September 26, 1945
5 Claims. (Cl. 315—79)

1. Electrical lighting equipment for a vehicle, comprising at least two light sources mounted thereon, an alternating current generator mounted on the vehicle and mechanically connected to be operated in accordance with the speed of the vehicle, and means electrically connecting said light sources with said generator, and so constructed that one of said light sources is fed with current of sufficient intensity to become luminous only at relatively low speeds of said vehicle, and the other of said light sources is fed with current of sufficient intensity to become luminous only at higher speeds of said vehicle, said last means comprising an iron core having at least two legs, and a winding on each of said legs, each said winding being in series with one of said light sources.

2,472,079
COMBINED HAT STAY AND COMPARTMENTING MEANS FOR HAT BOXES
Louise James and Joseph E. Jubin, New Orleans, La.
Application May 29, 1947, Serial No. 751,384
3 Claims. (Cl. 206—8)

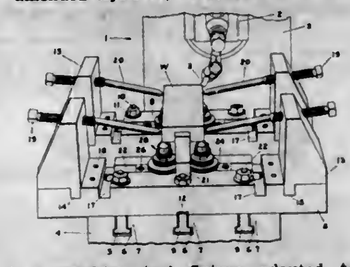
1. In a hat box of polygonal cross sectional shape having relatively opposed parallel pairs of vertical side wall panels, a hat stay and compartmenting means comprising a pair of relatively spaced vertical main partitions extending between the side wall panels of one of said pairs and dividing the interior of said box into a medial space between said partitions and side compartments on relatively remote sides thereof, in combination with integral extensions respectively extending from opposite longitudinal ends of said partitions, each said extension comprising a plurality of relatively folded vertical panels defining an end compartment of parallelogram cross section collapsible into flat condition against its respective main partition, said end compartments being disposed at opposite ends of said medial space and being relatively spaced to define between them an upwardly opening central well adapted to receive the crown of a hat and center same in inverted condition in said box, said partitions and their respective extensions having lin-

ear upper edges lying in a substantially common horizontal plane below the top of the box, and closure flaps for each of said side and end compartments hinged to said upper edges and operatively folded into the plane thereof to form a composite hat brim supporting tray around said central well.

2,472,080
BARREL CONTRACTING TOOL
William D. Jordan, Anamosa, Iowa
Application June 29, 1945, Serial No. 602,357
1 Claim. (Cl. 147—4)

A barrel tightener comprising a hollow handle being open at one end and having an axially apertured closure in its opposite end, spaced parallel laterally extending jaw plates secured to said handle at its open end and formed with opposed arcuate barrel-engaging jaw surfaces, spaced pins secured between said jaw plates, antifriction rollers disposed on said pins, a screw slidably disposed through said handle and apertured closure having an eye on its end adjacent the open end of said handle, a fixed link connected with said eye, a chain secured intermediate its ends to said fixed link, a hook on one end of said chain, an operating arm formed with a threaded opening forming a nut adapted to extend over the threaded outer end of said screw, and an operating handle formed on the outer end of said operating arm for rotating said operating arm to draw said chain into said hollow handle when placed about a barrel for securing a barrel head.

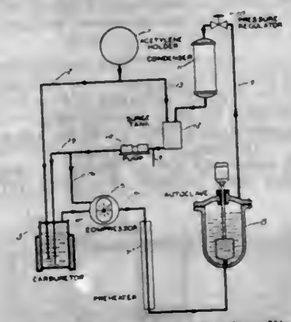
2,472,081
BINDING FOR LINOLEUM
Abraham I. Kantor, Bloomfield, N. J.
Application April 11, 1945, Serial No. 587,691
1 Claim. (Cl. 94—3)



In a binding for sealing meeting edges of linoleum, the combination of a pair of juxtapositioned sheets of linoleum having meeting edges, with a flat strip having comparatively short arcuate flanges at the edges providing an open recess in the inner part of the strip between the flanges, a layer of adhesive cement providing filling material filling the said recess in the under surface of the strip between the flanges, said strip overlying said meeting edges and being secured thereto by said cement, and spaced pairs of brads extended through the opposite edges of the strips and into said meeting edges with one brad of each of said pairs in each of said sheets of linoleum.

2,472,082
THERMAL SWITCH
George C. Armstrong, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Original application April 3, 1945, Serial No. 586,287. Divided and this application August 15, 1946, Serial No. 690,631
7 Claims. (Cl. 200—122)

1. An electric contact device, comprising a heatable and expansible container structure of variable volume having a quantity of mercury enclosed by said structure, a quantity of volatile liquid disposed in said structure so as to volatilize when sufficiently heated in order to then expand the volume of said structure, said container structure having two interior contact surfaces insulated from each other and engageable by said mercury quantity so as to be electrically interconnected and disconnected by said mercury quantity depending upon the change in mercury level caused by the change in volume of said structure.



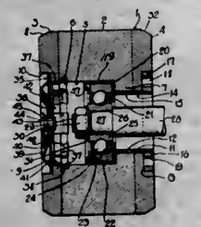
2,472,083
MACHINE TOOL FIXTURE
Carl O. Bartholdy, San Francisco, Calif.
Application July 3, 1945, Serial No. 603,096
4 Claims. (Cl. 90—60)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A machine tool fixture adapted to be mounted upon the table of a machine tool including, a pair of base plates supported upon the table and extending transversely thereof, the base plates being movable longitudinally of said table and relative to each other, keys carried by said base plates and coacting with the table for guiding and securing the base plates in adjusted positions, each base plate having an elongate longitudinal slot extending vertically therethrough, a pair of blocks slidably mounted within each slot so as to be movable transversely of said table, a key associated with each block and coacting with the slot for confining the block in said slot, means securing each key to its block and being tightened so as to bind the key against movement and fasten said block in adjusted

positions, each block having a vertical socket formed therein, a flanged pin engaging within each socket and having an axial bore, a second flanged pin screw-threaded into the bore of the first pin and having an axial bore, a lock nut carried by the second pin and overlying the flange of said first pin for locking said second pin in a vertically-adjusted position, a third pin screw-threaded into the bore of the second pin and having an enlarged head projecting thereabove, a slotted washer engageable upon the third pin and supported upon the flange of said second pin for controlling the vertical projection of the head of said third pin, whereby the elevations of the pair are vertically-adjustable and coact with the pins of the other block to support work in angular relation to the machine tool, a stop carried by the base plate farthest from said machine tool for preventing movement of the work longitudinally of said table away from the machine tool, said base plates having spaced transverse channels formed in their upper surfaces adjacent their longitudinal ends, an upright member overlying and secured to each end of each base plate, the member having a depending rib engaging within one of the channels, a set screw screw-threaded through the upper portion of said member and extending inwardly and downwardly, and a pin having a tapered inner end interposed between the lateral margin of the work and the inner end of the set screw for preventing transverse displacement of said work.

2,472,084
CARBURETOR PROCESS FOR ACETYLENE REACTIONS
Hans Beller, Cranford, and Robert E. Christ and Fritz Wuerth, Elizabeth, N. J., assignors to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
Application October 10, 1945, Serial No. 621,620
12 Claims. (Cl. 260—614)

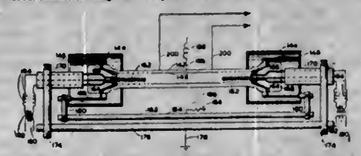
1. In a process involving the handling of acetylene wherein acetylene, from a low pressure source thereof maintained at conditions of temperature and pressure at which acetylene is non-explosive, is compressed and passed through a high pressure zone maintained at conditions of temperature and pressure at which the acetylene is normally explosive, the method of eliminating the danger of acetylene explosion which comprises contacting a stream of acetylene from said low pressure source while it is still at a low temperature and pressure outside the explosive range of acetylene with a volatile normally-liquid organic compound which is non-explosive at the conditions maintained in said high pressure zone, said liquid with which the acetylene is contacted being in liquid phase and being maintained at a predetermined temperature such that the acetylene on contact therewith becomes saturated with the vapors of said normally-liquid compound in such an amount as to form a mixture of acetylene and said vapors in such predetermined ratio that such mixture is non-explosive at said normally-explosive conditions of said high pressure zone, compressing the thus-obtained mixture of acetylene and vapors of said normally-liquid compound to the pressure maintained in said high pressure zone and introducing the thus-compressed mixture of acetylene and vapors into said high pressure zone while maintaining said mixture of acetylene and said vapors in said high pressure zone and during the compression step specified at a temperature above that at which said vapors will be condensed, withdrawing a stream of acetylene and said vapors from said high pressure zone and adjusting the pressure and temperature of the thus-withdrawn stream to conditions of temperature and pressure at which acetylene is non-explosive and thereafter separating said acetylene from said normally-liquid compound.



2,472,085
CARBURETOR PROCESS FOR MAKING N-VINYL COMPOUNDS
Hans Beller, Cranford, and Robert E. Christ and Fritz Wuerth, Elizabeth, N. J., assignors to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application October 10, 1945, Serial No. 621,621
4 Claims. (Cl. 260—315)

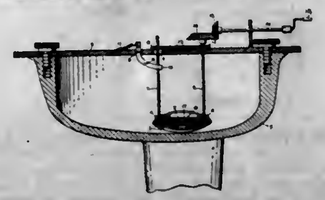
1. In the process of producing N-vinyl compounds wherein acetylene is introduced into a reaction zone and reacted therein, in the presence of a small amount of a compound having a strongly alkaline reaction, with an organic nitrogenous compound having a reactive hydrogen on the nitrogen thereof and selected from the group consisting of pyrrole compounds and secondary N-diarylamines known to be reactable with acetylene maintained in said reaction zone, said reaction being effected at a predetermined temperature of from 100–200° C. and a superatmospheric pressure at which the acetylene is normally explosive; the method of eliminating the danger of acetylene explosion and increasing the efficiency of the reaction which comprises contacting the acetylene which is introduced into said reaction zone while it is under non-explosive conditions of temperature and pressure with a volatile normally liquid inert organic compound which is non-explosive at said reaction conditions, said volatile normally liquid organic compound with which the acetylene is contacted being in liquid phase and being maintained at such a predetermined temperature that the acetylene becomes saturated with the vapors of said normally liquid organic compound in such an amount as to form a mixture of acetylene and such vapors in such a predetermined ratio that said mixture is non-explosive at said normally explosive reaction conditions, adjusting the pressure and temperature of the thus-formed mixture to these normally explosive reaction conditions, introducing the thus-obtained mixture into said reaction zone while maintaining it at a temperature above that at which said vapors will condense and therein effect the desired reaction between the acetylene and said organic nitrogenous compound and recovering the thus-obtained N-vinyl compound.

2,472,086
CARBURETOR PROCESS FOR ACETYLENE REACTIONS
Hans Beller, Cranford, and Robert E. Christ and Fritz Wuerth, Elizabeth, N. J., assignors to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application October 10, 1945, Serial No. 621,622
6 Claims. (Cl. 260—468)



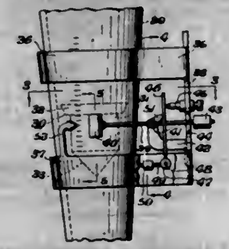
1. In a process of producing vinyl esters wherein acetylene is introduced into a reaction zone and reacted therein with an organic carboxylic acid maintained in said reaction zone under elevated conditions of temperature and pressure at which the acetylene is normally explosive, the method of eliminating the danger of acetylene explosion which comprises contacting the acetylene which is supplied to said reaction zone while it is under non-explosive conditions of temperature and pressure with a volatile normally liquid organic compound selected from the group consisting of volatile organic liquid diluents which are inert in said reaction and volatile organic acids employed in said reaction, said contacting being effected while said volatile normally liquid organic compound is in liquid phase and is maintained at such a predetermined temperature that the acetylene on contact therewith becomes saturated with the vapors of said volatile normally liquid organic compound in such an amount as to form a mixture of acetylene and such vapors in such predetermined ratio that said mixture is non-explosive at said normally explosive reaction conditions, adjusting the pressure and temperature of the thus formed mixture to said normally explosive reaction conditions, introducing the thus obtained mixture into said reaction zone while maintaining it at a temperature above that at which said vapors will condense and therein effecting the desired reaction between said acetylene and said organic carboxylic acid to produce a vinyl ester and recovering the same.

2,472,087
ROLLER SKATE WHEEL HUBCAP
Carroll M. Bierman, Franklin Square, N. Y., assignor of one-half to Frank J. Wagner, Franklin Square, N. Y.
Application September 12, 1945, Serial No. 615,778
2 Claims. (Cl. 301—108)



1. A roller skate wheel comprising a tread having a central chamber, there being an annular recess at the outer end of said central chamber and an inner annular recess spaced from said outer annular recess, an ornamental cap including a base disk positioned in said outer annular recess, an ornamental disk having a concave polished face, there being ornamental stones mounted in said concave face, a spider having spring fingers, and a rivet securing the ornamental disk, base disk and spider to one another, the spring fingers entering said inner annular recess and resiliently anchoring said ornamental cap in place with the outer face of the cap flush with the outer face of the wheel.

2,472,088
OSCILLATOR TUBE
Clarence A. Boddie, Belmar, N. J.
Application June 18, 1943, Serial No. 491,374
24 Claims. (Cl. 250—36)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

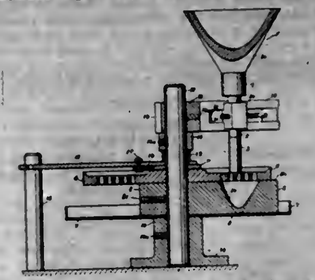


22. A very high frequency oscillator comprising first and second parallel closely spaced conductors, opposite ends of the first conductors including means constituting grids, opposite ends of the second conductors including means constituting anodes, two cathodes respectively positioned near said grids and on the opposite ends thereof from the anodes, enclosure means for maintaining the cathode-anode electron paths evacuated and air tight, supporting means for the first conductor comprising third and fourth conductors passing through said enclosure means and connected to and supporting opposite ends respectively of the first conductor, a grid-to-grid current path external to the enclosure including tuning means therein for varying the frequency of the oscillator, said grid-to-grid current path being connected between the outer ends of the third and fourth conductors, a conductor for connecting the cathodes together, and a source of high potential direct current impressed between the cathodes and said second conductor.

2,472,089
COIL WINDER
Linn S. Brennan, Dayton, Ohio
Application April 3, 1945, Serial No. 586,425
12 Claims. (Cl. 242—4)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In combination, in an antenna wire winding device, an antenna loop housing, a plate removably mounted on the base of said loop-housing, parallel shafts journaled therein and provided with spaced friction driving cylinders, means for driving both said cylinders in opposite directions and means for yieldingly urging one of said cylinders toward the other during the driving operation.

2,472,090
FLOW-ACTUATED VALVE
Nathaniel Brewer, Hatfield, Pa., assignor to Fischer & Porter Company, Hatboro, Pa., a corporation of Pennsylvania
Application November 23, 1943, Serial No. 511,493
14 Claims. (Cl. 137—152)



1. A device of the character described comprising a vertical tube, a float within said tube, said tube and float being so constructed and arranged that the float will assume definite positions, respectively, for each different rate-of-flow of fluid through said tube, a supply-and-waste type air valve including a nozzle and a flapper, a balanced lever mounted adjacent said tube and adjustable vertically therealong, means creating a magnetic couple intermediate said float and one end of said lever, the lever, lever mounting and magnetic couple being so arranged that said lever mounting may be adjusted to position said lever horizontally for any desired position of said float, vertical movement of said float from said desired position causing tilting of said lever, and means for causing relative movement of said flapper and said nozzle responsive to tilting of said lever, the air pressure within said nozzle varying generally according to the angle of tilt.

2,472,091
BORE SIGHT FOR INSERTION IN THE BREECH CHAMBER OF GUNS TO PROVIDE OVERLAPPING IMAGES OF MUZZLE PORTIONS OF THE GUN BORES
Leo H. Brown, Glenville, Conn.
Application May 23, 1944, Serial No. 536,933
5 Claims. (Cl. 88—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

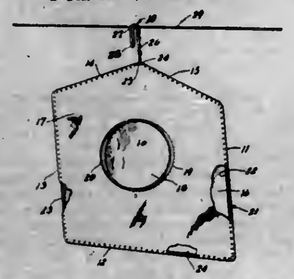
1. A bore sighting device comprising a disc adapted to fit within the breech portion of a gun transversely across the longitudinal axis of the bore of said gun, there being spaced sighting apertures in said disc, each adapted when said disc is in said breech portion, as aforesaid to define a line of sight parallel to said axis and closely adjacent a respective element of the surface of said bore, an optical prism carried by said disc having parallel end faces extending at 45° across the respective lines of sight, one of said faces being partially reflecting and the other of said faces being totally reflecting, and a complemental prism secured to said partially reflecting face, whereby overlapping views of spaced portions of said bore surface at the muzzle of a gun may be afforded at an observing position at the breech thereof.

2,472,092
DISPENSING AND MEASURING DEVICE
Alvin A. Campbell, Hackettstown, N. J.
Application April 8, 1942, Serial No. 438,960
7 Claims. (Cl. 222—264)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a material dispensing apparatus, a disk having a plurality of series of holes therethrough, each hole of a series being disposed equidistant from the center of the disk, adjacent disk holes of a series being displaced an equal angular distance, a ratchet wheel having teeth displaced said equal angular distance mounted on the disk, a spindle, means for rotatably mounting the disk about the spindle, a cross head above the disk and extending outwardly from the spindle, filling apparatus radially adjustable on the cross head whereby the holes of a given series may be filled, a tube forming a part of the filling apparatus and abutting the upper disk surface on a ground fit, a shoe having an exposed surface which engages the lower disk surface on a ground fit and provided with a passageway mouth, said passageway mouth extending radially to include radially aligned holes in adjacent series and extending circumferentially somewhat less than said angular distance.

2,472,093
CLEANING TOOL FOR TUBES
Charles E. Cournoyer, Port Washington, and Robert R. Charron, New York, N. Y.
Application January 16, 1946, Serial No. 641,552
5 Claims. (Cl. 15—4)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

3. A tool for swabbing a longitudinal bore surface formed internally of a body comprising a relatively long shaft having at one end a shank adapted for connection to a source of power for actuating said shaft and at its other end having rigidly attached thereto a transverse member having a periphery, multiple clamps mounted peripherally on said member, multiple swabbing elements detachably secured to said member by



said clamps, said swabbing elements being mounted to protrude beyond the periphery of said member, a hanger disposed adjacent said member for supporting said shaft centrally relative to the bore comprising a collar fitting loosely about said shaft, a radially extending web formed integrally with said collar and a longitudinally extending T-head formed integrally with the end of said web remote from said collar and adapted for contact with the body, said T-head having scraping edges formed on opposite ends thereof, an adjustable collar on said shaft disposed on the side of the hanger opposite from the transverse member and adapted to be locked to said shaft to limit the distance said hanger collar may slide relative to said shaft in a direction away from said member, and a second hanger similar to said first hanger and disposed on said shaft on the side of said adjustable collar away from said first hanger.

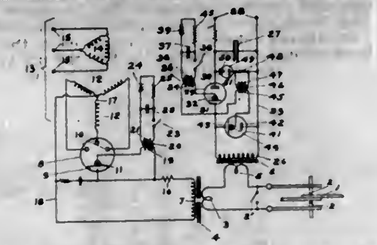
2,472,094

CLOTHESPIN SACK

Florence E. Cowles, New Braunfels, Tex.

Application April 2, 1946, Serial No. 658,925
1 Claim. (Cl. 150—1.8)

A clothespin sack comprising a pair of substantially rectangular and flexible walls secured to each other along their marginal edges, an entrance mouth provided in one of said walls at substantially the center thereof, a resilient band reinforcing said entrance mouth, an undulated wire interposed between said walls and having a plurality of peaks, said peaks engaging said walls adjacent the marginal edges thereof for retaining said walls in an extended and spaced position relative to each other, a wire member including a substantially U-shaped member having its leg portions twisted, said U-shaped member being bent intermediate its leg portions and its web portion to provide a hook, the leg portions of said U-shaped member being elongated to provide hanger arms extending between said walls, said walls having an opening therebetween through which said hook projects outwardly of said walls, and a cross brace between said hanger arms.



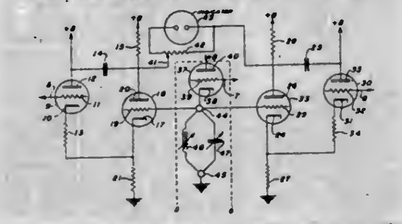
2,472,095

RESISTANCE WELDING SYSTEM

John W. Dawson, Auburndale, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware

Application September 10, 1940, Serial No. 356,146
30 Claims. (Cl. 219—4)

1. In combination, an inductance, a load circuit operatively related thereto, means for supplying a magnetomotive force to said inductance to store energy in said inductance by setting up magnetic flux, means for supplying an auxiliary magnetomotive force to said inductance to maintain said flux and for simultaneously cutting off said first-named magnetomotive force, and



means for causing said auxiliary magnetomotive force to decrease to cause collapse of said flux and delivery of said energy to said load circuit.

2,472,096

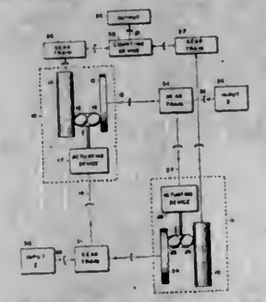
RADIO-FREQUENCY TESTING CIRCUIT

Charles E. Dennis, United States Navy

Application March 1, 1946, Serial No. 651,415
7 Claims. (Cl. 175—183)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a radio-frequency testing circuit, the combination comprising a pair of amplifying tubes each having a cathode, a control grid, and a plate circuit; a pair of vacuum tubes each having a cathode, a grid, and a plate, the cathodes of said vacuum tubes being resistance coupled to the cathodes of said amplifying tubes, respectively; a direct-current indicator connected between said plate circuits and responsive to the difference in currents therein; a third vacuum tube having a plate, a grid, and a cathode connected to the grids of said amplifying tubes; a source of three alternating voltages of the same frequency and two having the same amplitude, the third voltage having a phase angle which bisects the phase angle between the said two voltages; means for feeding the said two voltages to the grids of said pair of vacuum tubes, respectively; means for feeding the third voltage to the grid of said third vacuum tube; and test terminals in series with the plate to cathode circuit of said third vacuum tube adapted for connecting thereacross an impedance network to be tested.

2,472,097



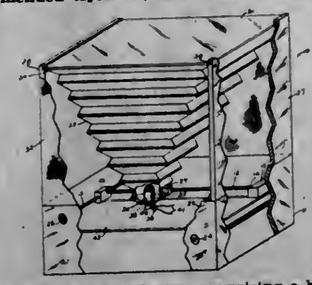
MULTIPLYING MECHANISM

Charles H. Doersam, Jr., Palisade, N. J.

Application February 15, 1946, Serial No. 647,983
3 Claims. (Cl. 74—675)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A multiplying system for obtaining an output quantity proportional to the product of two input quantities, comprising; means receiving the

input quantities, a first variable ratio drive mechanism responsive to the first of said input quantities for producing a first result quantity proportional to the first input quantity, said first variable ratio drive mechanism also responsive to the second input quantity for controlling the proportion by which the first input quantity is changed in the first variable ratio drive mechanism, a second variable ratio drive mechanism responsive to the second of said input quantities for producing



a second result quantity, proportional to the second input quantity, said second variable ratio drive mechanism also responsive to the first input quantity for controlling the proportion by which the second input quantity is changed in the second variable ratio drive mechanism, and counting means combining the first and second result quantities to produce an output quantity proportional to the sum of the first and second result quantities.

2,472,098

NAVIGATIONAL MAP PROJECTION DEVICE

Richard L. Duncan, West Lafayette, Ind.

Application May 28, 1946, Serial No. 672,901
2 Claims. (Cl. 88—24)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A navigational device comprising a housing, a translucent screen secured at one end of said housing, a micro-film positioned parallel to said screen near the other end of said housing, a screw shaft journaled in said housing along one side thereof, a variable speed reversible motor adapted to rotate said screw shaft, a splined shaft driven by a similar motor and journaled in said housing at the other side thereof parallel to said screw shaft, a worm gear slidable on said splined shaft and rotatable therewith, a second screw shaft journaled at one end on an internally threaded block threadably engaged with the first-named screw shaft and drivably connected by gear at the other end to said worm gear, a second internally threaded block movable on said second screw shaft, two adjustable dials calibrated one each in longitude and in latitude secured one each to the end of said first named screw shaft and to said splined shaft, a lens system mounted on said second internally threaded block and movably positioned between said micro-film and said screen, a light source secured to said lens system and movable therewith, and remote switch means for controlling the speed and direction of rotation of said motors whereby said lens system moves between said micro-film and said screen projecting filmed data thereon.

2,472,099

RUST INHIBITING COATING COMPOSITIONS

Loy S. Engle, Harrington Park, N. J., and Walter Fikar, Jackson Heights, N. Y., assignors to Interchemical Corporation, New York, N. Y., a corporation of Ohio

No Drawing. Application May 13, 1944, Serial No. 535,558
3 Claims. (Cl. 148—6.15)

3. A rust-inhibiting composition, consisting essentially the reaction product obtained by heating together, to about 150° C., a heat-bodied glyceride oil and an acid alkyl phosphate, dissolved in a volatile solvent, there being present from about ½ to 10% by weight of alkyl phosphate, heat-bodied glyceride oil in at least approximately as great quantity as the phosphate, but not exceeding about 30%, and 70% or more of volatile solvent.

2,472,100

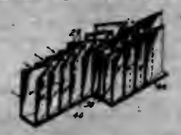
BITUMINOUS MASTIC COATED METAL SHEET

William F. Fair, Jr., Pittsburgh, Pa., assignor, by mesne assignments, to Koppers Company, Inc., a corporation of Delaware

Application November 6, 1943, Serial No. 509,302
1 Claim. (Cl. 154—45.9)

In a metal structural element having a layer of filler- and fiber-containing bituminous mastic bonded directly to metal surface of said element, the said layer of mastic and said metal element both being in sealed-in relationship to a coating of coal-digestion pitch containing heavy water gas tar heavy oil, said pitch in combination with said oil having a softening point of about 90° C. to about 150° C. and penetrations of not less than 10 at 32° F. and not more than 70 at 115° F., and the said pitch containing the said oil preventing penetration of water to the metal surface and being non-flowing at high atmospheric temperatures and being non-embrittling at low atmospheric temperatures, thereby preventing removal of said layer from said metal surface.

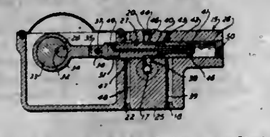
2,472,101



STEAM DRYING APPARATUS

Martin Frisch, New York, N. Y., assignor to Foster Wheeler Corporation, New York, N. Y., a corporation of New York

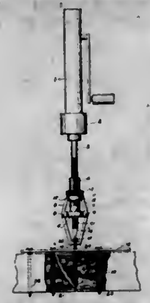
Application January 24, 1941, Serial No. 375,735
1 Claim. (Cl. 183—109)



In steam generating apparatus having a drum and means for introducing steam into the drum, and means for drying the steam in the drum comprising a plurality of spaced, substantially par-

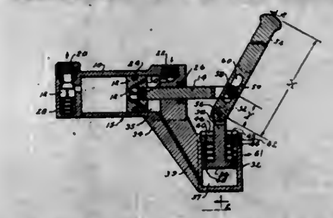
allel rows of separate vertically extending V-shaped plates horizontally spaced, with the apex edge of one plate within the area bounded by the next adjacent plate in the same row, the included angle between the legs of the plates in one row

being different from the corresponding angle of the plates of another row, the plates being disposed in the drum so that the steam to be dried flows in a substantially horizontal direction through the passages between the plates.



2,472,102
METERING DEVICE
Ross Lauder Fryer, Jr., Washington, D. C.
Application October 5, 1944, Serial No. 557,360
2 Claims. (Cl. 222—361)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A device for metering fluids supplied under pressure to said device comprising, in combination, a housing member provided with a plurality of passages including a fluid inlet, a metered fluid outlet, an excess fluid outlet, and a drain outlet, whereby fluids may enter into and be discharged from the said housing member, and a longitudinal bore formed within the said housing member communicating with each of the said passages; a plunger member reciprocable within the said bore having two chambers therein, one of the said chambers being of a predeterminable capacity and adapted to communicate with the fluid inlet passage in one position and with the metered fluid outlet in another position, and the other of said chambers being arranged to cooperate with a passage formed in the said plunger member whereby the housing member bore may be cleared of any fluid which has leaked between the said housing member and the said plunger through the reciprocating action of the said plunger; means for adjusting said predeterminable capacity of said one of the said chambers in the said plunger; and means for reciprocating the said plunger within the said bore to alternately align said one of said chambers of predeterminable capacity with the fluid inlet and the metered fluid outlet and to align said other of said chambers of said plunger with said drain outlet.



2,472,103
MODIFIED BONE SCREW HOLDER FOR SURGICAL DRILLS
Josef H. Giesen, United States Navy
Application March 13, 1945, Serial No. 582,476
1 Claim. (Cl. 145—52)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

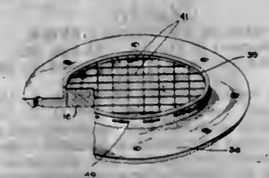
In a screw holder and driver for use with a drill chuck, a shank having one end for mounting in said drill chuck and having a screw driver blade on the other end, said shank having a threaded portion intermediate its ends, an internally and externally threaded sleeve adjustably mounted on said threaded portion and having a cross-arm, a pair of levers having jaws at one end thereof pivotally mounted on the opposite ends of said arm, a knurled nut threaded on and adjustable

on said sleeve and having means for pivoting said levers to move the jaws towards each other, one of the jaws having a single groove transversely thereof and the other of the jaws being pointed so as to threadedly engage with a single convolution of thread of the threaded portion of the screw shank whereby threaded axial movement of the jaws along the shank of the screw is permitted but axial slippage of the jaws is prevented.

2,472,104
INFINITE STAGE PUMP
David Grant, Los Angeles, Calif., and Nicholas Bashark, Dayton, Ohio
Application January 3, 1947, Serial No. 719,974
1 Claim. (Cl. 103—38)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

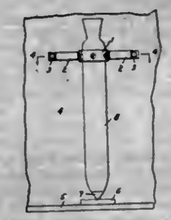
In a device of the character described, a main cylinder, a main piston slidable axially in said main cylinder dividing said main cylinder into suction and discharge chambers, an auxiliary cylinder, an auxiliary piston slidable axially in said auxiliary cylinder, the axes of said cylinders being substantially at right angles to each other, a lever of the second class, a guide slot in said lever intermediate the ends of said lever extending lengthwise thereof, load transmitting means hinged on the outer end of said main piston slidably fitted to said slot, whereby said lever is slidable bodily endwise along said load transmitting means, a fulcrum means connecting the end of said lever to the outer end of said auxiliary piston, whereby said lever may be moved bodily by said auxiliary piston toward or away from the axis of said main piston, spring means urging said auxiliary piston axially away from the axis of said main cylinder, and a passageway connecting the high pressure side of said main piston to the inner end of said auxiliary piston.

2,472,105
EXPLOSIVE COMPOSITION
George C. Hale, Dover, N. J.
No Drawing. Application October 30, 1943, Serial No. 508,387
5 Claims. (Cl. 52—13)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



2. An explosive composition, which is sufficiently fluid at about 90–100° C. to be cast, comprising a mixture of about 58 parts of ethylenedinitramine and about 42 parts of trinitrotoluene.

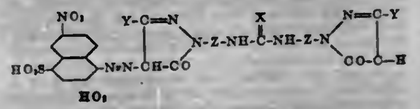
2,472,106
BROAD BAND ANTENNA
William W. Hansen, Garden City, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application September 20, 1943, Serial No. 503,066
2 Claims. (Cl. 250—33)



1. A radio antenna comprising a single unbroken length of wire forming a substantially U-shaped structure, said structure comprising a plurality of substantially semi-circular portions lying in spaced parallel planes and discretely faced to each other, and other semi-circular portions connecting the free ends of said first-mentioned semi-circular portions and lying in spaced parallel planes, which planes are perpendicular to said first mentioned planes, and the ends of said length of wire having electromagnetic energy fed thereto.

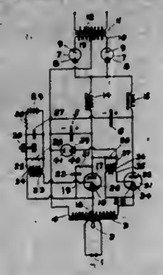
2,472,107
ACOUSTICAL APPARATUS
Harvey C. Hayes and Elias Klein, Washington, D. C.
Application May 6, 1936, Serial No. 78,071
18 Claims. (Cl. 181—0.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An electro-acoustical apparatus comprising in combination an electro-acoustical energy interchanging means, a fluid impervious housing for said means, said housing including a reinforced, sound window of a material having substantially the same velocity of propagation of compressional wave energy constant as sea water.



2,472,108
THRUST GAUGE FOR PROJECTILES
Clarence N. Hickman, Jackson Heights, N. Y., assignor to the United States of America as represented by the Secretary of War
Application November 16, 1944, Serial No. 563,738
10 Claims. (Cl. 73—167)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A pressure or thrust gage for determining the lateral thrust of a jet propelled device comprising in combination, a horizontally disposed supporting ring member fastened to a rigid support, an anvil member below said ring member, said ring member being provided with a plurality of evenly-spaced radial openings disposed in a plane substantially perpendicular to the axis of said ring member, an adjusting screw threadably engaged in each of said openings; a plunger slidably fitted in each of said openings, and a crusher element disposed within each of said openings between each of said adjusting screws and associated plungers, all adapted and arranged whereby a rocket projectile may be so disposed with the testing assembly that its nose part rests on said anvil member with a body part thereof centrally located in said ring member.



2,472,109
METALLIZABLE MONOAZO DIPYRAZOLONES
Peter Hindermann, Basel, Switzerland, assignor to J. R. Geigy A. G., Basel, Switzerland
No Drawing. Application December 31, 1946, Serial No. 719,635. In Switzerland December 27, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires December 27, 1965
12 Claims. (Cl. 260—162)

7. A metallisable monoazo dyestuff which, in the free state, corresponds to the formula

wherein X stands for a metalloid of the 6th group of periodic table whose atomic weight is not less than 16 and not greater than 33, Y stands for a radical selected from the group consisting of methyl, ethyl and phenyl radicals, and Z stands for a member selected from the group consisting of p-phenylene and 4:4'-diphenylene radicals free from sulfonic acid groups.

2,472,110
CONDENSER WELDING SYSTEM
Hans Klemperer, Belmont, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application February 1, 1940, Serial No. 316,798
18 Claims. (Cl. 219—4)

1. A welding system comprising a plurality of condensers, means for charging said condensers, a welding load circuit, means for discharging one of said condensers into said load circuit, and means which becomes active upon substantial discharge of said condenser to discharge another of said condensers into said load circuit.

2,472,111
RECOILLESS FIREARM AND AMMUNITION THEREFOR
William J. Kroeger and Clarence Walton Musser, Philadelphia, Pa.
Application February 14, 1945, Serial No. 577,830
15 Claims. (Cl. 89—1.7)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

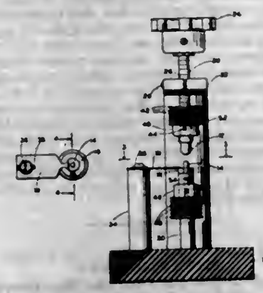
1. In a recoilless firearm, the combination of a barrel, a chamber extending rearwardly from said barrel and having walls which taper outwardly through at least half the chamber's length from the diameter of said barrel's bore at the chamber's front to a substantially larger diameter at the chamber's rear, an ammunition round comprising a projectile positioned in the rear bore of said barrel and a cartridge case positioned within said chamber communicating with said projectile and containing propellent powder, a metal wall for said case forming for said powder a cylindrical enclosure of diameter approximately the same as said surrounding chamber's forward end but substantially less than that chamber's enlarged rear portion and being perforated by a relatively large number of openings distributed circumferentially and lengthwise thereof and through which powder combustion gases may expand radially into said tapered chamber thereabout, a breech block secured in the rear of said chamber and there providing an orifice which leads from the chamber's interior to the rear exterior thereof and which permits escape of powder gases in proper quantity and at proper rate to neutralize recoil, and means including said breech block for supporting said perforated cartridge case against rearward movement and in spaced relation to the surrounding walls of said tapered chamber.

2,472,112
FIREPROOFING COATING COMPOSITION
Martin Leatherman, United States Army
No Drawing. Application December 5, 1945, Serial No. 633,025
14 Claims. (Cl. 106—15)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A flameproof coating composition comprising essentially a chlorinated material from the group consisting of chlorinated paraffin wax and chlorinated rubber; and an N-chloro compound from the class consisting of: acetyl chloramino-2,4-dichlorobenzene; N,N' dichloro-N,N' dibenzoyl ethylene diamine; N,N' quinonedichlorimine; 2,3,5-trichlorobenzoquinone (1,4) chlorimide; 2,5-dichlorobenzoquinone (1,4) bischlorimide; N-chlorophthalimide; N,N dichloro-4-carboxybenzene sulfonamide; dichloramine T; 1,3,4,6-tetrachloro-7-methyl-8-phenyl glycoluril; N,N dichlorodimethyl hydantoin; N,N dichlorobarbituric acid.

2,472,113
CABLE END RECEPTACLE
Arthur A. Mahren, Long Island City, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application September 14, 1946, Serial No. 697,108
3 Claims. (Cl. 173—328)

1. A cable end receptacle comprising an insulator guide sleeve having a flaring opening in one end, a conductor element secured in said guide sleeve and having one of its ends projecting therebeyond, a terminal conductor block engaging the conductor element, a terminal insulator block secured in said terminal conductor block and a spring terminal extending through a central bore in said terminal insulator block and having end portions thereof projecting therebeyond.

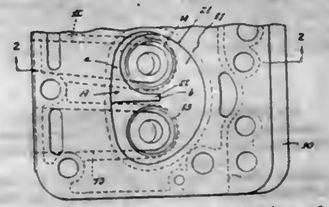


2,472,114
VISUAL TRAINING DEVICE
Herbert B. Marder, Chicago, Ill.
Application February 8, 1946, Serial No. 646,478
1 Claim. (Cl. 35—74)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

In a device adapted to cooperate with a projector to allow details of a projected image to change in logical sequence with the basic image remaining unchanged, the combination comprising a frame, a format frame supported by said frame, a format supported by said format frame and provided with an unchanging permanent basic image having transparent portions therein, a member rotatably mounted on the first-mentioned frame, indicia arranged and circularly spaced in logical sequence on the rotatable member and positioned to come into vertical registration with the transparent portions of the unchanging permanent basic image or outline on the format in logical succession, and cooperating stop means including an arcuate slot in the first-mentioned frame extending the length of the arcuate spacing assigned to a selected indicium,

and openings in said disc adapted for the insertion of a turning member, said openings being arranged at both sides of each indicium and spaced arcuately the length of said slot and adapted to register with the ends of said slot to limit the movement of said turning member and said disc with respect to said format for the successive alignment of selected indicia with respect to the permanent image.

2,472,115
TRIGGERED SPARK GAP
William G. Mayer, Asbury Park, N. J.
Application June 25, 1943, Serial No. 492,232
5 Claims. (Cl. 250—38)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

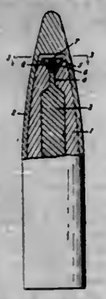


1. A triggered spark gap operable in air comprising main electrodes with a gap therebetween, a ceramic washer surrounding one of said electrodes near said gap, and a triggering electrode having its working end adjacent the aforesaid ceramic washer near the electrode carrying said ceramic washer, said working end being substantially an arc of less than 360° substantially coaxial with said last mentioned electrode.

2,472,116
SYRINGE HOLDER
Hyla F. Maynes, Miami, Fla., assignor of one-half to Emma C. Maynes, Miami, Fla.
Application October 18, 1945, Serial No. 623,085
18 Claims. (Cl. 128—218)

5. A device for operating a hypodermic syringe having a cylinder, a plunger projecting from the rear end thereof, and a needle at the front end of the cylinder; the device comprising a holder having an elongated stationary trough for engaging and supporting the syringe cylinder and forming a guide for longitudinal movement of the cylinder along the trough, the space between the trough edges being sufficiently wide to receive the syringe, an actuator in the trough movable therealong in engagement with the syringe plunger, thereby sliding the cylinder forward along the trough to project the needle, and a stop on the holder for limiting said forward sliding of the cylinder by the actuator, to cause the plunger to be moved in the cylinder by continued movement of the actuator.

2,472,117
COMBUSTION CHAMBER CONSTRUCTION
Frank McGowen and Marion C. Travis, Muskegon, Mich., assignors to Continental Motors Corporation, Muskegon, Mich., a corporation of Virginia
Application December 7, 1945, Serial No. 633,323
8 Claims. (Cl. 123—191)



1. In an internal combustion engine of the overhead valve type, a cylinder head structure provided with a combustion chamber, intake and exhaust passages terminating respectively in intake and exhaust ports, and intake and exhaust valves respectively associated with said intake and exhaust ports and opening inwardly of said combustion chamber, and an annular baffle structure projecting downwardly from the roof of said combustion chamber and closely bounding a portion of said intake port periphery but radially spaced therefrom and from said intake valve when in open position.

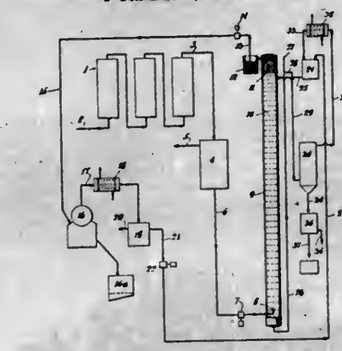
2,472,118
EXPLOSIVE BULLET
Wiley T. Moore, United States Army, Laverne, Okla., and Richard N. Nelson, Black River Falls, Wis., assignors to the United States of America as represented by the Secretary of War
Application September 3, 1941, Serial No. 409,374
5 Claims. (Cl. 102—56)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A bullet comprising a hollow core, a main charge in said hollow core, a wedge-shaped prim-

ing chamber formed in the front end of said core and in communication with the said main charge, a priming charge in said chamber, a wedge-shaped firing unit supported in the front end of

the core, interior surfaces of the firing unit in opposed relation with the priming charge between them, a jacket snugly enclosing the core and having means adapted to cause the said surfaces to be wedged together on impact.

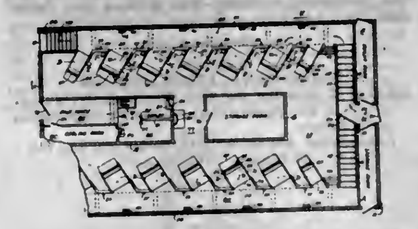
2,472,119
STABILIZATION OF BUTTER
William S. Mueller, Amherst, Mass., assignor to the United States of America as represented by the Secretary of War
No Drawing. Application May 31, 1946, Serial No. 673,623
16 Claims. (Cl. 99—164)



1. A composition of matter comprising a butter product, and an antioxidative rancidity-retarding and decolorization-retarding stabilizing agent comprising tetrachloro-para-benzoquinone.

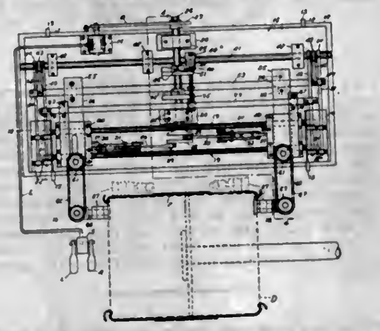
2,472,120
EXPLOSIVELY ACTUATED TOOL
Ivester R. Murphy, United States Army
Application December 6, 1944, Serial No. 566,933
2 Claims. (Cl. 255—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An explosively actuated earth boring tool comprising, in combination, a driving rod, the driving rod having opposite ends, one of which is a reduced end, and a threaded portion on its opposite end, a drill point removably mounted on the reduced end of the driving rod, a cup member threadedly mounted on the threaded end portion of the driving rod, the cup member being of substantially larger diameter than the driving rod and being adapted to receive a propellent charge and a mass of tamping material, the cup member being provided with oppositely disposed holes adapted to receive a handle bar for attaching the cup member to the driving rod, a handle bar in the holes, the said handle bar having a reduced end portion adapted to fit into the drill point and an enlarged end portion adapted to form a driving head, whereby the said handle bar may be used interchangeably as a starting rod and as a handle bar, a propellant charge in the cup member, and means for igniting the propellant charge.



2,472,121
DECAFFEINATED SOLUBLE COFFEE
John Ornfelt, Morristown, N. J., assignor, by mesne assignments, to American Home Foods, Inc., a corporation of Ohio
Application November 14, 1945, Serial No. 628,421
6 Claims. (Cl. 99—70)

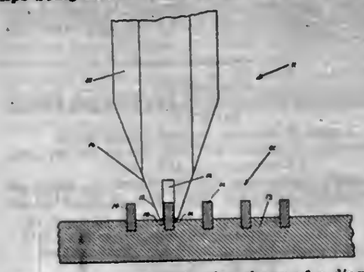
1. The process of producing soluble decaffeinated coffee, which comprises forming an aqueous extract of ground roasted coffee beans which contains at least about 40 percent by weight of soluble coffee solids comprising water-soluble and water-dispersible coffee constituents of beverage value, extracting caffeine therefrom by contact of the aqueous extract with a water-immiscible organic solvent for caffeine, effecting contact of aqueous extract and solvent until at least about 90 percent by weight of the caffeine has been removed from the aqueous extract, separating the decaffeinated aqueous extract from the caffeine-laden solvent, and freeing of residual organic solvent the aqueous coffee extract decaffeinated by contact with the organic solvent to produce soluble decaffeinated coffee.



2,472,122
MILKING BARN
George J. Polivka, La Grange, Ill.; Dorothy R. Polivka executrix of said George J. Polivka, deceased
Application April 20, 1944, Serial No. 531,907
9 Claims. (Cl. 119—16)

2. A milking barn above whose floor is provided a raised aisle and a plurality of spaced side-by-side raised stalls diagonally extended from the aisle, the inner corner of one stall proximate to the adjacent stall being disposed opposite thereto at a point which is remote from the inner end of the stall last noted whereby the floor space of lower elevation between the stalls

may accommodate a pair of milking machines, each near the outer end of one stall and proximate thereto, at unequal distances from the aisle.

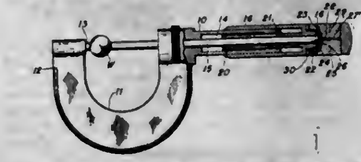


2,472,123
TIRE MAKING MACHINE
Conious E. Powers, Natches, Miss.
Application August 30, 1945, Serial No. 613,595
14 Claims. (Cl. 154—10.6)

2. In a tire making machine, a tire stitching roller mechanism for use with a tire drum comprising a roller adapted to contact the drum, a roller turning mechanism comprising a slidably mounted roller carriage, a roller carrying hub on which said roller is mounted, rotatably mounted on said roller carriage, a driving means for rotating the hub including a driving pinion gear rotatably mounted on said carriage, said pinion gear being positioned in mesh with a rack and a means for producing a relative longitudinal motion of said carriage with respect to said rack.

2,472,124
TOOL
Edmund A. Randall and Vernon B. Slifer, New York, N. Y.
Application July 13, 1945, Serial No. 604,951
1 Claim. (Cl. 78—47)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

A caulking hand tool formed of a single piece only of bar-shaped material, said tool throughout the major portion of its length being of uniform cross section and forming a handle, said tool at one end being axially slotted to form a pair of spaced lips, said lips having substantially parallel opposed internal surfaces and tapered external surfaces forming each lip into a wedge shape, said lips being flattened along their edges, said edges



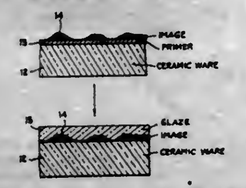
being of convex semicircular shape of a diameter substantially equal to the diameter of the handle.

2,472,125
PRINTING INKS
Charles A. Rietz, Park Ridge, Ill., assignor to Interchemical Corporation, New York, N. Y., a corporation of Ohio
No Drawing. Application March 2, 1945, Serial No. 580,705
2 Claims. (Cl. 260—33.2)

1. A typographic printing ink characterized by its ability to be set by the addition of water to the film and by its improved printing characteristics, which comprises pigment dispersed in a vehicle the essential binder of which is a resin comprising the condensation product of a phenol and a compound selected from the class consisting of terpene and terpineols which is soluble in a polyglycol, the resin being dissolved in a solvent of the group consisting of water-soluble polyglycols and the water-soluble monoethers thereof.

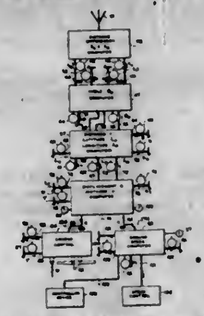
2,472,126
MICROMETER CALIPER
Hugh S. Robinson, United States Navy
Application July 30, 1945, Serial No. 607,896
1 Claim. (Cl. 33—164)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

A measuring instrument comprising a U-shaped frame member, an anvil secured to one end of said frame member, an internally threaded hollow shank secured to the other end of said frame member, a plunger supported in said shank and slideable relative to said frame for effecting desired measurement, a retaining head on one end of said plunger, a rotatable thimble threadedly engaging said shank and having a threaded head whose end face forms a seat for said retaining head, a nut adjustably secured to said thimble head for retaining said plunger head against said face and having a flexible end portion forming a diaphragm, and a transparent calibrated extension secured to said nut containing a liquid chamber filled with a liquid adjacent said diaphragm



and provided with a bore through which the liquid in said chamber will be forced to an indicated level whenever predetermined pressure is exerted between said plunger and said anvil upon rotation of said thimble.

2,472,127
TEMPERATURE COMPENSATED VIBRATION PICKUP
Frank K. Slason, United States Navy
Application February 15, 1946, Serial No. 647,986
6 Claims. (Cl. 171—209)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



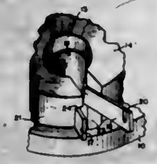
3. A temperature compensated vibration pick-up instrument comprising an annular permanent magnet resiliently mounted for limited axial displacement in accordance with the intensity and frequency of axial vibration of said instrument, and having an internally turned U-shaped axial cross-section, so as to form annular axially spaced poles, a soft iron core located centrally thereof extending between said poles, a pair of coils around said core at said poles, connected in series and wound for inducing opposite polarity by axial movement of the permanent magnet relative thereto, and a cylindrical sleeve fixed between the inner edges of said poles and having a negative temperature coefficient of permeability, for by-passing more of the magnetic flux at lower temperatures than at higher temperatures and to maintain the flux through said soft iron core substantially constant.

2,472,128
COLORING CERAMIC OBJECTS
Henry C. Staehle, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application May 3, 1947, Serial No. 745,737
3 Claims. (Cl. 95—5.5)

1. The method of decorating ceramic ware which comprises coating ceramic biscuit with a resinous coating, then with a mixture of a bichromated hydrophilic colloid, an aqueous dispersion of a water-insoluble, soft synthetic resin of the group consisting of polymethylacrylate, polyethylacrylate, polystyrene, polyvinylidene chloride, polyvinylacetate and neoprene, said resin being capable of drying to a continuous film when the dispersion is coated on glass, and a pigment, which will be colored after firing, drying said coating, exposing said coating to an image, washing away the exposed portions of said coating to leave said coating containing pigment in the unexposed portions, and glazing and firing said biscuit to form a finished ceramic object.

2,472,129
RADIO NAVIGATION SYSTEM
Edward C. Streeter, Jr., Old Westbury, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application August 4, 1943, Serial No. 498,706
24 Claims. (Cl. 250—2)

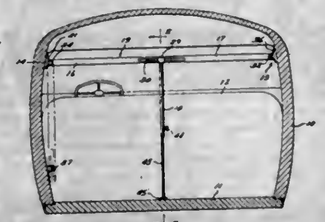
23. In a navigation system for a dirigible craft, means for computing the latitude and longitude of said craft, means for initially setting into said system fixed quantities corresponding to the latitude and longitude of an objective and the direction of a desired ground track passing through said objective, potentiometer means for continuously supplying said system variable quantities corresponding to said latitude and longitude of said craft, and means operative in response to said variable and fixed quantities for determining the distance of said craft from said ground track.



2,472,130
PROCESS FOR THE PREPARATION OF A MIXTURE OF NUCLEOTIDES CONTAINING PREDOMINANTLY ADENOSINTRIPHOSPHATE
Albert Emerich Szent-Györgyi, London, England, assignor to Science Associates Inc., New York, N. Y., a corporation of New York
No Drawing. Application August 21, 1946, Serial No. 694,416. In Hungary August 14, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires August 14, 1964
6 Claims. (Cl. 260—210)

1. In a process for extracting a natural animal tissue containing adenosintrophosphate and related substances, a first step of treating said tissue with a liquid dehydrating agent insolubilizing protein, and a second step of preparing an aqueous extract of said tissue after separating the liquid dehydrating agent from the tissue.

2,472,131
VACUUM TUBE SOCKET
Emerick Toth, Takoma Park, Md., and George H. Burbage, Washington, D. C.
Application January 15, 1946, Serial No. 641,373
5 Claims. (Cl. 173—328)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

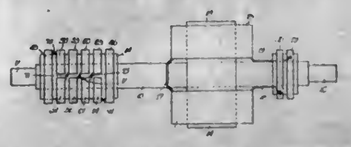


4. A tube socket comprising, a base member and pedestal having a plurality of cylindrical

apertures adapted to receive bas pins of a tube, said pedestal being slotted from each aperture to its periphery, each slot having opposed spaced wall portions, detent means in each of said slots extending from one of said wall portions toward the other wall portion, connector means positioned within each cylindrical aperture for contact with a tube base pin, each of said connector means having a cylindrical body portion with a

longitudinal opening formed therein, a longitudinal slit in one end of each said body portion at a point opposite said opening, indentations formed in said slitted end of each said body portion, and a pair of flexible arms extending radially outward from opposite edges of the opening in each said connector means through the adjacent slot in said pedestal, one of said arms being positioned by the detent means.

2,472,132
AUTOMOBILE CLOTHES RACK
William H. Walker, Alameda, Calif.
Application March 20, 1947, Serial No. 735,987
1 Claim. (Cl. 224—29)

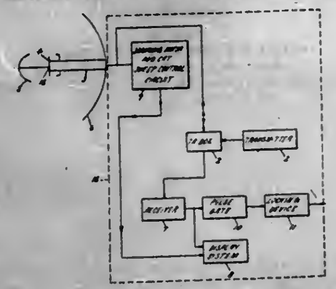


A foldable automobile clothes rack comprising brackets adapted to be connected respectively to the opposite sides of the automobile body, two rack parts connected together to be pivoted relative to one another and to be extended relative to each other for a limited distance, one of the parts being pivotally connected to one of the brackets and the other of said parts adapted to be detachably connected to the other of said brackets, said parts when not in use being adapted to be detached from the bracket at one side of the automobile body and pivoted upon one another and upon the bracket at the opposite side of the body and downwardly to extend in a vertical position and out of the way, the connection between these parts being effected by a pin extending transversely of the same, both of said parts having elongated slots at the ends where they are connected together, and said pin extending transversely through the elongated slots whereby to permit both pivotal and a longitudinal adjustment of the parts, and a standard connected to the pin and adapted to engage with the floor of the automobile body to support the rack intermediate its length, said rack parts being of channel formation and the slots extending through flange portions thereof, the one channel part adapted to be detachably connected to the bracket being smaller than the other channel part and adapted to be lifted into the larger channel part as when the parts are being folded to be located in their out-of-use position, and said standard being adapted to fit within the small channel part and be adjusted into the same as when the parts are folded together and into the out-of-use position.

2,472,133
THIOPHANTHRAQUINONE DERIVATIVES
Viktor Weinmayr, Pitman, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application March 20, 1947, Serial No. 736,125
2 Claims. (Cl. 260—329)

1. Thiophanthraquinone-2-carboxylic acid.

2,472,134
DIRECT-CURRENT APPARATUS
Francis P. Weiss, Gary, Ind.
Application August 24, 1946, Serial No. 692,889
13 Claims. (Cl. 171—322)

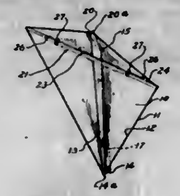


11. In direct current apparatus, in combination, open-circuit coil groups providing alternating electromotive forces, a rotor shaft journalled for rotation, collector-ring structure carried by the rotor shaft and including insulated segments disposed in rows longitudinally of the rotor shaft, each row including a plurality of segments circumferentially disposed to form gaps and which are angularly displaced as regards said rows to a predetermined extent, connecting bars electrically joining at least one segment of each row with a certain segment of another row, brushes forming terminals for the coil groups respectively and at least one brush in engagement and electrically connecting with each segment, said brushes being positioned in longitudinal rows substantially parallel with the shaft, a collector ring positioned at each end of the collector-ring structure in spaced and insulated relation with respect to the adjacent row of segments, and means electrically connecting each collector ring with a certain segment in one of the rows of segments.

2,472,135
MANUFACTURE OF CONDENSATION PRODUCTS
Charles Weizmann, London, England, assignor to Polymerisable Products Limited, London, England, a company of Great Britain
No Drawing. Application August 20, 1946, Serial No. 691,869. In Great Britain June 27, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires June 27, 1965
5 Claims. (Cl. 260—465)

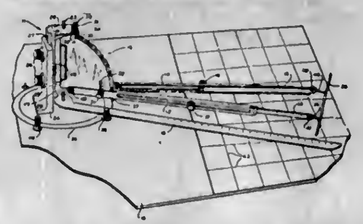
1. A process for carrying out a condensation reaction between (a) a substance containing a group which is a member of the series consisting of methylene (CH_2) and methine (CH) groups directly linked to an unsaturated carbon atom in-

cluding a carbon atom forming part of an aromatic nucleus on the one hand and (*b*) a substance which is a member of the series consisting of α,β-unsaturated aldehydes, α,β-unsaturated ketones and esters of α,β-unsaturated carboxylic acids on the other hand, characterised by carrying out the reaction in the presence of an extremely finely divided solid complex formed from potassium hydroxide and an organic liquid having a boiling point above 100° C. and which is a member of the group consisting of acetals, ketals, and the dialkyl ethers of ethylene glycols.



2,472,136
AIMING AND FIRE CONTROL SYSTEM
Rex S. Whitlock, Dayton, Ohio
Application January 3, 1945, Serial No. 571,189
1 Claim. (Cl. 89—28)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

An aiming and fire control system for manually operated weapons comprising a first device mounted on a weapon to be fired; and a second device mounted on a friendly object; said first device comprising in combination a short range pulse modulated radio transmitter, a directional antenna system for directing the output of said transmitter toward said object and for receiving echoes and radiations therefrom, said directional antenna mounted so that its radiation axis is parallel to the bore axis of said weapon to be aimed; a radio receiver for receiving signals intercepted by said antenna; a display means including a cathode ray tube responsive to the output of said receiver for presenting a contour image of said object; electro-mechanical means responsive to a selected output of said receiver for preventing the firing of said weapon; said second device comprising electronic means for receiving said pulse modulated signals from said directional antenna and retransmitting said signals in a modified form; whereby said retransmitted signals are received by said first device and prevent the operation of said weapon when radiation from said antenna strikes said friendly object.

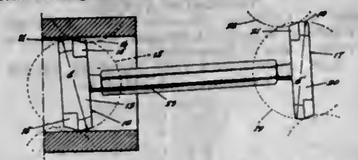


2,472,137
KITE
Edward N. Winslow, Chagrin Falls, Ohio
Application May 16, 1947, Serial No. 748,379
6 Claims. (Cl. 244—153)

1. In a kite of the type described, a polygonal flexible sheet, means for supporting the sheet in the form of a planing surface comprising a longitudinal frame member attached at its ends to the opposite most distant longitudinal extremities of the sheet, a transverse member attached at its ends to the lateral extremities of the sheet, said transverse member being disposed to the lee of the longitudinal member and translatable rear-

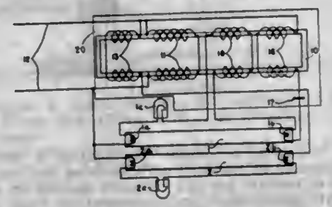
wardly relative to the longitudinal member when wind forces in flight urge the lateral extremities of the sheet rearwardly.

2,472,138
PLOTTER COMPUTER FOR DETERMINING SHELLFIRE POSITION
Hyam G. Yamins, Asbury Park, and Ralph L. Dunn, West Belmar, N. J., assignors to the United States of America as represented by the Secretary of War
Application May 30, 1945, Serial No. 596,714
9 Claims. (Cl. 33—76)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A plotter-computer, for determining the origin point of a trajectory where the spatial positions of a plurality of points thereon with respect to an observation post are known, comprising a plotting board having a point thereon representing the observation post, means for physically representing in a reduced scale above said plotting board the spatial positions of the plurality of trajectory points with respect to said post point, and a pointer for extrapolating said points to said plotting board to fix the origin point of said trajectory.

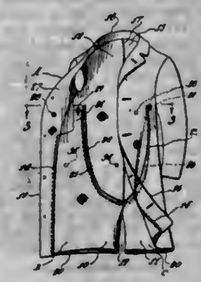
2,472,139
BORE GAUGE
Erik H. Aldeborgh, Poughkeepsie, and Alfred H. Emery, Wappingers Falls, N. Y., assignors to Standard Gage Company, Inc., Poughkeepsie, N. Y., a corporation of New York
Application November 3, 1944, Serial No. 561,651
11 Claims. (Cl. 33—178)



1. In a bore gage, a body comprising a substantial portion of the equatorial zone of a sphere, said body being subdivided into two diametrically opposed parts, corresponding great circle arcs of said two opposed parts constituting the gaging element, and a relieved surface adjacent to and substantially co-extensive with the

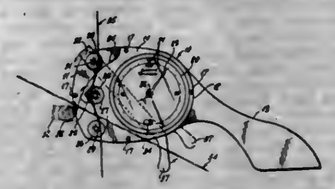
said great circle arc of each of said opposed equatorial zone parts, said relieved surface provid-

ing clearance to permit ready entry of the body into a bore to be gaged.



2,472,140
LIGHTING TRANSFORMER
Paul Berger, Chicago, Ill., assignor, by mesne assignments, of one-half to Hirsch Epstein and one-half to Louis R. Duman, both of Chicago, Ill.
Application August 31, 1945, Serial No. 613,779
4 Claims. (Cl. 315—97)

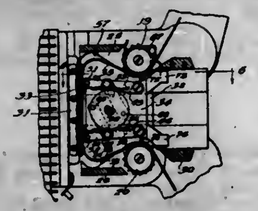
1. In combination with a pair of hot cathode glow discharge tubes each having cathode heating means at opposite ends thereof and each having a starting switch for connecting its heating means in series to effect starting of the tube and then opening the series connection, a transformer having a primary and a pair of secondaries, each secondary being connected in circuit to one of said tubes, a condensive reactance in circuit with one of the secondaries for power factor compensation whereby one of said tubes takes a leading current and the other tube a lagging current, and a starting coil in series connection with the starting switch of the tube taking the leading current, said starting coil and its series connected switch being connected in series with and between the cathode heating means at the ends of the tube taking the leading current, said starting coil being magnetically coupled with the primary and with its voltage additive to the voltage of the secondary in circuit with the leading tube when the starting coil is connected in circuit by its associated starting switch, said starting coil being located between the primary and one of said two pairs of secondaries.



2,472,141
CONVERTIBLE GARMENT
Louis Botha, New York, N. Y.
Application February 15, 1947, Serial No. 728,778
3 Claims. (Cl. 2—86)

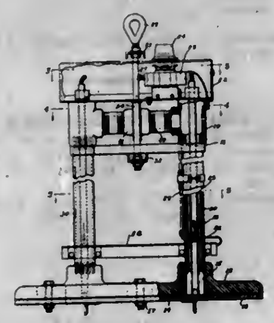
3. In a convertible garment of the type including oppositely disposed front portions adapted to be connected together to form a front opening and having a back formed with a slit extending from the bottom edge approximately midway to the waist of the garment, oppositely disposed integral extensions of said back projecting forwardly from the opposite edges of the slitted portion thereof, said extensions having vertically extending forward edges secured to the front portions of said garment adjacent the edges of the front opening to thereby provide spaced apart trouser leg sections on opposite sides of said slit, said sections extending upwardly to approximately the waist portion of said garment and having recessed upper edges extending from the upper end of said slit to the upper edges of said extensions with the upper ends of said recesses being located substantially midway between said slit and the forward edges of said extensions respectively, interengageable slide fastener elements

secured on the recessed edges of said leg sections for securing the same together in trouser formation and forming a crotch in the connected portion thereof adjacent said slit and interengageable fastening means on the upper portions of said extensions respectively and on the innner faces of the back of said garment and on the front portions thereof for respectively securing said trouser leg sections in an out-of-the-way position when in spaced apart uncoupled relation and in supported relation with the front of the garment when the trouser leg sections are connected together in trouser formation.



2,472,142
TENSIOMETER
Jean J. Boulin, Chatham, N. J., assignor to Boulin Instrument Corporation, New York, N. Y., a corporation of New York
Application November 8, 1946, Serial No. 708,718
5 Claims. (Cl. 73—144)

1. A one-hand tensiometer for measuring the tension in running yarns and the like comprising, in combination, a frame having forward and rearward ends, a pistol grip joined to said frame and extending from the rearward end thereof, an upwardly extending bank of at least three rotatable pulley means always located substantially in the same plane and in the vicinity of the forward end of said frame, fixed axis means rotatably

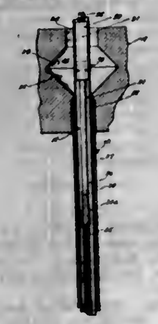


mounting the first and lowest of said pulley means on said frame, movable means rotatably supporting the second and intermediate pulley means on said frame, means biasing said movable means to a forward position while permitting it to be moved rearward under running yarn tension, indicating means on said frame comprising a series of force units indicia, indicator means for traverse of said indicating means, means for causing said indicator means to respond to movement of said movable means, a member pivotally mounted on said frame and having a free end in the vicinity of the forward end of the latter and a trigger extending below said frame forward of said grip for engagement by a finger of a hand grasping said grip, means biasing the free end of said member upwardly with said trigger in a forward cocked position whereby the free end of said member may be swung downwardly past said second pulley means to a position therebelow with rearward pull on said cocked trigger, and means rotatably supporting the third and highest pulley means on the free end of said member to be carried therewith to below said second pulley means with pull on said trigger to permit location and draft of a running yarn between said second pulley means and said first and third pulley means whereby the running yarn will be trained back and forth between said first, second and third pulley means with release of said trigger.

2,472,143
SELF-THREADING DEVICE FOR MOTION-PICTURE APPARATUS
Jack Briskin, Chicago, Ill., assignor to Revere Camera Company, Chicago, Ill., a corporation of Delaware
Application March 10, 1947, Serial No. 733,638
11 Claims. (Cl. 88—17)

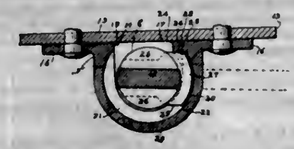
1. In a motion picture apparatus having intermittent film advancing means, a film supply sprocket and a film take-up sprocket, said sprockets being disposed substantially one over the other and said intermittent film advancing means being disposed at a point between said sprockets and rearwardly thereof to provide a film path including two loop portions, the combination of a sliding member adapted, when in inoperative position, to engage a film when said film is disposed substantially vertically in front of said sprockets and adapted, when in operative position, to maintain said film rearwardly in engagement with said intermittent film advancing means, extensible means mounted on said sliding member for movement in a direction substantially transverse to the movement of said sliding member to cause said film to be disposed in said loop portions, said extensible means being retractible, and means to maintain said film out of engagement with at least one of said film feeding means until said sliding means is disposed in normal film positioning position.

2,472,144
ELECTRIC HEATER FOR SOFTENING THERMOPLASTICS
John V. Calhoun, Haverford, Pa., assignor to Edwin L. Wiegand Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application July 8, 1947, Serial No. 759,557
2 Claims. (Cl. 219—19)



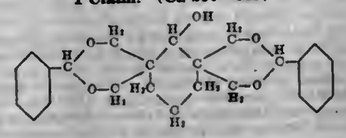
2. An electric heater comprising a platen adapted to be imposed on a body of material, a pair of electric heating elements carried by said platen constructed and arranged to heat said platen to cause said platen to impart heat to said material to melt or soften said material, a superstructure disposed above said platen and comprising a pair of ducts rising from said platen and to which said platen is connected, electric conductors for supplying electric energy to said heating elements extending through said ducts with the two conductors for each of said heating elements extending one through one of said ducts and the other through the other of said ducts and the two conductors in each of said ducts connected one to one side of the supply and the other to the other side thereby to reduce or avoid induction of current in said ducts when the heater is operated on alternating current, and thermostatic switch means responsive to the temperature of said platen to control the supply of electric energy to said heating means to avoid increase in temperature of said platen above approximately a set value.

2,472,145
MANUFACTURE OF ELECTRIC HEATERS
Charles W. Cappell, Allison Park, Pa., assignor to Edwin L. Wiegand Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application December 5, 1945, Serial No. 632,923
14 Claims. (Cl. 201—67)



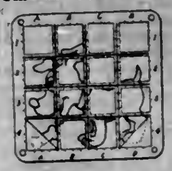
1. Apparatus for use in introducing comminuted insulating material endwise into a tubular sheath to embed a resistor disposed in said sheath, comprising: positioning means, connectable to terminal means fastened to an end of said resistor, constructed and arranged to position said resistor spaced from the inside surface of said sheath; said positioning means and said terminal means being so constructed and arranged that they are connectable and disconnectable merely by relative movement of said

means; and said positioning means being so constructed and arranged as to permit view of the



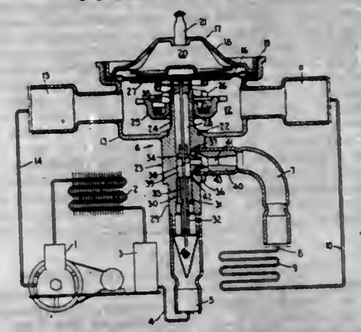
position of said terminal means relatively to said positioning means.

2,472,146
STOP FOR THE OPERATING BAR OF DOOR FASTENERS
George E. Dath, Mokena, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application November 30, 1945, Serial No. 631,904
5 Claims. (Cl. 292—218)

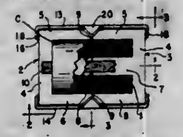


1. In a door fastener for hinged doors, the combination with a rotary operating bar having keeper engaging means thereon cooperating with fixed keepers; of a bearing block embracing the bar and rotatable therewith; a supporting guide bracket fixed to the door in which the block is rotatably supported; a stop shoulder interiorly of said bracket; and a stop projection on said block engageable with said shoulder for arresting rotary movement of the bar, the portion of said block carrying the stop projection being enclosed by said bracket.

2,472,147
DIBENZYLIDENE DERIVATIVE OF 2,2,6,6,-TETRAMETHYLOLCYCLOHEXANOL
Otis C. Dermer, Stillwater, Okla., assignor to Cities Service Oil Company, Bartlesville, Okla., a corporation of Delaware
No Drawing. Application August 18, 1948, Serial No. 44,987
1 Claim. (Cl. 260—338)

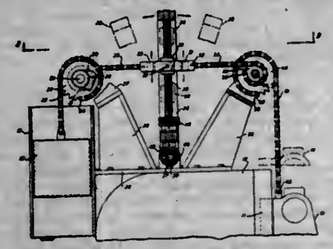


2,472,148
DEVICE FOR ENLARGING PICTURES
Anthony A. D'Orazi, Spokane, Wash.
Application June 3, 1946, Serial No. 674,079
3 Claims. (Cl. 25—26)



1. A device for copying original pictures and the like comprising a sheet having a transparent rectangular rim portion and transparent criss cross narrow partitions dividing the space within the rim into a plurality of smaller open areas, said partitions having opaque center lines thereon cooperating with each other and with the inner edges of the rim to delineate adjoining squares of equal dimensions, at least one corner portion of the rim being cut out on a diagonal line between the two adjacent meeting points of the nearest partitions with the rim to provide triangular open areas.

2,472,149
THERMOSTATIC EXPANSION VALVE
Earnest J. Dillman, Detroit, Mich., assignor to Detroit Lubricator Company, Detroit, Mich., a corporation of Michigan
Application February 18, 1946, Serial No. 648,462
8 Claims. (Cl. 236—92)

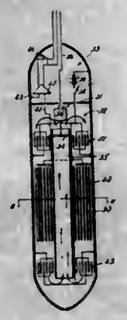


1. A thermostatic expansion valve, comprising a casing having a suction line passageway therethrough and having a second passageway intersecting said suction line passageway, said second passageway having an inlet and a valve port and having a partition therein with a guideway therethrough on the outlet side of said valve port, said casing having an outlet passageway with passageways leading thereto from said second passageway on the opposite sides of said partition, a valve member cooperable with said valve port, valve operating means responsive to changes of temperature and pressure in said suction line passageway, and a valve operating rod reciprocally fitting said guideway and said second passageway between said partition and said suction line passageway and operatively connecting said operating means and said valve member.

2,472,150
CORE CLAMP
Hirsch Epstein, Chicago, Ill., assignor, by direct and mesne assignments, to Advance Transformer Co., Chicago, Ill., a corporation of Illinois
Original application December 11, 1944, Serial No. 567,542. Divided and this application October 1, 1945, Serial No. 619,512
1 Claim. (Cl. 175—356)

In an alternating current magnetic apparatus, a magnetic core comprising two separate stacks of assembled laminations together forming a central leg and two outer legs joined by end portions, there being a non-magnetic gap between the two stacks at the middle of the outer legs of the assembly, means surrounding the central leg for setting up an alternating magnetic flux in said core, each outer leg having a clamp of metal that is substantially devoid of springiness, each clamp including a clamp body extending across the stacks of laminations and lengthwise of an outer leg of the core, each clamp body having at opposite ends thereof arms pressing the two stacks of laminations towards one another and said lengthwise extending clamp body having clamping jaws at the opposite longitudinal edges thereof and at the non-magnetic gaps of the core, said jaws being bent from the clamp body to a position extending over one of the non-magnetic gaps between the stacks and overlying the portions of the outer laminations adjacent the non-magnetic gap and firmly clamping said portions of the laminations together thereby holding said portions against vibration, each jaw being of substantially greater width along its line of bend from the clamp body than it is at the pressure engaging jaw end remote from the clamp body, the maximum length of each jaw in a direction lengthwise of the member over which it extends being substantially less than the minimum distance from the jaw to an adjacent arm of the clamp.

2,472,151
COUNTERBALANCING APPARATUS
Waldemar C. Ewaldson, Millington, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application November 23, 1946, Serial No. 711,915
4 Claims. (Cl. 90—11)



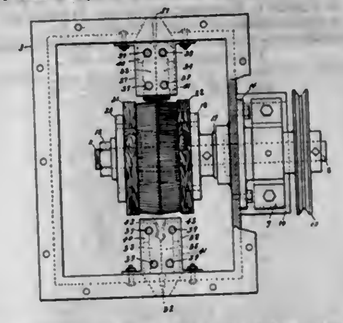
1. An apparatus for counterbalancing a movable unit variable in weight, the apparatus comprising a weight disposed at a position spaced from the unit, a frame interposed between the weight and the unit, a pivotal support for the frame, threaded elements rotatably supported in the frame, internally threaded followers on the elements, means to connect one of the followers to the unit, means to connect the other follower to the weight, and means to rotate the threaded elements to vary the positions of their followers relative to the pivotal support with variations in the weight of the unit to render the weight effective to counterbalance the unit.

2,472,152
DIESEL ENGINE FUEL
Adalbert Farkas and Arthur F. Stribley, Jr., Long Beach, Calif., assignors to Union Oil Company of California, Los Angeles, Calif., a corporation of California
No Drawing. Application August 5, 1944, Serial No. 548,310
12 Claims. (Cl. 44—57)

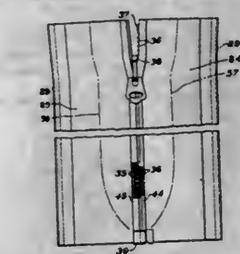
1. A Diesel engine fuel consisting essentially of a Diesel engine fuel from which ignition delaying compounds have been removed and between about 0.1% and about 5% by weight of a saturated cyclic hydrocarbon hydroperoxide prepared by oxidizing a saturated cyclic hydrocarbon containing from 4 to 6 carbon atoms in the ring in the liquid phase with a gas containing free oxygen at temperatures of from 150° F. to 325° F. and at a pressure of from normal atmospheric pressure to 500 pounds per square inch gage to maintain said liquid phase, to an acid number not exceeding about 10.7 mg. KOH per ml., to produce an oxidate containing said hydroperoxide in substantial amounts and separating hydroperoxide from the oxidate.

2,472,153
METHOD AND APPARATUS FOR DETECTING RADIATIONS
Robert Earl Fearon, Tulsa, Okla., assignor to Well Surveys, Incorporated, Tulsa, Okla., a corporation of Delaware
Application January 13, 1945, Serial No. 572,666
12 Claims. (Cl. 250—83.6)

12. A method of detecting penetrating radiation that comprises circulating a confined ionizable medium in a closed system, subjecting the medium to the penetrating radiation to produce ionization thereof, separating the ions thus formed in accordance with their electrical mobility, collecting one group of the separated ions, and measuring the electrical current produced by the collection of the ions as a measure of the penetrating radiation that enters the ionizable medium.



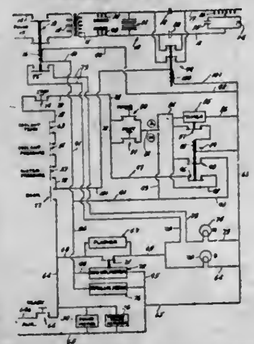
2,472,154
MATERNITY GARMENT
Grace Z. Florito, Woodhaven, N. Y.
Application December 8, 1945, Serial No. 633,754
6 Claims. (Cl. 2—74)



3. A maternity garment comprising a skirt portion, said skirt portion being provided at the region of the abdomen with a central portion, and a plurality of concentric annular portions of progressively increasing size about said central portion, severable means to attach said central portion to the first annular portion, and severable means to attach each annular portion to the annular portion adjacent thereto, and severable means to attach the outermost annular portion to the skirt portion, said central portion being adapted to be detached by severing the means which attaches said central portion to the first annular portion, and the annular portions being adapted to be progressively detached by severing their attaching means, whereby to provide an opening of gradually increasing size through which the abdomen of the wearer may protrude as the period of pregnancy advances.

2,472,155
MACHINE FOR CLEANING THE SURFACES OF VENETIAN BLIND SLATS
John Gaino, Cleveland, Ohio
Application October 3, 1946, Serial No. 700,974
1 Claim. (Cl. 15—77)

A device of the class described, comprising, in combination, a liquid receptacle having a slat inlet and outlet opening oppositely positioned in the wall thereof, a bracket connected to and laterally projecting from the wall thereof, the receptacle having formed in the wall above the bracket a packing recess, the inner wall of which extends into the receptacle and forms a boss therein, a packing in the recess, a removably mounted cover plate for the recess, a bearing block removably mounted on the bracket, a shaft journalled in the bearing block, its inner end portion being threaded, the shaft extending through the cover plate, the packing in the recess, then through the boss into the interior of the receptacle, but stopping short of the inner wall opposite its entry therethrough, a friction washer mounted on the shaft, a removably mounted flange mounted on the shaft, pins in and projecting from a face thereof, a circular brush having bores in the back surface thereof for the reception of the pins, a flanged spacer on said shaft, a companion brush, the flanged spacer interposed between the two brushes, the companion brush being provided with bores in its back surface, a second removably mounted flange on said shaft, additional pins in and projecting from the face thereof to engage in the bores in the back surface of the companion brush, a nut threaded on the threaded end of the shaft and adapted for effecting frictional coupling between the brushes and the spacer, removably mounted retainers in the interior of the receptacle and positioned laterally of the brushes and extending in to proximity of the periphery of the brushes, removably mounted sponge members mounted in the retainers, their contacting faces being in alignment with the inlet and outlet openings and also with the meeting faces of the brushes, a removably mounted cover for the receptacle having a filling opening therethrough, a plug to close the opening, and means to rotate said shaft.

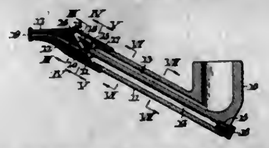


2,472,156
PANEL ACCESS-OPENING CLOSURE
Francis G. Gerber, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application November 23, 1946, Serial No. 711,863
12 Claims. (Cl. 244—129)

1. A separable access-opening closure for a structure, said closure comprising flexible closure panel means subject to conditions of flexure and having means for securing the same in sealing relation to the structure with said panel means overlying the access-opening, said panel means including separable fastener means for

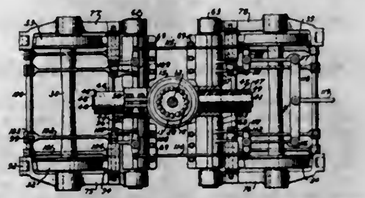
closing and opening the same and said panel means including flexible sealing means united with said panel means at said fastener means for sealing said panel means upon closing said fastener means and for flexing directly and conformingly with said panel means under flexure thereof in the closed and open conditions of the closure.

2,472,157
CONTROL SYSTEM
George H. Gordon, Bradford Woods, Pa., assignor to Edwin L. Wiegand Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 1, 1945, Serial No. 626,147
17 Claims. (Cl. 315—361)



1. A control system for high frequency electric apparatus, comprising: a translating circuit; main switch means for controlling the supply of electric current to said translating circuit; spark gap means included in said translating circuit; means, including a primary fluid, constructed and arranged to cool said spark gap means; means, including an auxiliary fluid, for cooling said primary fluid; and means responsive to the pressure of said auxiliary fluid, constructed and arranged to prevent closure of said main switch means, and cause opening of said main switch means if closed, if the pressure of said auxiliary fluid is below a predetermined minimum.

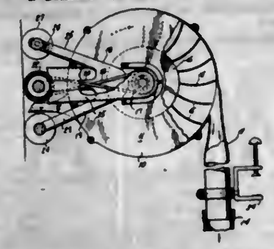
2,472,158
RADIO BEACON SYSTEM
James Matthew Henry, Needham, Mass., assignor to American Telephone and Telegraph Company, a corporation of New York
Application July 26, 1940, Serial No. 347,660
9 Claims. (Cl. 343—112)



1. A radio beacon system comprising a source of oscillations, means for modulating the frequency of said oscillations continuously between predetermined limits, a first antenna of a non-directional type connected to said source of oscillations for radiating said oscillations, a second antenna of a directional type, a line connecting said source of oscillations with said second antenna, said line including a delay network interposing a delay of predetermined interval, said second antenna radiating said oscillations delayed in time with respect to the oscillations radiated by the first antenna so that both antennae will simultaneously radiate oscillations of different frequencies, the frequencies of the oscillations radiated by said antennae always differing by a predetermined amount.

2,472,159
TOBACCO PIPE
Olaf M. Ingebretsen, Prospect Park, Pa.
Application February 11, 1947, Serial No. 727,866
4 Claims. (Cl. 131—213)

1. In a tobacco pipe comprising a bowl and stem unit having connectable bores in said stem, one of which serves as the smoke-conduit from the bowl and the other as a collector-drain-off passage; the combination of a unitary mouthpiece embodying communicating bores defining an intervening dam, one of said bores leading from the smoke-conduit and the other connecting therefrom into the collector drain-off passage; means jointly defining a trap for residuum drawn from the tobacco bowl at the juncture between the stem and mouthpiece; and means defining a riser between the collector-drain-off passage and the mouthpiece smoke-duct whereby nicotine, saliva and other residuum, accumulating in said drain-off passage is positively prevented from entering the smoker's mouth.

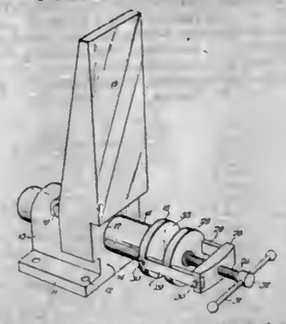


2,472,160
FLEXIBLE TRUCK FOR RAIL VEHICLES
Alvin S. Krotz, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application February 2, 1945, Serial No. 575,772
5 Claims. (Cl. 105—182)

1. A truck for a rail-type vehicle, said truck comprising a pair of axles having rail wheels, a center bearing for pivotally supporting a car, a frame member about said center bearing, link means for suspending said center bearing from said frame member, trunnions extending longitudinally of said frame member, torsion springs about said trunnions, each of said springs comprising a housing about one of said trunnions and a body of resilient rubberlike material between said housing and said trunnion and secured

thereto, a pair of yokes each adjustably secured to one of said housings, springs secured to each yoke, each of said last named springs comprising inner and outer members and a body of resilient rubberlike material therebetween and secured thereto, one of said members being secured to the yoke, and a torsion arm secured to the other member, said torsion arm providing a bearing for one of said axles.

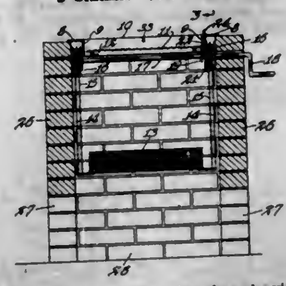
2,472,161
VACUUM-ACTUATED ABRADING DEVICE
Godfried Kryl, Inwood, N. Y.
Application September 13, 1945, Serial No. 616,001
1 Claim. (Cl. 51—176)



In a fluid actuated surface abrading device, comprising a substantially cylindrical casing having one of its sides removable, said casing having its diametrical dimension more than twice its axial extent and axial bearings in the sides thereof, said casing also having an inlet and an outlet peripherally connected thereto, in combination with a bladed rotor operative within the casing and supported in the axial bearings by a shaft fixed in said rotor, said casing being supported in its upright position by a pair of triple-legged brackets secured to the sides of the casing, the lower ends of said bracket legs being provided with three pairs of horizontal bearings, each pair of bearings being in axial alignment with each other, said rotor shaft extending through and beyond its bearings, one pair of bracket leg bearings being located on an axial line intermediate the axial lines of the other pairs of bearings, in combination with an abrading roller having an axial shaft fixed therein and extending through and beyond the intermediately located pair of bearings, in further combination with a pair of guide rollers having axial shafts fixed therein and respectively occupying the other pairs of bearings, one pair of bearings being adjustable to locate the abrading roller into operative relation to the surface being abraded, the shaft of the abrading roller having a driven pulley on each end thereof, each rotor pulley being in a common plane with its corresponding abrading roller pulley thereby providing for a balanced driving effect between the driving and the driven pulleys.

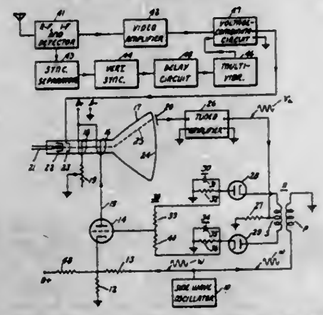
2,472,162
MULLION
Clarence F. Kuney, Howard J. Wurst, and Roland J. Serzow, Waukesha, Wis., assignors to Crittall-Federal, Inc., Waukesha, Wis., a corporation of Wisconsin
Application March 1, 1946, Serial No. 651,120
3 Claims. (Cl. 189—75)

2. In a mullion, the combination of a T-bar center piece having an elongated opening in its web providing an extended fulcruming surface, a clamp bar fulcrumed on said surface to engage at one end with a sash member to clamp it between said bars, and a movable member adjustably carried by the other end of the clamp bar to engage at this end with the other sash member to clamp the same between said bars.



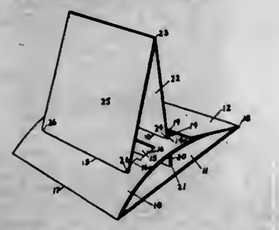
2,472,163
CONNECTING ROD ALIGNING JIG
Jewell M. Lantz, Oswego, and Edward R. Kerchal, Portland, Oreg.
Application January 30, 1946, Serial No. 644,225
3 Claims. (Cl. 153—32)

2. A device of the class described, having a combination of a standard having a face plate mounted thereon, a spindle slidably and rotatively mounted in said standard, the axis of which is normal to the surface of said face plate, means for releasably holding said spindle in a fixed relation to said standard, a vise mounted on said spindle adapted to hold the bearing end of a connecting rod within same normal to said axis while the piston on said connecting rod is opposed to said face plate and means for bending said rod while mounted in said vise.



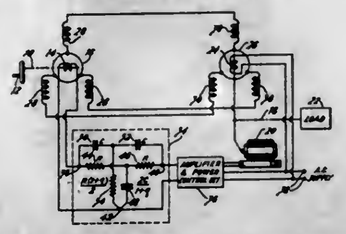
2,472,164
COOKING APPARATUS
Carl Mannheimer, St. Paul, Minn.
Application May 9, 1945, Serial No. 592,732
3 Claims. (Cl. 126—25)

1. For a combustion chamber having walls, cooking apparatus comprising, a substantially



rectangular frame formed from angle bars adapted to extend horizontally on said walls and to define a top opening of said combustion chamber, said frame having horizontally extending flanges adapted to be removably supported on the walls of said chamber and substantially vertical flanges depending within said top opening, a horizontally extending grill and a plurality of reels mounted on said frame, flexible members depending from and connected to said reels to be wound thereon, a fire basket supported on the lower ends of said members and movable to and from said grill beneath the same, manually operable means for actuating said reels and means for retaining said basket at adjusted elevations.

2,472,165
AUTOMATIC FOCUS CONTROL FOR CATHODE-RAY TUBES
Arthur H. Mankin, North Merrick, N. Y., assignor to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application April 29, 1947, Serial No. 744,586
13 Claims. (Cl. 315—31)



1. In a cathode-ray system; a cathode-ray tube having a screen, means for generating an electron beam, and focus-control means for said beam; and means responsive to changes in screen potential resulting substantially from changes in beam focus for developing voltages whose magnitude and phase are a function of the extent and direction respectively of the departure of the mean focus of said beam from sharp focus.

2,472,166
MAILABLE DISPLAY HOLDER
Albert Mathewson, Mount Vernon, N. Y.
Application December 10, 1946, Serial No. 715,166
5 Claims. (Cl. 40—124.1)

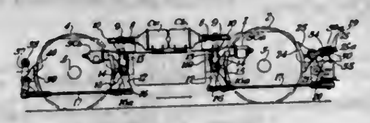
3. A greeting card comprising six portions attached in sequence by fold lines, said first portion having two transverse slots each having a wide part, and tabs forming a narrow part of said slots, the first and third portions overlying the second, a fourth and fifth portion having their joining fold line extending through the slot nearest the end of the strip, one of said portions having edge notches to embrace the tabs of said slot, and a sixth greeting section extending downwardly from said fifth section and having an end tab extending through said other slot.

2,472,167
FREQUENCY SENSITIVE CIRCUIT
Leslie E. Matson, Jr., Collingswood, and Robert N. Lesnick, Camden, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application March 13, 1945, Serial No. 582,540
8 Claims. (Cl. 318—30)

8. The combination, in an electrical control system with means for producing alternating control signals representative of a condition to be controlled by said system, of a frequency sensitive circuit comprising a network of resistive and capacitive elements only connected in series with said control-signal-producing means, said network and the values of the elements being chosen to make said network the equivalent of two T-networks in parallel, the first having two substantially equal serially-connected resistors and a shunt capacitor, and said second T-network having two substantially equal series-connected capacitors and a shunt resistor, said shunt capacitor and resistor having respective values of

$$\frac{2C}{1+q}$$

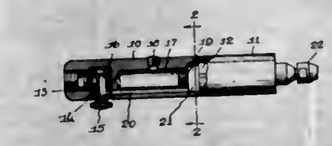
farads and



$$\frac{R(1+q)}{2}$$

ohms, where C equals the capacitance in farads of each of the series-connected capacitors, R equals the resistance in ohms of each of the series-connected resistors, and q equals a positive number greater than zero.

2,472,168
PROCESS FOR THE PREPARATION OF D-GLUCOSACCHARIC ACID
Charles L. Mehltretter, Carl E. Rist, and Benjamin H. Alexander, Peoria, Ill., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application October 12, 1948, Serial No. 54,192
1 Claim. (Cl. 260—528)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



A method which comprises oxidizing glucose in aqueous medium by means of an oxygen-containing gas, in the presence of a platinum catalyst and under vigorous agitation, the hydrogen ion concentration being maintained during the reaction within the range pH 5.0 to 9.6 by the addition of a basic potassium salt and recovering the D-glucosaccharic acid as the water-insoluble potassium acid D-glucosaccharate.

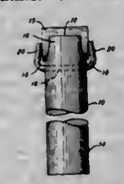
2,472,169
BRAKE RIGGING
Emil G. Mueller, Churchill Borough, Pa., assignor to The American Brake Company, Swissvale, Pa., a corporation of Missouri
Application April 16, 1946, Serial No. 662,657
10 Claims. (Cl. 188—56)

1. In a brake rigging, the combination with a truck frame and a supporting wheel therefor, of a live lever carrying means for frictionally engaging the wheel pivotally supported intermediate its ends for movement toward and away from the wheel, a brake cylinder mounted on the truck frame outboard of the wheels, a horizontally disposed brake cylinder lever fulcrumed at its inner end on a fixed fulcrum and operatively connected at its outer end with said brake cylinder and operatively connected intermediate its ends with the upper end of said live lever, an automatic slack adjuster, means including an equalizer lever connecting the lower end of said live lever with said automatic slack adjuster, and means connected with said equalizer lever for frictionally engaging the wheel at the side opposite to said first mentioned means.

2,472,170
MEANS FOR SUPPLYING LUBRICATION AS A FINE MIST
William W. Nash, Salem, Wis., assignor to The Dumore Company, Racine, Wis., a corporation of Wisconsin
Application August 16, 1944, Serial No. 550,016
2 Claims. (Cl. 184—55)

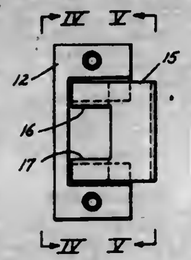
1. A pneumatic tool housing comprising a section of translucent material, an air actuated motor embodying high speed rotating parts disposed in one part of said housing, a valve in said housing, a duct between said valve and said tool said duct including a passageway of comparatively small cross section and a chamber, and a reservoir having a wall of sintered iron closing one end of the same and forming a wall portion of said chamber whereby air flowing over said wall becomes charged with an oily mist.

2,472,171
METHOD FOR PRODUCING ELECTRODES FOR ELECTRIC ARCS
Marcel Victor Oswald, Paris, France, assignor to Societe Le Carbone Lorraine, Paris, France
No Drawing. Application January 30, 1947, Serial No. 725,262. In France February 9, 1946
15 Claims. (Cl. 176—133)



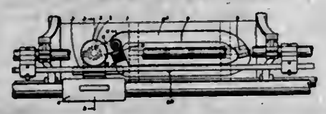
1. A method for producing electrodes for electric arcs, comprising in combination the steps of forming a paste from a solid carbonaceous matter, an organic silicon compound and an organic volatile solvent; shaping the material thus obtained; and then subjecting it to a hardening treatment.

2,472,172
HOSE CLAMP
William G. Ovens, Midland Park, and James W. McCrea, Radburn, N. J., assignors to Wright Aeronautical Corporation, a corporation of New York
Application September 7, 1945, Serial No. 614,868
3 Claims. (Cl. 24—27)



3. A hose clamp comprising a single loop of resilient wire with straight end portions, said wire loop being such that in its unstrained condition each straight end portion begins at the point the loop is completed and extends substantially tangentially from said point in a direction opposite to the direction at which the other straight end portion extends from said point, whereby said straight end portions can be pressed toward said point to spread said loop against its elasticity, the adjacent sides of said straight end portions each having a notch providing a shoulder facing a shoulder provided by the notch in the other straight end portion with each said notch having a depth gradually decreasing away from its shoulder, said facing shoulders being adapted to abut each other to limit the extent to which said loop can readily be so spread.

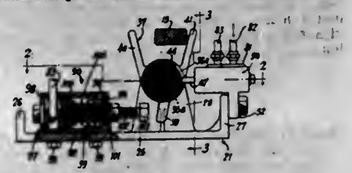
2,472,173
WELDING ELECTRODE
Raymond E. Powell, Westfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application June 16, 1947, Serial No. 755,392
7 Claims. (Cl. 219—4)



1. An electrode for welding comprising a body of conductive material having a groove substantially circular in cross-section extending at an angle relative to the centerline of the body through one end of the body, and a tip member circular in cross-section disposed in the groove and extending through the groove beyond the adjacent end of the body.

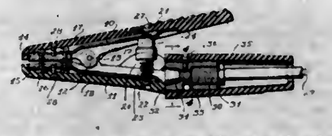
2,472,174
KEEPER FOR DOOR BOLTS
William H. Schneider, Pittsburgh, Pa.
Application February 18, 1947, Serial No. 729,342
3 Claims. (Cl. 292—340)

1. A keeper structure for door bolts, comprising a keeper plate adapted for connection flatwise to a door jamb and having a bolt-receiving opening cut therethrough intermediate its ends, from one vertical edge thereof, portions of the keeper at the vertically-spaced edges of the opening being deflected rearwardly from the plane of the plate, and a stop plate having channels formed thereon that receive and have frictional fit with said deflected portions and having an opening between said channels for the reception of a bolt.



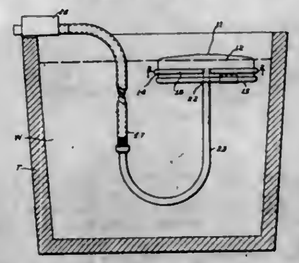
2,472,175
STRAIGHT-BAR KNITTING MACHINE
Harry Wilfred Start, Carlton, and Ernest Start, Kyiestrome, Wilford, England, assignors to William Cotton Limited, Loughborough, Leicestershire, England
Application December 11, 1946, Serial No. 715,416
In Great Britain September 4, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires September 4, 1965
11 Claims. (Cl. 66—126)

1. In a straight-bar knitting machine having a slurcock, draw mechanism for reciprocating it, and at least one carrier also driven by the same mechanism, the combination of reciprocatable rack for driving the carrier, a pinion meshing with the rack and bodily reciprocatable by said mechanism with the slurcock, and means for producing rotation of the pinion at least at one end of each traverse thereof and for preventing rotation during at least the major part of each traverse, thereby to produce a lead of the carrier over the slurcock.



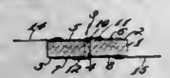
2,472,176
THROTTLE CONTROL DEVICE FOR STEAM LOCOMOTIVES
Charles Stern, Jersey City, N. J.
Application April 16, 1945, Serial No. 588,670
9 Claims. (Cl. 74—526)

1. In combination, a rotatably mounted fork having a pair of diverging fingers, an arm on said fork, a cylinder, a piston within the cylinder, means on the piston to engage said arm, means to supply compressed air to one end of the cylinder to move the piston in one direction to a predetermined position in the path of movement



of said arm, spring means to urge the piston in an opposite direction, and means actuated by the fork to control the supply of compressed air to the cylinder.

2,472,177
WELDING ELECTRODE HOLDER
Clifford W. Taber, Pasadena, Calif.
Application September 2, 1947, Serial No. 771,641
3 Claims. (Cl. 219—8)

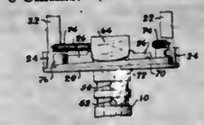


1. In a welding electrode holder, a pair of opposed jaw carrying members hingedly connected together, a compression spring between the members on the opposite side of the hinge from the jaws and urging said members to cause their jaws to clamp upon an electrode, insulating covers covering the outer and lateral sides of said members, one of said covers having side portions projecting over the sides of the spring, the opposed jaw carrying member carrying an insulating spring seat for the spring bridging the space between said portions and said opposed member.

2,472,178
ELECTRIC HEATING
Sidney J. Temple, Forest Hills, Pa., assignor to Edwin L. Wiegand Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application September 16, 1947, Serial No. 774,735
3 Claims. (Cl. 219—41)

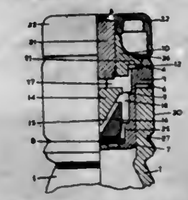
1. In combination: an electric heater constructed to float on a body of a liquid and thereupon to act to maintain at least the apposite portion of the surface of said body of liquid against congealing, comprising float means constructed and adapted to float said heater on said body of liquid, electric heating means carried by said float means and having one or more active portions distributed about the periphery of said heater and adapted to impart heat to the liquid adjacent thereto, switch means carried by said float means and connected to control the flow of power to said electric heating means, and thermostat means carried by said float means and constructed and connected to control said switch means responsive to temperature of the liquid beneath and adjacent the under portion of said float means; and conductor means, adapted to be connected to a supply of electric power, and constructed and arranged thereupon to conduct power from such supply to said electric heating means under control of said switch means.

2,472,179
PIEZOELECTRIC DEVICE
Raymond W. Tibbetts, Camden, Maine, assignor to Tibbetts Laboratories, Inc., Camden, Maine, a corporation of Maine
Application June 11, 1947, Serial No. 753,840
2 Claims. (Cl. 171—327)



1. A piezoelectric device comprising a plate of piezoelectric material having a hole extending therethrough, electrodes mounted on opposite faces of the plate, the edges of the electrodes being offset from the edges of the hole, and a conductor for electrically interconnecting an electrode on one face of the plate with an electrode on the opposite face of the plate, the conductor comprising a plug of conducting material filling the hole and integral portions of conducting material interconnecting the ends of the plug with said electrodes.

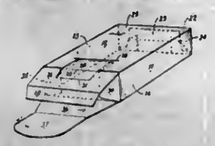
2,472,180
FLUORESCENT INSPECTION LAMP
Harry W. Tittle, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application February 1, 1946, Serial No. 644,873
4 Claims. (Cl. 240—11.4)



1. A fluorescent inspection lamp comprising a tube of transparent plastic material having threaded ends, a fluorescent lighting element arranged within the tube, a starter mounted within the tube at one end of the element, a closure member of transparent plastic material removably threaded to one end of the tube and having a passage therethrough for a flexible supply cable, said cable being sealed within said passage, a second removable closure member of plastic material threaded to the opposite end of said tube, a spacing tube surrounding said starter for spacing said element from the first said closure member, means at the second said closure member for holding said element, said starter, and said spacing tube against the first said closure member, said means comprising a central protuberance of the second said closure member and a resilient disc mounted between said protuberance and said element and resiliently supporting said element from said closure member, and means for sealing said closure members to said tube.

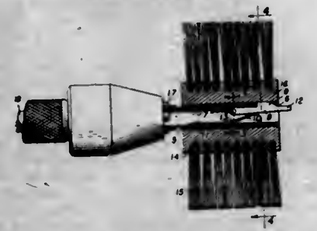
2,472,181
PROPELLER GOVERNOR
Frederick W. Werth, Jr., Clifton, N. J., assignor to Wright Aeronautical Corporation, a corporation of New York
Application July 7, 1944, Serial No. 543,812
8 Claims. (Cl. 264—6)

2. A speed control system for a mechanism comprising a member movable to regulate the speed of said mechanism, a spring for urging said member in one direction, a rotatable member drivably connected to said mechanism, flyweight means carried by said rotatable member and operative to urge said speed regulating member against said spring in response to the centrifugal force acting upon said flyweight means, and means operatively disconnected from said speed regulating member when the mechanism acceleration is less than a predetermined value and operatively connected to said speed regulating member at higher mechanism accelerations to urge said member against said spring with a force varying with the magnitude of said acceleration.



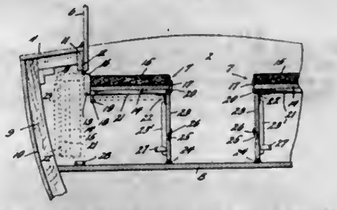
2,472,182
NONREFILLABLE BOTTLE CLOSURE
Albert Whittam, Markinch, Scotland, assignor of one-half to John Haig & Company, Limited, Markinch, Scotland, a British company
Application October 28, 1946, Serial No. 706,138
In Great Britain February 20, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires February 20, 1965
5 Claims. (Cl. 215—22)

1. A bottle closure comprising a tubular valve casing, an external flange on said casing, an internal annular shoulder in said casing intermediate its length, vertical ribs formed on the interior of said casing beneath said shoulder and extending downwards to the bottom of the casing, an eccentrically apertured valve seat at the bottom of said casing, a disc valve movable in said casing and arranged to seat by surface attraction on said valve seat, a weight loosely superimposed upon said valve, said weight having an inwardly tapering recess in the top thereof, a tubular nozzle in the upper part of said casing, said nozzle having an axial passage open at its outer end and closed at its inner end and said nozzle having ports in its side at right angles to



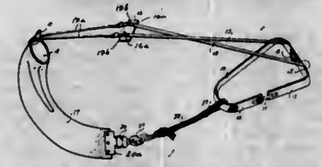
said axial passage and providing lateral connections between said axial passage and the interior of the valve casing, and a tapered bearing member at the inner end of said nozzle for co-operating with the recess in said weight.

2,472,183
CONTAINER
Marshall I. Williamson, New Haven, Conn., assignor, by mesne assignments, to National Folding Box Company, Incorporated, a corporation of Connecticut
Application October 23, 1945, Serial No. 623,977
6 Claims. (Cl. 206—45.31)



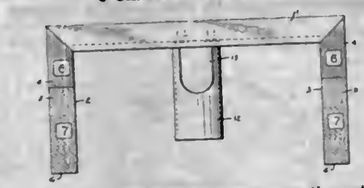
1. A folding box or carton comprising enclosing side walls, and panels forming end walls, one of said end walls comprising an inner end panel hingedly connected to one of the side walls along a fold line, said inner end panel and said one side wall having a flap cut therefrom hinged to said inner end panel providing upon folding of the flap an inspection aperture extending across said fold line; side flaps hingedly connected to side walls adjoining said one side wall; means for securing said inner end panel in carton contents retaining position; an outer end panel hingedly connected to a second side wall opposite said one side wall; an end flap, wider than said aperture, hingedly connected to said outer end panel, said outer end panel and said end flap being adapted to overlie and cover said inspection aperture, said one side wall having a slit therein extending substantially from the end edge of said cut flap, said end flap being insertable through said slit to maintain said outer end panel and end flap in aperture covering position, said slit extending beyond the width of said cut flap.

2,472,184
SNAP CHUCK
William Anest, North Platte, Nebr.
Application May 13, 1947, Serial No. 747,865
1 Claim. (Cl. 279—79)



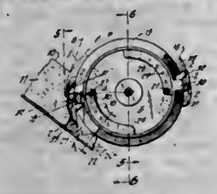
In combination with a tool hub having an axial bore and a notch formed in the bore including a shoulder; means for securing a driving shaft in the axial bore of the tool hub, said means comprising a hollow shaft open at one end, a longitudinal slot provided in said shaft adjacent the open end thereof, a pivotal latch mounted within the shaft, an outwardly projecting lip integrally formed with said latch for sliding movement in said slot, said lip including a transverse bearing edge engaging the shoulder of the notch formed in the tool hub bore to prevent rotary movement of the tool hub relative to the shaft and to hold the tool hub against longitudinal movement on the shaft in one direction, spring means fixed within the shaft for normally urging the lip outwardly from the slot, and a finger engaging lever integrally formed with the latch and projecting outwardly from the open end of the shaft.

2,472,185
SEAT FOR SMALL BOATS
Arno A. Apel, Ventnor, N. J.
Application August 17, 1945, Serial No. 610,897
4 Claims. (Cl. 9—7)



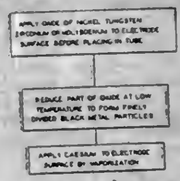
1. In a boat having a cockpit and front and rear bulkheads defining the opposite ends of the cockpit; together with oppositely arranged longitudinally extending pivotal seats having their opposite ends abutting against the adjacent bulkheads, said pivotal seats each provided with a coextensively extending front piece adapted to support the seat when in its open position, a flexible strip arranged along the lower edges of the front pieces and adapted to form a substantially water-tight connection with the floor of the cockpit to thus reduce the area of the cockpit when the seats are in their open position each seat and its front piece normally nested in a vertical position beneath the deck and capable of swinging inwardly towards each other and upwardly to a horizontal position when they are in their open position.

2,472,186
APPARATUS FOR COLLECTING URINE FROM HORSES AND OTHER ANIMALS
Gilbert Ewan Arnold, Grenville, Quebec, Canada
Application December 8, 1943, Serial No. 513,650
2 Claims. (Cl. 119—95)



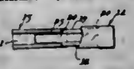
1. An apparatus for collecting urine from pregnant mares, comprising a container in the form of a bag of flexible material closed at its lower end and having an opening at its upper end, a relatively stiff shield connected to said container at one side of said opening and projecting above the opposite side of said opening, a body strap adapted to pass about a forward part of the body of the mare, means connecting said shield to said body strap to hold the upper end of said shield securely against the mare below the anus and above the urethral orifice and to hold the opposite side of said opening of the container below said urethral orifice, whereby urine enters the bag through the opening while fecal matter is excluded by said shield, and means including a rupturable section connecting the lower end of said container to said body strap.

2,472,187
INDOOR GOLF
Charley S. Barker, Ithaca, N. Y.
Application July 24, 1947, Serial No. 763,423
8 Claims. (Cl. 273—36)



1. In game apparatus for improving the putting technique of golfers, an assemblage comprising an angular three-sided frame formed of a rear wall and wings projecting forwardly from and at substantial right angles to the end zones of such rear wall, and an open-bottom and open-ended element secured to and projecting forwardly from a mid-zone portion of the rear wall, the open front end of said element permitting passage of a putted golf ball into the element, said element having an arched top and an overall height greater than that of the rear wall, said rear wall being undercut lengthwise of the length of the wall to form a forwardly-projecting rib-like formation extending lengthwise of the upper zone of such rear wall to thereby brake or snub a golf ball driven into contact with the rear wall by a putt stroke of the golfer, the open rear end of the element extending above the plane of the rib-formation to place the rib-formation accessible to the interior of the element and cause a putted golf ball entering the element to be subject to the braking or snubbing action of such formation to thereby control the rebound value of such entered ball.

2,472,188
ICE BREAKER
Azzel Clark Bennett, Hudson, N. Y., and Walter G. Engler, Chicago, Ill., assignors to Gifford-Wood Company, Hudson, N. Y., a corporation of New York
Application February 7, 1946, Serial No. 646,018
2 Claims. (Cl. 241—243)



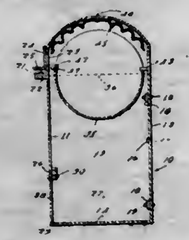
1. An ice breaker comprising the combination with a rotatable cylindrical drum, of means downwardly inclined towards said drum adapted to support a block of ice thereon so that it will slide freely towards said drum; said drum having a plurality of axially-spaced, outwardly-projecting, annular ribs thereon interrupted in two diametrically opposite zones of said drum, but being otherwise continuous, adapted to limit the approach of said block of ice towards said drum and providing continuously open spaces between said ribs for the free passage of ice particles therethrough; a plurality of ice picks disposed in two diametrically opposed groups, means detachably securing said picks to said drum in the interrupted zones of said ribs; whereby, when said breaker is in operation, said block of ice may slide into contact with the ribs on said drum in the intervals between the contact therewith of said groups of picks and thus initially present to each group a body of ice of substantial thickness to prevent gnawing away of the ice in comparatively small bits; and a toothed comb positioned below the zones of contact of said picks with said block of ice and having the toothed edge thereof disposed in radially closely spaced relation to the ribs on said drum; whereby to provide continuously open spaces adjacent said comb, partially defined by said ribs and partially defined by the teeth of said comb, for the free passage of ice particles of substantial size therethrough and for limiting the maximum size of said particles.

2,472,189
THERMIONIC TUBE HAVING A SECONDARY-EMISSION ELECTRODE
Henri Bienfait and Cornelis Frederik Veenemans, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application March 22, 1943, Serial No. 480,102
In the Netherlands July 3, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires July 3, 1961
2 Claims. (Cl. 250—174)

1. A secondary-emissive electrode for a thermionic tube having a multiplicity of parts on its surface comprised of black particles of nickel, and secondary-emissive material on the said electrode around said nickel particles.

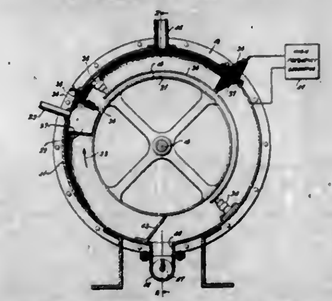
2,472,190
NECKTIE CLASP
Francis Leo Bievenouer, Rochester, N. Y.
Application February 21, 1945, Serial No. 579,142
1 Claim. (Cl. 24—49)

A necktie clasp comprising a U-shaped outer body member having integrally formed parallel underlying spaced locking legs, an integrally formed resilient necktie-engaging finger disposed between said locking legs for attaching said



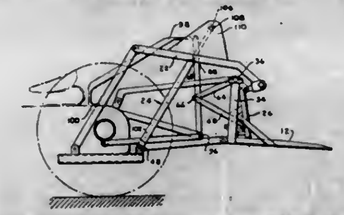
member to the front portion of a tied four-in-hand necktie, and a U-shaped inner body member having means thereon for engaging the underneath portion of a tied four-in-hand necktie formed with integral spaced inwardly extending parallel locking channels adapted to receive the locking legs of said outer body member for holding said clasp in assembled position.

2,472,191
ANIMATED CARTOON
James Carroll, Scranton, Pa.
Application December 29, 1945, Serial No. 638,292
2 Claims. (Cl. 46—36)



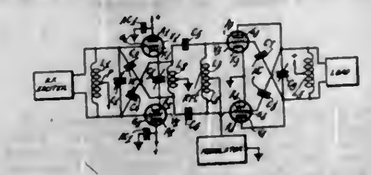
1. An animated cartoon comprising a card folded to form an underleaf and a cover, the folded edge of said card constituting a hinge, a primary picture on the inner face of said underleaf, a second picture on the outer face of said cover illustrating said primary picture in a relatively different posture, and means for opening and closing said cover to selectively expose said pictures alternately to view, said means including a flap flexibly connected at one edge to said cover in a lever-like relationship to said hinge, said flap having a center portion provided with a finger receiving aperture and an end portion folded under said center portion to form a finger rest, the finger rest sliding on the inner face of said underleaf adjacent the primary picture, the movement of said flap upon said underleaf opening and closing said cover to alternately expose said pictures to view.

2,472,192
AUTOMATIC SIGNAL MAILBOX
Robert Carter, Johnstown, Pa.
Application January 20, 1948, Serial No. 3,190
2 Claims. (Cl. 232—17)



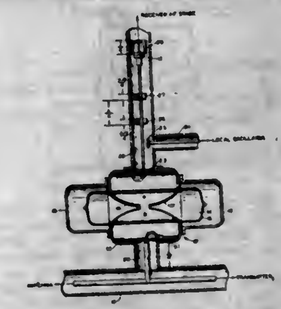
2. A signal for a slotted mail box comprising a housing with a receptacle rotatably mounted therein and having means for manually rotating the receptacle on a horizontal axis, said signal including a closed arcuate top upon the housing arched about the horisontal axis, an arcuate sonorous member secured at the intermediate portion thereof to the upper concave interior portion of the arcuate top of said housing in a substantially concentric relation to the axis of rotation of the receptacle and transversely corrugated throughout the entire extent thereof in substantial parallelism to said horisontal axis, and a clapper secured upon one portion of said receptacle in effective position to be brought successively against the corrugations of said sonorous member upon rotation of said receptacle.

2,472,193
ELECTRONIC DRYING OF FOOTS
Benjamin Clayton, Houston, Tex., assignor, by mesne assignments, to Benjamin Clayton, Houston, Tex., doing business as Refining, Unincorporated
Application October 19, 1943, Serial No. 506,899
6 Claims. (Cl. 260—412.5)



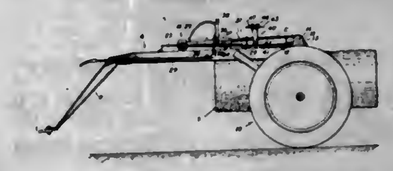
1. The process of drying foots from the refining of glyceride oils, said foots being a thick viscous organic material containing gums and also containing water dispersed therein, which process comprises, spreading said foots in a thin layer upon a supporting surface, moving said surface having said layer thereon through a drying zone, subjecting said layer while in said zone to the action of a radio frequency alternating electric field of sufficient intensity to generate heat in said foots and vaporize said water, maintaining a surface of said layer exposed to a vapor liberating space in said zone to provide for free escape of water vapor from said foots, withdrawing water vapor from said sone at a rate sufficient to produce a vacuum in said zone, and removing the resulting dried foots from said supporting surface and from said zone.

2,472,194
FARM IMPLEMENT OR LOADER
Carroll R. Cook, Lenawee County, Mich.
Application June 15, 1946, Serial No. 676,953
5 Claims. (Cl. 214—131)



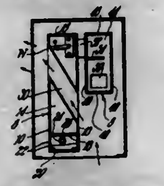
1. In a motor vehicle, a power operated loading device comprising a fork having horizontally extending tines, means for supporting said fork for vertical bodily movement with the tines thereof arranged horizontally so that the fork may be inserted into a load of material, power operated means operable for elevating said fork with the load thereon, a pusher mounted for movement relative to said tines for pushing the load off the end thereof and for movement to a retracted position, means operable for actuating said pusher by said power operated means when said fork is in an elevated position, means for locking said pusher to said fork during lifting movement thereof and arranged to be released when said fork reaches the upper limit of its vertical movement, means for locking said fork against downward vertical movement when said pusher locking means is released, said locking means being constructed and arranged so that said fork locking means is released and said pusher locking means reengaged upon movement of said pusher to its retracted position, said pusher and said fork being directly connected to said power operated means by rigid actuating members whereby said pusher, said fork, and said power operated means are operable as a unit during said movement of said fork and the movement of said pusher relative to said tines.

2,472,195
ELECTRON DISCHARGE TUBE HIGH-FREQUENCY AMPLIFIER AND MODULATING CIRCUITS THEREFOR
Victor James Cooper, Writtle, and Ernest Green, Writtle, Chelmsford, England, assignors, by mesne assignments, to Radio Corporation of America, New York, N. Y., a corporation of Delaware
Application October 24, 1946, Serial No. 705,264
In Great Britain December 5, 1945
4 Claims. (Cl. 332—24)



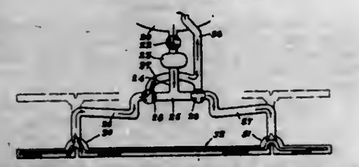
1. In an amplifier system, a source of currents of carrier wave frequency to be amplified, a pair of electron discharge tubes each having electrodes including an anode, a cathode and control grid, a parallel tuned circuit coupled to said source and connecting the control grids of said tubes in push-pull relation, couplings of low impedance to said currents of carrier wave frequency coupling the anodes of said tubes to ground, a second parallel resonant circuit coupled between the cathodes of said tubes, neutralizing capacitors cross coupling the control grids and cathodes of said tubes, a second pair of tubes each having electrodes including an anode, a cathode and a control grid, an output circuit coupled between the anodes of said last named pair of tubes, connections coupling said last named parallel resonant circuit in push-pull relation to corresponding electrodes of said last named pair of tubes, a modulator circuit coupling the control grids of said last named pair of tubes in parallel, and neutralizing apparatus connected with the control grid of each of said last named tubes.

2,472,196
TRANSMIT-RECEIVE SYSTEM
Bruce B. Cork, Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application May 17, 1945, Serial No. 594,270
4 Claims. (Cl. 250—13)



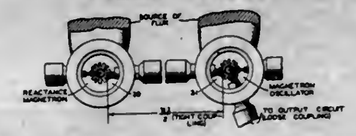
1. The combination in a transmit-receive radio system comprising a magnetron oscillator, a receiver, an antenna, a transmission line connecting said magnetron to said antenna, a stub line extending from said transmission line to said receiver, means for introducing an impedance in said stub line during the time of transmission which is very high for the fundamental frequency of the transmitted energy, and means on said stub line for attenuating the passage of energy whose frequency is the third harmonic of the transmitted energy.

2,472,197
STRADDLE-TYPE LOG HANDLING CART WITH HYDRAULIC LIFT
Thomas A. Dowd, Siler City, N. C.
Application December 3, 1947, Serial No. 789,409
9 Claims. (Cl. 214—65.3)



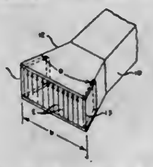
1. A log handling cart of the class described comprising a mobile frame provided on its rear end portion with rotatably mounted shaft having chain accommodating and guiding pulleys, tracks fixedly mounted on said frame, a cross-head slidably mounted on said tracks and movable toward and from said shaft, rearwardly extending, arms pivotally connected to the ends of the cross-head, a log chain having portions trained for operation over said pulleys, one end of said chain being rigidly secured to one of said arms, latch means on the remaining arm with which the remaining end of the chain is releasably connected, and a trip device mounted on said frame between one of said pulleys and the last-named arm and in the path of movement of said latch means and including a self-setting trip arm.

2,472,198
COMBINED COOKING AND AIR HEATING STOVE
Homer D. Dufault, Easthampton, Mass., assignor to Heatbath Corporation, Springfield, Mass., a corporation of Massachusetts
Application December 4, 1944, Serial No. 566,545
2 Claims. (Cl. 126—6)



1. The combination with a range having a compartment having a flue for gases and a warm air outlet in adjacent walls thereof of a heater in said compartment comprising in combination, separate horizontally spaced primary and secondary heater compartments in the compartment of the range and spaced from the walls thereof, said heater compartments including upper and lower horizontal walls and vertical inner and outer side walls and end walls, hollow pipe connections between inner adjacent side walls of said heater compartments at upper portions thereof adjacent said end walls, the lower wall of said primary compartment provided with a longitudinal slot for a burner, the lower wall of the secondary compartment being disposed in a plane intermediate the planes of the upper and lower walls of the primary compartment, air tubes extending diagonally upwardly through said primary compartment from the inner wall to outer wall thereof having opposite ends secured to said walls, the ends of said tubes secured to the inner walls of the primary compartment disposed below the plane of the lower wall of the second compartment, the ends of said tubes secured to the outer wall of the primary compartment disposed adjacent the outlet of the range compartment, and a hollow flue connection extending from the lower portion of one end wall of the secondary compartment.

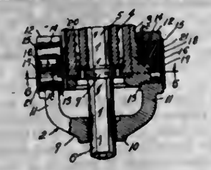
2,472,199
DISTRIBUTOR FOR BITUMEN AND LIKE MATERIAL
George M. Etnyre, Oregon, Ill., assignor to E. D. Etnyre & Co., Oregon, Ill., a corporation of Illinois
Application December 8, 1945, Serial No. 633,728
7 Claims. (Cl. 299—34)



3. A distributor bar for bituminous material and the like comprising, in combination, two substantially alined sections each having a pair of contiguous flow passages, hinge means connecting said sections and providing two passages respectively connecting the passages in adjacent sections of the bar, the passages in one section communicating with each other at the ends thereof remote from the other section, inlet means communicating with one of said connecting passages, and outlet means communicating with the other of said connecting passages.

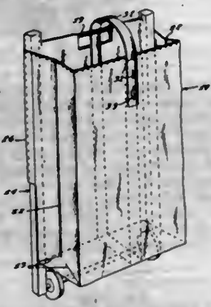
2,472,200
VARIABLE FREQUENCY MAGNETRON CIRCUIT
Edgar Everhart, Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application August 8, 1945, Serial No. 609,651
9 Claims. (Cl. 332—5)

7. In combination, a first oscillating magnetron, a second magnetron tightly coupled to said first magnetron, each of said magnetrons having a cathode and an anode, said anodes having a number of cavity resonators, means to impress a variable voltage onto the cathode-anode circuit of said second magnetron, said voltage being below the "cut-off" region of said second magnetron to cause a variation in the resonant frequency of said first magnetron.



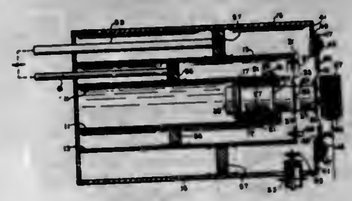
2,472,201
ANTENNA
Leonard J. Eyges, Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application December 10, 1945, Serial No. 634,071
7 Claims. (Cl. 250—33.63)

1. A horn antenna, comprising two parallel electrically conductive walls and two divergent relatively narrow walls perpendicular thereto, said walls defining a tubular structure flared from a throat end to a mouth end, said throat end being adapted for connection to a transmission line, said narrow walls being formed of electrically conductive material near said throat end and of dielectric material near said mouth end.



2,472,202
TOOL RETAINER
Walter D. Fish, Claremont, N. H., assignor to Joy Manufacturing Company, a corporation of Pennsylvania
Application June 1, 1946, Serial No. 673,819
10 Claims. (Cl. 279—19.1)

4. In combination, a support having lateral trunnions near its forward end and adapted to receive the shank of a reciprocable collared tool, a swingable one-piece retainer yoke having side arms adapted for lateral connection with said trunnions and at their rearward portions pivotally mounted on said trunnions, and yieldable means carried by said rearward portions of the side arms of said yoke for urging said side arms rearwardly into pivotal contact with said trunnions, said arms having recesses extending rear-

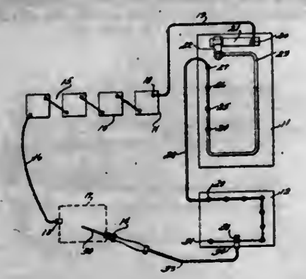


wardly of said trunnions to receive said yieldable means and laterally receiving said trunnions, said recesses having curved front walls providing rearwardly facing bearing surfaces engaging the front surfaces of said trunnions.

2,472,203
COLLAPSIBLE PARCEL CARRIER
Siegfried Friedmann and Erna Friedmann, St. Louis, Mo.
Application July 18, 1947, Serial No. 761,942
4 Claims. (Cl. 280—51)

1. A collapsible parcel carrier comprising a normally upright vertically elongated collapsible frame having ground engaging wheels at its lower end and a transverse handle at its upper end, said frame comprising substantially similar rigid upper and lower sections normally positioned in the same plane and hinged together at their connecting ends so that said lower section can be swung rearwardly relative to said upper section to lie coextensively along the back of said lower section in the collapsed condition of said sections, the meeting ends of said sections in the coplanar positions thereof abutting in a manner precluding forward swinging of either section relative to the other, spring means yieldably maintaining said sections in coplanar relation, a flexible bag on the front of said frame and extending substantially the full height of said frame, said bag being mounted on said upper section and depending freely along the front of said lower section, said bag being arranged to be folded on a transverse line adjacent to the hinge axis of said sections in a forward and upward direction on said upper section as said lower section is swung rearwardly and upwardly against the tension of said spring means, whereby the lower part of the bag lies coextensively along said upper section and said lower section lies coextensively along the back of said upper section.

2,472,204
HIGH-FREQUENCY CONCENTRIC LINE OSCILLATOR
Eugene Fubini, New York, N. Y., Hegar C. Kriegel, Houston, Tex., and John G. Stephenson, Mineola, N. Y., assignors to the United States of America as represented by the Secretary of War
Application March 1, 1946, Serial No. 651,310
4 Claims. (Cl. 250—36)

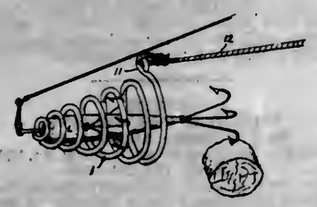


1. In an oscillation generator, first, second and third hollow metallic cylinders, said second cylinder being larger than said first cylinder, and said third cylinder being larger than said second cylinder, means positioning said cylinders in a concentric manner, a lighthouse type vacuum tube, a first dielectric means, means coupling the cathode of said vacuum tube to said first cylinder through said first dielectric means, means connecting the second cylinder to the grid of said vacuum tube, a second dielectric means, means coupling said third cylinder to the plate of said vacuum tube through said second dielectric means, first and second annular pistons, said first piston being positioned in the cavity formed by said first and second cylinders, said second piston being positioned in the cavity formed by said second and third cylinders, means allowing the driving of said pistons in an axial direction simultaneously, magnetic coupling means for coupling energy between the cavity formed by said first and second cylinders and the cavity formed by said second and third cylinders, electrostatic coupling means for coupling energy between the cavity formed by said first and second cylinders and the cavity formed by said second and third cylinders, a capacitor plate placed in the proximity of the anode of said vacuum tube, means for adjusting the proximity of said plate to said anode, coupling means inserted through said third cylinder into the cavity formed by said second and third cylinders, means for adjusting said latter coupling means in an axial direction, and means for adjusting said latter coupling means in a radial direction.

2,472,205
RHEOSTAT FOR WELDING
Paul S. Greider, Aberdeen, Md.
Application February 14, 1947, Serial No. 728,543
2 Claims. (Cl. 201—61)

1. In a welding outfit, an ampere regulator comprising an insulating plate, a plurality of spaced threaded posts mounted upon the plate and projecting above the plate, a pair of nuts arranged above the plate and carried by each threaded post, resistance devices arranged above the plate and having terminals at their opposite ends, the terminals being arranged in superposed contacting relation and arranged between the superposed nuts, a U-shaped copper clip for each threaded post and having openings near its ends to receive

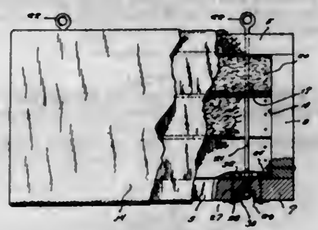
the threaded post, the U-shaped clip straddling the upper nut and having its lower side contacting with the terminal of one resistance device and its upper side contacting with the upper nut, a lock nut carried by each threaded post and



disposed above the upper side of the clip, and a slotted connector for insertion between the lock nut and the upper side of the U-shaped clip, the connector being adapted for connection with a wire and one end threaded post being adapted for connection with a wire.

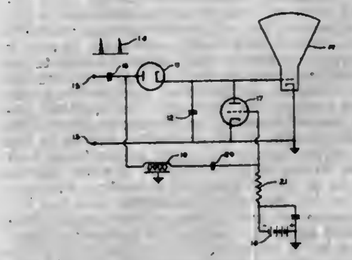
2,472,206
CEMENTITIOUS REFRACTORY AND METHOD OF MAKING
Le Elsworth Greene, Muskegon, Mich.
No Drawing. Application February 28, 1948, Serial No. 12,139
2 Claims. (Cl. 106—68)

1. A compound consisting of ten (10) parts by weight of ground fire clay, one (1) part by weight of nitre cake, one (1) part by weight of salt, one (1) part by weight of silica sand, a portion of iron filings not to exceed one twentieth by weight of the fire clay, nitre cake, salt and silica sand, and a selected volume of water.



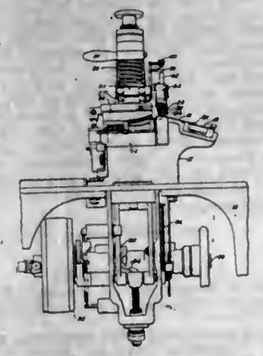
2,472,207
FISH LURE RETRIEVER
Louis M. Gundel, Chicago, Ill.
Application May 6, 1944, Serial No. 534,299
2 Claims. (Cl. 43—30)

1. A fish lure retriever comprising a single piece of wire wound spirally in spaced convolutions to form a frusto-conical shaped wire cage adapted to receive a fish line therein by passing the latter between the convolutions of the cage, each end of said wire being extended beyond the periphery of the convolution adjacent thereto for preventing escape of the fish line from within said cage.



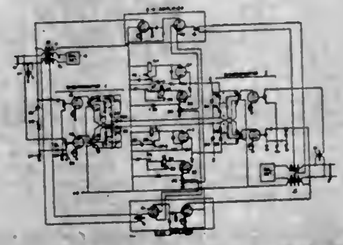
2,472,208
BACKSTOP FOR BOWLING ALLEYS
Albert B. Hackert, St. Paul, Minn.
Application March 13, 1945, Serial No. 582,536
2 Claims. (Cl. 273—53)

1. A backstop for a bowling alley comprising a unit adapted to be vertically arranged with relation to an alley and including a frame having an open center and a rigid backing therefor, said frame forming a recess forwardly of said backing, an inner sheet of flexible material completely fitting the recess and having its opposite side edges extending forwardly of said recess, each of said side edges being bent marginally so as to form a flange, a plurality of flexible separators positioned within said recess and extending forwardly of the latter, said separators being arranged in parallel spaced relation with



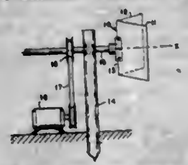
respect to each other and to the forwardly-extending side edges of said sheet and joined to the sheet to form with said side edges a plurality of independent channel-like compartments within and without said recess, filler material in each of said compartments and completely filling the latter, and a flexible cover extending over the front of said compartments and having its edges secured to said frame, the flanges on the forwardly-extending side edges of said sheet being attached to said cover.

2,472,209
CATHODE-RAY CIRCUIT
William M. Hall, Lexington, Mass.
Application September 6, 1944, Serial No. 552,923
10 Claims. (Cl. 315—22)



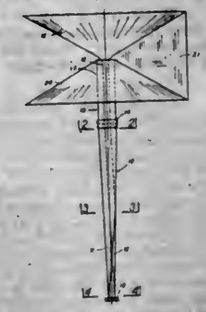
5. A pulse widening circuit comprising a condenser which may be charged by an incoming pulse, a delay network connected to said condenser to be operative after a predetermined interval, and a radio tube connected to said delay network through which said condenser is discharged after said interval.

2,472,210
MACHINE FOR ASSEMBLING AND MOLDING SHOE BOTTOM PARTS
William Henry Heggs and Harold Grimaldi Heather, Leicester, England, assignors to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application October 17, 1946, Serial No. 703,870
In Great Britain April 17, 1946
17 Claims. (Cl. 12—17)



14. In a machine for pressing together two sole members and a stiffener positioned between them, a holddown for said stiffener, means for applying pressure locally to an end portion of one of said sole members comprising a presser member, a carrier on which said presser member is mounted for angular movement upon engagement with the work, means mounted on said carrier for urging said presser member angularly toward the work, means for advancing said carrier to bring said presser member into proximity to the work, and means for further actuating said carrier to advance said presser member into pressing engagement with the work.

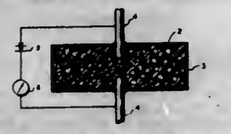
2,472,211
ANTISINGING GAIN CONTROLLED REPEATER
Roswell H. Herrick, Chicago, Ill., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application December 13, 1945, Serial No. 634,769
12 Claims. (Cl. 178—44)



5. In a signal transmission system including a bilateral signal transmission channel, a balancing network, a three winding transformer, two voice repeaters, two of the windings of said transformer being serially connected between said bilateral channel and said balancing network, the input circuit of one of said repeaters being connected between taps on said two windings, and the output of the other repeater being connected to the third winding of said transformer, means for deriving one voltage from the bilateral channel in response to signal waves, means for deriving a second voltage from the third winding of the transformer in response to signal waves, the ratio between said two voltages being greater or less than one depending on the signal direction, and means for increasing the gain of either one of the repeaters in accordance with whether said ratio is greater or less than one.

2,472,212
METHOD OF LOCATING BEACONS
Emmett L. Hudspeth, Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application July 9, 1945, Serial No. 604,027
2 Claims. (Cl. 343—5)

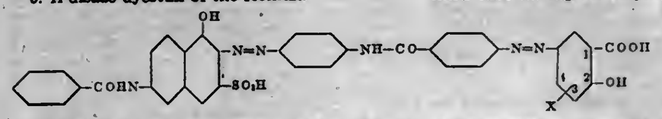
1. In an environment characterized by background objects that shift the polarization of a plane polarized wave a negligible amount, the method of locating a beacon reflector remotely positioned from a transmitter and disposed among said background objects, which method comprises transmitting a plane polarized wave of electromagnetic energy, shifting the plane of polarization of said energy through 90° by means of said beacon, and detecting said energy so shifted in polarization.



2,472,213
ANTENNA SYSTEM
George E. Hulstede, Cambridge, Mass., assignor to the United States of America as represented by the Secretary of War
Application October 3, 1945, Serial No. 620,140
6 Claims. (Cl. 250—33.63)

4. A radio frequency system comprising a biconical antenna and a transmission line electrically continuous therewith, said transmission line at the point of electrical connection with said

biconical antenna comprising a coaxial conductor, said transmission line at a point remote from said point of connection comprising a rectangular wave guide wherein two opposing sides thereof are continuous with the inner and outer conductors of said coaxial transmission line.



2,472,214
PRESSURE RESPONSIVE ELECTRICAL RESISTOR
Hyman Hurvitz, Washington, D. C.
Application October 22, 1947, Serial No. 781,286
8 Claims. (Cl. 201—48)

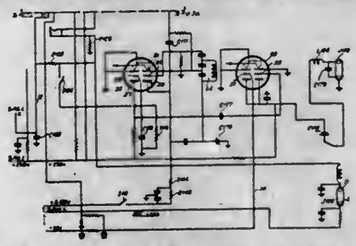
1. In combination, a mass of gas pervious electrically conductive deformable material, a pair of probes inserted therein, and a flexible sheath sealing gas within said mass of gas pervious material and preventing exit or entry of fluid therein and therefrom.

2,472,215
DISAZO DYESTUFFS AND A PROCESS FOR THEIR MANUFACTURE
Hans Ischer, Basel, Switzerland, assignor to the firm Sandos Ltd., Fribourg, Switzerland
No Drawing. Application March 8, 1945, Serial No. 581,715. In Switzerland January 26, 1944
9 Claims. (Cl. 260—177)

5. A disazo dyestuff of the formula

wherein X is in one of the positions 3 and 4 and stands for a member selected from the group consisting of hydrogen and methyl, which dyestuff dyes cotton and regenerated cellulosic fibres in red shades that become fast to washing and to light on after-treatment with copper salts.

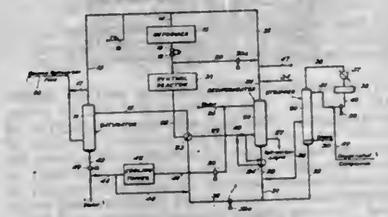
2,472,216
WINDOW STOP
Robert J. Kasik, Chicago, Ill.
Application July 8, 1947, Serial No. 759,564
6 Claims. (Cl. 292—342)



4. A window stop including a wedge-shaped resilient block and a metal channel supporting the same, said channel including a finger adapted to hold said stop in any desired position on the upper sash of a window, said stop being arranged to be wedged between the upper and lower sashes of said window when said channel is engaged by said lower sash, said channel including spurs normally held away from said upper sash by said resilient block but engaging said upper sash when said lower sash is urged against said stop with great force.

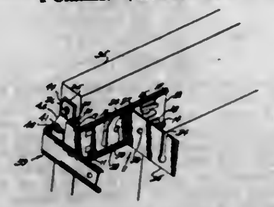
2,472,217
REFINING HYDROCARBON OILS
Eugene E. Langan, Rutherford, N. J., and Norman E. Lemmon and Frederick W. Schuessler, Hammond, Ind., assignors to Standard Oil Company, Chicago, Ill., a corporation of Indiana
No Drawing. Application January 19, 1946, Serial No. 642,426
6 Claims. (Cl. 196—38)

1. The method of refining a viscous petroleum oil comprising treating said oil with fuming sulfuric acid, treating the acid-treated oil containing at least about 0.05% sulfur dioxide with an alkali metal hydroxide in an amount in excess of that required to neutralize the acid-treated oil, air-blowing the neutralized oil in the presence of the excess neutralizing agent, in the absence of a diatomaceous filter-aid, at a temperature of from about 150° F. to about 220° F., for a time sufficient to reduce the water content thereof to less than about 0.1%, and subsequently washing the dehydrated oil with alcohol, and treating said washed oil to remove substantially all of the alcohol therefrom.



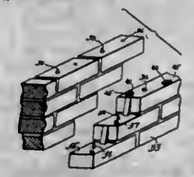
2,472,218
RADIO RECEPTION
Walter Lyons, Wenonah, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application February 5, 1944, Serial No. 521,174
3 Claims. (Cl. 250—20)

1. In combination, an amplifier amplifying high frequency waves modulated with code signals, a first tube having a detector section, a second tube having a relatively low frequency amplifier section and a diode detector section, a third tube having an amplifying section and an oscillator section, circuits for applying waves from the high frequency amplifier to the detector section of the first tube, circuits for applying waves from the oscillator section of the third tube to the detector section of the first tube, a circuit for applying the resultant relatively low frequency beat to the amplifying section of the second tube, means utilizing the amplified output of the amplifying section of the second tube



for monitoring purposes, a circuit for supplying high frequency waves to the diode section of the second tube, a resistor across which voltages are developed by rectifying action of the diode section of the second tube, and circuits for utilizing said voltages to control the amplifying section of the third tube and to automatically volume control said high frequency amplifier, and a utilization circuit coupled to the output terminals of the amplifying section of the third tube.

2,472,219
SYNTHESIS OF HYDROCARBONS
Leland R. Lyons, Hammond, Ind., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application February 13, 1945, Serial No. 577,679
9 Claims. (Cl. 260—449.6)

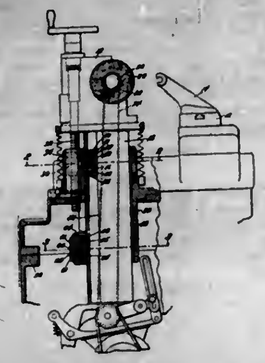


1. In a process for converting hydrocarbon gases into hydrocarbons of higher molecular weight, the steps which comprise converting a hydrocarbon gas into a mixture of gases comprising hydrogen and carbon monoxide, contacting said mixture of gases with a synthesis catalyst to produce higher-molecular-weight hydrocarbons and oxygenated compounds, partially condensing the vaporous reaction product, withdrawing oxygenated hydrocarbon compounds from said reaction product, and recycling at least a portion of said oxygenated hydrocarbon compounds to said hydrocarbon gas for reconversion to hydrogen and carbon monoxide.

2,472,220
COMBINATION SHADE AND CURTAIN ROD HOLDER
Ernest F. Lyon, Hinton, Okla.
Application April 4, 1947, Serial No. 739,285
4 Claims. (Cl. 248—252)

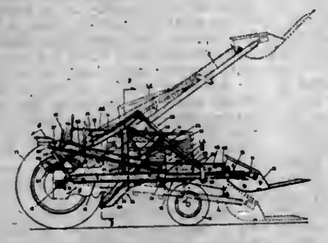
4. A combined shade and curtain rod holder, comprising an L-shaped base bracket for arrangement near the upper corner of a window frame, the base bracket including a foot secured to the outer vertical edge of the window frame and a generally flat horizontal portion arranged adjacent to the forward face of the window frame and extending inwardly of the foot, a generally U-shaped curtain rod bracket including a foot engaging upon the first named foot in superposed relation and secured to the vertical edge of the window frame, a neck secured to the foot of the curtain rod bracket and extending laterally outwardly of the vertical edge of the window frame and substantially parallel to the flat horizontal portion, and a substantially horizontal arm carried by the outer end of the neck and arranged substantially at right angles to the flat horizontal portion and extending forwardly thereof and constructed and arranged to support the end of a curtain rod, and an L-shaped shade bracket including a leg slidably mounted upon the flat horizontal portion and shiftable longitudinally thereof, and a forwardly projecting leg carried by the first named leg and arranged substantially parallel to the arm and constructed and arranged to support an end of a roller shade.

2,472,221
ERECTION OF BRICKWORK STRUCTURES
Ernest Goodall Malthouse, Sheffield, England
Original application May 9, 1944, Serial No. 534,761. Divided and this application July 23, 1945, Serial No. 606,488. In Great Britain April 17, 1943
2 Claims. (Cl. 72—37)



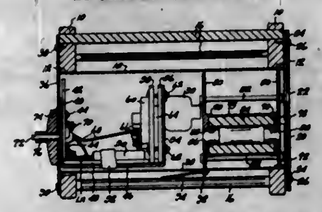
1. The method of erecting a masonry wall structure of large preformed units in simulation of individually-laid bricks or blocks, said units being laid up in the wall with plastic bonding material, said method consisting of laying a plurality of distance pieces each on a quantity of plastic jointing material placed upon a previously-laid foundation, bringing the distance pieces to a predetermined level while the jointing material remains plastic; allowing the jointing material to set; lowering preformed units vertically into position until the bases of the units rest on the distance pieces, the joint between the units thus being formed to a thickness determined by the height to which the distance pieces have been levelled; completing a whole row of such preformed units, and repeating the application of levelled distance pieces and the lowering of further preformed units upon the upper surface of the row to form another row of bevelled units, the operation being continued until the whole structure reaches the required height, the interstices between the units being filled in with plastic bonding material.

2,472,222
GRINDING MACHINE
Maxwell L. Mathewson, Providence, R. I., assignor to Brown and Sharpe Manufacturing Company, a corporation of Rhode Island
Application April 9, 1946, Serial No. 19,939
8 Claims. (Cl. 51—166)



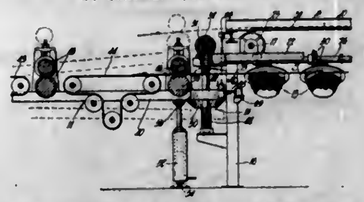
1. In a grinding machine having a base, a work support and a grinding head, a vertically adjustable supporting assembly for the grinding head, which comprises cooperating vertically disposed cylindrical post and sleeve elements relatively shiftable for vertically adjusting the position of the grinding head, one of said post and sleeve elements being formed with guide surfaces disposed at opposite sides of and extending longitudinally of the cylindrical axis, and a gibbing device comprising gibbing elements supported from the other of said post and sleeve elements

for engagement against said guide surfaces, and adjusting screws on said supporting element for



adjusting said gibbing elements transversely of the supporting element against said guide surfaces.

2,472,223
LOADER MACHINE
Eric M. McElhinney, Dysart, and Theodore A. Podhajsky, Traer, Iowa
Application December 13, 1946, Serial No. 716,132
8 Claims. (Cl. 214—141)



1. A loading machine including a portable frame, a pair of pivoted telescoping booms arranged at opposite sides of said portable frame having telescoping front members, first means pivotally supporting the rear ends of said booms on said portable frame, a load carrying unit mounted between the front ends of said telescoping members, a pair of forwardly extended lift members, second means pivotally supporting the rear ends of said lift members on said portable frame at a position spaced forwardly and above said first supporting means, means at the front ends of said lift members for movably supporting said booms, rearwardly extended rock arms mounted on said second supporting means for movement with said lift members, means for raising and lowering said lift members, means for moving said telescoping members in response to a pivotal movement of said lift members including upright levers on said first supporting means, first links connected between said upright levers and the free ends of said rock arms, and second links connected between said upright levers and said telescoping front members.

2,472,224
BED HEATER
Walter J. Miller, South Bend, Ind.
Application December 4, 1947, Serial No. 789,603
14 Claims. (Cl. 219—38)

1. A bed heater comprising a pair of similar end members, each having a plurality of angularly disposed flat end portions, a plurality of spaced bars connecting the marginal portions of said end members, an open ended tubular member spanning and secured to said end members in inwardly spaced relation to said bars, a pair of closures carried by said end members and spanning the ends of said tubular member, said tubular member and at least one closure having passages for air circulation through said tubular member in one or more laterally discharging predetermined paths, and an electrical heating element carried by one closure and positioned within said tubular member.

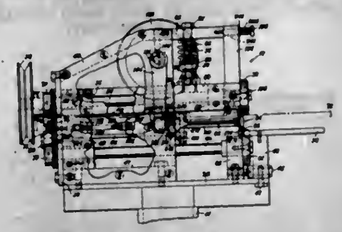
2,472,225
SHEET PILING APPARATUS
Earll R. Muddiman, Wilkinsburg, Pa., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application September 16, 1947, Serial No. 774,239
20 Claims. (Cl. 271—71)

1. A sheet piling apparatus comprising a pair of opposed series of downwardly tapering screw threaded cones, means mounting said cones for rotation on outwardly divergent axes whereby their inner opposed faces are vertical and spaced uniformly, and means for feeding sheets to the upper threads of the first cones in said series, succeeding threads of following cones having progressively diminishing diameters for carrying the sheets forward and downward at progressively diminishing forward linear speed.

2,472,226
DRIVING ARRANGEMENT FOR SPINDLES OF SPINNING AND DOUBLING FRAMES
Werner Naegeli, Winterthur, Switzerland, assignor to Actiengesellschaft Joh. Jacob Rieter & Cie., Winterthur, Switzerland
Application July 30, 1947, Serial No. 764,652
In Germany February 7, 1939
2 Claims. (Cl. 57—105)

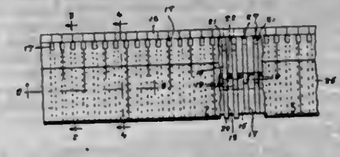
1. A driving device for spindles of spinning and doubling frames, comprising a thin sheet

metal driving roller extending through the frame and provided with circumferential grooves, spindles on both sides of the frame, and driving



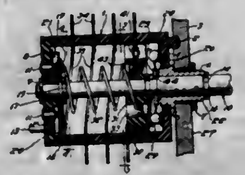
means for said spindles, the parts of said means passing from the spindles on one side to those on the other side being situated in said grooves.

2,472,227
PROCESS OF STABILIZING A CELLULOSE ETHER
Walter D. Palst, Orange, and Frank Berardinelli, Newark, N. J., assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application January 8, 1946, Serial No. 639,910
7 Claims. (Cl. 106—197)



1. In a process for the production of color stable compositions of matter having a basis of a cellulose ether and substantially resistant to color changes under the action of heat or light, the steps which comprise subjecting a cellulose ether in particle form to extraction with an aqueous solution of a lower aliphatic alcohol and then incorporating a color-stabilizing agent, selected from the group consisting of octyl sulphite, decyl sulphite and triethylcitryl sulphite, with said extracted cellulose ether.

2,472,228
TRIMMING MACHINE
Hans C. Paulsen, Medford, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application March 29, 1947, Serial No. 738,045
22 Claims. (Cl. 12—85)

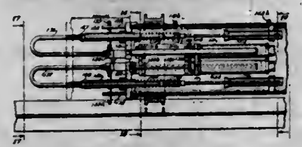


1. In a machine for simultaneously trimming right and left soles of a pair in conformity to a pattern to each side of which a sole is fixed with its margin extending beyond the edge of the pattern, opposed supports arranged to engage the margins of the soles at their outer sides, a knife having oppositely disposed blades mounted in engagement with said supports, a guide adapted to be received between the margins of the soles and to be engaged by the edge of the pattern, and means for vibrating said knife crosswise of the edge of the pattern.

2,472,229
MEASURING RULER
Dana Peterson, Oakland, Calif.
Application April 24, 1947, Serial No. 743,603
3 Claims. (Cl. 33—107)

1. A measuring ruler having top and bottom parts, and pegs extending through the top and bottom parts at different longitudinal locations there along to indicate different measurements and slidable transversely of the ruler to display a given location and said bottom part having a plurality of grooves in which said pegs are slidable and a recess having stop shoulders, and stop means on each of the pegs for limiting the extent of movement of the peg.

2,472,230
ROTARY ELECTRICAL SWITCH
Edward H. Reinschmidt, Jr., Cedar Rapids, Iowa, assignor to Collins Radio Company, Cedar Rapids, Iowa, a corporation of Iowa
Application March 12, 1948, Serial No. 14,557
6 Claims. (Cl. 200—158)

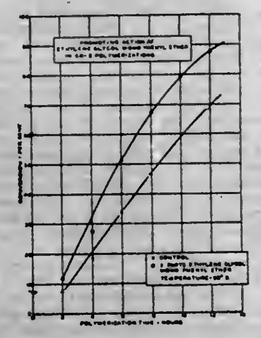


1. An electric switch comprising a cylindrical casing, a plurality of circumferentially-spaced stationary contacts carried by said casing arranged in a helical path therearound and extending inwardly thereof, a rotor drum of insulation concentrically mounted with relation to said stationary contacts interiorly of said casing, said rotor drum having a diameter approximating the internal diameter of said casing and carrying at least one wiper brush for engaging said stationary contacts as the rotor is rotated, and a single turn helical groove on the external periphery of said rotor and engaging with said contacts for subjecting said rotor to an axial feeding movement as said rotor is being rotated.

2,472,231
DRAWBENCH
William Rodder, Youngstown, Ohio, assignor to The Aetna-Standard Engineering Company, Youngstown, Ohio, a corporation of Ohio
Application June 16, 1944, Serial No. 540,630
8 Claims. (Cl. 205—3)

4. In a drawbench for tubes, said drawbench having a die stand provided with a plurality of dies, a supporting frame extending in one direction from said die stand, a bed extending in the opposite direction from said die stand, and car-

riage means operating on said bed for pulling tubes through said dies; at least two groups of mandrel rods, tube supporting members associated with each mandrel rod and adapted to support the rod and a tube loaded thereon, all of the mandrel rods being substantially parallel with each other and with the center lines of said dies, rotatable means supported by said frame for moving the mandrel rods of one group into drawing position in alignment with said dies while simultaneously moving the mandrel rods of the other group from drawing position into a loading position out of alignment with said die, said rotatable



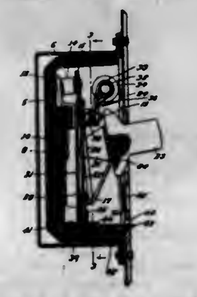
means comprising a cylindrical member surrounding said mandrel rods and extending throughout the major portion of the length thereof, said cylindrical member being supported by said frame for rotation about an axis parallel to the axes of said rods and carrying said tube supporting members and mandrel rods within it, anchor means for said mandrel rods at the end of said cylindrical member remote from the die stand, means for rotating said cylindrical member, and means mounted within said cylindrical member for shifting said anchor means and said mandrel rods toward and away from said die stand.

2,472,232

BUTADIENE EMULSION POLYMERIZATION IN THE PRESENCE OF A GLYCOL MONO-ETHER

Walter A. Schulze and Willie W. Crouch, Bartlesville, Okla., assignors to Phillips Petroleum Company, a corporation of Delaware

Application December 26, 1944, Serial No. 569,902
11 Claims. (Cl. 260—85.5)



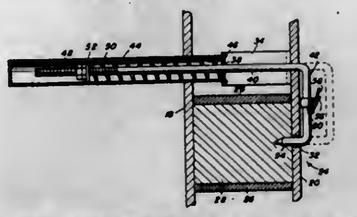
1. In a process for the polymerization of aliphatic conjugated diolefins in an aqueous dispersion containing an emulsifying agent, the improvement which comprises carrying out the polymerization reaction in the presence of a minor proportion of a glycol mono-ether as a polymerization promoter.

2,472,233

CIRCUIT BREAKER

Frank Short, Burke, Va., assignor of one-half to Louis V. Lucia, West Hartford, Conn.

Application November 17, 1943, Serial No. 510,635
3 Claims. (Cl. 200—122)



1. A circuit breaker including a casing, electric contact members mounted in said casing, a switch bar cooperating with said contact members, a carrier for said bar, a carriage pivotally supporting said carrier, a spring member connected at one end of said carrier and at the opposite end to an anchoring member movable to carry the axis of said spring across the pivotal axis of said carrier, a current carrying member responsive to an overload in said circuit for operating said anchoring means to cause said spring member to move said switch mechanism to open circuit position, a latch member having a detent for engaging said anchoring means to retain said switch mechanism in open position, means for manually operating said carriage to move the pivotal point of said carrier to the opposite side of said spring member, means operable with said carriage for moving said latch to release said anchoring means, and means urging said anchoring means toward their normal position.

2,472,234

TRUCK TAIL GATE LOCK

Harold A. Smith, Rochester, N. Y.

Application February 26, 1948, Serial No. 11,271
2 Claims. (Cl. 280—143)

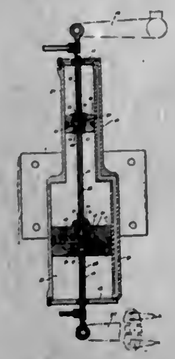
1. Stake retaining means for a truck body, comprising a socket in the truck body frame to receive one end of a stake, a U-shaped latch having a longer arm and a shorter arm, a bracket on said frame mounting said longer arm for horizontal sliding movement, a spring associated with said longer arm and bracket to bias said latch into a position with said shorter arm contacting said one end of a stake, said latch being pivotable about said longer arm as an axis from said position into a position with said shorter arm out of contact with said stake, said longer arm extending laterally of the socket in the frame, and the bight portion of said U-shaped latch being proportioned with reference to said frame so that said shorter arm may be disposed on one side of the frame when in inoperative position, said spring being encased in a tube carried by said bracket, and being adjustably mounted relative to said tube and said longer arm.

2,472,235

GARMENT FASTENER

Raymond V. Sullivan, St. Louis, Mo.

Application August 30, 1944, Serial No. 551,874
1 Claim. (Cl. 24—245)



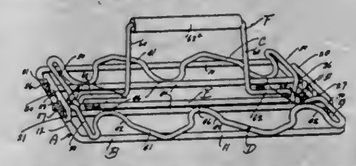
A diaper fastener for securing overlapping folded corner portions of the diaper together comprising a flat button positioned under said overlapping portions with one side facing the same, a flat ring of larger outside diameter than said button and smaller inner edge diameter than said button disposed over said overlapping portions opposite the other side of said button with its inner edge folding said overlapping corners over and around the edge of the button and reversely folding said overlapping portions over and around said inner edge of the ring, whereby pull against the overlapping corner portions in a separative direction tends to urge said button and ring into clamping engagement to fasten said overlapping portions together, and a cord like connector for said button and ring attached at its ends to the button and ring and forming a loop straddling said overlapping portions, said ring being transversely split and resilient for spreading apart to pass said button therethrough so that said ring may be disposed opposite said button with a snap action.

2,472,236

HYDRAULIC BOOST DEVICE

Robert W. Thomas, Grand Rapids, Mich.

Application September 13, 1946, Serial No. 696,681
4 Claims. (Cl. 121—41)



1. A boost cylinder device comprising a casing having portions of two different diameters, a large piston operating in the large diameter portion, and a small piston operating in the small diameter portion, piston rods respectively connected with the pistons and extending respectively through the ends of the cylinder casing, the piston rod of the small piston having a lost-motion connection therewith and an extension connecting with the large piston, said large piston having a small bore for receiving the rod extension, said rod extension serving as a valve element for controlling the flow of fluid from a high pressure passage within the large piston to opposite sides of the large piston depending upon the position of the valve element within the bore of the large piston, said lost-motion connection forming a lost-motion chamber within the small piston and permitting movement of the rod extension in the large piston to position said valve element therein without initially moving the small piston, a fluid return passage in the rod extension and through the piston rod of the small piston for exit of the fluid therefrom at a point exteriorly of the casing, and a bleed valve arrangement associated with the piston rod of the small piston and within the small piston for bleeding fluid into said fluid return passage from said lost-motion chamber.

2,472,237

BOTTLE CARRIER

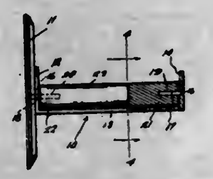
Shade Wesley Turner, Danville, Ky.

Application February 7, 1946, Serial No. 646,011
4 Claims. (Cl. 294—87)

4. In a bottle carrier the combination of a supporting frame having bottle gripping portions at opposite sides thereof, a bail-like handle structure, bottle gripping jaws pivoted to the lower portion of the bail-like handle structure remote from a hand grasping portion with the bottle gripping jaws extending at opposite sides of the plane of the handle structure towards the bottle gripping portions of the frame, and means slidably and pivotally connecting said bottle gripping jaws upon the frame intermediate the ends of said jaws and spaced from the pivots of the jaws upon the handle whereby upon movement of the handle transverse to the plane of the frame the jaws will be relatively moved upon the frame for opening and closing relation of the bottle gripping portions of said jaws and frame.

2,472,238

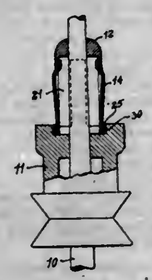
RECOVERY OF WOOL FROM WOOL-ACETATE FABRICS



George C. Ward, Cumberland, Md., and Roger U. Genaszani, New York, N. Y., assignors to Celanese Corporation of America, a corporation of Delaware

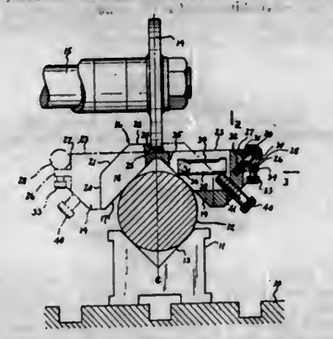
No Drawing. Application March 10, 1944, Serial No. 525,954
6 Claims. (Cl. 8—140)

1. Process for the recovery of wool from mixed textile materials containing wool and cellulose acetate fibers, which comprises immersing said fiber mixture in an aqueous solution containing



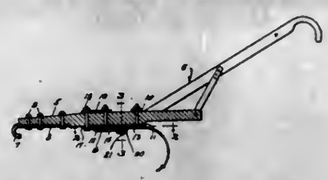
from 0.1 to 1% of sodium hydroxide and 5 to 25% of sodium sulfate so as to cause the saponification of the cellulose acetate fibers to yield regenerated cellulose, and carbonizing the cellulose fibers from the fiber mixture, whereby wool fibers substantially free of other textile materials are obtained.

2,472,239
PAPER ROLL HOLDER
Coy A. Weller, Flint, Mich.
Application November 8, 1944, Serial No. 562,470
2 Claims. (Cl. 242—55.2)



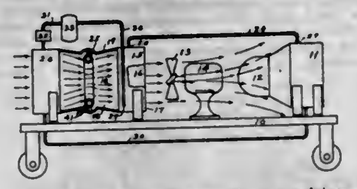
1. A paper holder comprising an anchor plate, a U-shaped channel rigidly secured by one leg thereof to said anchor plate, the web of the said channel being disposed at substantially 90° to said plate, a plurality of oppositely disposed apertures in the legs of said channel and a roller of larger diameter than the width of said channel, pins in opposite ends thereof rotatively secured in said apertures.

2,472,240
BOBBIN CLUTCH
George West, Whitinsville, Mass., assignor to Whitin Machine Works, Whitinsville, Mass., a corporation of Massachusetts
Application September 11, 1946, Serial No. 696,323
2 Claims. (Cl. 242—46.4)



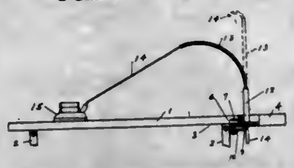
1. In a spindle having a blade and a driving whirl mounted thereon, a bobbin clutch comprising a one-piece bushing having a head mounted on said blade, a flange at the bottom of said bushing and a slotted body portion connecting said head and flange, said flange having an inner annular recess therein, an assembly of resilient bobbin-clutching fingers having an integral annular connection between their lower ends, said fingers being positioned in the slots of said body portion and said integral annular connection being positioned and seated in said inner annular recess of said bottom flange of said bushing.

2,472,241
MILL CUTTER CENTER LOCATOR
Charles R. Wilson, Pekin, Ill.
Application October 8, 1946, Serial No. 701,941
4 Claims. (Cl. 33—185)



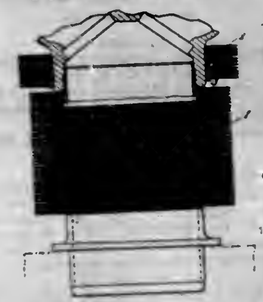
1. A mill cutter center locator comprising a substantially rectangular body in plan having oppositely inclined arms forming a V-cut at the bottom to engage a round shaft or stock of work, said body having a raised portion at one side of the top forming a vertical and transverse contact surface parallel to a plane bisecting the angle included between the arms of the V-cut and adapted to engage the side of a cutter, the other side of the body being off center as to the weight of the body to maintain said surface in contact with the blade in reverse positions, an extension on the end of said other side and a horizontal contact pin held in said extension parallel to said contact surface in a true horizontal position.

2,472,242
HARROW TOOTH MOUNTING
Fred H. Ziegler, Cullman, Ala.
Application July 14, 1947, Serial No. 760,764
1 Claim. (Cl. 55—36)



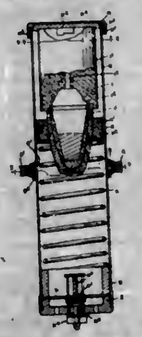
In a harrow the combination, with a beam and with lateral sections connected to the underside thereof, of a relatively elongated supporting plate extended longitudinally of and below the beam and having an upwardly offset front end, means for detachably connecting said front end to the beam, there being a space between the medial portion and rear end of the plate and said sections, a lug extended upwardly into said space from the medial portion of the plate, a spring harrow tooth having an opening at its front end for receiving the lug, said tooth adapted to fill the space between the plate and said sections, and a cuff extending upwardly into said space from the rear end of the supporting plate adapted to slidably receive the harrow tooth.

2,472,243
AIR CONDITIONING APPARATUS INCLUDING A STERILIZING MEANS
Lloyd M. Berryman, Baltimore, Md.
Application September 10, 1946, Serial No. 695,979
4 Claims. (Cl. 62—129)



1. An air conditioning unit comprising in combination a compressor, a condenser coupled to said compressor, an expansion valve, a liquid receiver connected to one side of said expansion valve, a de-hydrator coupled to the other side of said expansion valve, a housing having its transverse center portion restricted into a conical form for enclosing the space between the condenser and de-hydrator for leading the de-hydrated air from the de-hydrator to the condenser where the temperature of the de-hydrated air is increased by the heat of said condenser, and a coolant compressed in said compressor and flowing primarily through said condenser to heat same and have its heat extracted by said cooled air flowing therethrough, said coolant being conducted from said condenser to said liquid receiver, then to the expansion valve where the coolant is expanded and passed through the de-hydrator to absorb the heat and moisture from the incoming moist laden air.

2,472,244
IRON SUPPORT
Wilson M. Brady, Catonsville, Md.
Application November 25, 1944, Serial No. 565,096
1 Claim. (Cl. 38—107)



In combination with an ironing board, a tray unit comprising an unperforated bottom plate formed in a concaved and convexed construction with an inner wall for removable attachment to the end of an ironing board and an outer wall of restricted length parallel thereto, converging side walls for connecting said inner and outer walls and guiding the iron onto the bottom plate and prevent its slipping off the tray, the inner wall having ears projecting therefrom for bearing against the underside of the ironing board to support the tray unit thereon, means for removably attaching the tray unit to said ironing board, fastening means for holding the tray unit to the board, said tray having a socket therein, a swivel cable support comprising a tubular bottom portion for insertion in said socket, said tubular portion formed at its upper section by a coiled spring to resiliently support a cable passing therethrough and connecting with electrical connections at its upper and lower ends.

2,472,245
METHOD OF FINNING ENGINE CYLINDERS
William M. Busse, Massillon, Ohio, assignor to The Griscom Russell Company, New York, N. Y., a corporation of Delaware
Application April 17, 1944, Serial No. 531,419
1 Claim. (Cl. 29—157.3)

In the method of forming cylinders for engines and the like, the steps which comprise helically winding a strip of metal of L-shaped configuration to form a continuous sleeve of indefinite length with the foot portions of the L in contact and the upright portions forming a helical fin, fastening the foot portions of the L to contacting portions of the helical fin at spaced points, thereafter cutting the sleeve outwardly of and adjacent the points of said fastening to form a section for attachment to an engine cylinder, and fastening said section as a unit to the exterior of an engine cylinder.

2,472,246
CENTRIFUGAL CASTING MACHINE
Rodney E. Christian, Royal Oak, and Alfred W. Widerstedt, Detroit, Mich., assignors to Kerr Manufacturing Company, a corporation of Michigan
Application September 17, 1945, Serial No. 616,850
8 Claims. (Cl. 22—65)

5. In a centrifugal casting machine, a cylindrical casing having an opening at one end thereof and mounted for revolution in a vertical plane about a central transverse axis, a resiliently yieldable seat within said casing movable lengthwise thereof, a closed bottom open top crucible engaging said seat with its open top fac-

ing toward the open end of said casing, a mold engaging said crucible and in communication with the open top thereof and a closure for the open end of said casing adapted to engage said mold and press the same into sealing contact with said crucible against the resilient pressure of said seat.

2,472,247

FAST-SETTING COMPOUND OF RESIN AND POWDERED METAL

Edwin J. Coleman, Chicago, Ill., assignor to Crane Packing Company, Chicago, Ill., a corporation of Illinois

No Drawing. Application May 31, 1945, Serial No. 596,976
2 Claims. (Cl. 260—19)

1. A composition of matter comprising an asbestos filler, powdered metal alloy having 80% to 85% by weight of lead and the remainder antimony and tin, graphite and a thermosetting potentially reactive phenol-formaldehyde resin in the following proportions by weight:

	Per cent
Phenolic resin	35–50
Asbestos filler	22–30
Graphite	13–15

and the remainder powdered metal alloy and a lubricant.

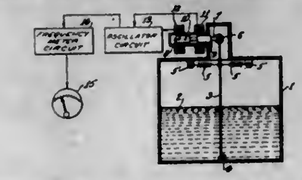
2,472,248

SPOOL

James Victor Cox, Buffalo, N. Y., assignor to B. F. Gladding & Company, Inc., South Otselic, N. Y.

Application February 1, 1947, Serial No. 725,945
11 Claims. (Cl. 242—118)

1. As an article of manufacture, a spool comprising opposed head members each including a central hollow cylindrical portion and a circular end wall portion extending radially outwardly therefrom, said cylindrical portions being snugly interfitting and adhesively secured to support the wall portions in spaced coaxial relationship, the proximate faces of the wall portions having relatively shallow circular grooves spaced outwardly of and concentric with said cylindrical portions, and a tubular element having its opposite ends seating in said grooves and held securely between said end wall portions by the rigid interfitting of said cylindrical portions.



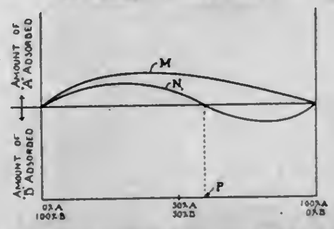
2,472,249

LIQUID LEVEL MEASURING DEVICE WITH OSCILLATOR

Clarence A. de Giers, Forest Hills, and Abraham Edelman, New York, N. Y., assignors to The Liquidometer Corporation, Long Island City, N. Y., a corporation of Delaware

Application September 8, 1945, Serial No. 615,161
8 Claims. (Cl. 73—290)

1. A transmitter for measuring the level of liquid in a tank, comprising an elongated member capable of oscillating at a natural frequency and extending substantially throughout the height of the liquid in the tank, means fixing one end of said member, means for resiliently supporting the other end of said member, electromagnetic means causing said member to vibrate at its natural frequency, said natural frequency varying as a function of the level of the liquid in the tank, said electro-magnetic means including a first coil having a permanent magnet armature movable therein, a second coil having an armature of magnetizable material movable



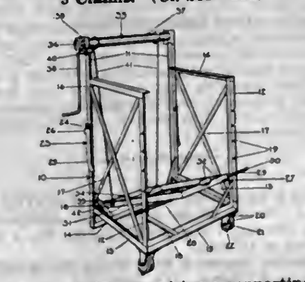
therein, means for rigidly connecting said armatures to each other and for mechanically connecting said armatures to said member so that said armatures will vibrate at the frequency of said member, an oscillator alternately energized to act on said first coil and armature and deenergized by the action of said second coil and armature, and frequency measuring means for determining the vibration frequency of said member, as indicative of the liquid level to be measured.

2,472,250

PROCESS FOR SEPARATING HYDROCARBONS BY ADSORPTION

Alfred E. Hirschler, Drexel Hill, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey

Application October 3, 1946, Serial No. 700,925
14 Claims. (Cl. 260—666)



1. In an adsorption method for separating two hydrocarbons, A and B, having the same degree of saturation by selective adsorption employing both activated carbon and silica gel as adsorbents, which hydrocarbons form a mixture from which A and B have the same adsorbability on one of the said adsorbents when the proportion of A to B is a certain definite proportion but from which A is more adsorbable than B on the other of said adsorbents at all proportions of A to B below, and up to a proportion at least substantially exceeding, said certain definite proportion, the steps which comprise first treating a mixture of the hydrocarbons in liquid phase with one of said adsorbents to selectively adsorb one of the components, the first treatment being with the aforesaid other of said adsorbents when the proportion of A to B is below, or not substantially different from, said certain definite proportion, thereby obtaining a filtrate fraction containing the other component in more nearly pure form and an adsorbate fraction containing the two hydrocarbons in a proportion between said certain definite proportion and said proportion at least substantially exceeding said certain definite proportion, then treating said adsorbate fraction in liquid phase with the adsorbent which was not used in the first treatment, to selectively adsorb the other component and thereby obtaining a filtrate fraction containing the component which was selectively adsorbed in the first treatment in more nearly pure form.

2,472,251

HOISTING DEVICE

John B. Houghton, Sanger, Calif.

Application June 24, 1946, Serial No. 678,822
5 Claims. (Cl. 248—133)

1. A drum hoist comprising a supporting frame, a cradle having opposite laterally extended pivot means near an end portion thereof, the frame having pairs of receptacles formed therein to receive the pivot means at selected elevations, a windlass mounted in the frame in a position superposed and spaced from the end of the cradle opposite the pivot means, flexible tension means interconnecting the windlass and said opposite end of the cradle, and a ratchet means associated with the windlass for locking the same in selected positions.

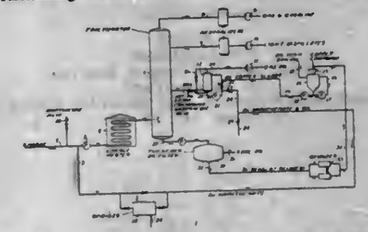
2,472,252

PROCESS FOR THE PRESERVATION OF BEER

Arthur Henry Hughes, Dublin, Eire, assignor to Messrs. Arthur Guinness Son and Company Limited, Dublin, Eire

No Drawing. Application February 26, 1946, Serial No. 650,379. In Great Britain March 26, 1945
2 Claims. (Cl. 99—48)

1. A process for the restriction of acidification of beer which comprises the step of adding a small proportion of egg-white to the beer during the racking stage.



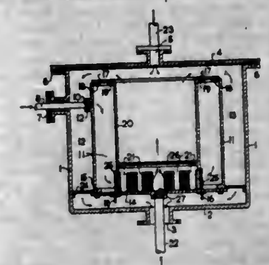
2,472,253

PRODUCTION OF CUPROUS NAPHTHENATE IN THE TREATMENT OF PETROLEUM OIL

Charles O. Hoover, Houston, Tex., assignor to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York

Original application October 2, 1946, Serial No. 700,824. Divided and this application April 25, 1947, Serial No. 743,887
17 Claims. (Cl. 196—26)

1. In the process of treating petroleum oil with a copper soap of a water-insoluble organic acid for the fixation of sulfur compounds contained therein in which the copper soap is introduced into the oil and the oil subsequently is subjected to heat treatment with the liberation of vapors containing the organic acid resulting from decomposition of the copper soap; the improvement which comprises passing the liberated vapors containing the organic acid into intimate contact

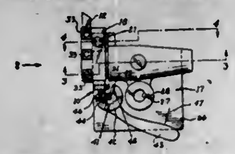


with a finely-divided copper compound suspended in a fluid medium which is inert with respect to the oil vapors and the organic acid, with resultant formation of the cuprous soap of the acid, and using the thus formed cuprous soap as the source material of the copper soap used in the treatment of further amounts of oil.

2,472,254

APPARATUS AND METHOD FOR CARRYING OUT CATALYTIC REACTIONS

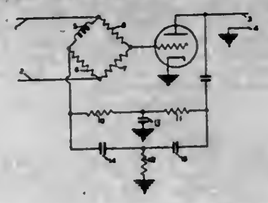
Ava J. Johnson, Oakland, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware



Application August 22, 1944, Serial No. 550,647
7 Claims. (Cl. 260—668)

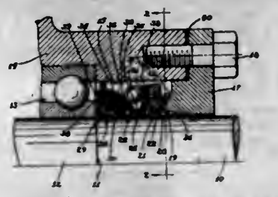
5. A method of simultaneously carrying out endothermic and exothermic catalytic reactions which comprises feeding a chemical compound in the fluid state at reaction temperature to a first reaction zone containing a catalyst under conditions at which said compound undergoes an endothermic reaction normally resulting in a decreasing temperature gradient through the reaction zone, also feeding into said reaction zone a substantial molar excess, based upon said compound, of a product of said endothermic reaction, and a minor amount, based upon said chemical compound, of another chemical capable of reacting exothermally with said reaction product under the reaction conditions, maintaining rates of flows of said reactants at which there is a net absorption of heat in the overall reaction, adding a further amount of said other chemical to the reaction products and feeding the mixture to a second reaction zone in the presence of the same catalyst in indirect heat exchange relationship with the first reaction zone whereby an increasing

temperature gradient is maintained in the flowing stream of reaction mixture and a net production of the product of said endothermic reaction is obtained, separating from the final mixture an amount of said product equal to that initially used in the reaction and recycling said product to the first reaction zone.



2,472,255
TOOLHOLDER
Anthony Kyle and John A. Johnson, Los Angeles, Calif.
Application October 8, 1945, Serial No. 620,974
5 Claims. (Cl. 82—36)

1. In a tool holder, the combination of: a base member having a pivot socket formed therein which provides a pivot axis, said base member having a surface thereon which is inclined relative to said pivot axis so that a plane perpendicular to said inclined surface is substantially parallel to said pivot axis; a tool holding member having a pivot spindle formed thereon which is adapted for insertion into said pivot socket and is rotatable therein to permit rotation of said tool holding member relative to said base member about said pivot axis, said pivot spindle being displaceable in said pivot socket along said pivot axis and being adapted for releasable engagement with said pivot socket to secure said tool holding member to said base member; adjusting means carried by said tool holding member, said adjusting means being adapted for engagement with said inclined surface to adjust the position of said tool holding member relative to said base member about said pivot axis and being adapted for slidable engagement with said inclined surface to displace said pivot spindle along said pivot axis and into engagement with said pivot socket when said adjusting means is urged into engagement with said inclined surface, in order to secure said tool holding member to said base member; wedge means for urging said adjusting means into engagement with said inclined surface, said wedge means being rotatably mounted on said base member and being adapted for insertion between said tool holding member and said base member; and releasing means for displacing said pivot spindle along said pivot axis and out of engagement with said pivot socket in order to release said tool holding member from said base member, said releasing means being rotatably mounted on said base member and being adapted for engagement with said tool holding member.

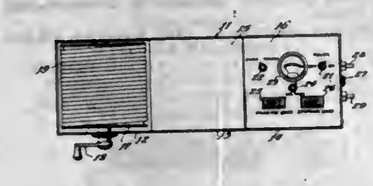


2,472,256
VOLTAGE STABILIZER
Gerrit Mak, Hendon, South Australia, Australia, assignor to Hartford National Bank & Trust Company, Hartford, Conn., as trustee
Application January 10, 1948, Serial No. 1,589
In Australia September 11, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires September 11, 1965
6 Claims. (Cl. 323—63)

1. A voltage stabilising system comprising a network including a ballast resistance, input means to apply an alternating voltage of predetermined frequency to said network, the amplitude of said alternating voltage being subject to fluctuations, output means to derive said alternating voltage from said network whereby said voltage is stabilized by said ballast resistance for relatively slow fluctuations in amplitude, and an

impedance circuit interposed between said network and said output means, said circuit having a characteristic presenting a relatively high impedance to amplitude fluctuations having a time period less than the time period of said predetermined frequency and a negligible impedance to voltage of the time period of said predetermined frequency.

2,472,257
SHAFT SEAL WITH INTERNAL DRIVE
Albert J. Matter, Park Ridge, Ill., assignor to Crane Packing Company, Chicago, Ill., a corporation of Illinois
Application August 4, 1945, Serial No. 608,870
4 Claims. (Cl. 286—11)



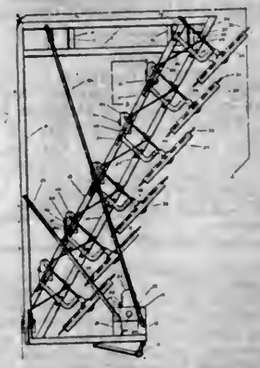
1. A sealing device for relatively rotatable elements comprising a sleeve concentric with and spaced from one of the elements, an enlarged part at the end of the sleeve, means compressed radially between the enlarged part and the said one element to form a fluid-tight seal therebetween and to provide a drive for the sleeve, a sealing surface on the other element, a sealing washer having a sealing surface in engagement with the first-mentioned sealing surface, flexible means having one end in fluid-tight engagement with the exterior surface of the enlarged part, the other end in fluid-tight engagement with the washer and a fold extending from the enlarged part radially toward the middle of the sleeve, and a slidable driving connection between the washer and sleeve.

2,472,258
TRAFFIC ANALYZER
Harold L. McCleery and Carlyle B. Stair, Downers Grove, Ill.; said McCleery assignor to said Stair
Application January 9, 1942, Serial No. 426,146
11 Claims. (Cl. 235—92)

1. A traffic analysing device comprising impulse members arrangeable in spaced relationship in

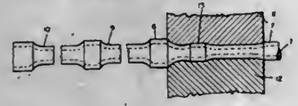
the direction of traffic in a traffic lane on a street, switches actuated by impulses transmitted by said members as a result of cars passing over the same, a source of electrical power, a switch for turning said power on or off, a timing condenser arranged in series with said source of power and said on-and-off switch and being therefore chargeable from said source of power when said on-and-off switch is closed, a relay having a coil arranged in series with said source of power and the first of said impulse-actuated switches so as to be initially energized upon the closing of such switch by a car passing over the first of said impulse members, a plurality of contacts arranged to be actuated by said relay coil, one of said contacts being normally in circuit with said source of power and with said condenser and being arranged to be opened by said relay coil upon energization thereof to disconnect said condenser from said source of power, a second of said contacts being arranged to be closed by the

initial energization of said relay coil and to thereby establish a circuit between said condenser and said relay coil to keep the latter energized from a pre-determined time after disconnection thereof from said source of power, a calibrating resistance in series with said condenser and in parallel with said relay coil to control the time required for discharge of the condenser, a car counter actuating coil, means, including a third one of said contacts, for energizing said car counter coil when said third contact is closed by energization of said relay coil, a speeding car counter actuating coil, and means, including a fourth one of said contacts and a second one of said impulse-actuated switches, for actuating said speeding car counter coil when said second impulse-actuated switch is closed by the passing of the wheels of the car over the second impulse member provided said fourth contact has not by that time been opened as a result of de-energization of said relay coil due to discharge of said condenser.



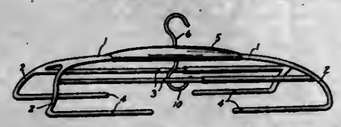
2,472,259
MEANS AND METHOD OF PRODUCING THREE-DIMENSIONAL PICTURES
Duncan McPherson, Los Gatos, Calif.
Application September 16, 1946, Serial No. 697,234
5 Claims. (Cl. 88—16.6)

1. A method of producing an apparently three-dimensional image, characterized by the steps of: viewing a scene from at least two aspects, transposing said views, selecting complementary unaltered portions of said views to produce a single composite image, the complementary portions being slightly mismated along a line of contiguity in such composite; producing a series of such composites, each including complementary unaltered portions slightly mismated along a line of contiguity, the composites of such series differing from each other in that the relative areas of complementary portions vary progressively in



such series; and exhibiting the series of said composites.

2,472,260
SIDE DELIVERY RAKE
Melvin A. Morrill, Laton, Calif.
Application January 25, 1947, Serial No. 724,274
15 Claims. (Cl. 56—377)

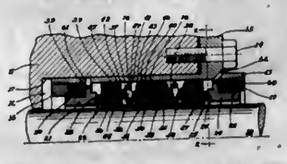


1. In a side delivery hay rake having a forwardly movable draft frame, support means for the frame attached thereto, said means including directional control means, and a plurality of rotary raking elements arranged in the frame for rolling movement over earth traversed by the frame, the combination of mounting means borne by the frame and individually mounting the raking elements in the frame for rotation in substantially erect parallel planes angularly displaced from the normal direction of movement of the frame, and for elevational movement during operation, control wheels individual to the raking elements mounted in the frame for reciprocal vertical movement in response to elevations and depressions in earth traversed, and means individually interconnecting the control wheels and their respective raking elements for unitary elevational movement.

2,472,261
CRANKSHAFT AND METHOD OF MAKING SAME
Homer L. Mueller, Cleveland, Ohio, assignor to The Cleveland Welding Company, Cleveland, Ohio, a corporation of Ohio
Application August 10, 1944, Serial No. 548,833
1 Claim. (Cl. 29—6)

The method of forming a crankshaft such as those used in internal combustion engines which comprises providing a cylindrical blank of diameter corresponding substantially with the diameter of the main bearings of the final form of crankshaft, heating a portion of the length of the blank to a workable state, rolling and forming in such heated portion an elongated reduced section of uniform reduced diameter corresponding substantially with the diameter of the connecting rod bearings of the final form of crankshaft, further rolling said elongated reduced portions at spaced points to leave intact an intermediate connecting rod bearing of a size as secured by said first rolling and to form sections of further reduced size corresponding substantially with the size of the crank arms of the final form of crankshaft, and relatively radially displacing said main and connecting rod bearing sections into the relative positions they are to occupy in the final form of crankshaft.

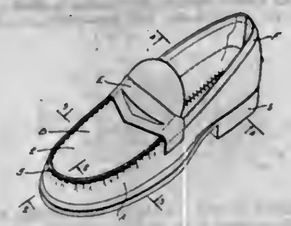
2,472,262
CLOTHES HANGER
Josephine H. Mullen, Dayton, Ohio
Application October 24, 1946, Serial No. 705,478
5 Claims. (Cl. 223—89)



1. A garment hanger, comprising an adjustable cage like structure, including a medial main bar divided into two reversely disposed relatively adjustable terminal sections, a tubular intermediate coupling within which the terminal sections are telescopically adjustable, downwardly divergently inclined bifurcated terminals on the adjustable sections of the medial main bar, additional telescopically adjustable bars interconnecting the furcations of the opposite terminals of the medial main bar in spaced relation therewith and with each other, inwardly directed relatively short stub bars projecting from the furcations in parallel relatively spaced relation with the aforementioned bars and with each other and terminating in separated aligned relation with those attached to the furcations of the opposite end of the structure.

2,472,263
METHOD OF PRODUCING FELT FOOTWEAR
William Pasko, Toronto, Ontario, Canada
Application January 9, 1947, Serial No. 721,110
3 Claims. (Cl. 28—72.3)

1. The method of producing a seamless felt article consisting in folding a sheet of dry carding wool around a flexible model of the article in a flat state, inserting the model and its wool covering in a flat state in a fabric envelope, immersing the envelope and its contents in boiling water at frequent intervals and after each immersion rolling and kneading same until the wool has shrunk to the size of the model around which it is rolled and has attained the texture desired in the final article, then removing the article from the envelope and allowing the article to dry, and subsequently removing the model.



2,472,264
DOUBLE SEAL
Frank E. Payne, Glencoe, Ill., assignor to Crane Packing Company, Chicago, Ill., a corporation of Illinois
Application December 22, 1945, Serial No. 636,954
5 Claims. (Cl. 286—11)

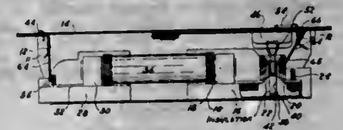
1. A seal device for effecting a seal between relatively rotatable structures, said seal comprising spaced seal seats on one structure, said seats having sealing surfaces facing one another, a resilient compressible sealing ring encircling the other structure, a tube located exteriorly of the ring and having its mid-portion compressed upon the ring, such that said ring is likewise compressed upon the other structure, said tube extending outward from the ring into proximity with the seal seats, sealing washers encircling the tube ends and each having a sealing surface contacting the sealing surface on the adjacent seal seat, an axially slidably rotary driving connection between the washers and tube, and flexible means effecting a fluid-tight seal between the washers and tube, said flexible means comprising expansible tubular elements having cylindrical regions near the ends thereof, means for compressing one region of each element upon the exterior of the tube, and means for compressing the other region of each element upon a washer.

2,472,265
METHOD OF SECURING TOGETHER MOCCASIN VAMPS AND PLUGS
Harry Phillips, New York, N. Y.
Application March 19, 1946, Serial No. 655,423
1 Claim. (Cl. 12—142)

The method of manufacturing a shoe of the true or genuine moccasin type, which includes the provision of a leather blank for the bottom and sides of the completed shoe, said blank being perforated around the edges of its fore part, providing a plug which is perforated around the edges of its fore part, such perforations being spaced apart a less distance than the spacing of the perforations around the edges of said first mentioned blank, assembling the blank and plug together with the plug edge upturned in contact with the bottom blank sides by stitching through the alined and complementary perforations so as to connect the edge of the plug to the edge of the fore part of the bottom blank, then permanently

stitching said blank and plug together along a line below the line of said first mentioned stitching and severing them along the line between said two rows of stitching.

2,472,266
SWITCH MECHANISM FOR FIRE ALARMS
Maxime E. Ouellette, Macwahoc, Maine
Application July 7, 1948, Serial No. 37,373
11 Claims. (Cl. 200—142)

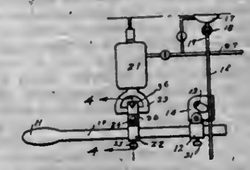


1. A switch device for an electrically operated fire alarm system, comprising a stationarily arranged housing tube, a tubular rod sheath removably carried by said tube, oppositely spaced stationary electrical contact elements carried by and insulated from said sheath, a contact rod slidably carried by said sheath, a contact member fixed to and movable with said rod, said member being engageable with either of said opposed contact elements upon reciprocation of said rod, a spring mounted upon said rod for urging said contact member toward one of said elements, said spring permitting said member to be manually forced into contact with the opposite element, and a fusible element carried by said rod for maintaining said spring under tension, whereby said movable contact member will be automatically released under predetermined temperature conditions and forced against said first mentioned contact element.

2,472,267
PROCESS FOR PREPARING GLUTEN SULFATE AND SALTS THEREOF
Henry C. Reitz, Berkeley, Calif., assignor to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application August 17, 1945, Serial No. 611,216
7 Claims. (Cl. 260—112)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

4. A process for the preparation of salt of gluten sulfate comprising reacting a gluten with concentrated sulfuric acid at a temperature of not over about 0° C., followed by reacting the reaction product with an inorganic hydroxide.

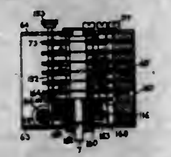
2,472,268
PULL-OUT SWITCH
Nicholas J. Schmelig and Floyd S. Green, St. Louis, Mo., assignors to Frank Adam Electric Company, St. Louis, Mo., a corporation of Missouri
Application July 5, 1945, Serial No. 603,388
11 Claims. (Cl. 200—114)



1. An electric switch comprising a casing having a door and a back, a base of molded insulating material on said back, a line and a load contact, a line terminal secured to said line contact, said line and load contacts being oppositely disposed and spaced from each other, a recess in said base adapted to accommodate said line and load contacts, a slidable mounting plate on said door, a switch blade mounted upon said plate, said switch blade being of substantial U-shape, said slidable mounting plate having an "on" and an "off" position, the "off" position locating the switch blade so that no contact is made between the line and load contacts when the door is closed, and the "on" position locating the switch blade so that it moves between the line and load contacts when the door is closed, the U-shaped switch blade being provided with ends which abut when inserted between the line and load contacts.

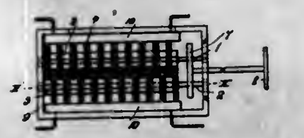
2,472,269
2,2-BIS-(4-METHYLTHIOPHENYL)-1,1,1-TRICHLOROETHANE
David A. Shirley, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 9, 1946, Serial No. 689,515
1 Claim. (Cl. 260—609)

2,2 - bis(4 - methylthiophenyl)-1,1,1-trichloroethane.



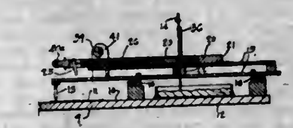
2,472,270
PORTABLE DRILL PRESS HOLDER
Franklin P. Stinchcomb, Baltimore, Md.
Application October 19, 1945, Serial No. 623,257
2 Claims. (Cl. 77—7)

1. In combination with an electric motor including a tool operated thereby, of a magnetic supporting unit comprising in combination, a magnetic device for magnetic attachment to a ferrous object horizontally positioned and including an eye and flexible link suspended therefrom, a cable coupled to said link and adapted to extend vertically down therefrom, a slip clamp mechanism mounted on said cable and including a holding plate with a wedgelike acting member and guide opposing it for tightening on the cable



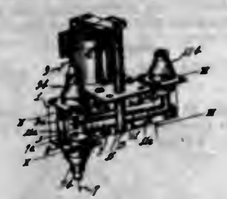
as the mechanism is tensioned away from the said device, a trammel bar including a handle at one end adjustably attached to said plate for positioning the latter relatively to said cable and forming a fulcrum point for the bar, an adjustable member slidable on said bar and including a flexible connection for fastening it to a portion of said motor, said member and handle being so positioned with respect to said portion of the motor as to enable the use of the unit to exert pressure under leverage by said handle with the cable and clamp as fulcrum to said motor and thereby facilitate the action of said tool, and electrical connections for said motor.

2,472,271
ANTIHUNTING MEANS FOR CONTROL DEVICES
Michel N. Yardeny, New York, N. Y.
Application February 26, 1944, Serial No. 524,029
6 Claims. (Cl. 318—33)



5. In apparatus for moving a load to desired positions, in combination, a pair of relatively movable members, one of the members having a pair of conducting elements separated by a gap, and the other member having a contact arm engageable therewith, a reversible motor for moving the load, one of the members being selectively pre-set to cause displacement between the said contact arm and gap and engagement with one of the conducting elements to rotate the motor in the desired direction, one member of the said pair being operatively connected to the said load motor, a frictional clutch interposed between the said movable member and the said motor, said frictional clutch comprising a pair of spaced stops secured to rotate with the said movable member, a plurality of elements each provided with a pair of spaced stops, the distance between the stops increasing with successive ones of the said elements, and a stud rotatable by the said motor and receivable in the spaces of the said stops of the plurality of elements and in the space between the said pair of stops of the said movable member, the said elements being in frictional engagement with each other and with the said movable member, the said load motor positively driving the said movable member by abutment of the said stud with the anterior one of the said pair of stops of the movable member, the anterior stops of the said plurality of elements being aligned by the said abutment between the said stud and said anterior stop to cause the posterior stops to be staggered at different distances from the said stud, said movable member being moved in a direction to restore alignment between the said gap and contact arm, the said movable member overrunning the gap to engage with the anterior conducting element to cause reversal of motor rotation to return the movable member toward the gap, detent means to hold the said member at the gap, said movable member being returned by frictional drive and with progressively increased torque as the said stud sequentially abuts the said staggered stops, said motor continuing its movement by inertia after the said restored alignment of gap and with the contact arm held at the gap.

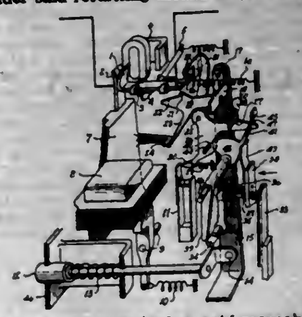
2,472,272
HAND DRYING OR CLEANING APPARATUS
Harold Barnes, Smethwick, England
Application October 1, 1947, Serial No. 777,347
In Great Britain November 6, 1946
6 Claims. (Cl. 24—95)



1. A hand drying appliance comprising a pair of rollers covered with resilient cellular material, from which air can be squeezed by pressure to produce a suction action when the pressure is released, said resilient cellular material conforming itself upon pressure to the contour of the hand as same is rolled thereover and sucking off moisture therefrom as the pressure is released, said resilient cellular material having annular projections on the periphery, the annular projections of one roller interleaving with the annular projections of the other roller, a spindle for each roller on which said resilient cellular material is slidably mounted, and means actuatable to compress the cellular material endwise and along said spindles to squeeze moisture therefrom.

2,472,273
APPARATUS FOR PRODUCTION OF RELIEF SURFACES
Robert L. Bates, Lexington, Va.
Application September 14, 1945, Serial No. 616,321
8 Claims. (Cl. 41—1)

1. In apparatus utilizing a rectangular section of a topographic map to produce a contour or relief surface on a like model section of plastic material, a table for supporting a map section and a model section in coordinate relation; a slide; a stylus and a tool carried by the slide for cooperation with the map and model sections; said slide being operable to traverse the stylus and the tool lengthwise and horizontally in relation to the map and model sections; a cross slide for the slide, mounted on the table and operable to traverse the stylus and the tool crosswise and horizontally in relation to the map and model sections; means for moving the slide and the cross slide to cause the stylus to scan the map section; means carried by the slide and movable relatively to the latter for imparting to the tool a vertical feed increment while the stylus is traversed from one map section contour line to the next; and adjustable means carried by the slide and cooperating with the last-named means to limit the range of movement of the latter to vary the increment of tool feed occurring from one contour line to the next to provide for development of the relief surface with an elevation scale determined by the feed increment.



2,472,274
HIGH-FREQUENCY COAXIAL CABLE SWITCH
Stanley M. Baleskas, Oaklyn, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application April 23, 1946, Serial No. 664,160
1 Claim. (Cl. 178—44)

A switch for selectively connecting two of three coaxial cables, said switch comprising a conductive casing constituting an electrically common outer conductor for all three of said coaxial cables and having a longitudinally tapered bore terminating at its larger end in a cavity within said casing, a pair of cable contacts mounted in spaced relation within said cavity along an axis substantially normal to the direction of extension of said bore, an inner conductor for the other one of said coaxial cables mounted for movement within said bore and terminating in the space between said pair of cable contacts, and means for moving said inner conductor in a direction substantially parallel to said axis whereby to bring its said terminal end into engagement with a selected one of said pair of cable contacts, said tapered bore being elliptical in cross-section adjacent to said cavity, the long axis of said ellipse being substantially parallel to the axis along which said spaced apart contacts are mounted whereby when said inner conductor is brought into engagement with either of said cable contacts any increase in capacitance occasioned by the approach of said conductor to one surface portion of said bore is compensated by a decrease in capacitance occasioned by an increase in the spacing between said inner conductor and the opposite surface portion of said bore.

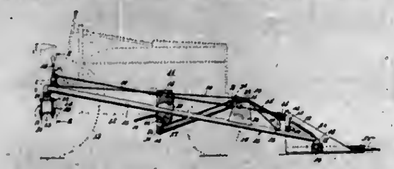
2,472,275
ELECTRIC SWITCH
Karl Bollmann, Zurich, and Hans Meier, Zug, Switzerland, assignors to Landis & Gyr, A. G., Zug, Switzerland, a body corporate of Switzerland
Application March 28, 1945, Serial No. 585,362
In Switzerland December 27, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires December 27, 1963
8 Claims. (Cl. 200—88)

8. In an electric circuit breaker having a switch magnet and an interference switch in the circuit of the switch magnet, a moveable contact and a normally stationary contact latched in a normal position and biased toward a tripped position when unlatched upon the occurrence of predetermined conditions, mechanism actuated by movement of said normally stationary contact from a set to a tripped position opening said interference switch in tripped position, and means for returning said mechanism to set position when said predetermined conditions are no longer present, said returning means being operatively connected with said moveable contact to render said returning means inoperative upon

said mechanism except when said moveable contact is in switched-out position.

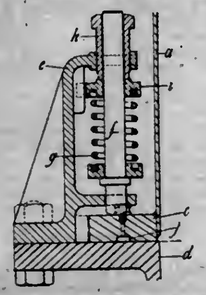
2,472,276
PROCESS FOR THE PRODUCTION OF ARYLDESOXYGLYCOSES AND DIARYLDESOXYALDITOLS
William Andrew Bonner, Hubbard Woods, and Charles D. Hurd, Evanston, Ill., assignors to Corn Products Refining Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application December 31, 1945, Serial No. 638,583
8 Claims. (Cl. 260—333)

4. The process which comprises contacting, under substantially anhydrous conditions and at elevated temperature, not exceeding 100° C., a glucose derivative and an aromatic hydrocarbon in the presence of anyhdrous aluminum chloride, said glucose derivative being characterized in that there is attached to the carbon atom of the aldehydic function a substituent selected from the group consisting of Cl, Br and acyloxy and in that the glycose derivative has protected hydroxyl groups; said aluminum chloride being present in the amount of at least about 5 molecular equivalents, based upon the weight of said glucose derivative.



2,472,277
MONOSUBSTITUTED DESOXYGLYCOSES AND PROCESS FOR PREPARING THE SAME
William Andrew Bonner, Hubbard Woods, and Charles D. Hurd, Evanston, Ill., assignors to Corn Products Refining Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application December 31, 1945, Serial No. 638,585
12 Claims. (Cl. 260—333)

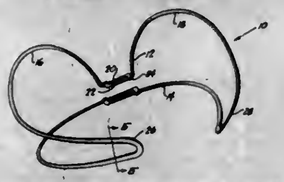
11. The process which comprises effecting the reaction, under substantially anhydrous conditions, between a polyacylglycosyl ester and a Grignard reagent, said Grignard reagent being present in the amount of at least about $2x+1$ molecular equivalents with respect to said polyacylglycosyl ester wherein x is equal to the number of acyl groups.



2,472,278
ATTACHMENT FOR TRACTORS
Albert L. Brauch, Omaha, Nebr., assignor to Harry A. Smith and Ben E. Kaslow, both of Omaha, Nebr.
Application November 17, 1945, Serial No. 629,214
6 Claims. (Cl. 214—140)

1. A hoisting attachment for a tractor com-

prising a pair of main side frame members, upwardly extending members rigidly secured to the side frame members, means for pivotally securing the rear ends of the frame members to a tractor, actuating means for raising and lowering the main frame members comprising fixed and movable members, means for pivotally securing the fixed members to the tractor, means for pivotally securing the movable members to said upwardly extending members, loading means attached to the forward end of the side frame members, said loading means comprising container means for material to be lifted, means for pivotally attaching said container means to said side frame members, a latch for retaining the container means, in the loading position, a release for said latch and resilient means for returning the container means to the loading position after said latch is released and the container unloaded by the weight of the material therein swinging said container means about its pivot, said resilient means having insufficient strength to prevent pivoting of said container means when it is loaded and being of such strength to return said container means to the loading position when it is unloaded, and a stop associated with the container means and cooperating with one of said side frame members to vary the position of the container means, said stop being adjustable to vary the angularity of the container means to vary its position for loading different materials.

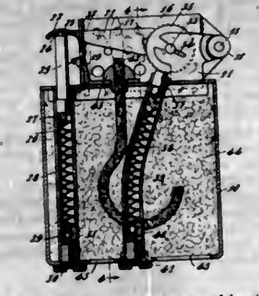


2,472,279
PIPE EXPANSION JOINT
Thomas Walter Falconer Brown, Newcastle on Tyne, England, assignor to The Parsons and Marine Engineering Turbine Research and Development Association, Wallsend, England
Application February 24, 1947, Serial No. 730,510
In Great Britain June 19, 1946
5 Claims. (Cl. 285—130)

1. A pipe joint comprising a pair of flanges having plane end faces abutting each other in slidable sealing relation, and a plurality of clamping devices carried by one of said flanges and surrounding and overhanging the other said flange, each clamping device comprising a tension frame member and a plurality of spring pressed members carried thereby and positioned for applying pressure to the back of the second said flange for forcing it against the first said flange, at least one of the said flanges having a lubricating groove in its face which engages the other flange and a channel in one of said flanges for supplying lubricant to the groove and lubricating the abutting faces of the flanges.

2,472,280
BRASSIÈRE
Henry H. Bruderlin, Venice, Calif.
Application December 2, 1946, Serial No. 713,546
6 Claims. (Cl. 2—42)

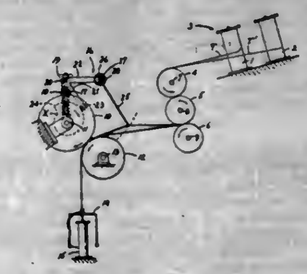
1. A self supporting strapless brassière comprising: a generally C-shaped frame, the medial portion of which includes upper and lower laterally extending wire elements curved in plan view to conform to the body of the wearer adjacent the breasts, each of said elements being structurally continuous across the plane of symmetry and thruout their lengths; the upper element having two sections, one at each side of the plane of symmetry of the frame arched upwardly away from the lower element to define therewith a pair of breast receiving openings; the free ends of said elements being more sharply curved in plan view than the medial portion to engage the sides and back of the wearer and converging toward each other and being joined at their extreme ends; the juncture of said free ends being below the midpoint of the medial frontal portion of said frame; said frame being spring biased to resiliently grip the body and retain itself in position thereon; and breast supporting covering material mounted on said frame in such manner as to prevent direct contact between said frame and the body.



2,472,281
GARMENT
Henry H. Bruderlin, Venice, Calif.
Application September 23, 1947, Serial No. 775,704
6 Claims. (Cl. 2—42)

1. A frame for a garment comprising: a structure of filamentary resilient material; the elements of said structure defining a closed loop at each side of the plane of symmetry to serve as a breast receiving opening; the free ends of said loops being curved out of the general vertical plane of the medial portion, but lying substantially in the horizontal plane of the lower edge

of said frame, to define therewith a generally C-shape to conform to and grip the body of the wearer; and the adjacent portions of said loops being so connected to each other as to be capable of substantial resistance to bending.



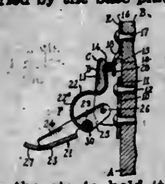
2,472,282
PYROPHORIC LIGHTER CONSTRUCTION
Ray L. Burchett, Newark, N. J., assignor to Ronson Art Metal Works, Inc., a corporation of New Jersey
Application May 4, 1945, Serial No. 591,926
3 Claims. (Cl. 67—7.1)

3. A lighter comprising in combination, a fuel container having a top surface, an abradant wheel mounted adjacent one extremity of said surface, mechanism for urging a pyrophoric element against said wheel, a wick member mounted adjacent said abradant wheel, said container having a passage member extending therethrough with an outlet adjacent the opposite extremity of said top surface, an angularly shiftable operating arm for said abradant wheel, said arm being pivotally mounted at one extremity thereof adjacent said wheel and extending substantially the full length of said top surface and being provided with a finger piece at the opposite extremity thereof, a limit stop mounted upon said container for limiting the extent of angular motion of said operating arm between said container and stop to approximately thirty degrees, said arm being substantially parallel to the top surface of the container when resting against said limit stop, a helical spring mounted in said passage member, and a plunger axially shiftable in said passage and urged by said helical spring against said finger piece whereby said arm is urged against said limit stop, said helical spring being adapted through the intermediary of said plunger for moving said finger piece by snap action from a position adjacent the top container surface to a position approximately 30° removed therefrom to actuate said abradant wheel.

2,472,283
SLUBBING DEVICE
George W. Byers, Glen Mills, Pa., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application July 1, 1947, Serial No. 758,438
19 Claims. (Cl. 57—38)

1. In a drafting mechanism, a set of restraining rolls, a set of drawing rolls, means for driving both sets of rolls, the drawing rolls at a higher rate of linear speed than the restraining rolls, a slubbing device between the drawing rolls and restraining rolls comprising an element disposed for engaging a strand passing between both sets of rollers, and means for oscillating the element

to vary the path of the strand between the drawing rolls and the restraining rolls.



2,472,284
CYLINDER BACK PRESSURE VALVE
John Merritt Clark, Northfield, N. J.
Application March 2, 1946, Serial No. 653,321
4 Claims. (Cl. 121—136)

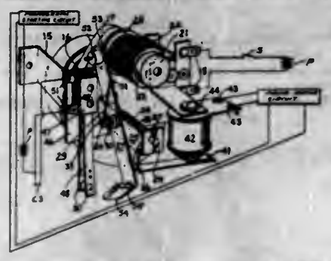
1. In a valve gear assembly, a steam cylinder having main admission and exhaust openings, a steam chest on the cylinder, a main valve in the steam chest for controlling the flow of steam through said cylinder openings, means including a main radius rod extending from said valve, an auxiliary valve in the steam chest for relieving back pressure in the steam cylinder when operated at high speeds, an auxiliary radius rod extending from the auxiliary valve, a combined rockable structure including a reverse link lever and an auxiliary rocking lever, said radius rods connected to the respective levers for adjustment toward and away from the pivot axis of the rockable structure, and manually-adjustable means connected to the radius rods to effect their adjustment upon the rockable structure.

2,472,285
LID FASTENER
Arthur Claud-Mantle, Trumbull, Conn., assignor to The Bassick Company, Bridgeport, Conn., a corporation of Connecticut
Application June 12, 1944, Serial No. 539,936
12 Claims. (Cl. 16—147)

4. In a lid fastener, the combination of a base plate having outstanding walls notched at one end, a member comprising a pin adapted to be received in the notched portion of the base plate and

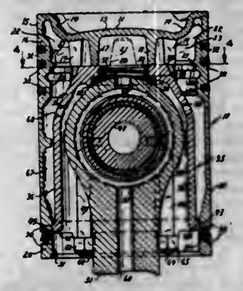
having means for attachment to a box part, and a toggle carried by the base plate having means

for engaging the pin to hold it in the notched portion.



2,472,286
UMBRELLA CARRYING GARMENT
Akivah Drasnin, Buffalo, N. Y.
Application May 18, 1948, Serial No. 27,738
5 Claims. (Cl. 2—247)

1. In an outdoor umbrella carrying garment supported principally from the shoulders of the wearer, the combination comprising a side panel descending to at least the wearer's knees and covering the lateral outer side of the wearer's thigh, and fabric means secured to said garment and forming a vertically elongated sheath-like pocket open at its upper end and closed at its lower end and of a length approximately equal to the distance between the thigh and knee of the wearer and arranged in such position on the inner side of said side panel that said open upper end is generally in line with the hips of the wearer and said pocket extends downwardly along the lateral outer side of the wearer's thigh and with said lower end being arranged adjacent the wearer's knee in the erect position of the wearer, said open upper end of said pocket providing an inlet and outlet therefor for a collapsed umbrella of a length substantially equal to the length of said pocket thereby to permit said umbrella to be carried in said pocket with the upper end of said umbrella not extending above the wearer's hip whereby the wearer can walk, sit and bend freely without unsightly bulging from or interference with said umbrella in said pocket.

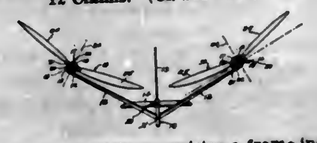


2,472,287
AUTOMATIC TIME CONTROL DEVICE FOR COIN-OPERATED PHONOGRAPH APPARATUS
Lyndon A. Durant, Chicago, Ill., assignor to Royal Patent Corporation
Application May 21, 1947, Serial No. 749,486
2 Claims. (Cl. 161—1)

1. A control device for controlling the operation of a coin-controlled phonograph at predetermined intervals comprising a starting switch, a member for closing said switch, means for supporting said member for movement into switch closing position, means for moving said member into switch closing position, means for releasing said member from said moving means at the end

of the movement of said member in one direction for movement in a direction from said switch closing position, said releasing means including a rockable carriage carrying said member, and an electromagnetic element for rocking said carriage in a direction to release said member from said moving means.

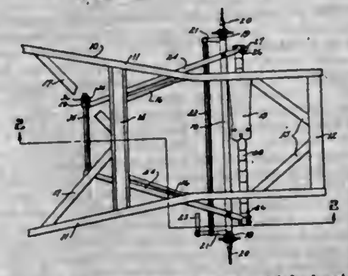
2,472,288
PISTON
Louis E. Endsley, Pittsburgh, Pa., and Wesley W. Schettler and John Howard Lentell, Beloit, Wis., assignors to Fairbanks, Morse & Co., Chicago, Ill., a corporation of Illinois
Application January 26, 1948, Serial No. 4,244
3 Claims. (Cl. 309—16)



1. In a piston, a body having a crown and a skirt portion, said crown portion being formed with a central area of spherically convex form and an adjacent peripheral area of concavo-convex form integrally united at its outer margin with said skirt portion, an inner and outer series of strut members integrally formed with and depending from said crown portion, the strut members of the outer series being staggered relative to the inner series and being connected with said skirt portion at a zone below the concavo-convex area of said crown portion, whereby the said areas of the crown portion are unrestrainedly free to expand, contract and flex as a result of the thermal and mechanical forces incident to piston operation, and an insert member disposed in said body to bear against said skirt portion at axially spaced zones and to contact said strut members, said insert member having a recess opening inwardly of said inner series of strut members and

through which a cooling fluid may enter the crown portion of the body for flow across the said crown areas and between and around said inner and outer series of strut members to carry off the heat imparted thereto during piston operation.

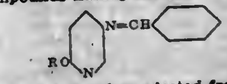
2,472,289
BANANA PULP FREE FROM STARCH
Carl Ermert, Cincinnati, Ohio
No Drawing. Application August 25, 1947, Serial No. 770,553
1 Claim. (Cl. 99—100)



A process of making panana pulp free from starch which comprises heating peeled matured ripening bananas to 98° F. and slowly increasing the temperature to 140–160° F. within a confined space in an atmosphere of reduced pressure, whereby the naturally occurring ethylene is liberated from the banana throughout the pulp to cause an increase in activity of the naturally occurring enzymes; and finally terminating the heating when the hydrolysis of the starch in the banana pulp is complete.

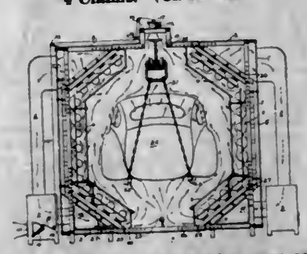
2,472,290
HELICOPTER KITE
Robert W. Fernstrum, Detroit, Mich., assignor to Joy Products Company, Menominee, Mich., a corporation of Michigan
Application March 18, 1946, Serial No. 655,253
12 Claims. (Cl. 244—154)

1. A helicopter kite comprising a frame including a pair of oppositely projecting outriggers, a pair of plural-blade rotors rotatably mounted on said outriggers, a stabilizing plane structure disposed on said frame rearwardly of said outriggers, and a connection for attaching a flexible towing member to the forward portion of said frame, the axes of rotation of said rotors being disposed in upwardly converging directions.



2,472,291
STABILIZER
Henry Ford, Dearborn, and Emory Nador, Detroit, Mich., assignors to Ford Motor Company, Dearborn, Mich., a corporation of Delaware
Application July 15, 1944, Serial No. 545,198
6 Claims. (Cl. 267—66)

1. In a stabilizer for a motor vehicle having a frame and a transverse axle, comprising, substantially straight rigid radius rods having their front ends fixedly secured to said axle adjacent opposite ends thereof and extending diagonally rearwardly and inwardly a substantial distance therefrom, a transverse torsion bar, the rear ends of said rods being rigidly secured to opposite ends of said transverse torsion bar for rotation therewith, and said torsion bar being journaled on said frame adjacent the connection of said rods to said bar and secured against substantial longitudinal movement with respect thereto.

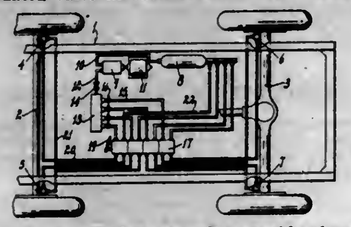


2,472,292
BENZYLIDENEAMINO COMPOUNDS OF PYRIDINE
Harris L. Friedman, New York, and Leo D. Braitberg, Yonkers, N. Y., assignors to Pyridium Corporation, Yonkers, N. Y., a corporation of New York
No Drawing. Application July 27, 1945, Serial No. 607,486
5 Claims. (Cl. 260—296)

1. Compounds having the general formula:

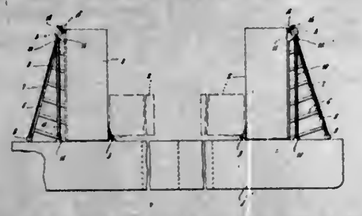
in which R is a member selected from the group consisting of alkyl radicals and alkoxy alkyl radicals having not more than eight carbon atoms and aryl radicals.

2,472,293
VENTILATED AND SHIELDED INFRARED OVEN
Fredrick J. Groven, Highland Park, Mich., assignor to Ford Motor Company, Dearborn, Mich., a corporation of Delaware
Application September 20, 1945, Serial No. 617,637
4 Claims. (Cl. 34—60)



1. An infrared ray paint-baking oven comprising in combination, a framework, a housing over said framework, a series of electrically powered infrared ray sources adjustably mounted on said framework within said oven, perforated metal panels suspended within said oven in the path of said infrared rays and within a uniform distance of the sources thereof, blower means to provide a constant circulation of air in said oven, duct and vent means on the floor of said oven positioned so as to direct opposing currents of air into said oven and to result in upwardly eddying currents of air passing around and through said baffle plates, and an exhaust escape means.

2,472,294
HYDRAULIC SYSTEM FOR VEHICLE JACKS
Monroe D. Hall, Wilmington, Calif.
Application March 7, 1947, Serial No. 733,035
1 Claim. (Cl. 254—96)



In a hydraulic system for vehicle jacks, the combination of a plurality of jacks fixedly at-

tached to a vehicle, a hydraulic pump, a reservoir connected to said pump, a pressure line extending from the pump, a manifold into which the pressure line extends, a control valve, a plurality of lines extending from the manifold, each of the lines extending to the control valve, a manually actuated valve in each of said lines extending

from the manifold, a manually operable plunger in the control valve, lines extending from the control valve to the up and down side of each of the jacks, said plunger being adjustable to direct fluid to either the up or down side of the jacks, and return lines extending from the control valve to the reservoir.

2,472,295
OPERATING AND CONTROLLING APPARATUS FOR DRY DOCK SIDE WALLS
Frederic R. Harris, New York, N. Y.
Application August 9, 1944, Serial No. 548,658
7 Claims. (Cl. 114—45)

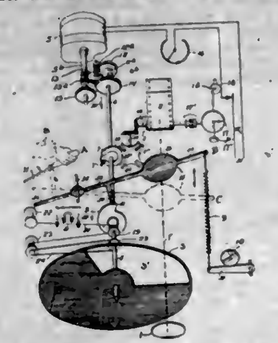
1. A dry dock having a pontoon hull, a wall section hinged thereon, a pair of columns pivotally mounted on said hull and joined together at their upper ends, a capstan screw on one face of said wall section, and an element connecting the screw to the upper ends of both columns, and means for rotating said screw to actuate said columns to raise and lower said wall section to vertical and horizontal position respectively.

2,472,296
SOLDERING IRON TIP
Merton R. Hartnell, Chicago, Ill.
Application October 12, 1946, Serial No. 702,889
1 Claim. (Cl. 113—105)

A soldering iron tip comprising a copper core portion, a coating of nickel thereon and a coating of rhodium over the first mentioned nickel coating.

2,472,297
EXPLODING SHIP TOY
Harry C. Holt, Cranston, R. I.
Application October 5, 1945, Serial No. 620,439
5 Claims. (Cl. 272—102.1)

1. A toy comprising a pair of normally straight flexible resilient members with their ends in adjacency, at least one pair of adjacent ends being held in wedge shape adjacency by a hook on one member extending over and slidably frictionally engaging the surface of a portion of the other member along one of the surfaces of the wedge, means at the other pair of adjacent ends to connect said ends for relative longitudinal movement, a block extending between and frictionally engaging said members intermediate their pairs of adjacent ends and spreading said members apart between their ends causing at least one of said members to be bowed having an inherent tendency to straighten thereby urging said hook and its engaged portion together along one of said wedge surfaces whereby repeated jarring of said members causes said hook to creep along the wedge-like surface it engages until disengaged.



2,472,298
CLEANING, PENETRATING, AND CORROSION LOOSENING COMPOSITION
Charles A. Jensen, Buffalo, N. Y.
No Drawing. Application September 6, 1945, Serial No. 614,815
1 Claim. (Cl. 252—49.9)

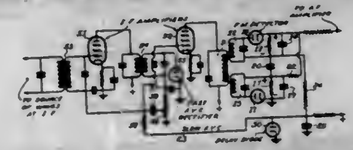
A cleansing, penetrating and corrosion loosening composition consisting essentially of phosphorus trichloride and a liquid petroleum hydrocarbon consisting essentially of lubricating oil and kerosene in the approximate proportions of 25% of lubricating oil and 75% of kerosene, said phosphorus trichloride and liquid petroleum hydrocarbon being in the approximate proportion of 0.3 to 1.0 gram-atoms of chlorine to one liter of the composition.

2,472,299
UNIVERSAL MOTION AND STILL PICTURE CAMERA
Ivan Jerome, Massapequa, N. Y.
Application June 12, 1944, Serial No. 539,908
4 Claims. (Cl. 88—18)

1. In a photographic camera, an operating shaft, means to intermittently move and stop the film at the rotation of said shaft, means to operate said shaft at a high speed, for motion pictures, or at a low speed, for still pictures, as desired, a rotary shutter on said shaft, a pivoted focal plane shutter, a resilient element acting on said focal plane shutter and having a tendency to place the same within the path of the light beam and quickly shut off the same, a cam on said operating shaft adapted to act on said focal plane shutter, normally having a tendency to place the same out of the path of the light beam but adapted to release it at a predetermined phase of its rotation and permit said resilient member to quickly close said shutter, both shutters operating when it is desired to take still pictures, and means to place said focal plane shutter into inactive position, out of the path of the light beam, when it is desired to take motion pictures; said focal

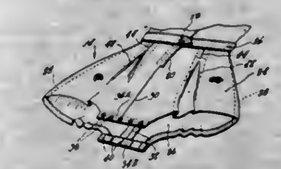
plane shutter being movable on a pivoted arm, and the resilient means acting thereon being in the form of a coil spring, one end of said spring being secured to an arm pivoted on a stationary center, the other end of the same being secured to said

pivoted arm carrying the focal plane shutter, and means to move said pivoted arm for the first end of said coil spring in one or in the other direction thereby to increase or decrease the tension on said shutter and the speed of its closing.



2,472,300
SELF-FASTENING CORD HOLDER
Ray V. Kemplin, Chicago, Ill.
Application January 5, 1946, Serial No. 639,239
1 Claim. (Cl. 242—96)

A cord holder formed of a single wire and having a pair of spaced convolutions at each end connected by a straight portion of the wire on one side of the centerline of the two convolutions and parallel thereto and straight end portions of the wire extending from the pairs of convolutions into abutting relation on the other side of the centerline of the two convolutions and in spaced parallel relation thereto, the straight spaced parallel portions forming a body portion upon which the cord may be readily wound and the two pairs of convolutions each providing a fastening means for the cord passing through the space between the same.

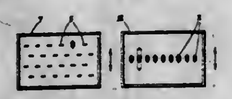


2,472,301
FREQUENCY MODULATED-AMPLITUDE MODULATED RECEIVER
Winfield R. Koch, Haddonfield, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Original application February 5, 1944, Serial No. 521,193. Divided and this application March 2, 1945, Serial No. 580,683
4 Claims. (Cl. 250—20)

1. In a frequency modulation receiver, a frequency discriminator including a pair of load resistors across which direct current voltages appear as a result of detection, conductive means for connecting said resistors in series-aiding relation with respect to said voltages, a slow-acting circuit for applying the resultant of the voltages to a portion of the receiver as a first gain control voltage thereof, means for deriving from the received frequency modulated signal a second control voltage which is representative of relatively fast amplitude variations of the signal,

means coupled to said resistors for deriving a detected modulation voltage representative of the frequency modulation of the received signal, and a fast-acting circuit for applying said second control voltage to a portion of the receiver as a second gain control voltage.

2,472,302
FEMININE GARMENT
Samuel Litt and Edward Litt, New York, N. Y.
Application December 12, 1946, Serial No. 715,692
2 Claims. (Cl. 2—80)



1. A unitary garment comprising a waist part and a skirt united with each to form a one-piece garment, said skirt flaring downwardly from the waist and the front of said skirt being provided with folds disposed at opposite sides of the vertical median line of the garment and extending downwardly from the waistline of the garment to the bottom thereof, portions of each of said folds being stitched together along a vertical line extending a short distance down from the waistline, the remaining portion of each of said folds being free to expand and contract laterally of the wearer, whereby the garment is fitted at the waistline without impairment of the flare of said skirt, the lower marginal edge portions of said skirt having centrally disposed crotch-forming parts at the back and front, respectively, of the garment provided with separable fastening means for releasably securing said crotch-forming parts together, said crotch-forming parts, when unfastened from each other, extending longitudinally of the lower edge of the skirt.

2,472,303
METHOD OF GROWING CRYSTALS
Edward J. Malone, Maple Heights, Ohio, assignor to The Brush Development Company, Cleveland, Ohio, a corporation of Ohio
Application June 10, 1946, Serial No. 675,533
3 Claims. (Cl. 171—327)

1. A method of growing crystals which comprises the steps of providing seed bodies cut from crystals of the material to be crystallized; planting the seed bodies in a solution of the said material; causing a flow of the solution relative to

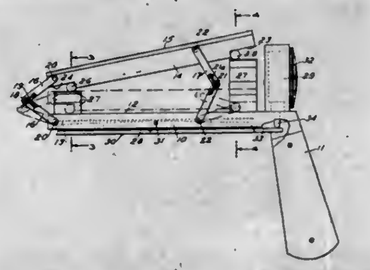
the seed bodies and meanwhile progressively lowering the temperature of the solution until growth of at least some of the seed bodies to a superficially sound crystal form typical of the material in solution is effected; picking from the solution all of the seed crystals so grown; segre-

gating such of said seed crystals as are superficially unsound and uncertain on further growth of producing sound or economically useful crystal material; replanting the remaining superficially sound seed crystals in solution of the material to be crystallized; and effecting further growth of the replanted crystals to desired size.

2,472,304
METHOD OF ETCHING ALUMINUM
Ralph B. Mason, New Kensington, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application March 13, 1944, Serial No. 526,215
11 Claims. (Cl. 41—43)

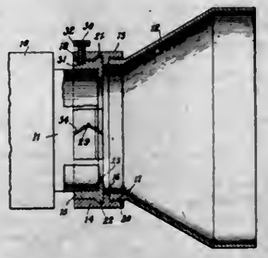
1. The method of etching aluminum surfaces, which includes making the surface an anode in an electrolytic cell, the electrolyte of which is an aqueous solution having as the essential etching component at least 0.5 per cent by weight of a compound selected from the group consisting of barium hydroxide and strontium hydroxide.

5. The method of preparing a printing plate having an aluminum surface, which comprises coating a portion of said aluminum surface with an etch resisting material, and subjecting the uncoated portion of said surface to the action of an etching medium, consisting of an aqueous solution having as the essential etching component at least 0.5 per cent by weight of a hydroxide selected from the group consisting of barium hydroxide and strontium hydroxide.



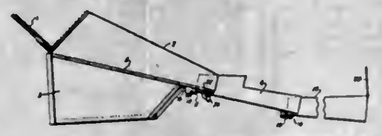
2,472,305
POST PULLER
Charles F. Miller, Denver, Colo.
Application April 15, 1946, Serial No. 662,120
6 Claims. (Cl. 254—135)

1. A post puller comprising a single rigid strut, a ground-engageable base on one end of said strut, a chain-engageable, notched plate on the other end of the strut to selectively receive links of a draft chain end-secured to a member to be uprooted and thereby determine the angular disposition and consequent leverage of said strut, and a post-engageable arm projecting laterally from an intermediate strut portion.



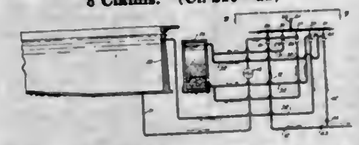
2,472,306
TAPER MEASURING INSTRUMENT
Octavius J. Minsto, Philadelphia, Pa.
Application July 20, 1946, Serial No. 685,081
3 Claims. (Cl. 33—174)

1. An instrument for measuring the internal taper of a bore, comprising a base having a plane surface, a sine bar attached to said base opposite said surface and angularly adjustable relative thereto, means for adjusting said sine bar to a predetermined angle to said surface, a sensing



bar pivoted to said base on the opposite side of said base from said sine bar, and an indicating means operated by said sensing bar and calibrated to zero when said sensing bar is parallel to said surface.

2,472,307
COUPLING DEVICE FOR DETACHABLY SECURING SUNSHADES, FILTER HOLDERS, AND LIKE ACCESSORIES TO THE LENS BARRELS OF CAMERAS
Henryk Nagel, Bronx, N. Y.
Application January 23, 1946, Serial No. 642,792
4 Claims. (Cl. 88—1)

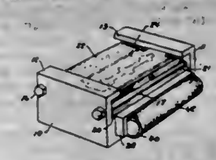


1. In a device of the character described, a tubular holding member having an inner surface, means for detachably fixing a camera lens attachment to said holding member, said holding member having an inclined portion on said inner surface, a split ring having an outer inclined peripheral surface complementary to and coacting with said inclined portion of said tubular holding member, a shoulder extending from said inner surface of said tubular holding member against which said split ring laterally abuts, and an element threaded through said tubular holding member and engageable with said split ring to bear against and contract the latter about a lens barrel.

2,472,308
SEGMENTAL CHUTE FOR LOADING MATERIALS
James O'Halloran, Quebec, Quebec, Canada, assignor to Anglo-Canadian Pulp and Paper Mills Limited, Quebec, Quebec, Canada, a corporation of Quebec
Application February 10, 1947, Serial No. 727,644
In Canada December 17, 1946
5 Claims. (Cl. 302—14)

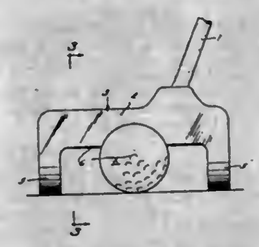
1. A loading chute for materials comprising a plurality of overlapping chute sections, and means connecting the overlapped sections for relative vertical and horizontal swinging movement comprising a bar mounted on the rearward end of each section, hinge portions carried by the bar, a second bar pivotally carried by the forward end of the adjacent overlapping section and having complementary hinge portions, and a rod pivotally engaged by all said hinge portions.

2,472,309
SWIMMING POOL APPARATUS
Earl J. Opsahl, North Hollywood, Calif.
Application September 14, 1945, Serial No. 616,274
8 Claims. (Cl. 210—11)



1. In a filtering and draining system, having a series of filter and drain lines, the combination of; a plurality of valves in said lines, a pump to force the water through said lines and said filter, a motor to drive the pump, an electric circuit for the motor, and common selective means for operating said valves selectively and simultaneously closing said circuit to energize said motor to operate said pump upon each selective operation of the common selective means.

2,472,310
PROCESS FOR PREPARING THE ETHYNYL CARBINOL OF β-IONONE
William Oroshnik, Brooklyn, N. Y., assignor to Ortho Pharmaceutical Corporation, a corporation of New Jersey
No Drawing. Application March 19, 1946, Serial No. 655,007
1 Claim. (Cl. 260—617)



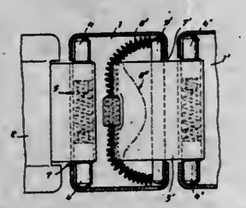
A method for producing α-ethynyl (β-ionol) comprising in an inert solvent reacting lithium acetylide with β-ionone and hydrolyzing the resultant reaction product.

2,472,311
RAZOR SHARPENER
Thomas M. Page, Detroit, Mich.
Application March 28, 1947, Serial No. 737,764
9 Claims. (Cl. 51—156)

9. A razor sharpener comprising a member having a surface of concave cylindrical form designed to sharpen a razor blade reciprocated thereon, means including said member forming an enclosed slideway adjacent and generally parallel to said surface, and a magnet reciprocably mounted in said slideway with its magnetic axis perpendicular to the axis of said surface and capable of moving a magnetically permeable razor blade over said surface.

2,472,312
PUTTER
Sherman S. Parrish, Minneapolis, Minn.
Application November 21, 1947, Serial No. 787,439
7 Claims. (Cl. 273—77)

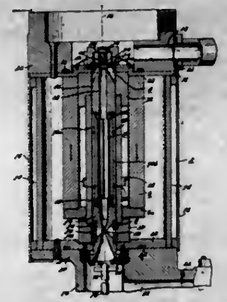
1. In a golf ball putter, a shaft, and an elongated putting head on the end of the shaft, said head comprising an elongated main body equipped at laterally-spaced ends with depending gauge-acting leg elements, said leg elements being of equal length, the bottom edge of said main body intermediate said leg elements being longitudinally straight and spaced from the plane of the bottom of the leg elements a distance less than the diameter of a golf ball but greater than the radius thereof.



2,472,313
FLYWHEEL MAGNETO
Russell E. Phelon, West Springfield, Mass.
Application June 13, 1946, Serial No. 676,413
14 Claims. (Cl. 171—209)

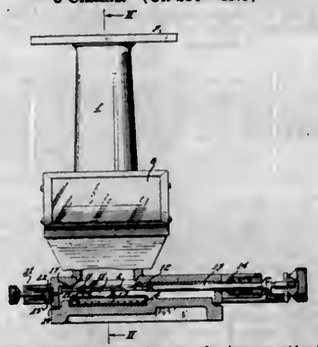
1. A flywheel magneto for an internal combustion engine comprising in combination, a rotatable shaft, a stationary core structure adjacent

the shaft including three circularly spaced poles all positioned within an arc of approximately 180° or less and having their outer faces equidistant from the shaft axis and also including primary and secondary coils surrounding the intermediate pole, a flywheel secured to the shaft and having an annular flange formed of magnetic material and surrounding the core structure, two permanent magnets directly engaging at their outer extremities with the internal face of the annular flange, the said magnets being circularly spaced within an arc of substantially less than 180° for simultaneous radial register respectively with the center pole of the core and with one of the other poles thereof and the said magnets being oppositely charged radially, and two separate circularly spaced pole pieces directly engaging the inner extremities of the respective magnets and having arcuate inner faces concentric with the axis of the shaft and movable in close proximity to the outer faces of the poles of the core structure which pole pieces cooperate with the magnets and with the annular flange of the flywheel to provide a magnetic circuit having inner pole faces of opposite polarity.



2,472,314
EXPANSIBLE BRACELET
Armand Pretre, Geneva, Switzerland, assignor to Montres Rolex SA (Rolex Watch Co. Ltd.), a corporation of Switzerland
Application January 31, 1948, Serial No. 5,642
In Switzerland February 5, 1947
5 Claims. (Cl. 59—79)

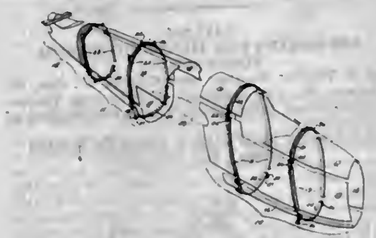
1. In an expansible bracelet or the like, in combination a plurality of connected units, each unit comprising a box-like outer member and an inner link hingedly connected therewith and slidably mounted in the outer member of the next adjacent unit, an arcuate coil spring housed within the box-like outer member of each unit, said arcuate coil spring bearing by its extremities against said outer member and being attached by its median portion to the link of the preceding adjacent unit, whereby expansion of the bracelet causes said arcuate coil spring to be centripetally deformed in the direction of its chord.



2,472,315
VARYING THE GAP SPACING OF POLE PIECES FOR ELECTRON OPTICAL APPARATUS
John H. Reisner, Collingswood, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application March 30, 1948, Serial No. 17,846
8 Claims. (Cl. 250—49.5)

1. In an electron optical system which includes a pair of magnetic electron lenses, a first pair of pole pieces providing a fixed gap for one of said lenses and a second pair of pole pieces providing a variable gap for the other of said lenses and means for changing the strength of said other

lens by varying said variable gap without changing the strength of said first mentioned lens.

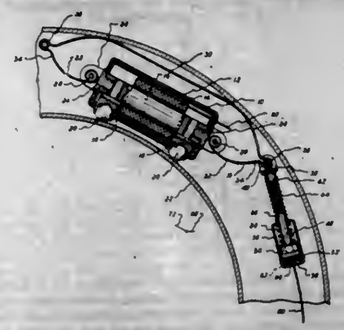


2,472,316
ELECTRON OPTICAL INSTRUMENT
Alexander M. Rennie, Philadelphia, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application November 28, 1947, Serial No. 788,723
6 Claims. (Cl. 250—49.5)

1. The combination in an electron-optical instrument having an axis along which electrons travel and containing a movable viewing screen, an electron-sensitive target and a shutter for said target mounted along said axis with said shutter normally interposed between said screen and target, of means for moving said viewing screen into and out of the path of said electrons, and means responsive to said movement of said screen for closing and opening said shutter, whereby selectively to expose said screen and said target to said electrons.

2,472,317
METHOD OF AIRCRAFT FUSELAGE CONSTRUCTION
Charles E. Sorensen, Detroit, and Logan C. Miller, Ann Arbor, Mich., assignors to Ford Motor Company, Dearborn, Mich., a corporation of Delaware
Application May 17, 1943, Serial No. 487,278
1 Claim. (Cl. 29—286)

The method of assembling an airplane fuselage from a plurality of subcomponent parts comprising assembling the individual subcomponents on individual jigs, securing said subcomponents to a rigid supporting member while still supported in the jig, the rigid supporting member comprising a segmental structure conforming internally substantially to the exterior of the subcomponents at a selected vertical section and being provided at the ends with mating surfaces, removing the subcomponent and supporting member from the jig, bringing together in predetermined order a plurality of these subcomponents and supporting members and also at least one supporting member without the corresponding subcomponents so that the mating surfaces of



the supporting members are in abutting relationship and the supporting members become in effect a segment of a complete ring without barring free access to the interior of the fuselage past the supporting member which is devoid of subcomponents, securing these supporting members at their end in abutting relationship, permanently securing the subcomponents together, removing the supporting members which carry no subcomponents, replacing such supporting members with supporting members carrying subcomponents, permanently securing the newly added subcomponents to the previously added subcomponents to form a section of the fuselage and removing all the supporting members.

2,472,318
INHIBITOR
Philip Subkow, Los Angeles, Calif.
No Drawing. Application March 27, 1943, Serial No. 480,871
7 Claims. (Cl. 252—45)

1. A mineral lubricating oil composition comprising a lubricating oil fraction and a compound of the general formula RSR'SR where R is one of the groups taken from the class consisting of an aryl, alkyl aryl and substituted aryl, alkyl aryl groups, and where S is sulfur and R' is a low molecular weight alkyl group taken from the group consisting of methyl and ethyl groups, said compound being present in an amount sufficient to inhibit oxidation of said oil.

2,472,319
MAGNETIC GAUGE FOR CONDUITS
Howard L. Turner, Jackson, Mich.
Application December 7, 1944, Serial No. 567,105
1 Claim. (Cl. 175—183)

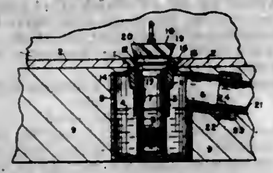
A measuring device for determining the amount of corrosion or other foreign deposits on the inner walls of both bent and straight tubes, pipes and the like, comprising an electromagnet unit having opposed pole portions adapted to ride along the inner surface of the tube being measured, a resilient distortable carriage for said electromagnet having resilient portions extending before and after said electromagnet unit and constructed and arranged to urge said electromagnet toward the inner wall of the tube, said resilient portions being adapted to engage the inner wall of the tube opposite that part of the inner wall along

which the opposed poles of said electromagnet ride, and distortable means directly connected to said carriage for applying traversing force indirectly to said unit for moving said unit through both straight and bent tubes and the like.

2,472,320
METHOD OF HEAT-TREATING STEEL
Gosta Vennerholm, Dearborn, and Harry D. Ford and Frederick C. Young, Detroit, Mich., assignors to Ford Motor Company, Dearborn, Mich., a corporation of Delaware
No Drawing. Application February 5, 1941, Serial No. 377,540
2 Claims. (Cl. 148—16.5)

2. A method of treatment of steel for the purpose of producing a wear-resistant outer surface thereof which comprises the heating of the steel within a temperature range of 1300 to 1500° F. in an atmosphere of NH_3 and generator gas in ratios within the range from 1.1 parts NH_3 to 1.0 part generator gas as a lower limit to 1.8 parts NH_3 to 1.0 part generator gas as an upper limit said atmosphere being substantially free of hydrocarbons and employed in amounts sufficient to cause the formation of a wear and corrosive resisting outer surface layer of austenite on such steel.

2,472,321
RECEPTACLE CLOSURE LOCK
Walter L. Vinson, Sherman Oaks, Calif.
Application November 23, 1946, Serial No. 711,949
10 Claims. (Cl. 220—58)

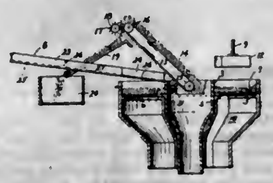


1. The combination with a receptacle having a flanged closure therefor, a bead on the lower edge of the flange of the closure, a flange on the receptacle as a seat for the beaded edge of the closure flange; of a pair of brackets fixed to opposite sides of the receptacle, cup-shaped cam members encompassing said brackets, pivots on which said cam members are mounted to turn, a ball fixed to said cam members so that said cam members will turn when the ball is raised and lowered, latch hooks having shanks slidably and vertically adjustably supported on said pivots within said brackets, spring means for forcing said hooks outwardly on said pivots, said cam members including circular body portions

through which said pivots extend and to which the ends of the bail are fixed, annular flanges on said bodies facing the sides of the receptacle, and cam surfaces arranged on the annular flanges of said cam members for contacting said

shanks of said hooks and moving the hooks against the action of said spring means into locking engagement with the bead on said closure incident to lowering the bail to either side of the cam and for releasing said hooks when the bail is raised.

2,472,322
SANITARY TRAP FOR BATHTUBS
David Weissman, New York, N. Y.
Application May 12, 1948, Serial No. 26,680
2 Claims. (Cl. 182—20)

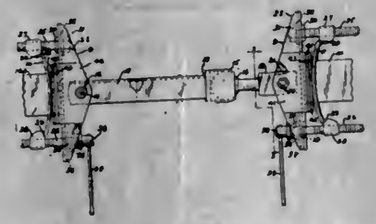


1. In a sanitary trap for a bath-tub which is provided with a bottom outlet, a closed trap casing located underneath said bottom outlet, a discharge pipe attached to the upper portion of said casing, an opening in the top of said casing, a hollow fitting inserted into the tub outlet engaging said top opening, said fitting having a depending flange extending beneath the discharge level of said casing and forming a liquid seal, a dirt collector open at the top and closed at its bottom end removably carried by said fitting and openings in the collector wall underneath the discharge level of said trap casing.

2,472,323
ARC WELDING
Alanson U. Welch, Jr., Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application March 3, 1945, Serial No. 580,855
23 Claims. (Cl. 315—166)

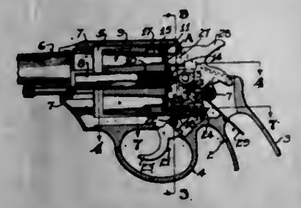
1. The method of welding with an arc energised from a source of alternating current which comprises establishing said arc between electrodes having substantially different electron emissivities at the temperatures produced by the operation of said arc which consequently acts to produce a substantial direct current component of current flow through said arc and its energising circuit, reducing preferably to zero the direct current component of current flow through said arc and its said energizing circuit by reducing the conductivity of the energising circuit of said arc during half cycles of that polarity of said alternating current source when the arc is more conductive as a result of the difference in electron emissivity of said electrodes.

2,472,324
APPARATUS FOR HANDLING LIQUID SUSPENSIONS
Dan B. Wicker, Dunbar, and Charles W. Cox, St. Albans, W. Va., assignors to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application April 4, 1944, Serial No. 529,540
1 Claim. (Cl. 210—196)



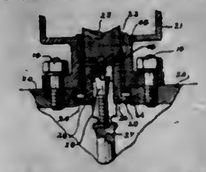
In an apparatus which comprises a rotating foraminous annular surface disposed in a horizontal plane and a trough inclined from the vertical for depositing a liquid suspension of particulate material thereupon so that the amount of suspension deposited on any given unit width of the annular surface is directly proportional to the relative linear velocity of such unit, said trough having a delivery edge the projection of which on the annular surface effectively defines substantially an arc of a circle and the locus of the center of which circle lies on the annular surface on a radial line through the center of said surface extending at a right angle to the longitudinal axis of the trough, and the termini of which arc coincide with the inner and outer peripheries of the annular surface, the locus of points on said arc being ascertainable from the equation

$$(R_t^2 - R_o^2) = K\ W$$



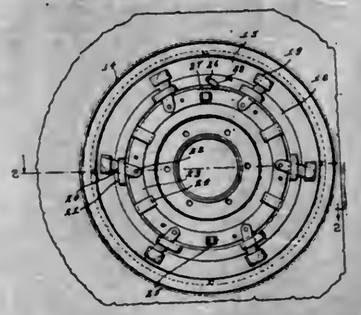
(where R_o is the inside radius of the annular surface and K is a factor determinable by substituting in the equation the outside radius of the annular surface for R_o and the width of the trough for W) by dividing the width of the annular surface into a number of portions between imaginary concentric circles and substituting the value of the radius of the outer circle defining each portion for R_t in said equation, solving for W, and dividing the trough into parallel, longitudinally extending strips between imaginary lines spaced from that edge of the trough which extends to a point above the inside periphery of the annular surface distances corresponding to the values of W obtained, the intersections between the imaginary concentric circles and vertical planes through said parallel imaginary lines constituting the loci defining the arc.

2,472,325
TOW BAR
Chester Williams, Ypsilanti, Mich.
Application October 7, 1944, Serial No. 701,755
4 Claims. (Cl. 280—33.14)



1. A tow bar of the character described adapted for bumper to bumper attachment between a towing vehicle and a towed vehicle, comprising a comparatively long and a comparatively short section, a ball and socket joint between the said sections, the said short section having a clamp rigidly secured thereto, said clamp being arranged to be secured to the rear bumper of the towing vehicle and the long section having a clamp pivotally secured thereto, said last named clamp being arranged to be secured to the front bumper of the towed vehicle, each of said clamps consisting of a channel member having an outwardly extending thrust plate on each side thereof, said channel member having longitudinal slots therein adapted to accommodate attaching bolts, attaching bolts in said slots, and lugs on said bolts adapted to engage the edges of an automobile bumper.

2,472,326
CYLINDER ROTATING MECHANISM FOR REVOLVERS
Mildred Dodge Youker, Los Angeles, Calif., assignor, by mesne assignments, to Malcolm P. Youker, Santa Rosa, Calif.
Application October 14, 1946, Serial No. 703,160
11 Claims. (Cl. 42—67)

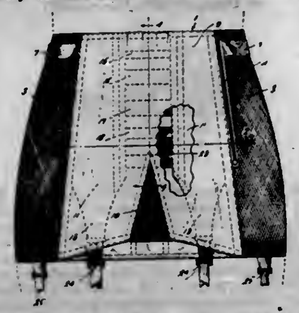


1. A revolver, comprising: a frame structure; a cylinder journaled therein, an annular cam track in the form of a channel recessed in the breech end of said cylinder, said cam track including a circumferential series of cam faces separated by keeper recesses; and a cam engaging member mounted within said frame structure for movement into and out of said cam track, the slope of said cam faces being such that upon movement of said member into said cam track a partial rotation is applied to said cylinder, said keeper recesses receiving said member upon completion of such partial rotation to lock said cylinder until said member is withdrawn.

2,472,327
DISTRIBUTOR COUPLING
Emil Zoerlein, Dearborn, Mich., assignor to Ford Motor Company, Dearborn, Mich., a corporation of Delaware
Application July 19, 1945, Serial No. 605,913
3 Claims. (Cl. 123—146.5)

3. In an internal combustion engine, a driving system for the ignition apparatus terminating in a shaft the driving end of which is substantially flush with a surface of the engine, and a collar secured to the driving end of said shaft, said collar being capable of rigid attachment to the shaft in an infinite number of angular relationships, being unsymmetrically slotted to receive a mating member of the ignition apparatus and being journaled in the same bearing which supports the mating member.

2,472,328
SEPARABLE RIM
Frank W. King, Portland, Oreg.
Application October 1, 1945, Serial No. 619,563
3 Claims. (Cl. 152—402)



1. A combined wheel and rim comprising a disk wheel, a fixed rim section secured to the periphery of said disk wheel, a separable rim section having pockets formed on its outer face, a ring rotatably mounted on the outer face of said disk wheel, locking dogs pivotally attached to said rotatable ring, and guide loops intermediate said ring and pockets to receive and direct said locking dogs into and out-of engagement with the pockets of said separable rim section upon rotation of said ring.

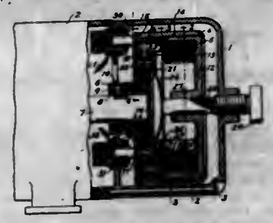
2,472,329
GARMENT
Joseph J. Kispert, Mount Carmel, Conn.
Application August 9, 1946, Serial No. 689,597
3 Claims. (Cl. 2—37)

1. A garment including a front section having an inner vest and an outer sheet covering the vest, said vest having side portions and an intermediate portion reinforced midway its width by vertical

stays, and strips of elastic fabric extending across the outer surface of the said intermediate portion and secured at their ends to side edges of the said intermediate portion, said elastic strips being vertically spaced from each other and progressively of increased width towards the lower

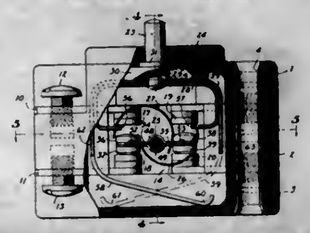
end of the intermediate portion and being of less length than the width of the said intermediate portion whereby the elastic strips will be stretched longitudinally in a direction transversely of the said intermediate portion when the garment is worn and exert pull to contract the vest transversely and apply pressure to the abdomen.

2,472,330
WEED ERADICATING MACHINE
William Klein and John Jaros, Warroad, Minn.
Application January 22, 1946, Serial No. 642,623
5 Claims. (Cl. 97—10)



1. A weeder comprising a carriage, an articulated frame pivoted at its forward end to the carriage, a weeding drum rotatably mounted on the frame intermediate its ends, means carried by the carriage for raising or lowering the mid-portion of the articulated frame, a movable screen mounted in the frame at the rear of the drum, means on the carriage to support the rear end of the frame in vertically adjusted position and means on the carriage to rotate the drum and move the screen in unison.

2,472,331
TRACTION ATTACHMENT FOR MOTOR VEHICLES
Fred G. Koehler, Chicago, Ill.
Application December 18, 1945, Serial No. 635,620
1 Claim. (Cl. 152—211)



The described device consisting of a shoe segment and means for fixing the same to a tire, said segment having an abrasive inner surface and an outer traction surface, said means adapted to be secured under the rim of a wheel and held between the rim and the tire, said device being embedded in the body of the tire and having its outer surface exposed and substantially flush with the tread of the tire.

2,472,332
CIRCUIT INTERRUPTING DEVICE
Everard F. Kohl, Lakewood, Ohio
Application September 8, 1944, Serial No. 553,243
17 Claims. (Cl. 200—88)

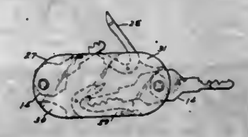
1. Apparatus of the class described comprising a housing containing a conductive liquid, said housing being shaped to provide a narrow contact chamber and a segment chamber having a greater width and peripheral extent than the contact chamber, a contact arranged in the contact chamber which is in electrical circuit with said liquid when the casing is at rest, and a plurality of segmental blocks arranged in the segment chamber which are displaceable by the centrifugally-developed buoyant force of the liquid to provide a space in the second chamber for said liquid when said casing is moved about one of its axes at a predetermined speed to thereby interrupt the circuit between said contact and said liquid.

2,472,333
SNAP ACTING ELECTRIC SWITCH
Everard F. Kohl, Lakewood, Ohio
Application June 4, 1945, Serial No. 597,555
20 Claims. (Cl. 200—76)

10. Apparatus of the class described comprising a housing having a bottom wall, a pair of stationary contacts arranged in said housing, a centrally disposed floating shaft, and a second pair of spaced contacts arranged in said housing, said second pair of spaced contacts being movable into and from engagement with the stationary contacts and being arranged on opposite sides of said shaft and being electrically connected together and supported by said shaft, an actuator slidably mounted in said housing, means movable with said actuator having arms arranged on opposite sides of said shaft, means secured to said shaft and providing supports arranged

on opposite sides of the shaft, first and second similar resilient members, one of said resilient members being secured to the support arranged on one side of said shaft and to the arm arranged on the opposite side of said shaft and the other resilient member being secured to the support arranged on the opposite side of said shaft and to the other arm to thereby maintain said shaft in a balanced relation, the movement of said actuator being effective in moving said arms to change the direction of the force of said resilient members and to cause a snap motion of said shaft when the actuator is moved a predetermined distance to force the movable contacts into engagement with the stationary contacts with a snap motion and to maintain them in engagement with the stationary contacts when the actuator is held in one position, and resilient means associated with said actuator having portions disposed in overlapping relation and engaging the bottom of said housing which are flexed during the movement of said actuator to store energy therein which is effective in returning the parts to their original position when the force upon the actuator is released.

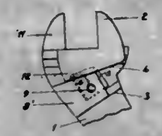
2,472,334
RECIPROCATING ELECTROMAGNETIC MOTOR
Harland L. McHenry, Sayre, Pa., assignor to Bendix Aviation Corporation, a corporation of Delaware
Application September 18, 1947, Serial No. 774,725
7 Claims. (Cl. 172—126)



1. In an electromagnetic reciprocating motor, a cylinder of non-magnetic material, a piston of magnetic material slidably mounted therein, a spring for actuating the piston in one direction, a solenoid arranged when energized to move the piston against the force of the spring, means for controlling the energization of the solenoid including a fixed contact, a movable contact, a magnetized member carrying said movable contact pivotally mounted for movement toward and away from the cylinder, means for completing a circuit for the flux of said magnetized member including the piston in the cylinder and means for providing a shunt path for said flux which does not include said piston.

2,472,335
METHOD OF FLAMEPROOFING COMBUSTIBLE CELLULOSIC MATERIAL
Andrew McLean, West Kilbride, and Stanley Frederic Marrian, Ardrossan, Scotland, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application November 15, 1945, Serial No. 628,994. In Great Britain January 10, 1945
6 Claims. (Cl. 117—137)

2. A method as claimed in claim 1 wherein the cellulosic materials used for treatment with the pentaerythritol tetra-orthophosphate have been impregnated with an aqueous 8% to 12% polyethyleneimine solution.

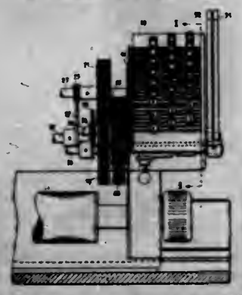


2,472,336
WITHDRAWN

2,472,337
KEY CONTAINER
Norman E. Olson, San Diego, Calif.
Application July 9, 1945, Serial No. 603,765
4 Claims. (Cl. 70—456)

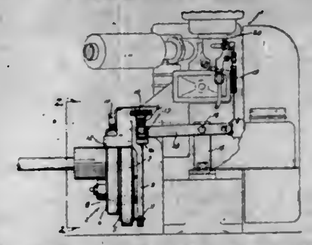
1. A key container, comprising two transparent spaced plates connected and maintained in parallel relation by a bridge affixed thereto and conforming to the adjacent edges thereof, means for pivotally securing a key or keys to and between said plates at one end portion thereof, and a U-shaped ejector septum pivotally connected to and extending between said plates at the opposite end portion thereof and normally acting to seat its lower lobe upon said bridge and substantially to close the space between said plates, but at the same time being operable to project the blades of said keys out of and to return said blades to the space between said plates.

2,472,338
WEDGE LOCKED, SLIDING SIDE JAW WRENCH
Eric Ludvig Leonard Österdahl, Stockholm, Sweden, assignor to E. A. Bergs Fabriks Aktiebolag, Eskilstuna, Sweden, a joint-stock company of Sweden
Application March 9, 1945, Serial No. 581,736
In Sweden February 1, 1944
1 Claim. (Cl. 81—151)



A wrench including a handle provided with a transverse opening and having correspondingly inclined shoulders on opposite sides thereof directly beneath and parallel with the bottom of the opening, a fixed jaw on the outer end of the handle, a bifurcated movable jaw straddled about the outer end of the handle for lateral sliding movement thereon relative to the fixed jaw, said movable jaw including identical leg portions having correspondingly inclined inner edges positioned at an angle relative to the shoulders and to the direction of movement of the movable jaw, a locking member including two identical parts positioned on opposite sides of the handle, a pintle extending through the opening for free movement therein and operably connecting the parts of the locking member together, and a spring seated in the opening and carrying the pintle for yieldably holding said locking parts against the inclined edges of the movable jaw and the shoulders on the handle.

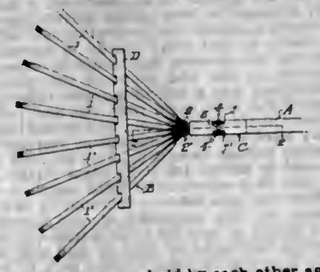
2,472,339
SEAT, ESPECIALLY FOR RAIL CARS
John W. Patton, Philadelphia, Pa., assignor, by mesne assignments, to Heywood-Wakefield Company, Gardner, Mass., a corporation of Massachusetts
Application January 15, 1945, Serial No. 572,773
8 Claims. (Cl. 155—171)



1. Revolving seat, especially for vehicles, comprising a base and rotatable thereon a structure carrying the seat and back rest cushions, a seat cushion extension and foot rest, a pair of links extending in the longitudinal direction of the seat on both sides of said extension and journalled by one of their ends to a structure spaced from and located in front of the seat and by their other ends to said extension near one of the latter's margins at a location, in the position of use of the extension, about midway between the front margin of the seat cushion and said structure, means for supporting the ends of the links attached to the said extension above the floor at a lower level than the points of attachment to said structure, supporting means on said seat for the margin of said extension which is remote from the margin journalled to the links, means for holding said extension in a position upwardly inclined toward said structure so that it constitutes an inclined foot rest, and means for holding the extension and the links in generally upright position.

2,472,340
SHEET FEEDING AND POSITIONING MECHANISM FOR TYPEWRITERS
Giuseppe Prezioso, Yverdon, Switzerland, assignor to Paillard S. A., a corporation of Switzerland
Application December 29, 1945, Serial No. 638,280
In Switzerland March 13, 1945
9 Claims. (Cl. 197—128)

1. In a typewriter, a device for selecting the limiting position of a plurality of statement sheets to be fed in superposed relation on a journal sheet carried by the platen of said typewriter, comprising, a casing carried by the carriage of said typewriter, a plurality of means selectively operable and movably mounted on said casing and normally urged to inoperative position against said casing, a latch means carried by said casing and engageable with a selected one of said first means after movement of the same from said inoperative position for holding the selected one of said first means, and a plurality of means supported by said casing and each for limiting the feeding of a statement sheet and operable in a plane out of reach by said first means when in inoperative position but engageable with a selected one of said first means when the same is held by said latch means to stop the feeding of one of said statement sheets.



2,472,341
MOTOR ACCELERATION MEANS
Harding F. Roach and William R. Nelson, Des Moines, Iowa
Application April 18, 1947, Serial No. 742,320
3 Claims. (Cl. 74—472)

3. In combination with a motive power unit and a power transmission means to transmit power from the motive power unit to a member to be operated, said power transmission means comprising a first mentioned rotatable means connected to the motive power unit, a second rotatable means associated with the first mentioned rotatable means, a second pair of rotatable means spaced from the first and second mentioned rotatable means with a bracket means attached thereto, said bracket means attached movably to the motive power unit, means connecting the first and second mentioned rotatable means with the second pair of rotatable means, the transmission means put into operative relation by the second pair of rotatable means moving on the supporting bracket to increase the space between the first and second rotatable means to bring the connecting means into engagement with the rotatable members and the improvement comprising a bar member with one end thereof contacting a projection extending from the bracket, said bar member pivotally mounted on the motive power unit, a screw in one end of the bar member contacting the projection on the bracket, the other end of said bar member attached to the motive power unit to accelerate the motive power unit to the desired operating speed when the transmission means is placed into operative relation by the bar member being pivoted when the transmission means is engaged with the screw in the opposite end of the bar being adjustable to vary the length of movement of the end of the bar member attached to the motive power unit.

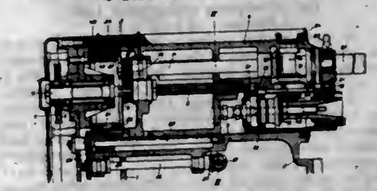
2,472,342
RAKE
Camille J. Rocquin, New Orleans, La.
Application May 20, 1946, Serial No. 670,987
7 Claims. (Cl. 56—400.17)

1. In a rake, the combination with a handle of a plurality of tines extending from the handle and having inner end portions bunched together for group attachment to said handle, each of said tine inner end portions being laterally deformed to provide an anchoring element, having an indentation on one side and a ridge on the opposite surface, the ridge of each element being complementary to the indentation of the adjacent element when said elements are mutually nested

whereby the tines are held by each other against individual movement longitudinally of said tine inner end portions; and a fastening member secured to said handle and embracing said tine inner end portions and maintaining said anchoring elements in said nested relationship.

2,472,343
FOUNTAIN PEN
Anthony G. Rosa, Lyndhurst, N. J.
Application March 19, 1946, Serial No. 655,499
2 Claims. (Cl. 120—44)

1. A fountain pen having a section made with an inner compartment terminating in a bore at one end thereof, a tube fixedly inserted in said bore, a weighted cylindrical member slidably arranged in said compartment, a writing tip point fixedly secured to said member and adapted to slidably move in said tube, said member being formed with an enlarged horizontal slot at the lower end thereof, and a pin loosely mounted in said slot, and secured in the section, whereby to permit an up and downward movement of the writing point.

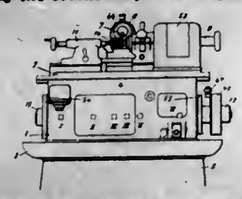


2,472,344
CIGARETTE CASE WITH CLIP FASTENER
Clifford W. Rosenbarger, Indianapolis, Ind.
Application December 16, 1947, Serial No. 790,887
1 Claim. (Cl. 24—3)

In a cigarette case, the combination of a receptacle having an openable top, a horizontal rib provided on the outer surface of said receptacle adjacent the top edge thereof, and a resilient clip having a horizontally angulated end portion rigidly secured to the upper surface of said top and extending therefrom downwardly past said rib for coaction with the adjacent side of said receptacle to frictionally retain the case on a support, the downwardly extending portion of said

clip being movable toward and away from the adjacent side of the receptacle and being formed with a recess to receive said rib whereby opening of said top may be prevented.

2,472,345
MILLING MACHINE WITH PIVOTING AND SLIDING HEAD
Charles Schäublin-Villeneuve, Bevilard, Switzerland, assignor to Schäublin S. A., Bevilard, Switzerland, a joint-stock company of Switzerland
Application April 9, 1945, Serial No. 587,282
In Switzerland March 14, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires March 14, 1964
7 Claims. (Cl. 90—17)



1. In a milling machine, a frame with a bore, a hollow cylindrical head slidably and pivotally mounted in said bore, a spindle with its rotation axis in a plane parallel to the rotation axis of said hollow head, a support carrying said spindle and mounted on said head adjustably around a revolving axis perpendicular to the rotation axis of said hollow head, said support having an outer circumference lying, together with said spindle, within the cross sectional area of said bore on said spindle being adjusted parallel to said rotation axis so as to allow withdrawing of said support and said spindle into said bore and driving means for said spindle, going through said hollow head.

2,472,346
MILLING MACHINE FOR FORMED CUTTERS
Ernst Schindler, Biel, Switzerland
Application November 11, 1943, Serial No. 509,911
In Germany September 9, 1942
3 Claims. (Cl. 90—15)

1. In a cam controlled milling machine of the kind described, a horizontal work supporting carriage, a vertical carriage, a cutter spindle, a sleeve chuck eccentrically mounting the cutter spindle on the vertical carriage, and first, second and third cam devices for determining the position of the cutter spindle with respect to the work piece at any stage for defining the work profile, the first cam device displacing the vertical carriage with the cutter spindle during cut-

ting, the second cam device displacing the horizontal carriage and the third cam device turning said sleeve chuck, an adjusting device comprising a rotatable ring having lineal graduations and indicating the eccentricity of said spindle, a sec-

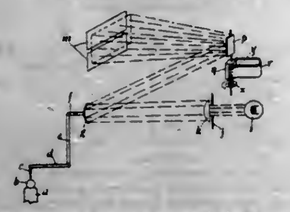
ond rotatable ring having circular graduations, and a third ring keyed to the last mentioned ring and having a division indicating the position of the point of culmination relative to the said eccentricity, the several rings being mounted on the cutter spindle.

2,472,347

PREVENTION AND DESTRUCTION OF WEEDS

Wilfred Archibald Sexton, Manchester, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain

No Drawing. Application August 14, 1945, Serial No. 610,862. In Great Britain October 23, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires October 23, 1962
6 Claims. (Cl. 167—45)



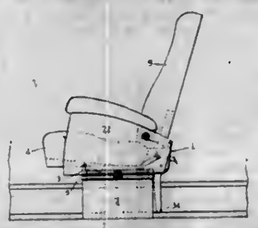
1. A composition suitable for destroying weeds comprising an aqueous dispersion of a compound conforming to the general formula $Ar.O.CH_2.Y$, in which Ar is selected from the group consisting of the phenyl radical, the naphthyl radical, and such radicals containing also at least one substituent selected from the methyl radical and halogen atoms, and Y is selected from the group consisting of the carbonamide, nitrile, and carboxylic ester radicals, the carboxylic ester being derived from an alcohol from the group consisting of aliphatic and cycloaliphatic alcohols containing not more than 10 carbon atoms, the compound being present in an amount sufficient to exert an herbicidal action.

2,472,348

MEASURING OR COMPARING DEVICE

Peter Graham Skinner, Cook Hill, near Alcester, England, assignor to Morris Motors Limited, Cowley, England

Application November 21, 1944, Serial No. 564,516
In Great Britain December 8, 1943
1 Claim. (Cl. 250—41.5)



Apparatus of the kind specified for measuring or comparing the dimensions or forms of objects, comprising the combination of an electric light source, a pair of photo-electric cells arranged side by side and electrically interconnected in parallel and opposed relationship, an electrical instrument electrically connected to said cells so as to be responsive to differential illumination thereof, a movable reflector for diverting the light beam emanating from said light source, a support for the objects to be examined, a movable feeler arranged to bear on the objects placed on said support, means interconnecting said reflector and feeler so that said reflector is movable for deflecting the diverted light beam in response to variations in size and shape of the objects to be examined, and a second movable reflector for directing the light beam from the first reflector on to said photo-electric cells, said second reflector having electrical actuating means responsive to the same voltage as said light source, and being arranged to deflect the light beam relatively to said cells in a direction at right angles to that in which the light beam is deflected by said first reflector, so that movement of said second reflector serves to vary the cross sectional areas of the beam impinging on both of said cells without varying the response of said cells to movement of said first reflector.

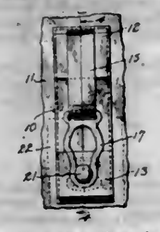
2,472,349

REVERSIBLE SEAT

George C. Smith, Glenside, Pa., assignor, by mesne assignments, to Heywood-Wakefield Company, Gardner, Mass., a corporation of Massachusetts

Application June 21, 1945, Serial No. 600,749
7 Claims. (Cl. 155—96)

1. Reversing mechanism for a car seat or the like, comprising in combination, a base frame, a supported frame mounted for relative turning movement thereon, a continuous guiding trackway on one of said frames, said trackway including at least three connecting portions meeting at a common junction and extending in different directions, and spaced guided track followers on the other frame mounted for turning movement in said trackway to reverse the position of the frames and in so doing to reverse their positions on said trackway, said frames being unrestrained in relative turning movements except by said trackway and track followers, whereby either of the track followers is enabled to move along any portion of said trackway at some time during the turning movement of the seat.



2,472,350

HOSIERY SUPPORTER

Roswell M. Taylor, Noank, Conn.

Application January 3, 1946, Serial No. 638,815
3 Claims. (Cl. 2—300)

3. In a hosiery supporter, a combined guide and anchor strip for a detachable hose supporting strap, said strap having mounted on one end a button head and having mounted on the other end thereof a key-hole fastener, said anchor strip being permanently affixed to the leg portion of a garment, and said anchor strip having a button hole in the lower portion thereof adapted to anchor the button head fastener on the strap to the strip, whereby the button head on

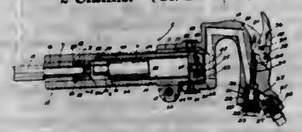
the said hose supporting strap is held in position in the button hole of said strip to cooperatively engage within the keyhole fastener, to thereby support hosiery from the leg portion of the garment.

2,472,351

COMBINED WATCHCASE AND BRACELET

Edward P. Tyler, North Hollywood, Calif.

Application September 4, 1945, Serial No. 614,198
4 Claims. (Cl. 224—4)



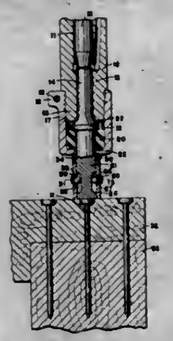
1. As a novel article of jewelry, a watch bracelet comprising an elongated strip of resilient material having its end portions curved to substantially oval form, but spaced apart sufficiently to permit passage of a wearer's wrist therebetween without spreading the ends of said strip to the extent of exceeding the elastic limit of said material, said strip having a recess therein, a watch movement fitted directly into said recess, and a crystal fitted to said strip with its edge encircling said recess and retaining said movement within said bracelet.

2,472,352

FLUID ACTUATED TOOL

Paul Van Sittert, Shaker Heights, Ohio, assignor, by mesne assignments to Reed Roller Bit Company, Houston, Tex., a corporation of Texas

Application December 30, 1943, Serial No. 516,232
2 Claims. (Cl. 121—17)



1. In a tool of the character described: a housing having a bore extending therethrough, a handle secured to one end of said housing, a fluid actuated plunger reciprocable within said bore formed with an operating tool engaging reduced end portion, a nose piece secured within the other end of said housing adapted to slidably receive the shank of an operating tool to be impinged by the reduced end portion of said plunger, a sleeve secured in said housing bore adjoining the inner end of said nose piece, said sleeve having a bore therethrough with an enlarged front portion surrounding the end of said shank and a reduced rear portion affording a sliding bearing for the reduced portion of said plunger immediately before and after impingement of said plunger on said shank, and means for admitting motive fluid alternatively into opposite ends of said housing bore for actuating said plunger, said means comprising a conduit in said housing terminating in a port adjacent to but spaced from said sleeve and adapted to be closed by said plunger whereby motive fluid is trapped longitudinally between said plunger and sleeve and laterally between the wall of said housing bore and the front end portion of said plunger.

2,472,353

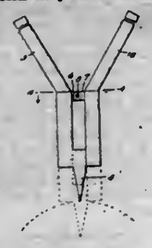
NAILING ATTACHMENT FOR PNEUMATIC HAMMERS

Paul Van Sittert, Shaker Heights, and William E. Barth, Vermilion, Ohio, assignors, by mesne assignments, to Reed Roller Bit Company, Houston, Tex., a corporation of Texas

Application September 7, 1945, Serial No. 615,042
4 Claims. (Cl. 1—46.1)

1. In a percussive tool of the character described, a casing, a reciprocatory hammer therein, a nail set extending into said casing in line with said hammer to receive blows therefrom, said set having a cylindrical portion of uniform diameter projecting beyond the casing, a guard on the projecting uniform diameter portion of said set, said guard having a uniform bore slidably fitting said projecting portion, spring means for biasing said guard outwardly on said set, said set having a longitudinal groove, said guard having a radial opening adapted to register with said groove, and a detent held in said opening and movable in said groove for limiting outward movement of the guard.

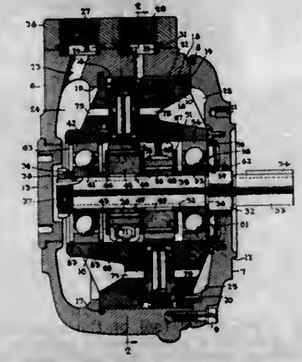
2,472,354



COCONUT HUSK REMOVING TOOL

Cecil P. Waters, Fort Lauderdale, Fla.

Application June 4, 1946, Serial No. 674,305
2 Claims. (Cl. 146—7)



1. A cocoanut husk removing tool including a pair of pivoted, coacting inverted U-shaped head members having inwardly offset depending teeth formed on their lower ends, said teeth being transversely aligned when said tool is in closed position, and upwardly and outwardly ex-

tending handles formed on said head members adapted to extend in parallel relation when said

tool is in fully open position and the teeth are spread apart.

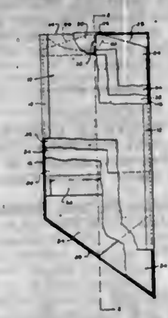
2,472,355
PUMP
David J. Whittingham, Watertown, N. Y., assignor to The New York Air Brake Company, a corporation of New Jersey
Application February 1, 1946, Serial No. 644,820
5 Claims. (Cl. 103—174)

1. A radial multicylinder pump comprising in combination, a two part closed hollow shell having means for connecting an inlet line and a discharge line and having a shouldered seat; a body mounted in said seat and clamped between the parts of said shell, said body having radial bores and means forming with the shell an annular passage surrounding the body and connecting the outer ends of said bores with said discharge connecting means, said body also having passages connecting other portions of said bores with said inlet connecting means; at least two resilient annular sealing rings compressed between the body and shell along the opposite margins of said annular passage and serving to isolate the inlet and discharge spaces within the shell; a radial pump mechanism comprising shaft, shaft bearings, eccentric cam, plungers, cylinders and valves, all sustained by said body, said shaft extending through an opening in the shell, and the body being removable from the shell upon separation of the parts thereof, while all the body-sustained parts remain in assembled relation; and a seal between said shaft and the shell around said opening.

2,472,356
4:7-DICHLORO-(2:1)-NAPHTHINDOLE-2:2'-(2':1')-NAPHTHATHIONAPHTHENE INDIGO
Donald Graham Wilkinson, Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application December 4, 1947, Serial No. 789,759. In Great Britain December 4, 1946
2 Claims. (Cl. 260—322)

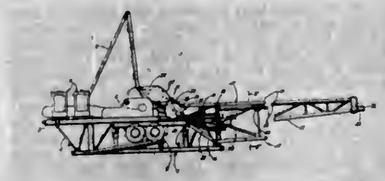
1. The new dyestuff 4:7-dichloro-(2:1)-naphthindole-2:2'-(2':1')-naphthathionaphthene indigo.

2,472,357
MOBILE BODY
Abraham Wolf, Vineland, N. J.
Application January 16, 1946, Serial No. 641,524
2 Claims. (Cl. 170—159)



1. In a vehicle adapted to move through a fluid medium and including a rotary propeller for propelling said vehicle through said medium, a nose-piece comprising a substantially conical member mounted in advance of said propeller on an axis coincident with the axis of rotation of said propeller, said member being rotatable with said propeller and having a plurality of circumferentially distributed, helical grooves in the surface thereof each extending from its apex end to its base end, the number of said grooves being equal to the number of blades in said propeller, each of said grooves being associated with and terminating at the rear face of a separate one of said blades, said grooves being adapted to receive and guide therealong to the rear of said blades streams of said medium as said propeller rotates to advance said vehicle through said medium, the base end of said nose-piece being provided with a plurality of seats, one for each of said blades, said nose-piece being disposed against said propeller with the blades thereof received in said seats, and the base end of each of said grooves being positioned to direct tangentially onto the rear surface of the blade associated therewith the stream of said medium guided thereby.

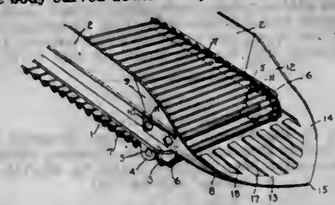
2,472,358
FILM HOLDER
Otto E. Wolff, Cambridge, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application September 26, 1947, Serial No. 776,326
8 Claims. (Cl. 95—66)



1. A composite photographic film unit comprising an envelope, and a sheet of photosensitive material in said envelope and slidably movable with respect thereto, said envelope comprising a sheet of material folded transversely thereof to form two walls joined by a folded edge, said sheet of material being opaque to light which is actinic to said photosensitive material, said folded edge having a notch therein a predetermined area of said photosensitive material along one edge thereof being uncovered by said notch, said one edge of said photosensitive material adjacent to

said uncovered area sloping away from said folded edge to form a cutting edge adapted to cut open

said folded edge to permit the withdrawal of said photosensitive material from said envelope.

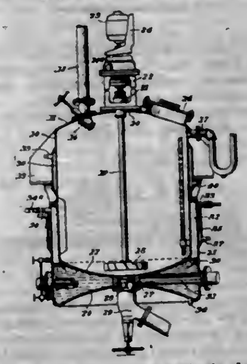


2,472,359
OIL WELL DRILLING APPARATUS HAVING CROWN BLOCK MOVABLE LENGTHWISE OF MAST
Homer J. Woolslayer, Cecil Jenkins, and William H. Luttgen, Tulsa, Okla., assignors to Lee C. Moore Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
Application April 20, 1948, Serial No. 22,204
8 Claims. (Cl. 189—21)

1. Oil well drilling apparatus comprising a substructure, a power drum associated therewith, a mast mounted on the substructure and having an open side and a closed side, the lower end of one of said sides being hinged to the substructure to permit the mast to be swung down to a position along the ground, a crown block detachably mounted in the top of the mast, a traveling block in the mast, a line suspending the traveling block from the crown block and having one end attached to the drum for raising and lowering the traveling block, and a track inside the mast adjacent said closed side and extending from the top of the mast to a point near its bottom, the crown block being slidably supported by said track when the mast is in its lower position with the crown block disconnected from the top of the mast, whereby the crown block can be moved along the track toward the opposite end of the mast and onto the substructure.

2,472,360
POTATO DIGGER BLADE
Frank R. Wright, Nezperce, Idaho
Application July 26, 1945, Serial No. 607,185
3 Claims. (Cl. 55—137)

1. A potato digger blade, comprising a body having longitudinal slots in the bottom part thereof leading back from a point adjacent the front edge thereof, the sides of the front edge being curved forwardly to an apical point and the body curved downwardly and forwardly, rear-



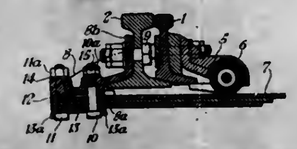
wardly and upwardly extending attaching and guard flanges or extensions on the body, and the side edges of the body gradually curved upwardly to meet the extensions or flanges.

2,472,361
ACTIVE HALOGEN COMPOUNDS AND PROCESSES FOR THEIR PRODUCTION
William C. Arsem, Bethesda, Md.
No Drawing. Application October 30, 1944, Serial No. 561,166
9 Claims. (Cl. 260—583)

1. The process of preparing an organic N-halogen compound which consists in reacting an organic N-hydrogen compound, which is decomposed by a hypohalite salt acting alone, with a hypohalogen acid in an aqueous solution having a pH below 7.

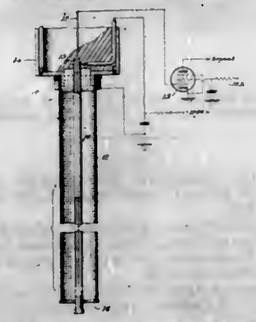
2,472,362
HEAT-EXCHANGE APPARATUS
Herbert L. Barnebey, Oakmont, and James R. Shields, Pittsburgh, Pa., assignors to Blaw-Knox Company, Pittsburgh, Pa.
Application November 18, 1944, Serial No. 564,075
3 Claims. (Cl. 257—6)

1. In a method of successively heating and cooling the contents of a vessel by means of a fluid medium, the steps of confining a body of vaporizable fluid in a hermetically sealed space about the bottom and sides of a vessel to be heated defined by the vessel wall and an auxiliary condensing surface, maintaining a portion of said fluid body in the liquid state as a pool contacting the bottom of said vessel, first applying extraneous heat to boil the liquid and heat the ves-



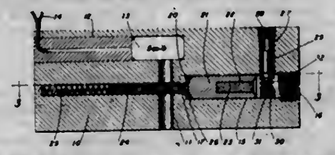
sel and its contents by exchange of heat through the vessel walls from the hot liquid and condensing vapors, then ceasing to apply extraneous heat to the liquid, and finally extraneously cooling said auxiliary condensing surface causing the vessel and its contents to cool by boiling the liquid pool in contact with said vessel bottom, and condensing the resulting vapor on said surface.

2,472,363
BUILDING BLOCK
James G. Blackinton, Flint, Mich., assignor of one-half to Douglas G. B. Hill, Corunna, Mich.
Application May 22, 1944, Serial No. 536,718
4 Claims. (Cl. 46—25)



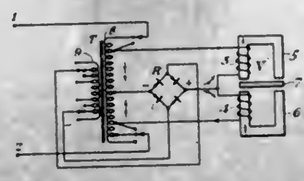
1. In a set of building blocks the combination of a plurality of line blocks, semi-blocks and corner blocks; each line block having on each of two contiguous faces a dove-tail groove extending the length of the block, there being on two other faces complementary dove-tail ribs; an edge portion of said line block formed by contiguous faces bearing said grooves being beveled throughout its length; each semi-block having on each of two mutually perpendicular faces a dove-tail groove and a complementary dove-tail rib respectively, and having an oblique plane face extending from edge to edge of said two faces; each corner block having a dove-tail groove extending the length of each of two faces and on a third face a complementary dove-tail rib; a fourth face being provided with a lug square in plan and having dove-tail marginal edges, said lug adapted to be inserted slidingly into a groove of any other block of the set to thereby establish the said corner block at will either at right angles to such groove or parallel therewith.

2,472,364
RAILWAY SWITCH POINT SUPPORT
Herbert L. Bone, Forest Hills, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application September 10, 1945, Serial No. 615,433
1 Claim. (Cl. 246—435)



A bracket and cantilever spring assembly for attachment to a track rail in a position in which the free end of the spring is in supporting relation to a movable switch point, said assembly comprising a bracket having a vertical arm adapted to be secured to the outer side of the track rail and a horizontal arm provided with two laterally spaced holes, a cantilever spring provided at one end with holes which align with the holes in said bracket, bolts extending through the aligned holes in said bracket and said spring, and a fulcrum plate surrounding the outer bolt between said cantilever spring and the underside of said horizontal arm of said bracket, said fulcrum plate being shaped to provide a horizontal axis extending parallel to the rail about which said spring can be rocked by adjusting the tension of said bolts, and sufficient space being left between said bracket and the underside of said horizontal arm except at said plate to permit the desired amount of rocking to be effected.

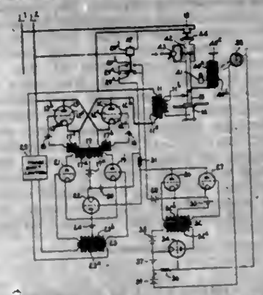
2,472,365
ALPHA PARTICLE COUNTING
Casimer J. Borkowski, Oak Ridge, Tenn., assignor to the United States of America as represented by the United States Atomic Energy Commission
Application February 21, 1946, Serial No. 649,405
4 Claims. (Cl. 250—83.6)



1. In an ionization chamber and amplifier system for alpha particle counting, in combination, an outer tube of wire mesh having arranged concentrically therein an electrode structure comprising a coaxial rod and tube having insulating material interposed therebetween, a connector grounding said wire mesh tube, a source of relatively high voltage impressed on said coaxial tube whereby a signal current will appear in said rod as a result of ionization of air within the wire mesh tube and a connector from said rod to the amplifier.

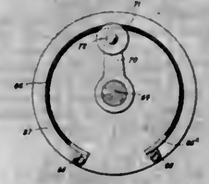
2,472,366
THERMAL TIME DELAY
Robert B. Brode, Silver Spring, Md., assignor to the United States of America as represented by the Secretary of the Navy
Application September 8, 1943, Serial No. 501,572
1 Claim. (Cl. 102—70)

In a fuze for a rotating projectile, a substantially cylindrical body having an axial ignition bore, a squib at one end of said bore, said body having a substantially diametrically located passage intersecting said bore and closed at both ends, a gate member shiftable in said passage, a spring lodged in one end of the passage and urging said gate member into position to close said bore, thereby preventing the transmission of ignition from said squib through said bore, a metallic pellet lodged in the other end of said passage, said pellet having a cavity therein, a heat-producing composition in said cavity, a fusible element connecting the inner end of said gate member to the adjacent end of the pellet, and means actuated by setback to ignite said composition, thereby heating said pellet and melting the fusible element to release the gate member, which thereupon moves radially outward against the spring, under the influence of centrifugal force, to open the ignition bore.



2,472,367
ELECTRICALLY OPERATED VIBRATOR APPARATUS
David Benjamin Corbyn, London, England, assignor, by mesne assignments, to The Union Switch and Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application October 28, 1947, Serial No. 782,516
In Great Britain May 14, 1947
2 Claims. (Cl. 318—132)

1. In combination with an electric vibrator comprising two electro-magnets arranged to act in opposite directions on a movable armature, a transformer supplied with alternating current and having a middle terminal and two end terminals, a metallic rectifier supplied with alternating current by said transformer, means comprising connections to the two end terminals of said transformer for energizing said magnets in series by alternating current, and means comprising connections from said middle terminal through said rectifier for energizing said magnets in parallel by unidirectional current supplied thereby, to render said magnets effective alternately and thereby cause the vibration of said armature at the frequency of said alternating current.



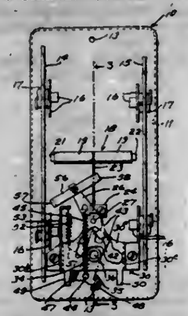
2,472,368
PLASTICITY RESPONSIVE WELDER
Irvin W. Cox, West Allis, and Lester D. Drugmand, Greenfield, Wis., assignors to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application July 18, 1947, Serial No. 761,976
10 Claims. (Cl. 219—4)

1. In a welding system, in combination, relatively movable electrodes, a pressure supply for said electrodes, control means subject to control by the pressure to which said electrodes are subjected, control means subject to actuation by relative movement of said electrodes, means under the control of said two control means jointly to supply welding energy to said electrodes, the second mentioned control means comprising means operatively associated with said electrodes for repetitive action as said electrodes in moving into welding relation move into other relations progressively, thus to render the second mentioned control means upon initiation of welding in any of a multiplicity of relations of said electrodes effective to initiate termination of welding as the relation of said electrodes changes

with plastic deformation of the material undergoing welding.

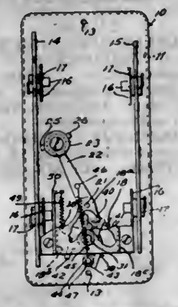
2,472,369
RHEOSTAT
Lincoln K. Davis, Brockton, Mass., assignor to the United States of America as represented by the Secretary of the Navy
Application September 11, 1943, Serial No. 502,070
12 Claims. (Cl. 201—48)

1. In a rheostat, a resistance member, a contact member engaging said first member, the contact member and resistance member being movable relatively to vary the effective resistance of said first member, and constraining means for moving said members relatively to cause one of the members to move along the other with a combination rolling and sliding action, the constraining means including pivots about which said members are movable and disposed so that a line between the pivots is offset from the point of contact of the members throughout the range of movement thereof.



2,472,370
ELECTRODE FOR HIGH-FREQUENCY HEATING OF INSULATION PREFORMS
Lester D. Drugmand, Milwaukee, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application January 8, 1945, Serial No. 571,778
3 Claims. (Cl. 219—47)

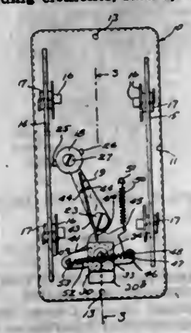
1. In combination, a trough-shaped sheet metal electrode for use in high frequency heating of cylindrical preforms of thermosetting dielectric molding material, means for mounting said elec-



trodes horizontally with the trough thereof opening upwardly whereby the same is adapted to act directly as a centering support for the preforms, the side edges of said electrode being equally spaced throughout the length thereof a distance greater than the diameter of the preforms to effect substantial equalization of the heating effect upon the latter of high frequency current passed between the same and said electrode, a second electrode overlying the horizontal supporting trough formed by said first electrode throughout the length of the latter, and the longitudinal edges of said last mentioned electrode being alined with and spaced from those of the first mentioned electrode a sufficient distance to avoid any possibility of arcing between the electrodes or short-circuiting thereof around the preforms.

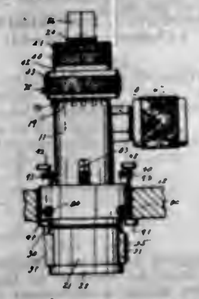
2,472,371
MUSICAL CHIME SIGNAL CONSTRUCTION
George R. Fish, Norwalk, Conn., assignor to Edwards and Company, Inc., Norwalk, Conn., a corporation of New York
Application December 21, 1945, Serial No. 636,476
9 Claims. (Cl. 84—404)

1. In a signalling device having spaced sounding elements, striker means, actuating means therefor, the combination of means mounting said striker means between said sounding elements for movement in directions first to strike one element and then the other, said mounting means comprising an elongated spring member having striker means secured at one end thereof, means supporting and anchoring the other end of said spring member in a position between said sounding elements to hold the striker means out of engagement with both when said spring member is in normal or unflexed condition, two pivotally mounted lever means having means forming an interconnection between them to swing one of them in response to swinging of the other and having spring means coacting with at least one of them in such relationship to its pivot as to effect a snap action of pivoting movement thereof in either direction about its pivot, means for actuating one of said lever means about its pivot, and two relatively widely spaced actuating members carried by the other of said lever means and positioned one on either side of said spring member for individual impacting thereof against said spring member under the snap action of said spring means, thereby to effect flexing of said spring member and impacting of the striker means against one of said sounding elements, the spacing between said two spaced actuating members being such that the leading one of them is always out of the path of flexing of said spring member as the trailing actuating member effects flexing of the spring member.



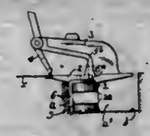
2,472,372
MUSICAL CHIME SIGNAL CONSTRUCTION
George R. Fish, Norwalk, Conn., assignor to Edwards and Company, Inc., Norwalk, Conn., a corporation of New York
Application December 21, 1945, Serial No. 636,477
3 Claims. (Cl. 84—404)

1. In a signalling device comprising two spaced sounding elements, striker means and actuating means therefor, the combination of a substantially rigid lever rotatably mounted between said elements in a position to swing in an arcuate path between them, said lever having a relatively long arm adapted to serve as a striker and an oppositely extending short arm, a rotatably mounted operating shaft, a rocker pivotally mounted on said shaft and having a first arm adapted to engage the said short arm of said lever and swing it oppositely to the direction of rotation of said rocker, a fixed stop, a second arm on said rocker having a bifurcated end the bifurcations of which straddle said fixed stop and in cooperation with said fixed stop serve to limit the rotation of said rocker in either direction, said bifurcations being spaced apart a distance such that one or the other contacts said fixed stop before the striker strikes either of said sounding elements, said stop means including resilient means adapted to yield sufficiently to permit the striker arm of said lever to move the additional angular distance necessary to strike the striker element toward which it is moving and a spring interconnected between the long arm of said lever and the point below the pivot for said lever and movable across the said pivot whereby snap action is imparted to the lever.



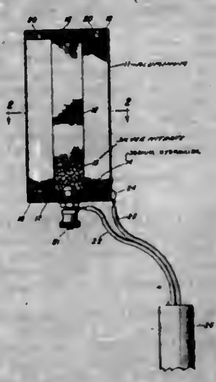
2,472,373
MUSICAL CHIME SIGNAL CONSTRUCTION
George R. Fish, Norwalk, Conn., assignor to Edwards and Company, Inc., Norwalk, Conn., a corporation of New York
Application December 21, 1945, Serial No. 636,478
3 Claims. (Cl. 84—404)

1. In a chime signalling device comprising, a frame, a pair of sounding elements, and a striker mounted between said elements for movement against said sounding elements successively, the combination of an actuating shaft extending into said frame, a driving plate mounted on the inner end of said shaft and rotatable with the shaft, an arm rotatably mounted in said frame adjacent to said driving plate, said arm carrying the said striker at its free end, a spring member slideably interconnecting said driving plate and said arm whereby said arm is caused to rotate with said plate and spring member, means for limiting the extent of rotation of said driving plate and said spring member so that while at rest at either limit of its swing it will hold the said arm adjacent to but out of contact with one of said sounding elements, said spring connector



being yieldable under momentum of the striker as the latter swings about its pivot and adapted to flex sufficiently to permit the striker to impact said sounding elements respectively, said driving plate having a bifurcated end, stop means between said bifurcations, and spring means interconnected between said plate and said stop thereby giving snap action to the movement of said plate, and means for biasing said plate.

2,472,374
RESURFACING TOOL
John E. Giles, Diablo Heights, C. Z.
Application March 7, 1945, Serial No. 581,381
6 Claims. (Cl. 82—4)



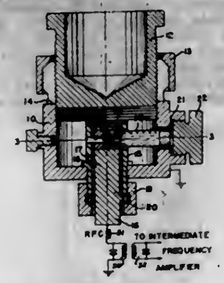
1. A tool for trimming annular non-circular seats surrounding openings in members comprising a tubular body adapted to occupy the opening, means movably carried by the body and adapted to be extended to engage the seat to position the body axially in the opening, means carried by the body adapted to engage the wall of the opening to clamp the body in its positioned location, a spindle in the body, a bit-carrier transversely movable in the spindle, a bit carried by the carrier and adapted to coact with the seat, means for moving the bit-carrier in and out as the spindle rotates.

2,472,375
TENTER CLIP
Maurice G. Hinnekens, Paterson, N. J.
Application December 13, 1946, Serial No. 716,977
3 Claims. (Cl. 26—61)

1. A tenter clip having spaced parallel pivoting studs whereby to connect it pivotally to two other tenter clips between which it is disposed in the forming of a tenter-clip chain for a tentering machine, said clip having a thrust-assuming face lateral of and facing away from that plane which is coincident with both axes of the studs, in combination with an attachment removably secured to said clip in sheathing relation to said face and having a deflected portion penetrated by and snugly fitting one stud and another portion hooked around and thereby anchored to the portion of the clip which surrounds the axis of the other stud.

2,472,376
ELECTRIC CELL OF THE IMMERSION TYPE
William K. Kearsley, Schenectady, Arthur F. Winslow, Scotia, and Herman A. Liebhafsky, Schenectady, N. Y., assignors, by mesne assignments, to the United States of America as represented by the Secretary of the Navy
Application June 11, 1946, Serial No. 675,858
2 Claims. (Cl. 136—90)

1. An electric cell unreactive in the dry state but operative upon immersion in water comprising an aluminum case, a perforated copper cylinder within said case, a quantity of substantially dry sodium hydroxide interposed between said case and said cylinder, and a quantity of substantially dry silver nitrate within said cylinder, said sodium hydroxide adapted to dissolve upon immersion of said cell in water whereby to connect electrolytically said aluminum case and said copper cylinder causing an electrical potential difference therebetween.

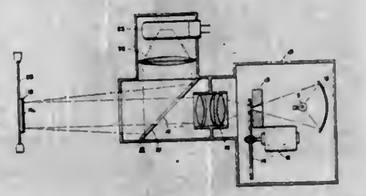


2,472,377
PROCESS FOR HYDROCARBON SYNTHESIS
Percival C. Keith, Peapack, N. J., assignor to Hydrocarbon Research, Inc., New York, N. Y.
Application January 31, 1945, Serial No. 575,417
7 Claims. (Cl. 260—449.6)

1. The process of synthesizing organic compounds through the catalytic hydrogenation of carbon monoxide, which comprises passing carbon monoxide and hydrogen up through fluidized synthesis catalyst maintained at reaction conditions and disposed in a multiplicity of tubular reaction zones each having a transverse section within which the innermost catalyst particle is not less than about ½ inch and not more than about 4 inches away from the periphery of said section and each being subjected to cooling for the extraction of heat from said catalyst, while fluidizing a mass of said catalyst with a substantially nonreactive gasiform medium in a lower zone communicating with said tubular zones to ensure substantially uniform fluidization in said multiplicity of tubular reaction zones, permitting said medium to flow up through said tubular zones along with said carbon monoxide and hydrogen, causing said gases to become disengaged from the bulk of said catalyst in an upper zone into which said tubular zones discharge, withdrawing said gases and recovering synthesized organic compounds therefrom.

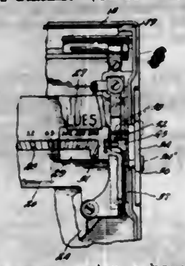
2,472,378
DETECTION OF HIGH-FREQUENCY ELECTRIC OSCILLATIONS
James L. Lawson, Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of the Navy
Application August 27, 1943, Serial No. 500,266
8 Claims. (Cl. 250—20)

1. Apparatus for detection of radio signals in cooperation with a rectifier element including a cavity type electrical resonator of approximate axial symmetry, an axially movable end wall for tuning said resonator, an axial column in said cavity spaced from said axially movable end wall and having an outer conducting sheath connected to the end wall of said resonator opposite to the said axially movable end wall, an inner conductor within said axial column insulated from said sheath but capacitively coupled thereto by a relatively small capacitance and adapted for electrical connection to an amplifier, means for supporting one end of a rectifier element in electrical contact with said inner conductor, an aperture in said conducting sheath to avoid contacts between said sheath and said rectifier element, and means for supporting the other end of said



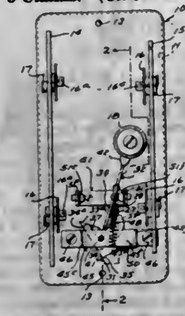
rectifier element in contact with the outer wall of said resonator.

2,472,379
BATTERY ELECTROLYTE WITH PHOSPHORIC ACID
Herbert E. Lawson, Chevy Chase, Md., assignor to the United States of America as represented by the Secretary of the Navy
No Drawing. Application September 20, 1943, Serial No. 503,157
8 Claims. (Cl. 136—154)



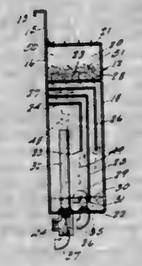
1. A contact electrolyte solution for deferred action type batteries comprising ortho-phosphoric acid, an acid selected from the group consisting of hydrochloric acid and hydrobromic acid, and water.

2,472,380
SCREEN FOR OPTICAL DISPLACEMENT GAUGES
John H. Long, New York, N. Y., assignor to the United States of America as represented by the Secretary of the Navy
Application March 8, 1946, Serial No. 652,907
4 Claims. (Cl. 88—14)



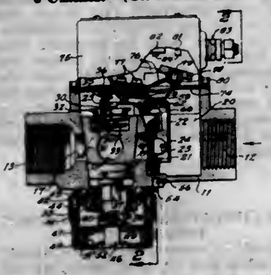
1. In an optical gauge for measuring changes in distance from an element to the stationary portion of the gauge, a stationary mounting, a constant light source on said mounting, means for detecting light reflected from the element, an optical system for projecting a light beam from said source upon the element and directing the reflected beam to the measuring means, the light paths between the element and the optical system being substantially coaxial, and a movable portion securable to said element for maintaining the amount of reflected light substantially constant throughout a substantial angle of movement of said movable portion, said portion comprising a mass of reflecting globules mounted in operative position on the element.

2,472,381
TWO RANGE EXPOSURE METER
Archie J. McMaster, Chicago, Ill., assignor to G-M Laboratories, Inc., Chicago, Ill., a corporation of Illinois
Application May 12, 1945, Serial No. 593,343
8 Claims. (Cl. 88—23)



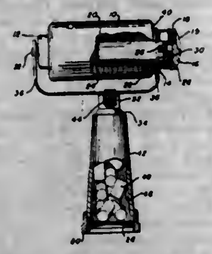
1. In an exposure meter, a housing, a photovoltaic cell adapted to receive light through a window in said housing, a galvanometer including a moving coil carrying an indicating needle, means providing a scale of relatively low light values, and a scale of relatively high light values, either of which is adapted to be seen through a window in the housing, a relatively sensitive circuit including in series a resistance, said cell and galvanometer coil, said circuit adapted to be established when the scale of low light values is employed, a relatively less sensitive circuit including in series a resistance, said cell and galvanometer coil, and a resistance in shunt relation to said coil, said circuit adapted to be established when the scale of high light values is employed, and means exterior of the housing to establish either of said circuits, said last-mentioned means including a slidable finger engageable member at the extremes of movement of which said circuits are established, and means to establish at intermediate positions of said member a cell and galvanometer circuit less sensitive than either previously mentioned circuit.

2,472,382
MUSICAL CHIME SIGNAL CONSTRUCTION
Christian Miller, Norwalk, Conn., assignor to Edwards and Company, Inc., Norwalk, Conn., a corporation of New York
Application December 21, 1945, Serial No. 636,482
5 Claims. (Cl. 84—404)



1. In a signalling device comprising a frame having two sounding elements mounted thereon in spaced relation, a striker having means movably supporting it for movement into successive impact with said sounding elements, actuating means comprising a rock lever structure pivotally supported by said frame and having mechanical connection with said striker to actuate the latter in response to rocking movement of the rock lever structure, said frame having a slot therein for the projection thereinto of an external actuator, and an actuator projecting through said slot and having means mounting it for movement lengthwise of said slot, said rock lever structure having a lever-like arm substantially overlying said slot and having a cam surface engaged by said actuator to rock said rock lever structure in response to actuation of said actuator.

2,472,383
AIR CONDITIONING ATTACHMENT FOR TOILETS
Fred L. Owens, Long Beach, Calif.
Application May 22, 1946, Serial No. 671,504
6 Claims. (Cl. 4—215)

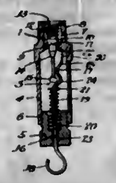


1. An air conditioner comprising; an air-water separating chamber having a sump, a jet pipe, and a circuitous path formed therein and discharging through the upper end of the chamber; a suction chamber; a source of water under pressure; a spray nozzle having communication with said source of water under pressure and a control valve therefor and discharging into and through said jet pipe into said air-water separating chamber and a communication between said suction chamber and the outlet of said spray nozzle for drawing air from said suction chamber and discharging the same with the spray from said spray nozzle through said jet pipe for thorough washing of the air; said circuitous path including a series of baffles forming forward and return passages therebetween; and a trapped drain for said sump; said suction chamber consisting of a toilet flushing connection, a pipe communicating between said flushing connection and said trapped drain; said control valve consisting of a normally open valve; a finger projecting from and mounted on the reaward end of a toilet seat cover with said valve mounted in cooperative relation thereto, and with said finger closing said valve when the toilet seat cover is closed and releasing said valve to open when the cover is raised, and a trap for a flush tank overflow pipe, and means for mounting said air-water separating chamber on one end of a flush tank.

2,472,384
GAS-BURNER CONTROL SYSTEM
William A. Ray, North Hollywood, Calif., assignor to General Controls Co., Glendale, Calif., a corporation of California
Application April 1, 1947, Serial No. 738,510
6 Claims. (Cl. 158—117.1)

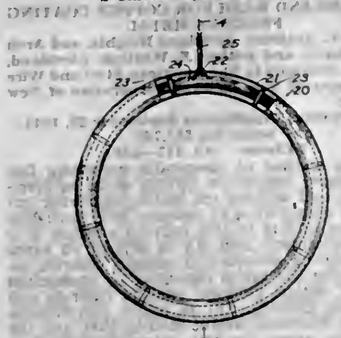
1. In a gas-burner control system: a burner; a valve for controlling supply of gas to said burner and having a closure biased to closed position; manually-operable means for opening said valve and including a handle member movable to a position wherein said closure is open; means limiting the movement of said valve-opening means when said handle member is in said position; a resilient connection between said valve-opening means and said handle member, said connection being relatively unyielding in the opening of the closure but yielding to permit continued movement of the handle member beyond said position; electrical means, operated by said continued movement of the handle member, for igniting the gas at said burner; and means responsive to the flame of said burner for holding said closure in open position against the force of said bias while said flame exists.

2,472,385
MASSAGE DEVICE
Michael A. Rollman, Landisville, Pa.
Application July 18, 1946, Serial No. 684,433
3 Claims. (Cl. 128—57)



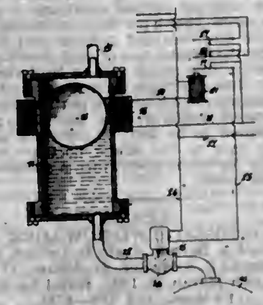
1. A massage device comprising in combination a hollow roller terminating at one end in a restricted cylindrical portion externally threaded and comprising an opening in said roller, said roller being suitable to contain a coolant solution formed from predetermined amounts of solute and solvent, a handle, means connected to said handle and also pivotally connected to the roller, a cup-shaped closure internally threaded on its side walls, whereby said closure may be detachably secured in fluid tight engagement over said cylindrical portion, and an elongated cup-shaped measuring container secured to the inner portion of said closure and having a smaller diameter than said cylindrical portion, whereby said container may be disposed within said roller when said closure is secured in operative position over said cylindrical portion, said container having a capacity corresponding to the predetermined amount of solvent of said solution.

2,472,386
SOIL PULVERIZING AND ROLLING IMPLEMENT
Theodore G. Schmeiser, Fresno, Calif.
Application May 8, 1944, Serial No. 534,570
1 Claim. (Cl. 55—77)



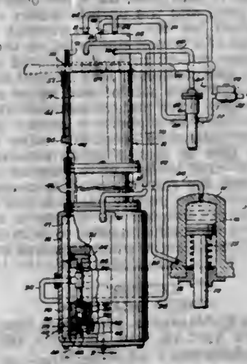
An earth working roller unit comprising a frame which includes a transversely disposed front beam and a pair of rearwardly projecting end beams, a roller type cultivator journaled in the outer ends of the end beams, said end beams being swingable about said journal point so that it and the main frame may be positioned either substantially horizontally or substantially vertically, a main draft yoke and an auxiliary draft yoke both connected to the main frame and to each other and both lying in a plane substantially parallel to that of the main frame and end frames, means for connecting the main draft yoke to a tractor when the main and end frames are in substantially horizontal position, and the auxiliary frame being provided with means whereby it may be connected to a tractor when the main and end frames are in substantially vertical position.

2,472,387
DRINKING FOUNTAIN
Clarence G. Shepherd, Fontana, Calif.
Application July 24, 1946, Serial No. 685,964
4 Claims. (Cl. 119—81)



1. A drinking fountain including a barrel constructed and arranged to be connected to a source of water supply, a valve having a horizontal seat, a depending stem and a weight constituting an enlargement at the lower end of the stem and forming a cam-engaging head, a plunger rod formed with a hook on its lower end and a cam on its upper end, a spring engaging a part on said plunger rod, a drinking receptacle constructed with a hook for engaging said plunger-rod hook and suspending said receptacle from said plunger rod, the weight of said receptacle being such as to draw down said plunger rod against said spring to cause said cam to engage and tip said valve stem head and valve to open said valve to admit water through said barrel to said drinking receptacle, until said receptacle is filled with water, and said spring being of such power to raise said plunger rod and drinking receptacle, when a predetermined amount of water is drunk from said filled receptacle, to cause said cam to engage said valve stem to open said valve and admit water through said barrel to fill said drinking receptacle.

2,472,388
MAGNETOSTRICTIVE OSCILLATOR
Albert L. Thuras, New London, Conn., assignor to the United States of America as represented by the Secretary of the Navy
Application January 15, 1944, Serial No. 518,447
2 Claims. (Cl. 177—386)

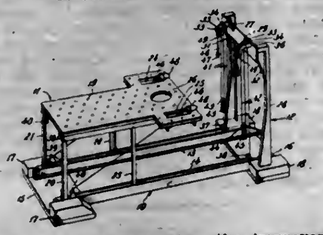


1. A magnetostrictive oscillator for producing and receiving compressional wave energy comprising a toroidal tube of magnetrostrictive material, and a coil disposed within said tube, the conductors of which extend circumferentially in the tube and lie parallel with the tube wall.

2,472,389
FLOAT CONTROL FOR LIQUID DISPENSING DEVICES
Walter Von Stoeser, North Tonawanda, N. Y., assignor to The Rudolph Wurlitzer Company, North Tonawanda, N. Y., a corporation of Ohio
Application September 17, 1943, Serial No. 502,772
1 Claim. (Cl. 222—67)

A liquid level control device for use with a beverage dispensing apparatus including a coin control switch and a beverage supply tank, comprising a combined dispensing and float chamber having an inlet adapted for communication with said supply tank and an outlet for the beverage to be dispensed, a normally-closed, electrically-governed valve interposed between said tank and said chamber, a float operating in said chamber and free of any connection therewith, an electric circuit including said valve and a control switch therefor and said coin-control switch, and means in said circuit for simultaneously governing said switches including a magnetic field creating coil about said chamber for subjective influence by the float as determined by its position and a relay coil in operative relation to such switches, whereby the circuit is rendered operative to close said switches to maintain the valve open and the dispensing apparatus operative when the float is in its elevated position and the circuit rendered otherwise operative to simultaneously open said switches and cause said valve to close and the coin switch to open to render the dispensing apparatus inoperative when the float is lowered in its chamber.

2,472,390
HYDRAULIC PRESS
Frank C. Wilson, Arcade, N. Y.
Application July 25, 1944, Serial No. 546,532
4 Claims. (Cl. 60—51)



1. A hydraulic press including a movable member, a cylinder containing a piston for actuating said member, a container for a body of actuating liquid, a pump for the actuating liquid, an element actuated pneumatically for causing the operation of said pump, a valve for admitting compressed air into said container to force actuating liquid into said cylinder to initiate the operation of said movable member, a relay valve which is responsive to the pressure in said container and which is automatically operative when said pressure reaches a predetermined value to admit compressed air to said actuating element, thereby to operate the pump to force actuating liquid under added pressure into said cylinder to continue the operation of said movable member, a valve for relieving the pressure of said actuating fluid, a valve for relieving the pressure of said actuating element, a valve for admitting compressed air into said cylinder to restore said movable member to its original position, a pivotally mounted lever which may be rocked in one direction to open said first mentioned valve and which may be rocked in the opposite direction

may be detachably secured in fluid tight engage-

to open said last three-mentioned valves, and means for normally holding said lever in a position corresponding to the closed positions of said first, third and fifth mentioned valves and the open position of said fourth mentioned valve.

2,472,391
CLINICAL EXERCISE TABLE
Luis G. Albizu, Ponce, P. R.
Application August 9, 1944, Serial No. 548,720
10 Claims. (Cl. 272—81)

1. In exercising apparatus, the improvement comprising an elongated base, a table supported above one end of said base, an upright pulley support spaced from said table and mounted at the other end of said base, the space between the end of the table and the upright pulley support being sufficient for the free movement of the arms and legs of a person supported on the table, a pair of upper pulleys rotatably secured to each side of the upper portion of said upright support, a hook adjacent each pair of said upper pulleys, a pair of spaced lower pulleys adjacent the bottom of said upright support, a second pair of spaced lower pulleys adjacent the other end of the base, a pair of spaced hooks adjacent the outer end of said table, and a pair of spaced hooks adjacent the end of the table nearest the upright support, the pulleys at each side of the apparatus being adapted to receive a flexible cord and the hooks being adapted to hold the free ends of the flexible cords when attached thereto.

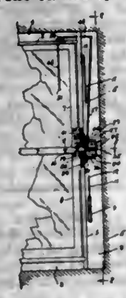
2,472,392
SCREW DRIVER
Arthur F. Alexander, Cleveland, Ohio
Application April 12, 1946, Serial No. 661,751
3 Claims. (Cl. 279—75)

1. A hand tool comprising a handle with an axial bore extending entirely therethrough and a lateral opening through the handle constricted at its inner end, a ball seated in said opening a portion of which normally projects into said bore, said handle having an exterior annular shallow groove intercepting said opening, a spring retainer ring seated in said groove engaging said ball for preventing movement of the ball outwardly beyond its seat, said retainer ring leaving the outermost portion of the ball exposed, a tool bit having a cylindrical shank adapted to enter said bore from either end of the handle, said shank having a cavity of spherical contour to receive the inwardly projecting portion of the ball, and a sleeve slidable on the handle lengthwise thereof adapted to engage the exposed outer portion of said ball for locking the bit against movement in the handle angularly as well as longitudinally.

2,472,393
PROCESS AND BATH FOR COPPER COATING FERROUS METAL
Samuel C. Avallone, Cleveland Heights, and Arch W. Harris and Esther J. Whiting, Cleveland, Ohio, assignors to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
No Drawing. Application September 25, 1944, Serial No. 555,762
6 Claims. (Cl. 117—130)

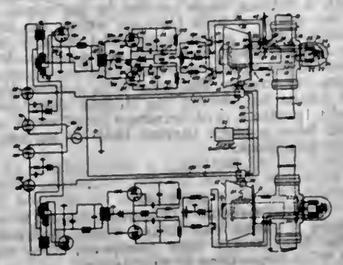
2. The method of chemically depositing fine grain copper coating on ferrous metal as lubricant for cold working the metal comprising immersing the metal in an aqueous bath consisting by weight of 0.40 to 10% cuprous chloride, 2 to 12% hydrochloric acid, 0.4 to 20% of an agent for enhancing solubility of cuprous chloride selected from the group consisting of ammonium chloride, sodium chloride, calcium chloride and potassium chloride, 0.01 to 0.20% polyethylene glycol of molecular weight 3500 to 4500, and the remainder water, the bath being maintained at a temperature in the range 70° to 195° F. and in the presence of a reducing agent for preventing oxidation of cuprous chloride, the reducing agent being of the group consisting of metallic copper, metallic tin and stannous chloride.

2,472,394
LOCKING DEVICE
Jacob A. Barraket, Brooklyn, N. Y.
Application September 17, 1947, Serial No. 774,466
1 Claim. (Cl. 151—32)



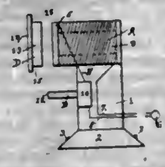
In a device of the class described, a relatively flat sheet of permanently deformable material having an enlarged portion apertured to grip the head of a screw, shank portions extending respectively from the enlarged portion and bendable rearwardly therefrom, one of said shank portions having on its free end a pair of transverse ears, the other shank portion having on its free end two horizontally extending leg portions and being of bifurcated configuration, said leg portions being adapted to be bent to interlock with the extending ears as the shank portions are bent rearwardly for engagement with a structure containing the screw.

2,472,395
AUTOMATIC WINDOW LOCK
Edward A. Barber, Alwin D. Collins, and Harold C. Sylvester, St. Albans, Vt.
Application March 12, 1946, Serial No. 653,795
1 Claim. (Cl. 292—173)



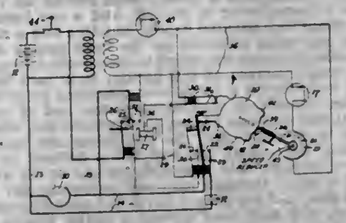
A fastener for vertically slidable sashes comprising a lock case adapted to be disposed through

the side of a window frame opposite the transverse meeting rails of a pair of slidable sashes when in closed position, a guard bracket secured to the side of said window frame overlying said lock case and formed with an aperture, an elongated operating lever pivotally attached to said guard bracket and having a yoke formed on its lower extremity, a locking bolt slidably disposed in said lock case and pivotally connected between the arms of said yoke on the operating lever and



having a stem slidably mounted in the aperture in said guard bracket, a resilient tensioning spring disposed about said stem for normally urging said locking bolt to its locked position, said sashes being formed with alignable coacting locking grooves for receiving the locking bolt for holding the sashes locked in closed position, a pulley mounted on said window frame, and a flexible lock releasing cord disposed over said pulley and secured to the upper extremity of the operating lever.

2,472,396
ELECTRICAL SPEED CONTROL SYSTEM
Joseph R. Schoenbaum, Roseland, N. J., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application October 6, 1944, Serial No. 557,534
2 Claims. (Cl. 175—355)



1. A frequency responsive system for controlling the speed of a prime mover comprising a source of reference frequency alternating current energy, a frequency source controlled by said prime mover, to produce a frequency proportional to prime mover speed, an oscillation generator operable at fixed frequency, means to add said prime mover and oscillator frequencies to constitute a source of variable frequency alternating current energy of a frequency in the range of the frequency of the reference frequency energy source and varying with the speed of said prime mover, means acting in response to both said reference and variable energy means for producing current impulses proportional in number to the frequency of the beat between said frequencies, means to form said pulses with abrupt beginnings or terminations according to whether the variable frequency is greater or less than the reference frequency, and means responsive to the abrupt beginning or termination in said pulses to produce a potential the sense of which varies according to an abrupt initial or terminal pulse characteristic respectively, and means for varying the speed of said prime mover in substantially fixed increments corresponding to the number of said pulses and in direction according to the sense of said potential.

2,472,397
DOOR HOLDER AND BUFFER
William P. Bennett, San Bernardino, Calif.
Application October 22, 1946, Serial No. 704,896
5 Claims. (Cl. 292—70)

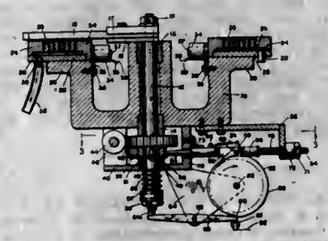
1. For use with a door or the like provided at one of its sides with a metallic element, a fixed electro-magnet positioned in the path of travel of said metallic element as the door is moved to an open position, an electric supply circuit for energizing said magnet and including a normally open switch movable to a closed position against resilient tension, and said switch being in the path of travel of said door as the door is moved to an open position and being actuated by said door to close the electric circuit prior to contacting engagement between the door carried metallic element and the electro-magnet.

2,472,398
ARRANGEMENT FOR OPERATING OIL BURNERS
Jack Berger, Laurelton, Long Island, N. Y., assignor to Diesel Oil Burner Corporation of New York, Jamaica, N. Y.
Application October 12, 1946, Serial No. 703,680
11 Claims. (Cl. 158—28)

1. An arrangement for operating an oil burner comprising in combination a burner motor for supplying oil; an ignition device for igniting said

oil; a source of electric current; a burner circuit connecting said source of electric current with said burner motor; an ignition circuit connecting said source of electric current with said ignition device; a rotatable timer motor; a timer circuit connecting said rotatable timer motor with said source of electric current; an automatic thermostatic combustion responsive switch included in said timer circuit and constructed so as to disconnect automatically said rotatable timer motor from said source of electric current when its temperature rises over a predetermined temperature; rotatable operating means rotatably connected with said timer motor and adapted to be turned by said rotatable timer motor from an initial position into a final position; ignition switch means included in said ignition circuit and operated by said rotatable operating means so as to be in open position when said rotatable operating means are in said initial position of the same; combined burner and ignition switch means included in said ignition and said burner circuits; means tending to hold said combined burner and ignition switch means in open position; a relay adapted to close said combined burner and ignition switch means when energized; a relay circuit connecting said relay with said source of electric current; a first relay switch included in said relay circuit; means tending to close said first relay switch; means operated by said rotatable operating means for opening said first relay switch when said rotatable operating means are in said final position of the same; second relay switch means included in said relay circuit; means tending to close said second relay switch; and means operated by said rotatable operating means for opening said second relay switch when said rotatable operating means are in said initial position of the same.

2,472,399
POLISHING CHUCK
Gerard Boldue, Manchester, N. H.
Application March 26, 1947, Serial No. 737,339
3 Claims. (Cl. 279—8)

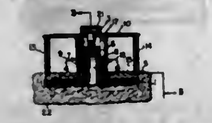


1. A chuck for holding a watch wheel having a shaft projecting axially from each side of the wheel, comprising a rotary head having an end face perpendicular to its axis, and a cap having a bottom wall parallel to said end face and a rim, said cap being mounted on the head axially adjustable to clamp the wheel between said face and the inner surface of the bottom wall, said bottom wall having a radial slot extending from the center thereof to accommodate one end of said shaft and said cap having a peripheral slot wider than said radial slot, the peripheral slot intersecting the radial slot and being defined by a plane through said end wall parallel to its axis and a plane through said rim perpendicular to said axis, said peripheral slot accommodating said wheel, and said head having a radial groove to accommodate the other end of said shaft whereby the wheel may be inserted into the chuck merely by backing off the cap somewhat more than the thickness of the wheel.

2,472,400
METHOD OF PROTECTING METAL SURFACES AGAINST HYDROGEN SULFIDE CORROSION
Donald C. Bond, Northbrook, and Michael Savoy, Chicago, Ill., assignors to The Pure Oil Company, Chicago, Ill., a corporation of Ohio
No Drawing. Application November 22, 1946, Serial No. 711,804
5 Claims. (Cl. 252—8.55)

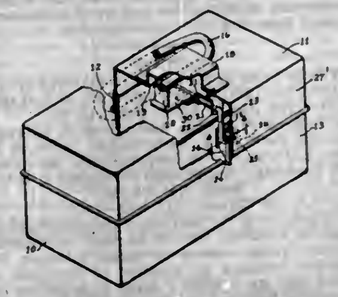
1. The method of protecting metal equipment in oil wells against hydrogen sulfide and brine corrosion comprising continually introducing into said wells during production of oil and brine therefrom compounds selected from the group consisting of pyridine, quinoline, their methyl derivatives and their mineral acid salts, in an amount of about 1 part of said compounds per 1,000 to 10,000 parts of brine produced from the well, and withdrawing oil and brine from the well mixed with said compounds.

2,472,401
MICA SPLITTING MACHINE
James F. Boucek, Chicago, Ill.
Application January 7, 1948, Serial No. 869
7 Claims. (Cl. 125—24)



1. In a mica splitting machine, a rotatable shaft, a cutting blade carried by the upper end of the shaft, a base through which the shaft extends having supports disposed radially from the shaft in the path of the blade, a suction block mounted for sliding movement on each support, means for rapidly agitating each suction block, and means for feeding the cutting blade downwardly to slice a predetermined thickness of material from a block thereof held by suction on the suction block.

2,472,402
ZINC-COPPER-TITANIUM ALLOYS
Edward J. Boyle, Oak Ridge, Tenn., assignor to The New Jersey Zinc Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application June 17, 1948, Serial No. 33,670
3 Claims. (Cl. 75—178)



1. A homogeneous zinc-base alloy comprising from 0.5 to 1.5% copper, from 0.12 to 0.5% titanium, and the balance zinc, said alloy having a creep rate such that when the alloy is finish cold rolled to 0.018 inch strip with 50% reduction the resulting strip requires at least 0.0044 day for 1% elongation when subjected to a dead load tension of 15,000 pounds per square inch.

2,472,403
STEEL WOOL PAD HOLDER
Solomon Burwen, Swampscott, Mass., assignor of one-third to Frank W. Burwen, Marblehead, Mass., and one-third to Charles B. Burwen, Lynn, Mass.
Application January 22, 1947, Serial No. 723,518
3 Claims. (Cl. 15—209)

1. A steel wool pad holder comprising a base and a cover, both elements being rectangular in section and the cover having side walls forming a box open at the bottom, the base having inwardly projecting flanges whose ends serve as a clamping surface with the wall edges of said cover, said base having a centrally positioned hollow post with aligning ribs on either side in the center line of said base, the cover member having a wall generally coextensive with said side walls forming a well, shaped to receive the post with sections formed also to receive said ribs for aligning the cover and base together and a clamping screw passing through the face of the cover and threading into said hollow post for clamping the cover and base together.

2,472,404
HANDLE OPERATED LATCH FOR RECEPTACLES
Wallace H. Cadwell, New Carlisle, Ohio
Application May 26, 1945, Serial No. 596,011
3 Claims. (Cl. 220—56)

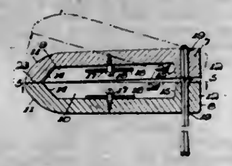
1. In combination, a container, a lid hinged on said container, locking means including a shaft, bearings on said lid for rotatively supporting said locking means on said lid, a lock-receiving member carried on said container for receiving said locking means, spring means engaging said locking means normally urging the same out of locking engagement with said lock-receiving member, handle means including a shaft, bearings on said lid for supporting the shaft of said handle means for rotation in a plane at substantially right angles to the plane of rotation of said locking means, and actuating means extending between the shaft on the handle means and the shaft on the locking means for rotating said locking means into locking engagement with said lock-receiving member upon rotation of said handle means into carrying position.

2,472,405
EASEL HINGE
Carroll N. Cross, Middleboro, Mass.
Application July 23, 1945, Serial No. 606,649
4 Claims. (Cl. 248—35)

1. A display mount including a back board, a supporting prop having free side edges and a free end adapted for angular movement away from said back board into mount-supporting position, a hinge connection between said back board and the other end of said prop, said connection deviating from a straight line drawn between the side edges of said prop, whereby a wedging effect is obtained at said hinge line tending to urge said prop into closed position.

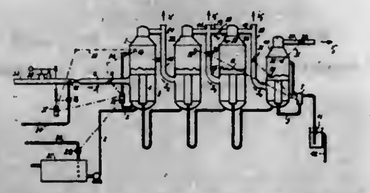
2,472,406
BOWLING BALL
Joseph Darula, Jr., Kenosha, Wis.
Application April 23, 1947, Serial No. 743,379
4 Claims. (Cl. 273—63)

1. In a bowling ball having a pair of finger receiving bores therein for engaging the thumb and middle fingers of a bowler, a plurality of finger positioning recesses provided in the spherical surface of the ball for receiving the remaining fingers of a bowler.



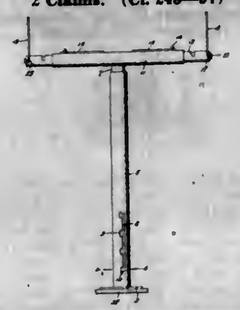
2,472,407
FOLDING CART
Herbert J. David, Rockaway Beach, and Max Zausner, Brooklyn, N. Y.
Application August 23, 1946, Serial No. 692,634
4 Claims. (Cl. 280—36)

1. In a folding cart of the class described, a main elongated U-shaped back frame having a



handle, wheels attached to the lower end portion of said frame, a seat frame of U-shaped form having one end portion pivotally mounted between intermediate portions of the frame members of the first named frame, a third U-shaped leg frame, the arms thereof being rigid and pivotally connected to the free ends of the arms of the second named seat frame, connecting links between and connected with the first and the third named frames, and a flexible sling attached at one end to the first named frame and at the opposite end to a rod carried by interconnected portions of the second and third named frames.

2,472,408
COMBINED CASTANET AND TAMBOURINE
Carlo Di Angelo, Hostetter, Pa.
Application December 6, 1944, Serial No. 566,886
2 Claims. (Cl. 46—191)



1. An instrument of the character described comprising two similarly shaped concave sound producing members, pivot forming means rigidly secured to the inner face of one of said concaved members at one end thereof, the other concaved member adapted to contact at one end and move about said pivot forming means, and flexible hand-grip means passing through both of said members on opposite sides of said pivot forming means and connecting said members together.

2,472,409
EVAPORATOR
Josef Eisner, Allestree, Derby, England, assignor to George Fletcher and Company Limited, Derby, England, a British company
Application August 18, 1944, Serial No. 550,092
In Great Britain May 2, 1944
10 Claims. (Cl. 257—2)

4. An evaporator for the continuous concentration of liquors wherein a relatively weak liquor is continuously fed in and a more concentrated liquor is continuously discharged therefrom comprising in combination an evaporator vessel having the characteristic of the sealed down-take type, a supply of exhaust steam for heating said vessel, a supply of live steam for heating said vessel, means sensitive to fluctuations in liquor level in said vessel controlling said exhaust steam and live steam supplies, a relief valve on said exhaust steam supply, and means operating to open said relief valve subsequent to the cutting off of live steam by said control.

2,472,410
SACK HOLDER
Milton F. Ferrell and Joseph K. Moore, Flagstaff, Ariz.
Application May 31, 1945, Serial No. 596,862
2 Claims. (Cl. 248—97)

1. A sack holder comprising a standard, a horizontal tube on the upper end of the standard, a pair of arms slidably and rotatably mounted in the ends of the tube, means for securing the arms in slidably adjusted position and also for limiting rotary movement of the arms and including longitudinally spaced, circumferentially extending slots in the arms, and pins carried by the tube and engaged in the slots, a pair of resilient sack-supporting arms, and means for attaching the sack-supporting arms transversely in the outer ends of the first-named arms to project forwardly and rearwardly of the standard and adapted for engaging and supporting the front and rear sides of the mouth of a sack, the rear ends of the sack-supporting arms being adapted to swing downwardly to release the sack upon a removal of the sack from the front ends thereof.

2,472,411
METHOD FOR ALKYLATING PHENOLIC HYDROXYL GROUP CONTAINING ALKALOIDS AND THE RESULTING PRODUCTS
Karl Folkers, Plainfield, and Frank R. Koniuszy, Roselle Park, N. J., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application November 2, 1943, Serial No. 508,756
14 Claims. (Cl. 260—236)

9. The process for alkylating phenolic hydroxyl groups in alkaloids having at least one phenolic hydroxyl group and a trivalent nitrogen that comprises treating an alkaloid of the class described with an oxidizing agent to form the corresponding alkaloid amine oxide, reacting the alkaloid amine oxide with a dialkyl sulfate in alkaline solution, reducing the alkylated alkaloid amine oxide thus formed with zinc and dilute mineral acid, and recovering the alkylated alkaloid.

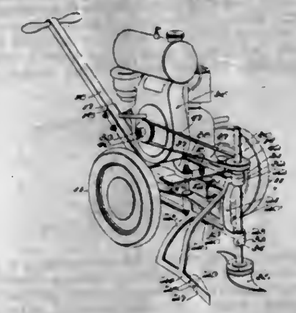
14. The fully methylated Erythrina alkaloid which has the empirical formula $C_{19}H_{23}NO_3$, and which forms a crystalline picrate salt melting at 160–161° C., $(\alpha)_D^{26}=+137–138.1°$.

2,472,412
IMPELLER FOR CENTRIFUGAL FORCE PUMPS
Walter B. Fritz, Monroeville, Ohio
Application March 14, 1947, Serial No. 734,625
2 Claims. (Cl. 103—115)

1. An impeller for a centrifugal force pump

comprising a solid, right circular cylinder, there being a centrally-disposed opening extending through said cylinder, a plurality of radial bores in said cylinder and spaced from each other, the front face of said cylinder being provided

with a circular recess concentrically disposed with respect to said opening, and a plurality of holes positioned within the confines of said circular recess and in communication with said radial bores, said holes extending axially from the front face of the cylinder to the respective bores.

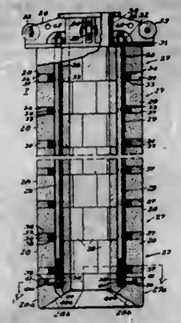


2,472,413
HEAT EXCHANGER
John M. Gantvoort, Somerville, N. J., assignor to American Locomotive Company, New York, N. Y., a corporation of New York
Application September 25, 1945, Serial No. 618,555
5 Claims. (Cl. 257—245)

3. A heat exchanger comprising a shell having a sloped open end; a plurality of plates partitioning the shell into passages; a closure wall secured to the sloped open end of the shell and disposed in a plane inclined to the planes of the plates, said wall having transmission slots opening one into each of the shell passages and dividing the wall into a plurality of ribs disposed one in line with each of the passages, the area of the face of each of said ribs being greater than the cross-sectional area of its correlated passage taken along a plane normal to all of the plates; a header secured to the wall provided with chambers and nozzles opening thereinto; means securing the headers to the ribs; and means at the opposite end of the shell to receive a plurality of fluids for transmission through the passages, slots, and header in heat-exchange relation.

2,472,414
LAWN TRIMMING MACHINE
Harold L. Geater, Vinton, Iowa
Application October 30, 1945, Serial No. 625,546
4 Claims. (Cl. 56—25.4)

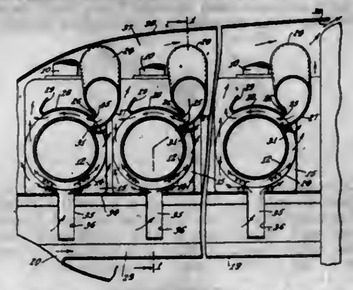
4. A lawn trimming machine, comprising an axle, wheels secured to the axle near its outer ends, a single substantially horizontal arm disposed adjacent to one wheel and inwardly thereof and upon one side of the longitudinal center of the axle, the single arm projecting forwardly of the adjacent wheel, a vertical fork carried by the forward end of the single arm and projecting above the same and provided at its top and bottom with bearings, a substantially horizontal guard bar disposed outwardly of the wheel adjacent to the single arm and extending longitudinally of the arm, a rear transverse arm secured at its outer end to the guard bar and at its inner end to the single arm, a forward transverse arm secured at its outer end to the guard bar and at its inner end to the vertical fork, a vertical rotatable shaft held within the bearings of the fork, a rotary cutter mounted upon the lower end of the vertical shaft and travelling close to the guard bar, longitudinal horizontal bolsters disposed upon the inner side of the single arm and secured to the axle, one of said bolsters being disposed at the longitudinal center of the axle, the other bolster being disposed upon the opposite side of the longitudinal center with respect to the single arm, a generally horizontal diagonal brace secured to the vertical fork and to one bolster, a motor mounted upon the bolsters, driving connecting means between the motor and vertical shaft, a handle disposed at the rear of the bolster and at the center of the axle and extending rearwardly longitudinally thereof, and means to rigidly connect the handle to the rear ends of the bolsters.



2,472,415
CROSS-WIND LANDING GEAR SHOCK ABSORBER FOR AIRPLANES
John Harlin Geisse, Washington, D. C.
Application February 6, 1947, Serial No. 726,891
3 Claims. (Cl. 244—103)

1. An airplane shock strut including an outer cylinder, an inner cylinder slidably and rotatably mounted in the outer cylinder, and a torsion spring element fixed in one cylinder and slidably but irrotationably mounted in the other cylinder.

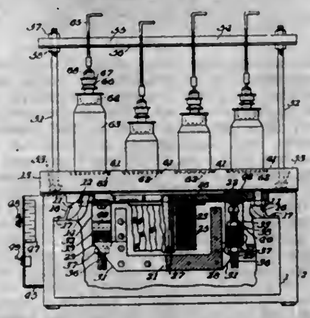
2,472,416
BLOWING TUBE FOR MOLTEN METAL
Robert M. Gibson, Pittsburgh, Pa.
Application August 28, 1944, Serial No. 551,492
8 Claims. (Cl. 266—34)



8. A metallic blowing tube comprising a tube body constructed of refractory blocks assembled upon longitudinal extending elongate members, in combination with circumferentially extending members arranged in spaced relation with respect to said longitudinal members for reinforcing the wall of the tube against pneumatic pressure developed in the bore of the tube in service, said longitudinal and circumferentially extending members being enclosed within the assembled blocks between the inner and outer surfaces of the wall of the tube constructed thereof.

2,472,417
PROCESS OF MANUFACTURE OF GLYCOL
Max Gonse, Forest-Brussels, Belgium, assignor to Solvay & Cie, Brussels, Belgium, a company of Belgium
No Drawing. Application July 23, 1947, Serial No. 763,140. In Switzerland October 15, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires December 24, 1962
4 Claims. (Cl. 260—635)

1. In a process of producing ethylenic glycol, the step consisting in hydrating ethylene oxide in the presence of a trihalogenacetic acid thereby producing glycol and volatile products, and separating the glycol from said volatile products by the action of heat.



2,472,418
ENGINE COOLING BAFFLE
Alfred T. Gregory, Massapequa, N. Y., assignor to Fairchild Engine and Airplane Corporation, Farmingdale, N. Y., a corporation of Maryland
Original application December 7, 1943, Serial No. 513,211. Divided and this application January 29, 1945, Serial No. 575,083
8 Claims. (Cl. 123—171)

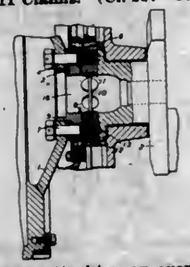
1. In a bipolar cooling system for an engine comprising a row of cylinders, the combination of at least one air scoop having an intake opening for receiving air under pressure, means on each side of said cylinders in communication with said scoop and provided with restricted passages having outlets extending substantially along the lengths of said cylinders at opposite sides thereof for directing air upon selected areas thereof, the air directed against the areas of said cylinders on one side of said bank of cylinders following the surface of said cylinders and flowing as a cross stream between the cylinders to a low pressure area, and said outlets on the other side

of said bank of cylinders comprising flanges having their ends terminating at the margins of said areas on said side of said cylinders and at points spaced from said cylinders.

2,472,419
METHOD OF DEFLOCCULATING BACTERIA
Glenn Green, Lakeville, Ohio, assignor to Syntron Company, Homer City, Pa., a corporation of Delaware
Application September 28, 1945, Serial No. 619,233
5 Claims. (Cl. 195—75)

1. The method of deflocculating bacteria for counting which comprises subjecting bacteria suspended or dispersed in a medium to a vertical mechanical vibration of relatively low magnitude and a frequency of 3600 to 7200 vibrations per minute.

2,472,420
TOUCH SIGNAL LEVEL
Frederick H. Hagner, San Antonio, Tex.
Application November 28, 1944, Serial No. 566,372
1 Claim. (Cl. 33—206)

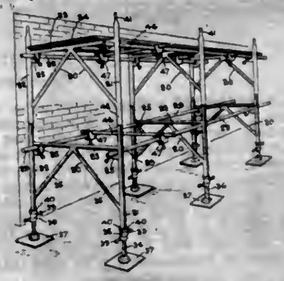


A touch signal levelling device for use when visibility is impossible comprising a body having a transverse elongated channel, a freely rollable gravity-controlled ball rollable throughout the length of the channel, said body having restricted openings at the opposite ends of said channel of less diameter, than the diameter of the ball through which said ball is adapted to protrude when the body is tilted, the restricted openings preventing the displacement of the ball from the

body, said openings being adapted to be covered by the hand of an operator, and said ball being adapted to signal the operator by sense of touch

upon contact with the hand thereby signalling the operator that the levelling device deviates from the zenith point.

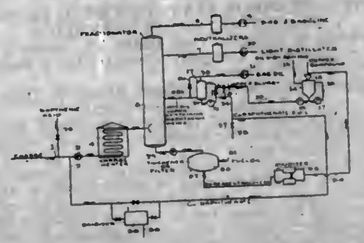
2,472,421
MEANS FOR ATTACHING WHEELS TO SHAFTS
William Wilson Hamill, Little Aston, and Robert Strange Crump, Birmingham, England
Application October 29, 1946, Serial No. 706,332
In Great Britain November 7, 1945
11 Claims. (Cl. 287—53)



10. Means for attaching an overhung wheel to a shaft including a cavity in the end of the shaft, holes in said cavity extending from periphery to bore thereof, a nut seated in each hole and insertable or withdrawable by way of the bore of the cavity, and holding bolts passing laterally through the wheel hub with their heads adjacent the outer face thereof to engage the respective nuts.

2,472,422
COCCIDIOSTATIC COMPOSITION
Paul D. Harwood, Ashland, Ohio, assignor to Dr. Hess & Clark, Inc., Ashland, Ohio, a corporation of Ohio
No Drawing. Application August 21, 1946, Serial No. 692,128
4 Claims. (Cl. 167—53.1)

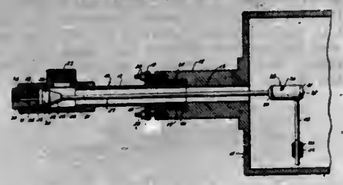
1. A coccidiostatic composition for the prevention and treatment of coccidiosis in poultry which are exposed to the said disease, consisting essentially of a mash feed and between 0.03 and 1 percent by weight of a member of the group consisting of para-nitrochlorobenzene, para-nitrobromobenzene and para-nitroacetanilides.



2,472,423
SCAFFOLDING
Albert Henry Hawes, Erdington, Birmingham, England, assignor, by mesne assignments, to Kwikform Limited, Small Heath, Birmingham, England, a British company
Application September 11, 1946, Serial No. 696,081
In Great Britain October 2, 1945
7 Claims. (Cl. 304—2)

1. A scaffold frame unit comprising two vertical tubular members, a horizontal member connecting said vertical members rigidly and permanently together, said horizontal member being adapted to engage and support a substantially horizontal platform or staging extending transversely of said frame unit, a pair of clamping devices secured permanently to the frame unit and adapted for clamping engagement with tubular scaffolding elements extending transversely and horizontally of the frame unit to secure the latter to a second similar unit or other structure, said clamping devices being disposed one adjacent to each junction between the said horizontal and vertical members of the frame unit, each clamping device comprising a bracket disposed in the angle between the said horizontal and

vertical members and extending between said members to each of which it is permanently secured to provide a reinforcement for said junction, the bracket having a transverse opening to receive the transverse scaffolding element by a movement along its length, said bracket having also adjacent to said opening a threaded socket, a clamping screw working in said threaded socket, a pressure plate on said clamping screw, the latter being rotatable relative to said plate, said plate being adapted for clamping engagement with said transverse scaffolding element, and said plate having a pair of spaced ears adapted to engage one on each side of said bracket.

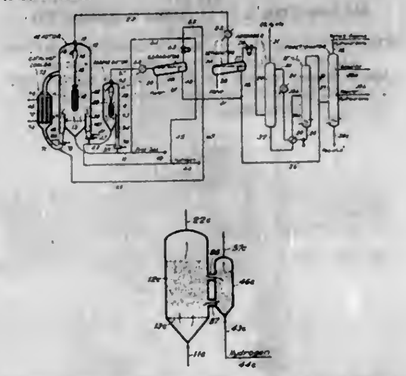


2,472,424
PRODUCTION OF CUPROUS NAPHTHENATE
Charles O. Hoover, Houston, Tex., assignor to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York
Application October 2, 1946, Serial No. 700,824
8 Claims. (Cl. 260—438)

1. The method of forming cuprous naphthenate which comprises bringing napthenic acid into intimate contact with a finely-divided copper compound of the group consisting of cuprous oxide, cupric oxide, cuprous hydroxide, cupric hy-

droxide, cupric carbonate and cupric acetate suspended in a fluid medium at a temperature above about 225° C.

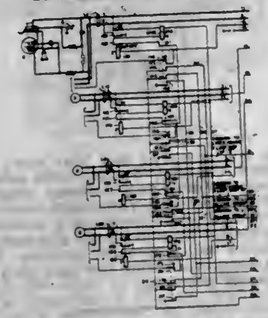
2,472,425
PIPE JOINT
Charles W. Howard, Franklin, Ohio
Application September 19, 1946, Serial No. 697,891
2 Claims. (Cl. 285—10)



1. In a drying roll siphon including a suction pipe and a delivery tube, a joint comprising a tubular body forming a socket in one end thereof, said socket being provided with a slot extending diametrically of said body, said pipe extending through said slot, a ball movable in said socket and secured to said pipe, said tube extending through the remaining end of said body and communicating with said pipe through the medium of said ball, and a spring-pressed follower in said body in engagement with said ball.

2,472,426
PROCESS OF ENRICHING THE ENDOSPERM OF CEREAL GRAINS WITH NATURAL VITAMINS
Erich Gustav Husenlaub, Brentford, England, assignor to Mars and Husenlaub, Chicago, Ill., a copartnership
No Drawing. Application November 12, 1946, Serial No. 709,093
6 Claims. (Cl. 99—11)

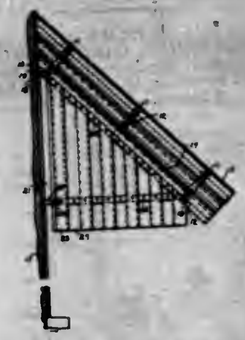
1. That process of enriching the endosperm of cereal grains with natural vitamins which comprises steeping the grains of one kind of cereal in a liquid containing a proportion of natural vitamins dissolved by it out of a different kind of cereal, whereby the steeped grains acquire a higher vitamin content than they do when steeped—all other conditions being the same—in a liquid containing an equal proportion of the same natural vitamins dissolved out of the same kind of cereal as that being steeped.



2,472,427
HYDROCARBON SYNTHESIS WITH FLUIDIZED CATALYST REGENERATION
Everett A. Johnson, Park Ridge, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application February 27, 1947, Serial No. 731,241
7 Claims. (Cl. 260—449.6)

1. The method of producing normally liquid products by a carbon monoxide-hydrogen synthesis reaction which method comprises passing a carbon monoxide-hydrogen gas mixture upwardly through a synthesis zone in contact with a large mass of solid synthesis catalyst which is regeneratable by hydrogen and which has a particle size substantially smaller than 200 microns and chiefly within the range of 2 to 100 microns, passing said gas mixture upwardly in said synthesis zone at a low velocity sufficient to produce a liquid-like dense turbulent phase of said catalyst superimposed by a light dispersed catalyst phase in said synthesis zone, withdrawing substantially catalyst-free gases from the upper part of said synthesis zone, maintaining said synthesis zone under conditions of temperature and pressure for effecting substantial conversion of carbon monoxide and hydrogen into normally liquid products, withdrawing a portion of the catalyst in dense phase liquid-like condition from the dense catalyst phase in the synthesis zone below the upper level of said dense catalyst phase, suspending the withdrawn catalyst in hydrogen in a regeneration zone which is at approximately the same elevation as the synthesis zone, employing a low upward gas velocity in the regeneration zone sufficient to maintain the catalyst therein in liquid-like dense phase condition, maintaining said regeneration zone under conditions of temperature and pressure for removing from the catalyst at least a part of the deposits which accumulate thereon in the synthesis zone, withdrawing catalyst in liquid-like dense phase condition from the regeneration zone for return to the synthesis zone, maintaining an open upper passageway between said zones below the dense phase levels therein, maintaining a lower open passageway between said zones at a lower level than the upper passageway, and effecting catalyst transfer between said zones by employing such upward gas velocities therein that the catalyst density between the upper and lower passageways in one of said zones is greater than in the other of said zones whereby unequal catalyst heads provide pressure differentials for effecting said transfer.

7. The method of producing normally liquid products by a carbon monoxide-hydrogen synthesis reaction which method comprises passing a carbon monoxide-hydrogen gas mixture upwardly through a synthesis zone in contact with a large mass of solid synthesis catalyst which is regeneratable by hydrogen and which has a particle size substantially smaller than 200 microns and chiefly within the range of 2 to 100 microns, passing said gas mixture upwardly in said synthesis zone at a low velocity sufficient to produce a liquid-like dense turbulent phase of said catalyst superimposed by a light dispersed catalyst phase in said synthesis zone, withdrawing substantially catalyst-free gases from the upper part of said synthesis zone, maintaining said synthesis zone under conditions of temperature and pressure for effecting substantial conversion of carbon monoxide and hydrogen into normally liquid products, withdrawing a portion of the catalyst in dense phase liquid-like condition from the dense catalyst phase in the synthesis zone below the upper level of said dense catalyst phase, suspending the withdrawn catalyst in hydrogen in a regeneration zone which is at approximately the same elevation as the synthesis zone, employing a low upward gas velocity in the regeneration zone sufficient to maintain the catalyst therein in liquid-like dense phase condition, maintaining said regeneration zone under conditions of temperature and pressure for removing from the catalyst at least a part of the deposits which accumulate thereon in the synthesis zone, withdrawing catalyst in liquid-like dense phase condition from the regeneration zone for return to the synthesis zone, maintaining an open upper passageway between said zones below the dense phase levels therein, maintaining a lower open passageway be-



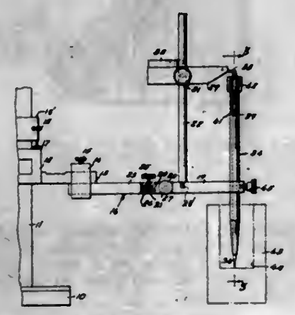
2,472,428
ALL RELAY TELEPHONE LINE CIRCUIT AND LINE FINDER
Roy W. Jones, Rochester, N. Y., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application July 22, 1947, Serial No. 762,751
13 Claims. (Cl. 179—18)

1. In a telephone system, lines having tens and units digit designations, a line circuit for each line including a line relay, an allotter common to said lines, a first and a second start relay included in said allotter, said first relay common to all said lines whose last digit ends in one through five and said second start relay common to all lines whose last digit ends in six through zero, said lines being arranged into tens line groups, a plurality of marking conductors, said marking conductors being divided into two groups, one group being tens marking conductors and the other group being units marking conductors, each tens marking conductor being individual to a corresponding said tens line group, and each units marking conductor being individual to the lines in all said tens line groups having corresponding units digit number designations, a plurality of linefinders, means responsive to the initiation of a call on one of said lines for operating the corresponding line relay, means responsive to the operation of said line relay for selecting said marking conductors corresponding to said calling line and for operating said start relay common to said calling line, means responsive to the operation of said start relay for operating one of said linefinders and for marking said selected marking conductors, and tens and units relays in said one finder operated in response to said marked marking conductors for extending said initiated call.

2,472,429
SHUTTER-FOLD AWNING
John Henry Kadleck, Pasadena, Calif.
Application October 18, 1945, Serial No. 704,148
2 Claims. (Cl. 160—183)

1. A device of the character described, comprising a supporting frame formed of upper and lower and intermediate bows, cross-bars secured to the ends of said bows, a tie board connected to said cross-bars at the center thereof, and spacing said cross-bars at the ends and center of said tie

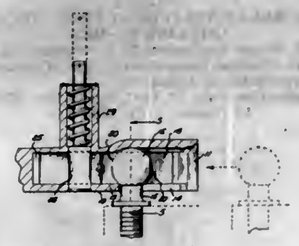
board, inner and outer slats secured to said bows in offset relation to each other, means for hingedly supporting said frame on a house, and side frames for supporting said frame in inclined relation with the house.



2,472,430
COLLAR
Ashley J. Logan, Waterville, Maine, assignor to C. F. Hathaway Co., Waterville, Maine, a corporation of Maine
Application August 28, 1947, Serial No. 771,926
4 Claims. (Cl. 2—132)

1. A collar of the character described comprising a band portion and a front fold, said front fold being formed by a front ply, a lining adjacent said front ply and of the same shape as said front ply, a rear ply of substantially the same shape as the front ply but having the side top parts thereof folding inwardly forming a hem which makes an angle with the top edge of the front ply, a pair of intermediate plies positioned between the lining and the rear ply, adjacent said rear ply, at the outer ends of said outer fold, each of said intermediate plies being about one quarter the length of the outer fold, a pair of intermediate triangular breaker strips positioned between said intermediate plies and the lining, and extending over the thinner portion, resulting from said inwardly folding of the rear ply, of the front fold, the lower and side edges of said plies and lining and the side edges of the triangular breaker strips being stitched together and a row of stitches passing through the top edges of the band, the lining, the front and intermediate plies, the triangular breaker strips and the central part of the top edge of the rear ply, a pair of parallel rows of stitches

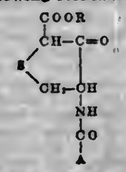
between the rear and intermediate plies, said rows of stitches terminating close to the lower corners of the outer fold and forming a pair of pockets adapted to receive stiffening members.



2,472,431
UNIVERSAL HEIGHT GAUGE ATTACHMENT
Mitchell M. Marcil, Springfield, Mass.
Application November 17, 1947, Serial No. 786,348
3 Claims. (Cl. 33—172)

3. A height gauge attachment for a dial indicator comprising parts hinged together and adapted to be connected to a horizontally extending bracket of a vertically disposed scale, means for locking the hinged parts at different angle positions thereon, a post extending from one of the parts in vertical relation thereto, a dial test indicator mounted on the post and a pointer device having a sleeve mounted in said last part in vertical relation thereto and in parallel relation to said post and said sleeve adapted to extend above and below the last mentioned part, and said pointer device comprising a rod slidably mounted in the sleeve, a cap fitted over the upper end of the sleeve and having an opening through which the rod is extended, said rod having an enlarged transversely extending hole therethrough, a pin extending through the rod and into the enlarged hole of the sleeve, said pin limiting the movement of the rod within the sleeve, and a spring surrounding the rod and reacting between the cap and the transverse pin in the rod, for coaction with the dial indicator.

2,472,432
TRAILER HITCH
Donald C. McCune and Harry Brooks, Cleveland, Ohio
Application December 31, 1946, Serial No. 719,494
4 Claims. (Cl. 280—33.17)

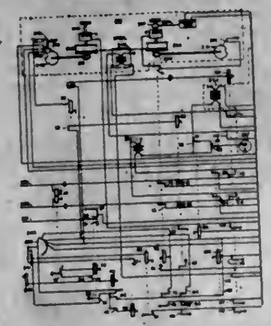


4. In combination with an upstanding vertical coupling member having an upper knob portion and a depending neck portion supporting said knob portion, a casing having an open end, said casing having a bottom wall provided with an inwardly extending slot to receive the neck portion of said vertical coupling member, a top wall carried by the casing in spaced relation to and overhanging said bottom wall thereby defining a socket within said casing, said upper knob portion supporting said top wall and thereby carrying the weight of the casing, coupling jaws mounted in said socket engageable with opposite sides of said knob for locking the vertical coupling member and casing together, pins pivotally securing said jaws in said socket, transverse abutment ledges carried by said casing in said socket, abutment shoulders carried by said jaws engaging said ledges when said jaws are in a knob-engaging position for bracing said jaws and relieving forward pulling strain from said pins, said shoulders extending laterally of said ledges and being movable into and out of con-

tact with said ledges as said jaws move to and from a knob-engaging position, said jaws having rearwardly diverging portions adapted to swing toward and away from each other as the jaws are opened and closed, and a vertical coupling pin carried by said casing and adapted to drop between said rearward portions of said jaws to automatically lock the jaws in a closed knob-engaging position.

2,472,433
BIOTIN INTERMEDIATE
Marjorie B. Moore and Edmond E. Moore, Waukegan, Ill., assignors to Abbott Laboratories, a corporation of Illinois
No Drawing. Application April 7, 1943, Serial No. 482,296
5 Claims. (Cl. 260—329)

1. A tetrahydrothiophene compound represented by the following formula:



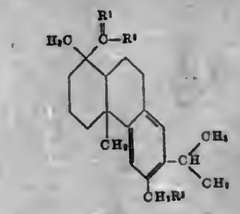
where the R is a lower alkyl group and A is selected from the group consisting of alkyl, aralkyl and aryl groups.

2,472,434
METHOD OF PREPARING VINYL ESTERS OF POLYCARBOXYLIC ACIDS
Alphonse Pechukas, Akron, Ohio, assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa., a corporation of Pennsylvania
No Drawing. Application August 24, 1946, Serial No. 692,923
7 Claims. (Cl. 260—485)

1. A method of preparing a vinyl ester, which comprises reacting a vinyl haloformate with a salt of a polycarboxylic acid, whereby to evolve carbon dioxide and to produce a vinyl ester of the polycarboxylic acid, and recovering said ester.

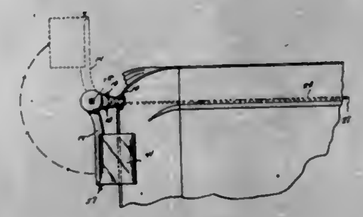
2,472,435
WIRE RECORDING SYSTEM
Edward S. Peterson, Elmwood Park, Ill., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application October 9, 1946, Serial No. 702,312
14 Claims. (Cl. 179—6)

1. In a telephone system, a line, a pair of wire recorders, means for establishing a connection between said line and one of said recorders, means responsive to the establishment of said connection for transmitting a message from said one recorder over said connection, means automatically operated only on termination of said message to operate the other of said recorders for the purpose of recording a message transmitted from said line, a second line, an initial starting point for said other recorder, means for connecting said second line to said other recorder, to operate said other recorder to transmit said recorded message over said second line, and to automatically reset said recorder to its initial starting point; said other recorder thereafter operated on receipt of further messages over either of said lines to automatically remove said first message on said other recorder.



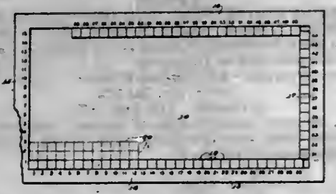
2,472,436
CONTAINER CAP
Dana Peterson, Newton, Mass.
Application June 16, 1947, Serial No. 755,374
1 Claim. (Cl. 215—43)

A container cap including a flat substantially rectangular body portion, end-to-end longitudinally diverging tongues depending from opposed sides thereof and formed integrally therewith, one of the tongues depending a greater distance than the other tongue, said cap open at one end at least for slidable advancement of the cap over the container mouth with the body portion positioned flat thereagainst, inwardly turned gripping edges on the tongues, proportioned for engagement by the threads of the threaded neck of a container, and means embodied in one of the gripping edges constituting a guide whereby to retain the cap in proper relation to the threaded neck during application or removal of the cap, said means being in the form of a shallow depression cut in said edge, the ends of said depression terminating a substantial distance from the ends of the gripping edge in which it is formed.



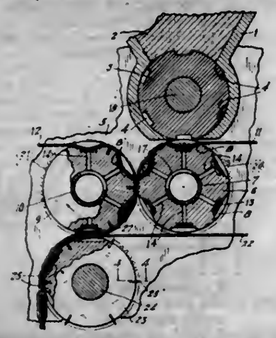
2,472,437
DEHYDROABIETIC ACID DERIVATIVES
Yolanda T. Pratt, Mount Rainier, Md., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 26, 1947, Serial No. 731,039
4 Claims. (Cl. 260—97)

1. As new compositions of matter, compounds derived from dehydroabietic acid having the following general formula:



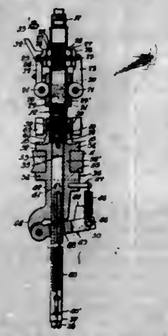
where R^1 is one of the group consisting of O and H_2; R^2 is one of the group consisting of OH, O-metal, O-alkyl and NH_2; and R^3 is one of the group consisting of Cl, Br, OH, SH, CN, SCN, COOH, COO-metal, OSO_3H, OSO_3-metal, NH_3X, NX_3, NX_3+, OX, in which X is an alkyl radical.

2,472,438
SWINGING AND ROTATING REFLECTING DEVICE FOR MOTOR VEHICLES
Voris V. Price, Brazil, Ind.
Application April 11, 1947, Serial No. 740,866
5 Claims. (Cl. 88—98)



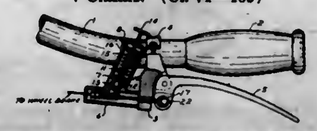
1. A device of the class described, comprising an arm adapted to be hinged to the front of a vehicle, a cylindrical recess in the end of the said arm, an inner cylindrical sleeve and an outer cylindrical sleeve adapted to nest within the said recess, each of the said sleeves being provided with a twisted diametral groove, the groove of one sleeve being in an opposed direction to that of the other sleeve, a diametral pin adapted to ride in the grooves of both sleeves, a mirror fixed to each sleeve, and a cable connected to the said pin, whereby a pull on the cable will swing the arm about its pivot and also move the pin to rotate the sleeves and their respective mirrors.

2,472,439
DEVICE FOR TEACHING ARITHMETIC
Alban E. Rogers, Swarthmore, Pa.
Application October 5, 1945, Serial No. 620,556
1 Claim. (Cl. 35—31)



A teaching device comprising a rectangular board, training pieces movable thereover, four raised portions each bordering a side of said board and providing shoulders at their inner edges for abutment by said training pieces, two of said raised portions each bearing a sequential set of numerals progressing equidistantly from each other and from the junction of said raised portions, the common zero of said sets being at said junction, and a series of numerals on the two remaining raised portions forming a sequential continuation of the numerals on one of said first two portions.

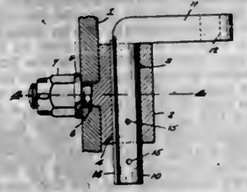
2,472,440
MACHINE FOR FABRICATING PACKAGES
Leroy L. Salfisberg, South Orange, N. J., assignor to Ivers-Lee Company, Newark, N. J., a corporation of Delaware
Application March 7, 1946, Serial No. 652,759
6 Claims. (Cl. 93—3)



1. A packaging machine, including two parallel rotatable sealing rolls to receive and press layers of packaging material between them for sealing such layers together, one of said rolls having a plurality of circumferentially spaced recesses opening through its periphery, means for connecting said recesses to a source of vacuum whereby a layer of porous packaging material passing around said roll will be drawn by suction into said recesses, means for rotating said rolls in opposite directions, and means for depositing predetermined quantities of a commodity on the zones of the exposed side of such a layer of packaging material that overlie said recesses, whereby said commodity quantities will be drawn and held upon said layer of packaging material by suction in the respective recesses and will be enclosed between said layers.

2,472,441
SHEET FEEDING
Frank R. Schmitt, Hollis, N. Y., assignor, by mesne assignments, to Aeroexx Corporation, New Bedford, Mass., a corporation of Massachusetts
Original application October 7, 1942, Serial No. 461,238. Divided and this application May 6, 1947, Serial No. 746,366
9 Claims. (Cl. 271—30)

1. In an automatic machine for handling resilient sheets stacked under compression, a magazine, a follower in said magazine, a suction head near the upper part of said magazine, means imparting to said head a fixed vertical stroke to engage the top sheet of the stack, clamp means normally urged laterally to grip the upper part of the stack within the magazine, and means correlated with the movement of said head for opening said clamp when the head enters the magazine and for releasing said clamp for reclosure thereof prior to removal of the head from the magazine.

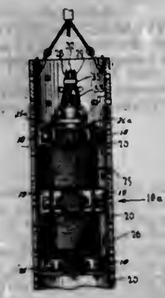


2,472,442
BRAKE LOCK
Theodore Schueler, Wood River, Ill.
Application April 25, 1947, Serial No. 743,759
7 Claims. (Cl. 74—489)

1. A lock for a hand operated brake lever comprising a bracket attached to the vehicle steering bar, a hand operated brake actuating lever pivotally connected to the bracket, a horizontally extending cylindrical housing mounted on the front of said bracket and having integrally formed therewith a substantially vertically extending cylindrical housing, the lower inner diameter of said vertical housing being reduced, a plunger mounted in said vertical housing having a shoulder slidable within the reduced portion of said housing, a spring surrounding said plunger and adapted to maintain said plunger in extended position, a detent integral with the lower

end of the plunger and normally positioned within the reduced portion of said vertical housing, a hollow rod attached to the said lever and extending into said horisontal housing, the forward end thereof being provided with a series of ratchets which are adapted to be engaged by the said detent when the plunger is depressed, and a brake operating cable extending through the rod and being operable by the operating lever.

2,472,443
DEAD LEVER FULCRUM
Harvey H. Shaffer, Berwick, Pa.
Application September 26, 1945, Serial No. 618,721
4 Claims. (Cl. 188—205)

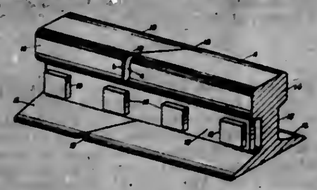


1. A dead lever fulcrum including a sleeve, means extending laterally from the sleeve for engagement with a bolster, a shank in the sleeve, said shank and sleeve having matching key-ways, means in the key-ways for holding the shank and sleeve against relative rotation, means within the shank and sleeve for holding the sleeve against longitudinal displacement, and a head on the shank.

2,472,444
PIPE
Edward E. Smatt, Lyndhurst, Ohio
Application July 11, 1945, Serial No. 604,375
1 Claim. (Cl. 131—202)

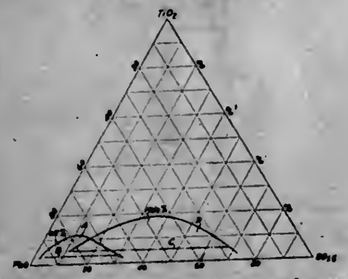
A smoking pipe comprising a bowl, a stem extending radially from the bowl near its bottom, said stem having an axial bore entering the end remote from the bowl and communicating with the interior of the bowl, said stem also having a pair of longitudinally spaced radial bores opening through the wall thereof and communicating with the axial bore, said radial bores extending in the direction of the open end of the bowl and along axes parallel with the longitudinal axis of the bowl, a plug in the axial bore of the stem between the radial bores, a block fixed to the stem, said block having a circular cylindrical chamber opening through one side of the block, said chamber being concentric about an axis which is spaced from the stem and lies along a plane midway between the radial bores, said block also having spaced parallel bores opening into the chamber and lying tangent thereto, said last named bores opening into the radial bores in the stem, a removable plug closing the open end of the chamber, a bit entering the open end of the axial bore and said bit having an axial bore extending therethrough and a radial bore which communicates with the radial bore in the stem remote from the bowl and a charge of filtering material removably contained in the chamber and extractable through the open end of the chamber when the plug is removed therefrom.

2,472,445
APPARATUS FOR TREATING OIL AND GAS BEARING STRATA
Severn D. Sprong, Monroe, N. Y.; Katharine Sprong Osborn (Katharine W. Sprong), executrix of Severn D. Sprong, deceased, assignor, by direct and mesne assignments, to Thermacter Company, New York, N. Y., a corporation of Delaware
Application February 2, 1945, Serial No. 575,859
1 Claim. (Cl. 219—33)



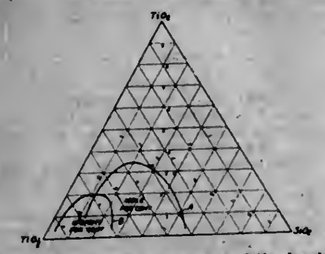
Means for heating sub-surface strata for the release of oil and other petroliferous material contained therein, said means comprising: electromagnetic heating means provided with a vertically extending central laminated core and a plurality of mutually vertically spaced sets of pole pieces, each set comprising a plurality of mutually horizontally spaced pole pieces and electrical windings surrounding said central core the lateral periphery of which is materially spaced from the lateral faces of said pole pieces whereby to provide passages through said heating element about said windings and between said pole pieces; in combination with a tubular member of electromagnetic conducting material disposed about said heating element in operative juxtaposition with the lateral faces of its said plural pole pieces, said tubular member being provided with perforations; and means for suspending said heating element within a bore leading to the sub-surface strata in close adjacency to said tubular member and the strata to be treated.

2,472,446
RAILWAY RAIL JOINT
George A. Standfast, Jefferson City, Mo.
Application September 19, 1947, Serial No. 775,100
1 Claim. (Cl. 238—230)



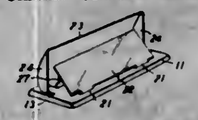
In a scarf-joint, railway rail comprising a flange, a web and a rail head having upper and lower rounded edges, said rail having its end surfaces disposed in respective planes substantially perpendicular to the bottom surface of said flange and inclined substantially 45° to the longitudinal center line of the rail, and said rail head having at each end thereof an acute toe and having on its outer side at the end of each toe a surface inclined upwardly and inwardly from the bottom curved edge of said side to a location disposed

inwardly of the adjacent upper curved edge and inclined outwardly from the end of said toe to



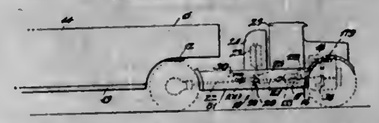
the surface of said side at a location spaced from the end of said toe.

2,472,447
LEAD-TITANIUM-BORATE GLASS
Kuan-Han Sun, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application January 29, 1946, Serial No. 644,181
2 Claims. (Cl. 106—47)



2. Optical glass having an n_D value greater than 2.0 and consisting of the fused heat reaction product of a batch consisting of titanium oxide, 12 parts by weight; lead oxide, 78 parts; and boron oxide, 10 parts.

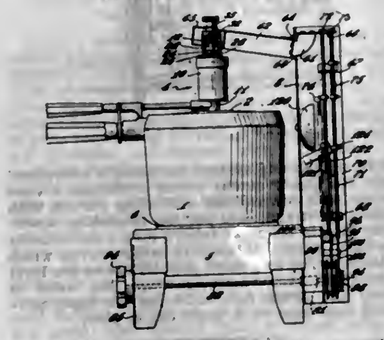
2,472,448
THALLIUM-SILICATE GLASS
Kuan-Han Sun, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application August 9, 1946, Serial No. 689,528
4 Claims. (Cl. 106—52)



1. An optical glass consisting of the heat-reaction product of a batch consisting of compatible oxides, at least ninety per cent by weight of which consists of silica, thallous oxide, and titanium dioxide.

2,472,449
DISPLAY BOX
Robert Van Reesa, New York, N. Y., assignor to J. Makowsky Corporation, a corporation of New York
Application March 25, 1946, Serial No. 656,855
3 Claims. (Cl. 206—45.13)

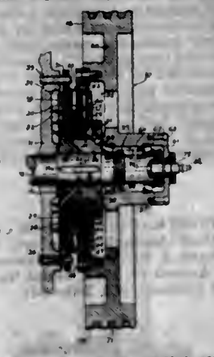
6. In a display box, a hollow base member, having a top provided with a cut-out portion toward its rear including forwardly extending narrow slots near the ends of the top and forwardly extending wide slots nearer the center than the narrow slots, a display member hinged at its front to the top and normally overlying the wide slots, a cover member pivoted on the top the pivot axis being above the top of the base member and forward of the rear of the cover member a distance greater than the height from the top of the base member, downwardly extending side walls to the cover member so that the side walls enter the narrow slots when the cover is turned on its pivots, and forwardly extending lugs on the cover passing through the wide slots and lifting the rear of the display plate when the cover is turned on its pivot.



2,472,450
MOTOR VEHICLE
Horace R. Van Vleck, Upper Montclair, N. J.
Application February 14, 1946, Serial No. 647,583
7 Claims. (Cl. 180—53)

6. In a motor vehicle having sets of front and rear wheels, an engine, a propeller shaft for transmitting power from the engine including a drive section and a driven section, driving means operatively connecting the driven section of the propeller shaft to one of said sets of wheels, a clutch for connecting the engine to the drive section of the propeller shaft and disconnecting it therefrom, means for selectively connecting and disconnecting the drive and driven sections of the propeller shaft, a carburetor for supplying a gaseous fuel mixture to the engine, a throttle valve for normally controlling the supply of gaseous fuel mixture from the carburetor to the engine and a governor for normally preventing operation of the engine above a predetermined speed; the improvement which comprises a power take-off, means for selectively connecting said power take-off to and disconnecting it from the drive section of the propeller shaft, a generator supported by the vehicle, means operatively connecting the power take-off to the generator, a second throttle valve for controlling the supply of gaseous fuel mixture from the carburetor to the engine independently of said first-mentioned throttle valve, means normally maintaining said second throttle valve in a position inoperative to throttle the engine, a second governor, means operatively connecting the power take-off to the second governor for operating the same, and means operatively connecting the second governor to the second throttle valve, the action of

said last-named connecting means being so controlled by the second governor that when the power take-off is operatively connected to the drive section of the propeller shaft and the engine is operated above a predetermined speed above its idling speed, the second governor operates the second throttle valve to reduce the gaseous fuel mixture supplied to the engine, whereby when the drive and driven sections of the propeller shaft are disconnected and the power take-off is operatively connected to the drive section of the propeller shaft and the drive section of the propeller shaft is operatively connected to the engine through the clutch, the engine may be operated at a substantially constant and predetermined speed above its idling speed and below the maximum speed permitted by the first-named governor to assure the generation of a substantially constant and predetermined amount of electrical current.

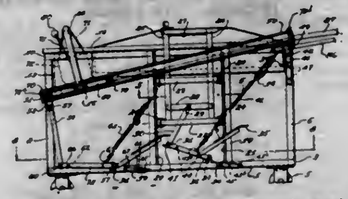


2,472,451
PRESSURE COOKER
Lyman F. Whitney, Cambridge, Mass., assignor, by mesne assignments, to Stator Corporation, Providence, R. I., a corporation of Rhode Island
Application April 12, 1945, Serial No. 587,933
34 Claims. (Cl. 219—43)

1. Pressure food cooking apparatus comprising an enclosed vessel having an opening, a control head associated with said opening and including a heat-responsive member, heating means arranged to apply heat to said vessel, timing mechanism including time setting means for governing the operation of said heating means, and control mechanism associated with said heat-responsive member so that when thermal conditions within said vessel rise above a predetermined point, said control mechanism operates to diminish said heating means.

2,472,452
AIR ACTUATED CLUTCH AND BRAKE DEVICE
Reuben E. Wissman, Minster, Ohio, assignor to The Minster Machine Company, Minster, Ohio, a corporation of Ohio
Application April 9, 1945, Serial No. 587,296
10 Claims. (Cl. 192—18)

1. In the combination of a press having a drive shaft overhanging the press frame unsupported on the outward end thereof carrying a flywheel thereon and a combination brake and clutch on the drive shaft between the press frame and the flywheel, a brake plate carried on said shaft and disposed closely adjacent the frame of the press, a single brake ring adjacent said brake plate and supported by the frame of the press, a clutch plate supported by said shaft, a single clutch ring adjacent said clutch plate and carried by the flywheel of the press, a disc-type common actuating member carried by said shaft between said rings for alternate engagement of either thereof, fluid operated means carried by said



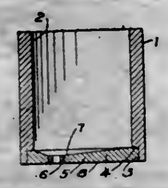
brake plate in substantial radial alignment with said brake ring and connected with said actuating member to engage the clutch, and spring means between said clutch plate and said actuating member within the inner periphery of said clutch ring and between the radial planes of said rings for disengaging the clutch and engaging the brake.

2,472,453
STREPTOMYCIN COMPOSITION OF REDUCED TOXICITY
Frank J. Welf, Westfield, and Max Tishler, Rahway, N. J., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application July 26, 1946, Serial No. 686,480
1 Claim. (Cl. 167—65)

A streptomycin preparation of reduced toxicity comprising, as an amorphous powder, an unreacted mixture of streptomycin with 8 to 16% of its weight of calcium chloride.

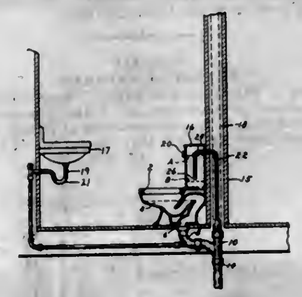
2,472,454
GLAZE APPLYING MACHINE
Virgil E. Ackles, Los Angeles, Calif., assignor to Doughnut Corporation of America, New York, N. Y., a corporation of New York
Application January 13, 1947, Serial No. 721,815
1 Claim. (Cl. 91—2)

In a glazing machine for doughnuts and the like embodying a frame structure, a pan on said structure for containing glazing material, a vertically movable tray supporting carriage for mov-



ing a tray in and out of the glazing material in said pan; a tiltable track, a carriage on said track and means on said carriage for pouring a glazing material on a batch of doughnuts or the like floating on the material in said pan; toggle members connected to said tray supporting carriage, a foot pedal for actuating said toggle members to raise and lower said carriage, a locking pedal for releasably engaging said foot pedal for holding said tray supporting carriage in an elevated position, spring means for cushioning downward movement of said tray supporting carriage, toggle members connected to said tiltable track, a foot lever for actuating said toggle members to raise and lower said track, a releasable locking pedal for engaging said last named foot lever for holding said track in its elevated position and spring means for cushioning downward movement of said track.

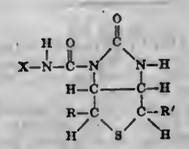
2,472,455
DUAL GRIP CONTRACTIBLE HOSE COUPLING
Herman Kimball Ansingh, Beaufort, N. C., assignor to Frank J. Raybould, Lakewood, Ohio
Application August 14, 1946, Serial No. 690,355
3 Claims. (Cl. 285—86)



1. A hose coupling comprising a slotted cylindrical collet bushing which is adapted to fit around a flexible hose with the end of the hose projecting a short distance beyond the end of the bushing, a straight screw thread formed on the outer wall of said bushing, a nut having a tapered thread on the interior thereof and adapted to be screwed onto said bushing, an insert permanently secured to said nut and movable therewith and comprising an elongated tapered portion and a conical cam section, said nut and said insert cooperating with each other to simultaneously expand the interior of the hose radially outwardly and to compress the exterior of the hose radially inwardly and to compact the end of the hose between the end of the bushing and the nut, as said nut is screwed onto said bushing.

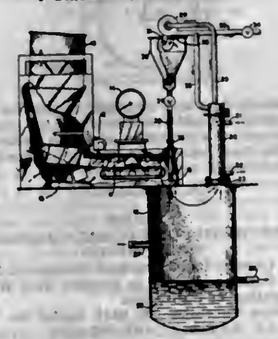
2,472,456
CRUCIBLE AND METHOD OF MAKING CRUCIBLES
Robert J. Anicetti, Beverly, Mass., assignor to the United States of America as represented by the United States Atomic Energy Commission
Application March 20, 1945, Serial No. 583,769
19 Claims. (Cl. 263—48)

16. A crucible comprising a separate tubular graphite side wall member having a portion of the inner wall adjacent one end machined to a larger inner dimension and forming a shoulder member, a separate graphite bottom member comprising a disc-like member the periphery of which is machined, with the bottom member pressed into the side wall member in engagement with the shoulder member and with the machined periphery of the bottom member securely engaging the machined portion of the inner wall of the side wall member with a machine fit.



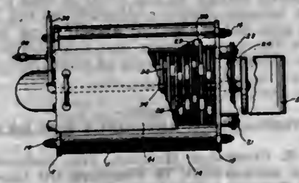
2,472,457
VENT SYSTEM FOR SANITARY TOILETS
Isaac E. Ash, Athens, Ohio
Application October 4, 1948, Serial No. 52,715
4 Claims. (Cl. 4—211)

2. In a plumbing system including a toilet reservoir, the improvement which comprises a vent pipe having a downwardly extending portion with an open lower end, said portion extending downwardly in said reservoir from a level substantially even with the level of water in said reservoir when the latter is full to a point slightly above the level of water in said reservoir when the toilet is flushed, and means for connecting the upper portion of said pipe to a main drain pipe.



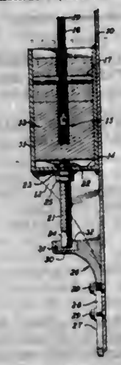
2,472,458
IMIDAZOLIDO THIOPHANES AND METHODS OF PREPARING SAME
Bernard R. Baker, Nanuet, and Merle V. Querry, Pearl River, N. Y., assignors, by mesne assignments, to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application August 14, 1945, Serial No. 610,872
11 Claims. (Cl. 260—309)

1. Chemical compounds having the general formula:



in which X is a member of the group consisting of hydrogen, alkyl and aryl radicals, and R and R' are members of the group consisting of hydrogen, N-alkyl carbamidoalkyl radicals and N-aryl carbamidoalkyl radicals.

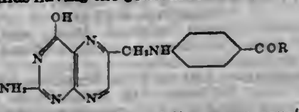
2,472,459
METHOD AND APPARATUS FOR FEEDING ADSORBENT MATERIALS TO STREAMS OF LIQUID HYDROCARBONS
Daniel B. Banks, Drexel Hill, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
Application May 16, 1947, Serial No. 747,290
9 Claims. (Cl. 196—147)



1. In a process for removing impurities from liquid hydrocarbons by the continuous-contact filtration process wherein predetermined quantities of finely divided particles of adsorbent material are added continuously to a body of preheated liquid hydrocarbons in a treating tank and vapors, containing entrained particles of adsorbent material, are formed within the tank: the steps of removing said vapors from the tank to a heating zone removed from the zone of admission of the adsorbent material to the tank and therein maintaining said vapors in vapor phase; conducting the vapors so heated in the heating zone to a separating zone and therein separating, from the vapors, the entrained adsorbent particles; returning said separated particles to the treating tank; and returning vapors, from which said particles have been so separated, to the heating zone and therein mixing them with the vapors being removed from the tank.

2,472,460
VEGETABLE PEELER
Harry R. Banks, Creston, Iowa, assignor of one-half to C. A. Overturf, Algonac, Mich.
Application February 4, 1946, Serial No. 645,347
3 Claims. (Cl. 146—49)

1. A vegetable peeler comprising a substantially cylindrical container, means mounting the container with its axis horizontal, a series of shafts the opposite ends of which are journaled in the end walls of the container, said shafts being parallel and forming a cradle-like support, each shaft having knockers and pulleys alternately mounted thereon, drive means for rotating all the shafts, knockers and pulleys about their own respective axes, axially aligned annular members having peripheries resting upon and driven by the pulleys on the shafts, said annular members forming a conduit through which vegetables pass from one end to the other of the container, and the knockers extending radially beyond the peripheries of the pulleys and into the conduit between the annular members to peel the vegetables by impact thereon.



2,472,461
CHAIN SUPPORT
Luther A. Blackburn, Lynwood, Calif.
Application September 13, 1946, Serial No. 696,665
4 Claims. (Cl. 74—242.14)

1. In a device for supporting an endless chain, a stationary support, a casing, having an open end, secured to said support, a pair of pillow blocks, means to hold said pillow blocks in spaced relationship within said casing, an adjusting screw threaded through the end of said casing opposite to the open end thereof and bearing upon said means to vary the position of the pillow blocks, and a sprocket journalled between said pillow blocks.

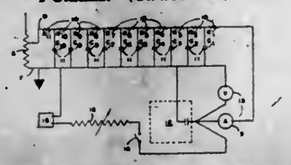
2,472,462
PROCESS OF PREPARING PTEROIC ACID AND AMINO ACID AMIDES THEREOF
James H. Boothe, Pearl River, N. Y., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application May 3, 1947, Serial No. 745,719
7 Claims. (Cl. 260—251)

1. A method which comprises reacting together 2,4,5-triamino-6-hydroxy-pyrimidine and a member of the group consisting of N(acyl)-N(beta-dihalo - gamma - halopropyl) para aminobenzoic acids and amino acid amides thereof, whereby compounds having the general formula,

in which R is a member of the group consisting of a hydroxyl radical and an amino acid radical, are produced and recovered.

2,472,463
THE DISTILLATION OF A MIXTURE OF HYDROCARBONS

Richard C. Brandon, Elizabeth, and Minor C. K. Jones, Mountainside, N. J., assignors to Standard Oil Development Company, a corporation of Delaware



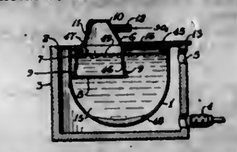
No Drawing. Application May 5, 1945, Serial No. 592,272
4 Claims. (Cl. 196—35)

1. A method of distilling cracked gasoline which consists of the steps of mixing gasoline containing gum forming unsaturated hydrocarbons with about one-fourth its volume of petroleum phenols and an acid catalyst selected from the class consisting of sulfuric acid and aromatic sulfonic acid and recovering overhead a gasoline of substantially greater storage stability.

2,472,464
WELL ANALYZER

William A. Bruce, Tulsa, Okla., assignor to Standard Oil Development Company, a corporation of Delaware

Application April 19, 1945, Serial No. 589,203
4 Claims. (Cl. 235—61)



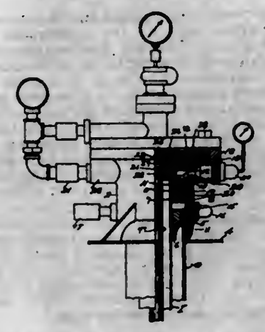
1. A method for studying the behavior of a well producing a fluid from a subterranean formation, which comprises establishing an electrical circuit having a source of power to represent formation pressure, resistances to represent total resistance to flow of fluid through the formation for a predetermined distance around the well, condensers to represent the fluid capacitance of the formation for said distance around the well, a condenser to represent fluid capacitance of the well itself, and current draw-off means to represent the production of fluid from the well, determining the variations of bottom hole pressure in the well with time when the well is shut in after flowing, adjusting the various elements of the electrical circuit to give a variation in voltage with time at the point in the electrical counterpart corresponding to the bottom of the bore hole corresponding to the variations of bottom hole pressure in the well with time when the well is shut in after flowing, and thereafter introducing into the electrical circuit electrical changes which correspond to projected changes in operation of the well, and measuring in the circuit the effect of such projected changes on the other factors involved in the production of fluid from the well.

2,472,465
APPARATUS FOR THE TREATMENT OF MOLTEN METALS

Robert C. Cornell, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

Application July 26, 1945, Serial No. 607,182
2 Claims. (Cl. 266—34)

1. An apparatus for preparing magnesium and its alloys for casting comprising an open top melting vessel in a furnace setting adapted to hold a body of the molten metal at casting temperature, with a flux on the surface of the molten metal, said vessel having a rim resting on a furnace setting, a flux shield supported on the rim and arranged to isolate a portion of the surface of the molten metal so as to exclude flux therefrom, a



baffle attached to and disposed across the bottom of the shield, a hood over the shield for maintaining a protective atmosphere over the molten metal under the hood, said hood having an opening for the admission of a ladle.

2,472,466
LANDING HEAD FOR PLURAL CASINGS AND OIL TUBINGS

Ewell C. Counts, La Habra, and Norman H. Le Roy, Brea, Calif., assignors to Shaffer Tool Works, a corporation of California

Application November 10, 1947, Serial No. 785,112
5 Claims. (Cl. 285—22)

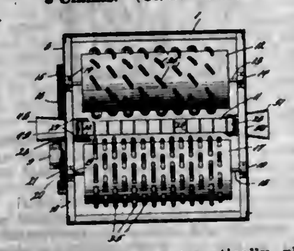
1. In a well casing head, in combination, an outer casing, a cylindrical body member mounted on the outer casing and having a central bore, longitudinally spaced, downwardly and inwardly inclined step projections formed on the face of the body bore, an inner casing, spacing and packing means between the said inner casing and the outer casing resting on the lower of said projections, a tubular device concentric in the inner casing, and upper packing and spacing means between the inner casing and said device and directly resting on the upper of said projections.

2,472,467
FRICTION LINING ASSEMBLY FOR BRAKE BANDS

Robert R. Crookston, Houston, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J., a corporation of Delaware

Application August 19, 1946, Serial No. 691,484
8 Claims. (Cl. 188—249)

1. An assembly adapted for attachment to a brake band defining an arcuate inner surface and spaced openings extending through the band substantially normal to said surface, comprising, in combination, an arcuate sheet member having a width coinciding with that of the brake band, its outer surface having a curvature corresponding to that of the inner surface of the brake band, dowel members secured to the outer surface of the sheet member and normal thereto, said dowels defining threaded passages and a friction lining member

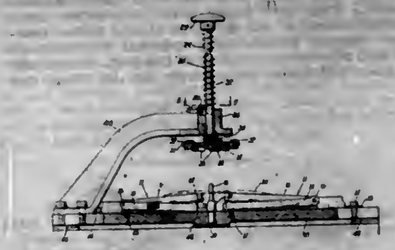


having an area coinciding with that of the inner surface of the sheet member and defining spaced perforations coinciding with the spacing of the threaded passages defined by the dowel members, and means arranged to engage with the threaded passages of the dowel members for securing the friction lining to the sheet member.

2,472,468
MACHINE FOR AUTOMATICALLY REMOVING THE FEATHERS FROM FOWL

Emmet B. Digby, Atlanta, Ga.

Application February 2, 1946, Serial No. 646,360
8 Claims. (Cl. 17—11.1)



1. In a machine for automatically plucking feathers from fowl, two spaced longitudinally extending rotary members, an endless conveyor mounted in the space between the said rotary members and travelling longitudinally of the said rotary members, each rotary member provided on its outer surface with a plurality of elastic frictional means, the said elastic frictional means each provided with a plurality of transversely extending ridges, the said elastic means on one of the rotary members extending at an angle to the axis of the rotation of said rotary members, the said elastic frictional means being adapted to rotate the fowl about its longitudinal axis, and force the opposite ends of the fowl against the said frictional members and thereby remove the feathers from said fowl, and means for operating the said rotary members in a like direction and driving the endless conveyor.

2,472,469
STAPLE SETTING MACHINE

Thomas F. Didato, Middlesex, N. J.

Application February 1, 1947, Serial No. 725,914
7 Claims. (Cl. 1—3)

1. In a stapling machine, in combination, a horizontal support, a plurality of radially disposed magazine stapling heads carried by said support, and a plurality of staple clinchers moveable vertically with respect to said support to simultaneously clinch a plurality of staples at the stapling heads.

2,472,470
PROCESS FOR THE PREPARATION OF MERCAPTANS

Lawrence T. Eby, Roselle, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application August 4, 1945, Serial No. 609,046
10 Claims. (Cl. 260—609)

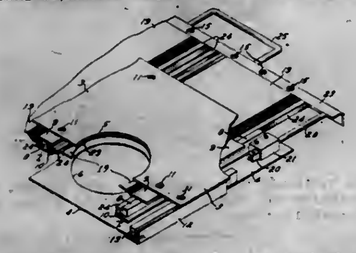
4. A process of making mercaptans having the general formula, RSH, wherein R represents a hydrocarbon group containing an alkyl radical which comprises reacting hydrogen sulfide at room temperature in the presence of a Friedel-Crafts type catalyst with an organic halide of the formula, R_1X, where R_1 represents an alkyl radical and X represents a halogen atom.

2,472,471
PROCESS FOR THE PREPARATION OF THIOETHERS

Lawrence T. Eby, Roselle, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application August 4, 1945, Serial No. 609,041
9 Claims. (Cl. 260—609)

1. A process of making thioether compounds having the general formula R—S—R', wherein R and R' represent hydrocarbon groups containing an alkyl radical, which comprises reacting a mercaptan of the formula RSH with an organic halide of the formula R'X, X representing a halogen atom, in the presence of a Friedel-Crafts type catalyst at a temperature within the range of —20° C. and 200° C.



2,472,472
LOADING TRAY

Carl E. Ellsworth, Louisville, Ky., assignor to The Girdler Corporation, Louisville, Ky., a corporation of Delaware

Application April 22, 1946, Serial No. 664,028
10 Claims. (Cl. 18—1)

9. For use with a high-frequency heating unit, a portable loading tray electrode removable therefrom for loading and unloading of dielectric objects to be heated and comprising an upper plate having openings therethrough to receive and space said objects, a lower plate slidable with respect to said upper plate and having openings therethrough, which when aligned with the openings of the upper plate provide for discharge of

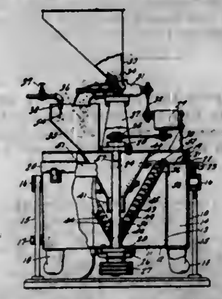
said objects, said lower plate frictionally engaging said unit during insertion into and withdrawal of the tray from said unit and being slightly spaced from said upper plate to provide, upon misalignment of the openings of said plates, shallow recesses preluding accidental displacement of said objects in handling of the tray, and handle means connected respectively to the front end

of said lower plate and to the rear end of said upper plate for accessibility of only one of them when the tray is in said unit in avoidance of accidental displacement of said objects and for accessibility of both of them when the tray is out of said unit for handling of the tray and for effecting relative sliding movements of said plates in loading and unloading of the tray.

2,472,473
CONVERSION OF HYDROSULFIDES TO NEUTRAL SULFUR SUBSTANCES
Lloyd C. Fetterly, Long Beach, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application December 16, 1946, Serial No. 716,636
15 Claims. (Cl. 23—224)

4. A process for converting aliphatic hydrocarbon hydrosulfides to aliphatic hydrocarbon disulfides comprising contacting said aliphatic hydrocarbon hydrosulfides in an aqueous alkaline solution of an alkali metal alkaline compound with an oxygen-containing gas in the presence of from about 0.01% to about 5% by weight based on the weight of said solution of an amino-hydroxy-nitrobenzene oxidation catalyst containing attached to the benzene nucleus three polar groups selected from the class of groups consisting of amino and hydroxy groups.

5. A process for converting hydrocarbon hydrosulfides to neutral sulfur substances comprising contacting said hydrocarbon hydrosulfides in an aqueous alkaline solution with an oxygen-containing gas in the presence of a small amount of an amino-hydroxy-nitrobenzene oxidation catalyst containing attached to the benzene nucleus three polar groups selected from the class of groups consisting of amino and hydroxy groups.

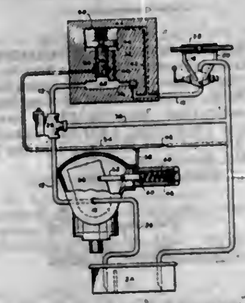


2,472,474
LATCH
Charles B. Gash, Oak Park, Ill.
Original application August 26, 1944, Serial No. 551,371. Divided and this application September 7, 1945, Serial No. 615,002
2 Claims. (Cl. 292—120)

2. Latch means for simultaneously holding a first member against rectilineal movement and a second member against swinging movement on an axis spaced from and substantially parallel to said first member with the axis being arranged normal to the direction of movement of said first member, said latch means comprising a lever, a pivotal mounting for said lever between said members, elements of an interlocked connection on one end of said lever and said first member, elements of another interlocked connection on

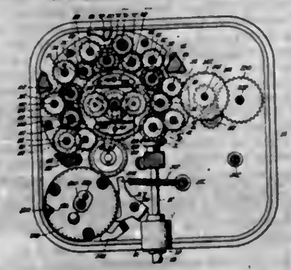
the other end of said lever and said second member, and means associated with said pivotal mounting for rotating said lever to simultaneously make and break said interlocked connections.

2,472,475
CENTRIFUGAL AMALGAMATOR
Tolbert Hamilton, Oakland, Calif.
Application June 21, 1946, Serial No. 676,279
7 Claims. (Cl. 209—199)



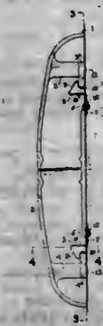
1. A concentrating and amalgamating mill comprising; a bowl-type spinner operating on a vertical axis and means for driving said spinner; said spinner having a series of concentric riffles extending throughout its height interiorly thereof; and an intake for the lower central portion of the spinner and means for intercepting discharge from the top of the spinner; said spinner being of inverted conical form for gradually increasing the centrifugal force as material advances upwardly toward the point of discharge; said riffles being L-shaped in cross-section with the leg of each riffle extending inwardly diagonally upward at right-angles to the inside surface of the spinner and with the head of each riffle being directed upwardly parallel to the inside surface of the spinner to form a rectangular pocket open between the top of the head and the bottom of the next superposed riffle to cause violent eddies within the spaces between the riffles, and with the diagonal arrangement of the legs of the riffles increasing the contact area of mercury in the pockets to a maximum in excess of the area of the spinner under centrifugal action.

2,472,476
ANTACID COMPOSITION
Leo L. Hardt, Chicago, Ill., assignor to Hardt Foundation, a nonprofit corporation of Illinois
No Drawing. Application March 15, 1948, Serial No. 15,047
5 Claims. (Cl. 167—55)



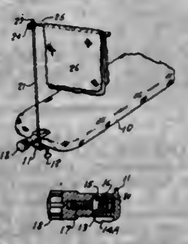
1. A pharmaceutical composition for the treatment of peptic ulcer comprising a mixture of animal mucin from 2% to 90% by weight, aluminum hydroxide gel from 10% to 95% and magnesium trisilicate from 0 to 85%.

2,472,477
VOLUME CONTROL SYSTEM FOR PUMPS
Ferris T. Harrington, Detroit, and James Robinson, Huntington Woods, Mich., assignors to Vickers Incorporated, Detroit, Mich., a corporation of Michigan
Application September 13, 1946, Serial No. 696,864
13 Claims. (Cl. 60—52)



12. A speed governor for a hydraulic transmission employing a variable displacement pump hydraulically connected to a fixed displacement constant speed motor, comprising a motor circuit, a flow control and relief valve in the motor circuit, a control conduit connected to the relief valve for receiving excess pressure fluid, a restriction in the control conduit, and a pressure actuated pump compensator connected to the control conduit at a point ahead of the restriction for varying the pump displacement.

2,472,478
VARIATING MECHANISM
Sherwood Hinds, Columbia City, Ind., assignor to The Wayne Pump Company, Fort Wayne, Ind., a corporation of Maryland
Application December 2, 1944, Serial No. 566,336
26 Claims. (Cl. 74—353)



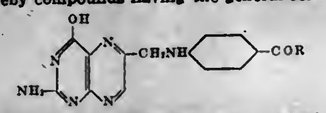
1. In variating mechanism, the combination of a driving shaft, output means, drive shafts arranged around said output means, operative connections between said driving and drive shafts, selected gears on certain of said drive shafts, selecting gears movable to selectively connect said selected gears to said output means, said output means being adapted to operate driven means in accordance with the rotation of the selected of the selected gears, stop means for preventing rotation of said selecting gears when engaged thereby, setting means for moving said selecting gears to mesh with the selected of the selected gears or to engage said stop means, said setting means including a movable member for each of said selecting gears, and means associated with one of said movable members for preventing operation of said variating mechanism unless each of said selecting gears is operatively connected with one of said selected gears, or to said stop.

2,472,479
HANDLE MOUNTING
John G. Hoff, Mansfield, Ohio, assignor to The Tappan Stove Company, Mansfield, Ohio, a corporation of Ohio
Application June 12, 1946, Serial No. 676,468
5 Claims. (Cl. 16—114)

1. In a mounting for detachably securing a handle to a door panel, said handle having a pair of spaced opposed lugs adapted to engage the door panel and each of said lugs having a boss adapted to project through a complementary aperture in the door panel, a pair of spaced clips secured to the door panel, each of said clips having a free end which is adapted to engage one of said lugs and resiliently hold it against said panel.

2,472,480
CLOTHES RACK
John Huhn, Jr., Detroit, Mich.
Application November 22, 1946, Serial No. 711,594
1 Claim. (Cl. 211—86)

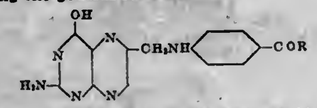
A rack for ironed articles consisting of a C-clamp adapted to be fixed to an ironing board, a cylindrical hollow boss on said clamp, a plug slidable therein, said boss and plug being pro-



vided with registering openings constituting a passage therethrough, an arm having a portion adapted to enter said passage, said arm normally extending vertically, and having a laterally extending branch, and means for moving relatively said plug and boss whereby to fix said arm portion against movement in said passage.

2,472,481
METHOD OF PREPARING PTERINS
Martin E. Hultquist and Doris R. Seeger, Bound Brook, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application May 29, 1947, Serial No. 751,464
6 Claims. (Cl. 260—251)

1. A method which comprises reacting together 2,4,5-triamino-6-hydroxypyrimidine, an amide of para-aminobensoic acid and a compound having the formula:



in which X is a member of the group consisting of hydrogen and halogen, one of which is halogen, whereby compounds having the general formula,

in which R is a substituted amino radical, are produced and recovered.

2,472,482
PROCESS OF PREPARING SUBSTITUTED PTERINS
Martin E. Hultquist, Bound Brook, and Paul Franklin Dreisbach, Somerville, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application October 10, 1947, Serial No. 779,204
6 Claims. (Cl. 260—251)

6. A method which comprises reacting together 2,4,5-triamino-6-hydroxypyrimidine, a 1,1-dihalo-2,3-epoxypropane and an amino acid amide of para-amino-benzoic acid whereby compounds having the general formula:

in which R is a radical of the amino acid being attached to the carbonyl group by an amide linkage, are produced and recovered.

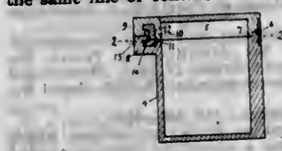
2,472,483
CATHETER-TYPE INSTRUMENT
Louis H. Krippendorf, White Plains, N. Y., assignor to American Catheter Corporation, Port Chester, N. Y., a corporation of New York
Original application May 5, 1944, Serial No. 534,207, now Patent No. 2,437,542, dated March 9, 1948. Divided and this application December 10, 1947, Serial No. 790,818
2 Claims. (Cl. 138—49)

1. In an elongated flexible catheter-type instrument, a fabric base formed of intertwined threads, the threads in one region of said base being of the same material as, but of appreciably lesser calibre than, those in a longitudinally-adjacent region thereof, the flexibilities of the corresponding sections of the instrument being correspondingly affected.

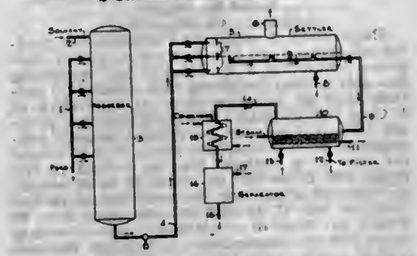
2,472,484
CATHETER-TYPE INSTRUMENT
Louis H. Krippendorf, White Plains, N. Y., assignor to American Catheter Corporation, Port Chester, N. Y., a corporation of New York
Original application May 5, 1944, Serial No. 534,207, now Patent No. 2,437,542, dated March 9, 1948. Divided and this application December 10, 1947, Serial No. 790,819
4 Claims. (Cl. 138—49)

1. In an elongated flexible catheter-type instrument, a fabric base formed of intertwined threads, the threads in one region of said base being of the same material as, but of appreciably lesser calibre than, those in a longitudinally-adjacent region thereof, the flexibilities of the corresponding sections of the instrument being correspondingly affected.

2,472,485
CATHETER-TYPE INSTRUMENT
Louis H. Krippendorf, White Plains, N. Y., assignor to American Catheter Corporation, Port Chester, N. Y., a corporation of New York
Original application May 5, 1944, Serial No. 534,207, now Patent No. 2,437,542, dated March 9, 1948. Divided and this application December 10, 1947, Serial No. 790,820
2 Claims. (Cl. 138—49)



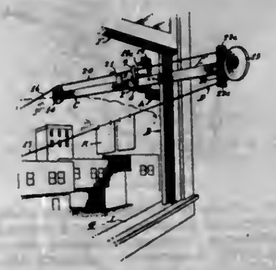
1. In an elongated flexible catheter-type instrument, an initially limp fabric base impregnated with a flexible stiffening medium and coated with a flexible varnish, the varnish which coats one region of said base being of appreciably greater flexibility than that which coats a longitudinally-adjacent region thereof, the flexibilities of the corresponding sections of the instrument being correspondingly affected.



2,472,486
LOCKING MEANS FOR CASES, CONTAINERS, AND THE LIKE
George Levinson, New York, N. Y.
Application May 9, 1945, Serial No. 592,872
5 Claims. (Cl. 217—57)

1. A container comprising a hollow body with an open side, a cover adapted for closing and

opening said body, said body and said cover contacting each other in closed position with surfaces positioned in a plane parallel to said open side, said surfaces having grooves extending from the same line of contact in a direction perpendicular to said plane, said grooves having inner extensions directed angularly to said perpendicular direction, and a bar slidably fitting said grooves and their extensions and passing through said contacting surfaces in a direction perpendicular to said plane.

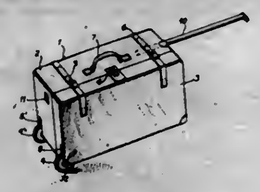


2,472,487
BUTADIENE EXTRACTION
John B. Lovell, Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware
Application March 29, 1946, Serial No. 658,208
3 Claims. (Cl. 260—681.5)

1. In a process for extracting a diolefin from a mixture of hydrocarbons containing a diolefin with a cuprous salt solution, the steps which comprise contacting a liquid mixture of hydrocarbons containing the diolefin with cuprous salt solution, passing the mixture of hydrocarbons and cuprous salt solution to a settler where separate layers of the mixture of hydrocarbons and the cuprous salt solution are formed and withdrawing from the interface of the mixture of hydrocarbons and the cuprous salt solution a portion of said solution, thereby removing substances having a tendency to promote foaming and emulsification.

2,472,488
WINDOW CLOTHESLINE SUPPORT
Robert P. McNaught, San Francisco, Calif.
Application December 10, 1946, Serial No. 715,242
5 Claims. (Cl. 211—119.08)

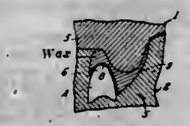
2. In a window clothes-line support; a bracket adapted to be secured to the exterior of a window frame; an arm pivoted intermediate of its length to the bracket; the arm normally being arranged in substantially upright position on the outside of a window and being swingable toward a horizontal position to move one end thereof through a window opening; pulleys mounted on the arm near the ends thereof and adapted to have a clothes-line trained thereover; a fixed jaw extending upwardly from the bracket; and a second jaw secured to the arm and horizontally spaced outward of the pivot when the arm is moved toward horizontal, the portion of the clothes-line disposed between the pulleys being guided between the jaws; the jaws being positioned and coacting with one another to clamp the clothes-line therebetween when the arm occupies a substantially upright position and to free their grip on the clothes-line upon moving the arm toward a horizontal position.



2,472,489
PREPARATION OF CLAY CATALYSTS
Jerry A. Pierce, Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application October 18, 1947, Serial No. 780,767
4 Claims. (Cl. 252—450)

1. A method of producing a catalyst useful for the catalytic cracking of hydrocarbon oils which comprises digesting a bentonite clay with sulfuric acid to produce an activated clay, washing the clay to remove the products of such treatment, drying the clay, treating the dried clay with a dilute hydrochloric acid wash, drying and activating the treated clay by heating to from 800° to 1200° F.

2,472,490
PROCESS OF PREPARING POROUS GLASS CATALYSTS
Charles J. Plank, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application September 13, 1947, Serial No. 773,927
5 Claims. (Cl. 252—432)



1. A process for preparing a porous siliceous composition of matter suitable for use as a catalyst and promoting catalyst carrier, which comprises forming a glass melt consisting essentially of 5 to 15 per cent of an alkali metal oxide, 15 to 30 per cent of boric oxide, 55 to 75 per cent of silica, and 5 to 15 per cent of a metal oxide selected from the group consisting of the oxides of iron, copper, and nickel, heating said melt at a temperature of between about 400° C. and about 650° C. to effect a solid glass having a phase rich in silica, a phase poor in silica, and a devitrified phase, leaching said glass with an acidic aqueous solution selected from the group consisting of dilute aqueous solutions of mineral acids and concentrated aqueous solutions of ammonium chloride to dissolve out said phase poor in silica and said devitrified phase and thereafter drying the resultant porous composition.

2,472,491
MOBILE LUGGAGE
Bernard Quinten, Tuckahoe, N. Y.
Application July 1, 1947, Serial No. 758,249
2 Claims. (Cl. 280—38)

1. An article of mobile luggage comprising a container body having a pair of laterally spaced compartments disposed adjacent one end and bottom corner respectively adjacent the opposite side walls of said body, said compartments having bottom and end openings through the outer contour of said body and being provided with walls separating them from the interior of said body, a pair of wheels individually rotatably journaled on respective hollow axles supported on the outer end of respectively cooperating axle arms whose inner ends are pivotally mounted adjacent an outer wall of said respective compartments, said parts being constructed and arranged so that when said axle arms are moved about their pivotal axis in one direction said wheels are disposed in retracted position within their respective compartments and when said axle arms are rotated in the opposite direction said wheels are disposed in their respective openings with a portion of their peripheries extending exteriorly of said body contour, said wheels being provided with respective latching pins slidably disposed in said hollow axles and resiliently urged inwardly, said pins having spaced apart portions engageable with respective relatively fixed portions provided by said compartment walls for selectively holding said wheel in retracted or extended position.

2,472,492
CAST OR MOLDED DENTURE
Jacob A. Saffir, Kew Gardens, N. Y., assignor to The Dentists' Supply Company of New York, New York, N. Y., a corporation of New York
Application January 30, 1945, Serial No. 575,291
7 Claims. (Cl. 18—55.1)

1. The method of making a plastic denture which comprises molding the denture plate with the teeth in situ in the mold, the gingival portion of said teeth being provided with means for preventing direct contact of said teeth with the molding material and permitting removal of said teeth, said teeth uniformly converging toward their gingival end portion into the denture plate material, curing the said plastic material, and removing said teeth, whereby a cured plastic denture plate having formed teeth-receiving sockets is attained.

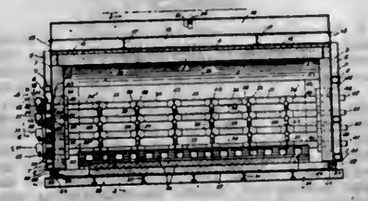
2,472,493
CATALYTIC DEHYDROGENATION OF ALCOHOLS
Helmuth G. Schneider, Westfield, and Vincent F. Mistretta, Fanwood, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Original application December 28, 1944, Serial No. 570,210, now Patent No. 2,436,733, dated February 24, 1948. Divided and this application September 29, 1945, Serial No. 619,416
8 Claims. (Cl. 260—596)

7. The method of producing ketones which comprises passing a secondary aliphatic alcohol over a metal oxide dehydrogenation catalyst selected from the group consisting of zinc oxide, cerium oxide and magnesium oxide and 1 to about 6% by weight of bismuth oxide under conversion conditions of temperature and pressure.

2,472,494
SAFETY FUEL INGREDIENTS AND THEIR PREPARATION
Ober C. Slotterbeck, Rahway, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application January 26, 1946, Serial No. 643,757
1 Claim. (Cl. 260—683.15)

The method of preparing a hydrocarbon product suitable for use in a safety fuel, which comprises contacting a C_4 refinery cut containing iso- and normal butylenes with about 75% sulfuric acid at a temperature in the range of 0° C. to 100° C. until a final total polymer product formed from the butylenes contains substantially no di-isobutylene, about 15 to 30 weight per cent of a codimer fraction boiling in the range 105° C. to 145° C., about 50 to 80 weight per cent of a polymer fraction boiling in the range of 145° C. to 200° C. and about 5 to 20 weight per cent of a polymer fraction boiling above 200° C., separating the codimer fraction boiling in the range 105° C. to 145° C., contacting the codimer fraction with about 85% strength sulfuric acid at a temperature in the range 0° C. to 60° C. until above 80% by weight of the polymers in said codimer fraction are converted to polymers boiling above 200° C.

2,472,495
CONDENSATION PRODUCT OF A POLYHALOGENATED ALIPHATIC HYDROCARBON AND A COPOLYMER OF A POLYMERIZABLE CYCLIC COMPOUND AND AN UNSATURATED ALIPHATIC HYDROCARBON
William J. Sparks, Cranford, and David W. Young, Roselle, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application May 3, 1945, Serial No. 591,843
14 Claims. (Cl. 260—88.1)

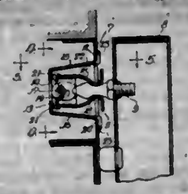


13. The process which comprises chemically condensing 20 to 90 parts by weight of a copolymer of a polymerizable aromatic hydrocarbon containing one mono olefinic side chain and an aliphatic olefin containing from 4 to 8 carbon atoms with 20 to 200 parts of a material consisting essentially of an alkene dihalide, said process being carried out in the presence of a Friedel-Crafts catalyst at a temperature ranging from 90° to 210° F.

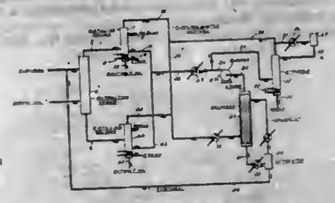
2,472,496
1-CARBETHOXY-4-METHYLPIPERAZINE, ITS SALTS, AND METHOD OF PREPARING SAME
Hugh W. Stewart, Plainfield, N. J., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application February 26, 1948, Serial No. 11,337
5 Claims. (Cl. 260—268)

1. 1-carbethoxy-4-methylpiperazine, and salts thereof.

5. A method of preparing 1-carbethoxy-4-methylpiperazine which comprises mixing under reactive conditions a member of the group consisting of 1-carbethoxypiperazine and salts thereof with formaldehyde in the presence of a mineral acid and zinc.



2,472,497
FURNACE
Kenneth W. Stookey, Shaker Heights, Ohio, assignor to The Gas Machinery Company, Cleveland, Ohio, a corporation of Ohio
Application January 28, 1946, Serial No. 643,914
19 Claims. (Cl. 263—42)



1. A furnace comprising a chamber adapted to be heated; a tube in heat exchange relation with said chamber comprising a plurality of tube sections formed of non-metallic, refractory material abutting end-to-end with adjacent abutting end surfaces which are substantially portions of surfaces of concentric spheres, whereby each of said spherical abutting surfaces fits closely with the adjacent substantially concentric and spherical abutting end surface in a ball-and-socket joint which permits limited universal angular movement between adjacent tube sections having said spherical abutting surfaces; means for supporting said tube sections while permitting limited angular movement thereof; and means operating on an end of said tube for exerting on the tube a longitudinal compressive force which holds said tube sections together in abutting relation so that each of said ball-and-socket joints is substantially gas-tight within the range of universal angular movement of said tube sections.

2,472,498
CATCH
Roy A. Stone, Rockford, Ill., assignor to National Lock Company, Rockford, Ill., a corporation of Delaware
Application March 29, 1946, Serial No. 658,175
4 Claims. (Cl. 292—18)

1. A catch adapted to be mounted in an opening in a metal wall, comprising an integral body formed of sheet metal shaped to provide a base, a pair of oppositely disposed resilient walls projecting outwardly therefrom and provided at the outer ends thereof with means for engaging the margins of said wall opening to lock the body to said metal wall and a pair of oppositely disposed ears projecting outwardly from said base, a pintle connecting said ears, a pair of holding and clamping jaws pivoted on said pintle, and a spring urging said jaws into clamping relation.

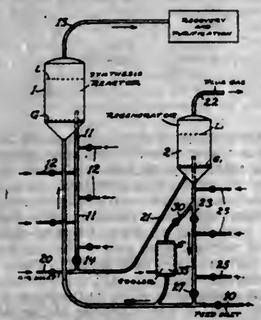
2,472,499
SOLVENT EXTRACTION OF OIL
Charles M. Stone, Long Beach, Calif., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application May 7, 1947, Serial No. 746,490
6 Claims. (Cl. 196—14.26)

1. In the fractional separation of oil by extraction with a water miscible organic solvent liquid wherein a mixture comprising solvent liquid and a fraction of said oil is obtained as a result of said extraction and the solvent is thereafter separated from said oil fraction with the aid of steam in a distillation zone, thereby obtaining a mixture of solvent and water, the method of recovering solvent from said solvent-water mixture which comprises passing said solvent-water mixture to an absorption zone, subjecting it therein to contact with a non-aqueous liquid absorbent for said solvent liquid which is higher boiling than water, effecting said contact at a temperature above the boiling point of water at the pressure prevailing within said absorption zone, separately removing from said zone a vapor stream of water containing some residual solvent and a liquid stream of absorbent containing dissolved solvent recovering solvent from removed absorbent, recycling a portion of said vapor stream to said distilling zone, passing another portion thereof to a secondary distilling zone, forming a secondary distillate consisting of an azeotropic mixture of solvent and water and a secondary residual liquid comprising water, discharging said residual liquid, and recycling said secondary distillate to said absorption zone.

2,472,500
GRAPPLING TOOL FOR JOISTS AND STUDS
Laverne E. Swanson, Manistee, Mich.
Application July 29, 1947, Serial No. 764,475
1 Claim. (Cl. 294—86)

A grappling tool for joists or studs, constructed from a single continuous bar or strip of metal of rectangular form in cross section, and comprising a straight elongated handle formed at

one end with a U-shaped grapple hook, a central V-shaped longitudinal rib tapered to a knife edge, formed on the inner edge of the transverse base portion of the grapple hook, and a pair of cor-



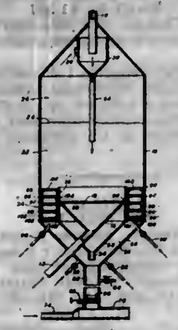
responding laterally spaced longitudinally disposed V-shaped ribs tapered to a knife edge, on the inner edge of the shorter arm of the U-shaped grapple hook, with the first and last mentioned ribs disposed in alternating relation.

2,472,501

PROCESS OF REGENERATING SYNTHESIS CATALYST WITH OXYGEN AND RETURN OF OXIDIZED CATALYST TO THE SYNTHESIS REACTOR

Sumner B. Sweetser, Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware

Application December 20, 1945, Serial No. 636,248
3 Claims. (Cl. 260—449.6)



1. In a continuous method for synthesizing normally liquid hydrocarbons in a process in which a mixture of carbon monoxide and hydrogen is fed to a reaction zone containing a body of fluidised iron catalyst which becomes contaminated with deposits during the reaction, the improvement which comprises withdrawing a portion of fouled catalyst from a lower portion of the reaction zone, conducting it to a regeneration zone, charging an oxygen-containing gas to the regeneration zone where it contacts the catalyst maintained in the form of a fluidised mass, maintaining the catalyst in said regeneration zone for a time sufficient and at conditions adequate to effect regeneration by burning of the catalyst contaminants and to oxidise the iron of the catalyst at least in part, withdrawing regenerated and oxidised catalyst from said regeneration zone, returning catalyst so withdrawn to said reaction zone, controlling the rate of oxidised catalyst return to said reaction zone at a value of less than about 2% of the total weight of catalyst in said reaction zone, per hour, and maintaining said reaction zone at a temperature of about 600°–650° F.

2,472,502

APPARATUS FOR STRIPPING FINELY DIVIDED SOLIDS

Charles W. Tyson, Summit, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

Application July 28, 1945, Serial No. 607,639
2 Claims. (Cl. 23—288)

1. An apparatus of the character described adapted for stripping volatile material from solid particles, comprising a vertical shell, an annular passageway inside said shell for the withdrawal of solid particles from the lower portion of said shell, a plurality of transverse sections of open-mesh grating, within said annular passageway, means for supporting said sections one above the other in spaced relation so that the sections are parallel and extend horizontally across said annular passageway, means for introducing solid particles to be stripped into the upper part of said annular passageway and means for introducing a stripping gas at at least one point into the lower part of said annular passageway whereby the introduced gas flows upwardly countercurrent to the introduced downflowing solid particles, said grating sections functioning to prevent undesired circulation of the solid particles in said vessel while permitting downward flow of solid particles and simultaneous upward flow of stripping gas.

2,472,503

LUBRICATING OIL COMPOSITIONS

Johan Leonard van der Minne, Amsterdam, Netherlands, assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application November 9, 1946, Serial No. 708,935. In the Netherlands October 1, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires October 1, 1965
5 Claims. (Cl. 252—37)

1. A mineral lubricating oil having incorporated therein, in an amount sufficient to inhibit oxidation and corrosion, an oil-soluble polyvalent metal salt of an acidic aromatic compound selected from the group consisting of phenols and aromatic carboxylic acids and a saponifiable oxidation product of a polymeric olefin of lubricating oil viscosity, said oxidation product being obtained as follows: polymerizing an olefinic hydrocarbon material of boiling range of from about 100° C. to about 300° C. to produce a synthetic polymeric olefin hydrocarbon oil of lubricating oil viscosity and oxidizing said synthetic hydrocarbon oil at a temperature between about

150° C and 200° C. with an oxygen-containing gas for sufficient time to partially oxidize the synthetic hydrocarbon oil while avoiding breakdown thereof.

2,472,504

ORGANOMETALLIC COMPOUND

Carl Winning, Westfield, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

No Drawing. Original application December 30, 1939, Serial No. 311,835. Divided and this application October 18, 1944, Serial No. 559,256
1 Claim. (Cl. 260—609)

The barium salt of a tertiary amyl phenol sulphide.

2,472,505

ANIMATED FISHING LURE

Lee Roy Yocam and Donald K. Newman, Vancouver, Wash.

Application October 24, 1947, Serial No. 781,938
6 Claims. (Cl. 43—42.01)

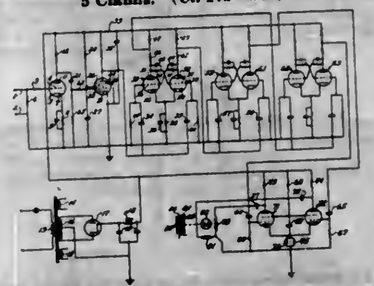
3. An animated fishing lure which comprises a body, a shaft rotatably mounted in said body, means for rotating said shaft, a plurality of fins pivotally attached to said body, on said shaft a cam engaging said fins, whereby to oscillate the same by rotating said shaft, a tail pivotally attached to said body, a slotted arm on said tail, and a crank on said shaft adapted to turn within a slot in said tail, whereby to cause said tail to oscillate with the rotation of said shaft.

2,472,506

FIRE EXTINGUISHER

Richard Zieschang, Brentford, England, assignor to The Pyrene Company Limited, Brentford, England, a British company

Application October 12, 1945, Serial No. 622,603
In Great Britain November 12, 1944
2 Claims. (Cl. 169—31)



1. In a hand-operated fire-extinguishing apparatus of the kind set forth, a cylindrical container for a liquid having a discharge nozzle for the liquid to be expelled from said container, a pipe extending longitudinally inside said container and communicating with said discharge nozzle, and a revoluble liquid pick-up device extending over substantially the whole length of said container, said pick-up device having at each end a boss secured to said pipe and each provided with a passage communicating with the inside of said pipe, each of said passages having at its outer end a valve seat, a ball cooperating with each valve seat, a housing for each ball in which the ball is positively moved into and out of engagement with its valve seat, means slidingly supported for longitudinal movement on said pipe and carrying both of said housings whereby the latter must move in unison to force one of said balls away from engagement with its valve seat and the other ball into engagement with its valve seat.

2,472,507

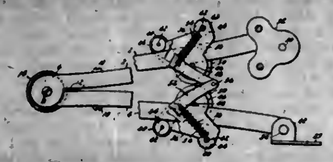
POLYPHASE SUPPLY CIRCUIT

John H. Andresen, Jr., Port Washington, and Edward Kasner, Brooklyn, N. Y., assignors to Square D Company, Detroit, Mich., a corporation of Michigan

Application October 19, 1946, Serial No. 704,512
5 Claims. (Cl. 172—281)

5. A circuit for producing a two phase output of subdivided frequency from a single phase input comprising a first electronic tube fed from said input and having its output voltage of the same frequency as the input but of rectangular wave form, a first Eccles-Jordan frequency divider circuit fed by said rectangular wave form voltage and having its output two voltages of subdivided frequency 180° spaced in time phase, a pair of Eccles-Jordan frequency divider circuits each fed by one of the output voltages of said first Eccles-Jordan circuit and producing output voltages of further subdivided frequency and a circuit fed by two only of the four outputs of said pair of Eccles-Jordan circuits to produce a two phase output of subdivided frequency spaced 90° in time phase relation, the load resistors of said pair of Eccles-Jordan frequency divider circuits being unbalanced to insure consistent order of firing of the tubes therein.

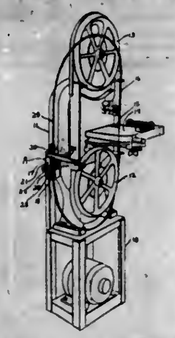
2,472,508



DOOR CHECK AND CLOSER

James G. Allen, Ubly, Mich.

Application September 9, 1946, Serial No. 695,599
5 Claims. (Cl. 16—80)



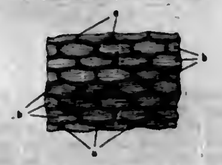
1. A door check and closer comprising a pair of pivoted, spring-pressed arms adapted for mounting respectively upon a door and its frame, connected travelers on the arms, rollers on the

travelers engaging the outer surfaces of the arms as the door is opened, and friction rollers on the travelers disposed between the arms and engage-

able with each other and the inner surfaces of the arms as the door is closed under tension of spring pressure and retarding the closing.

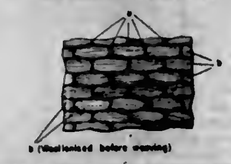
2,472,509
BLADE-SHEARING BAND-SAW ATTACHMENT
Christopher J. Anderson, Peru, Ind.
Application August 29, 1946, Serial No. 693,665
1 Claim. (Cl. 143—157)

An attachment for a band saw, the latter having oppositely disposed pulleys over which an elongated continuous band saw blade is removably mounted, said attachment comprising an elongated mounting block having means for connection to an adjacent frame of the band saw and provided with a guide groove extending in the direction of its length and in a direction corresponding to the long sides of the band saw blade, and in which a portion of said band saw blade is adapted to be mounted when said band saw blade is removed from said pulleys, a means for removably clamping said blade portion in said groove, a shearing blade carried by said plate at one end of the groove, a handle pivotally mounted on one end of said plate and movable through a plane substantially at right angles with respect to the plane of said adjacent frame of said band saw, and a shearing blade carried by said handle for cooperating with the shearing blade carried by said plate, substantially as described.



2,472,510
WIRE TWISTING DEVICE
Loren E. Bennett, Winnetka, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application March 22, 1946, Serial No. 656,332
5 Claims. (Cl. 140—149)

4. A device for twisting the ends of stranded conductors comprising a wire member having an elongated shank portion and a spiral hook portion formed on one end thereof, and drive means at the other end of said wire member and in spaced relation to said hook for rotating said wire member about a fixed axis,

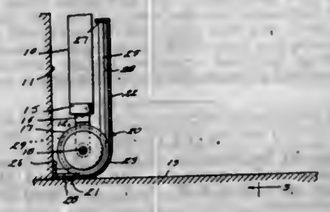


said spiral hook portion being formed with each successive portion thereof starting at the juncture with the shank portion curving progressively longitudinally forward and transversely away from and circumferentially around the axis of rotation.

2,472,511
MANUFACTURE OF BLANKETS, BLANKET MATERIAL, FELT SUBSTITUTES, AND CARPET MATERIAL
Arthur Paul Benthall, Calcutta, Bengal, British India, assignor to Bird & Company, Calcutta, Bengal, British India, a partnership firm
Application November 27, 1944, Serial No. 565,433
In British India January 15, 1944
5 Claims. (Cl. 28—76)

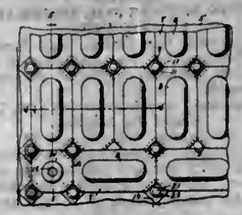
1. A process for the manufacture of a differentially woollenised jute fabric, which comprises weaving the fabric with a hard-spun relatively thin but strong warp and a relatively thick loosely-spun weft, whereby a woven fabric is produced in which the greater part of the visual bulk of the material is constituted by the loosely-spun weft, which weft is thus in a condition which can more readily be acted upon by the caustic to be subsequently used and can more easily be "nap raised," subjecting the so-woven fabric to a treatment with caustic until the weft is substantially completely woollenised, washing out the excess caustic before any appreciable woollenising of the warp takes place, and submitting the resultant fabric to a "nap raising" treatment.

2,472,512
BLANKETS, BLANKET MATERIAL, FELT SUBSTITUTES, AND CARPET MATERIAL
Arthur Paul Benthall, Calcutta, Bengal, British India, assignor to Bird & Company, Calcutta, Bengal, British India, a partnership firm
Application November 27, 1944, Serial No. 565,432
In British India January 15, 1944
4 Claims. (Cl. 28—80)



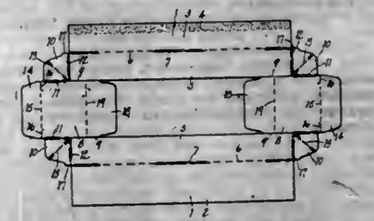
1. A chemically woollenised or woven jute fabric having a thick and loosely-spun jute weft and a thin and hard-spun but otherwise untreated jute warp, the bulk of the weft being considerably greater than that of the warp, said weft having been substantially completely woollenised prior to weaving, whereby the surface of the fabric is constituted primarily of woollenised weft.

2,472,513
BELT DRIVING DEVICE
Nils Olof Bergquist, Appelviken, near Stockholm, Sweden
Application February 20, 1946, Serial No. 648,981
In Sweden February 26, 1945
1 Claim. (Cl. 74—229)



A belt driving device, comprising, in combination, a belt having a main portion for transmitting the essential part of the driving power and having at least one ridge integral with said main portion and extending in the longitudinal direction of the belt, and a pulley having a substantially cylindrical portion contacting said main portion of the belt and at least one circumferential groove in said cylindrical portion, which groove corresponds to the ridge of the belt, said ridge and said groove being of such shape and dimensions, that on a straight part of the belt the ridge does not entirely fill up the groove laterally but when running over a pulley in bent condition will fill up the groove laterally and exert a pressure on the side walls of the groove on account of the deformation caused by the bending of the belt over the pulleys.

2,472,514
ROLLER TRACK
David T. Brinkley, Elk Park, N. C.
Application January 18, 1946, Serial No. 641,951
3 Claims. (Cl. 5—317)

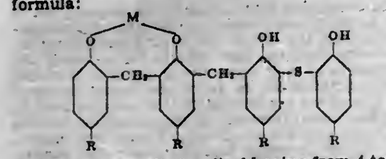


1. In a fixture of the character disclosed for use with articles of furniture having leg supports, the combination of a roller support for each of the legs of the furniture to facilitate movement thereof between relatively permanent and temporary positions, and a track for the roller support to move along during said movement of the furniture, said track having relatively short and long legs substantially rigidly disposed at right angles to each other and interconnected by an arcuate portion which conforms to the periphery of the roller support.

2,472,515
DIES
Paul H. Brinkoeter, San Antonio, Tex., assignor to Ed Friedrich, Inc., San Antonio, Tex., a corporation of Texas
Application July 19, 1946, Serial No. 684,967
1 Claim. (Cl. 113—49)

In embossing dies, a pair of die shoes, a set of die blocks for each shoe, one set having protuberances and the other set having protuberance-receiving recesses, and means for securing the die blocks to their respective shoes, each die block being rectangular in form and being provided with bevelled corners having grooves parallel to the horizontal faces of the blocks, splines held in adjacent grooves of adjacent blocks, and clamping screws threaded into the shoes and passing through holes in said splines.

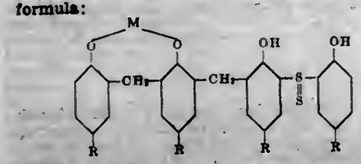
2,472,516
CARTON
Kenneth T. Buttery, Kalamazoo, Mich., assignor to Sutherland Paper Company, Kalamazoo, Mich., a corporation of Michigan
Application July 12, 1946, Serial No. 683,029
6 Claims. (Cl. 229—30)



1. A collapsible box formed of a single blank scored and slit to provide hingedly connected bottom and side and end walls, the bottom comprising complementary bottom members disposed at the ends of the blank and overlapped and adhesively secured together, the side walls being hingedly connected in the blank to the inner edges of the bottom members, the end walls being disposed in the blank between the inner edges of the side walls, said side walls and end walls being connected only by foldable corner members, said corner members being foldable upon the inner sides of the end walls, the end walls being of greater width than the side walls and having tucking flaps at their outer edges in the blank, the tucking flaps being disposed between the bottom and the lower edges of the corner members when the box is erected, there being slits at the ends of their hinge connections to the end walls, the corner members having lugs engaging said slits when the end walls are erected, the end walls being provided with wrapping supporting flaps on their inner edges in the blank,

the portions of the end walls which extend above the upper edges of the side walls and the said wrapping supporting flaps being formed of stock between the inner edges of the side walls in the blank.

2,472,517
ADDITION AGENTS FOR MINERAL OIL LUBRICANTS
Troy L. Cantrell, Lansdowne, and Herschel G. Smith, Wallingford, Pa., assignors to Gulf Oil Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application June 20, 1947, Serial No. 756,090
22 Claims. (Cl. 252—42.7)



11. A lubricant composition comprising a major amount of a mineral lubricating oil and a minor amount, sufficient to confer detergent properties on the composition, of a salt having the formula:

wherein R is an alkyl radical having from 4 to 12 carbon atoms, and M is a divalent metal.

2,472,518
ADDITION AGENTS FOR MINERAL OIL LUBRICANTS
Troy L. Cantrell, Lansdowne, and Herschel G. Smith, Wallingford, Pa., assignors to Gulf Oil Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application July 8, 1947, Serial No. 759,690
22 Claims. (Cl. 252—42.7)

11. A lubricant composition comprising a major amount of a mineral lubricating oil and a minor amount, sufficient to confer detergent properties on the composition, of a salt having the formula:

wherein R is an alkyl radical having from 4 to 12 carbon atoms, and M is a divalent metal.

2,472,519
KEY-OPERATED DIFFERENTIAL ACTUATOR
John Carlsen, Copenhagen, Denmark
Application November 15, 1945, Serial No. 628,698
In Denmark October 21, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires October 21, 1964
5 Claims. (Cl. 235—62)

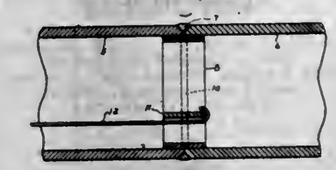
1. In calculating machines of the kind comprising keys adapted to impart a step-wise rotary motion to number wheels associated therewith directly on their depression, a key unit comprising a number of flat key arms independently pivoted on a common axis perpendicular to the overall planes of the key arms and having their flat sides situated in close relationship, keys individual to said key arms and carries by the latter at different distances from the said common axis and representing different amounts, means for keeping each key arm in a normal position and for restoring it to such position after depression, means for limiting the angular movement of each

key arm when depressed to a value proportional to the amount represented by its associated key, a projecting member integral with each of said key arms other than that representing the lowest amount and engaging below the key representing the next lower amount, and means for operatively connecting the key arm representing the highest amount with the number wheel served by the unit.

2,472,520
SIFTER TOP
Allen B. Criss, Biloxi, Miss.
Application April 25, 1946, Serial No. 664,841
1 Claim. (Cl. 65—57)

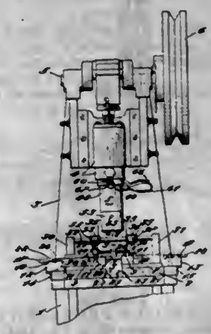
A sifter top comprising a cap having a flat upper wall and sloping side walls leading to the upper wall, said upper wall having a plurality of spaced parallel slots, and an agitator comprising a plate formed from one rectangular sheet of material, said plate being slotted to provide a pair of spaced longitudinally aligned ribs at each of two relatively opposed edges of said plate, the mid-portions of said plate between said ribs being arcuated and overlapped one over the other to constitute a finger grip, portions of the remaining edges of said plate being notched and angulated to provide further ribs intermediately of said first mentioned ribs, said plate being slidably positioned on the outer surface of the upper wall, said ribs extending through said slots, and said first mentioned ribs being angulated and forming inturned retaining flanges frictionally engaging the inner surface of the upper wall.

2,472,521
PACKAGING
George M. Danenbauer, Chicago, Ill., assignor, by mesne assignments, to The Diamond Match Company, New York, N. Y., a corporation of Delaware
Application February 14, 1946, Serial No. 647,530
2 Claims. (Cl. 93—3)



1. The method of folding and loading a package in the shape of a rectangular parallelepiped having a front, bottom, back, top, and two sides, comprising folding a blank into the shape of a tube having a rectangular cross section which may be opened along a line on the surface of the tube parallel to the axis of said tube, inserting a roll of sheet material having a core completely into said tube through one open end thereof, forming a portion of the ends on each side of said tube as a bearing for the core of said roll, and folding the ends of said tube across the core of said roll of said sheet material to form the sides of said package and engaging the bearings with each end of the core of said roll.

2,472,522
LEAK DETECTION
Taber de Forest, Chicago, Ill., assignor, by mesne assignments, to Joseph L. Switser and Robert C. Switser
No Drawing. Application August 5, 1943, Serial No. 497,541
6 Claims. (Cl. 250—71)

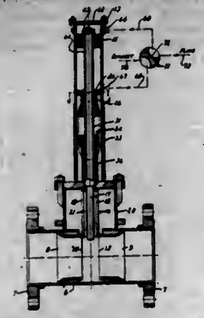


1. A method of detecting leaks in a closed vacuum system having walls transparent to visible light and fluorescigenous radiations comprising the steps of applying to the outer primary surface of a wall of the system a luminescent testing liquid which wets the material of the wall being tested, subsequently removing said testing liquid from said primary surface, and then inspecting the inner secondary surface of said wall of the system under fluorescigenous radiations in the substantial absence of visible light for the leaks revealed by visible light transmitted back through a transparent wall of the system by a portion of said testing liquid which penetrated through said wall and luminesces in response to fluorescigenous radiations transmitted through said transparent wall.

2,472,523
BACKING OR CHILL RING
John J. Dillon, Needham, and Michael Needle, Chelsea, Mass.
Application May 24, 1945, Serial No. 595,594
2 Claims. (Cl. 113—111)

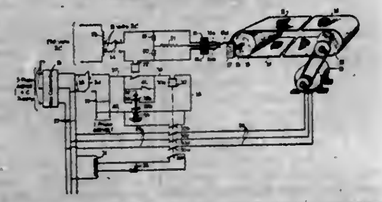
1. A backing ring for interior engagement with adjacent end portions of pipe or like hollow sections of weldable stock when said sections are butted together for welding, and to be withdrawn through one of the sections by means engageable with the ring and extending through one of the sections, said ring comprising a strip of non-weldable yieldable stock the ends of which are tapered and overlapped, said strip being sufficiently stiff to remain in a seated position protruding from one section when the other section is butted thereagainst while yielding, when pulled, to permit it to be tipped with one overlapping end sliding relative to the other so that it may be withdrawn through the pipe after the sections have been welded together, and rigid means carried by said strip and so located as to arcuately brace said ring remote from its overlapped ends for engagement by said withdrawing means and so disposed that the ring is tipped when the withdrawing means are pulled.

2,472,524
MACHINE FOR OPERATING ON SOLE PARTS
Alfred F. Donovan, Boston, Mass., assignor to E. T. Wright & Co., Incorporated, Rockland, Mass., a corporation of Massachusetts
Application November 25, 1947, Serial No. 787,882
11 Claims. (Cl. 12—17)



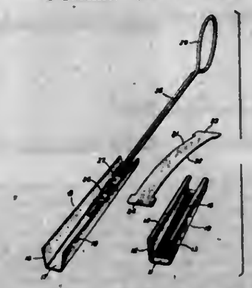
9. Apparatus for use in slotting the metatarsal pad of an insole preparatory to assembly of a shank stiffener therewith, said apparatus comprising a support for the central portion of right and left insoles, a holder and slotting die rotatable relative to each other and relatively movable toward and away from said support so as to form a slot in a metatarsal pad of an insole disposed on said support, means for rotating said slotting die so as to operate on right and left insoles, a link pivotally mounted at one end to move toward and away from said support, and an elongate positioning member having positioning fingers at its inner end engageable with the rear edge portion of said pad so as to position and maintain said insole and pad in a predetermined position relative to the path of travel of said die and having an upwardly curved tail portion at its outer end, and means for effecting a relative movement between said holder and support, the positioning member being rockably mounted adjacent its inner end to the free end of the link, whereby when the insole is withdrawn the positioning fingers are rocked to a position to release the pad and when a new insole is inserted the positioning fingers are rocked back into position to determine the location of the new insole and pad.

2,472,525
FLUID PRESSURE OPERATED VALVE
Samuel H. Edwards, Richmond, Calif.
Application June 27, 1945, Serial No. 601,778
9 Claims. (Cl. 137—139)



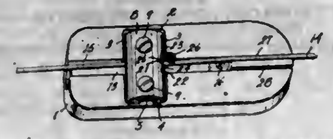
1. A valve of the character described comprising a valve body, a valve seat therein, a valve gate, a hollow valve stem supporting said gate, a seat engaging member movably mounted on said gate, a piston on said valve stem, said gate having a passage therein for fluid from said stem to move said member to engage said seat, a cylinder cooperatively positioned with respect to said piston, and in fluid communication with said valve stem on one side of said piston, a first port in said cylinder on one side of said piston, a second port in said cylinder on the other side of said

piston, said valve stem having an opening to said one side of said piston, and a fluid control valve



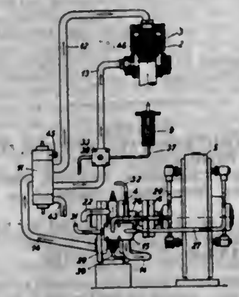
for controlling fluid communication between said valve stem and said cylinder.

2,472,526
UNDERSPEED MOTOR PROTECTIVE SYSTEM
Albert C. Frazee, Wilmerding, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application January 26, 1945, Serial No. 574,780
2 Claims. (Cl. 318—461)



1. Protective apparatus for use in connection with a motor-driven conveyer belt, said apparatus comprising a source of direct-current voltage, two electrical condensers, an electrical relay having a winding and a contact adapted to be actuated from a dropped-out or open position to a picked-up or closed position and maintained therein only so long as the current energizing the winding exceeds a certain value, said condensers being connected in series relation with each other across said source of voltage with the winding of said relay interposed in series relation between the outer terminal of one of said condensers and one terminal of the source of voltage, a single-pole double-throw switch having two spaced stationary contacts and a movable contact shiftable alternately into engagement with the stationary contacts, a resistor having one end connected to the movable contact of said switch and the other end connected to the common terminal of connection between said two series-connected condensers, one of the stationary contacts of said switch being connected to the terminal of one condenser opposite said common terminal and the other of said stationary contacts of said switch being connected to the terminal of the other of said condensers opposite said common terminal, the arrangement being such that when the movable contact of said switch engages said one of the stationary contacts it establishes a circuit through which current flows from said source to charge the other of said condensers and also simultaneously establishes a local circuit including said resistor through which said one condenser is discharged, the movable contact of said switch being effective when it engages the said other of the stationary contacts to establish a circuit through which current flows to charge said one condenser and also simultaneously establishes a local circuit including said resistor through which said other condenser is discharged, rotary cam means associated with the movable contact of said switch and operative in accordance with the linear speed of travel of the conveyer belt to effect the operative engagement of the movable contact of said switch alternately with the two stationary contacts at a frequency corresponding to the linear speed of travel of the conveyer belt, thereby producing a pulsating uni-directional current that energizes the winding of said relay, the electrical characteristics of said condensers and said resistor being such that the condenser charging current energizing the winding of said relay is maintained above said certain value only so long as the conveyer belt travels at a speed exceeding a certain speed, with the result that the contact of said relay is restored to its dropped-out or open position when the condenser charging current energizing the winding of the relay reduces below said certain value consequent upon reduction of the conveyer belt to a speed of travel less than said certain speed, and electro-responsive control means controlled by the contact of said relay in such a manner as to interrupt the power supplied to the driving motor when said contact is restored to its dropped-out or open position.

2,472,527
DROP WIRE CLAMP
Chester S. Gordon, Boonton, William J. Lally, Madison, and Gustav H. Zieschang, Morristown, N. J.; said Gordon and said Lally assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York, and said Zieschang assignor to American Telephone and Telegraph Company, a corporation of New York
Application May 22, 1947, Serial No. 749,824
2 Claims. (Cl. 24—136)

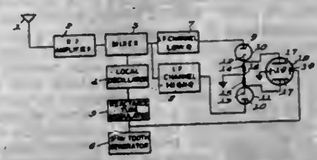


1. A clamp for supporting insulated electrical conductors comprising an elongated transversely U-shaped tapered body member having inturned flanges along the marginal edges of the sides thereof to form guides, an elongated transversely U-shaped tapered wedge member slidably positioned within said body member and having its marginal edges located in said guides, a wire loop secured to said member for supporting said clamp, a bowed flat metallic spring member, having its concave surface roughened, interposed between said wedge member and said body member, said bowed member having its convex surface in contact with said wedge member and adapted to be flattened out against the tension thereof when a conductor is clamped between said spring member and said body member.

2,472,528
LEATHER LACE SKIVER
Lawrence E. Grimes, Bristol, Ind.
Application June 28, 1948, Serial No. 35,662
12 Claims. (Cl. 69—20)

1. A leather lace skiver comprising a base member having an elongated recess in the upper surface thereof, a lace supporting spring fixedly mounted in said recess, an adjusting screw threaded into said base member for vertically adjusting said spring against the resiliency thereof, a resilient cutting blade having a cutting edge disposed transversely of said groove above said lace supporting spring, said cutting blade being of flat relatively thin resilient flexible metal, and means on said base member for flexing the cutting edge portion of the blade downwardly and holding said edge portion in a downwardly flexed position during the lace skiving operation, said means including an upwardly curved portion on the base member for supportingly engaging the lower surface of the blade, a guard plate having a lower curved wall engaging the upper surface of the blade, and adjusting screws threaded into the base member and extending through the guard plate and blade for adjusting the guard plate toward said upwardly curved portion, against the resiliency of said blade.

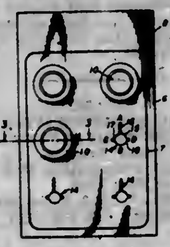
2,472,529
HYDRAULIC PUMP
Poul Haahr, Copenhagen, Denmark
Application May 21, 1947, Serial No. 749,434
In Denmark February 9, 1946
Section 1, Public Law 690, August 8, 1946
Patent expires February 9, 1966
6 Claims. (Cl. 103—11)



1. An arrangement of the kind referred to comprising a low-pressure pump and a high-pressure pump; means for feeding the high-pressure pump from the low-pressure pump; an automatic spring-loaded valve for discharging the excess fluid from the low-pressure pump when operating as feeding pump for the high-pressure pump; supplementary means for operating said valve under the influence of the pressure at the delivery side of said high-pressure pump; and an abutment determining the maximum lift of said valve.

2,472,530
PIPE COUPLING TOOL
Alma J. Harrison, Philadelphia, Pa., assignor to Proctor & Schwartz, Inc., Philadelphia, Pa., a corporation of Pennsylvania
Application December 23, 1947, Serial No. 793,426
10 Claims. (Cl. 285—1)

1. A coupling for pipe sections and the like, comprising a splined mandrel having a diameter less than the bore of the pipe sections which are to be coupled, a plurality of jaws axially movable in the splines of said mandrel, a set of jaws positioned in opposite ends of each spline, opposite external threads at the inner extremities of each jaw, teeth at the outer external extremities of each jaw, a collar mounted on the mandrel and having an outside diameter substantially equal to that of the pipe section to be coupled, and internal opposite threads in the collar adapted to enclose the mandrel and engage the threads on the jaws whereby the jaws are moved axially in the splines when the collar is rotated with respect to the mandrel.

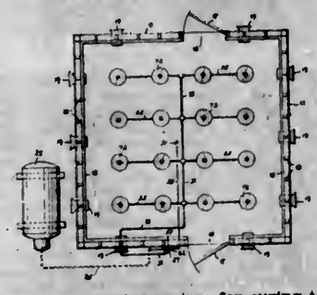


2,472,531
PANORAMIC RECEIVER WITH PULSE NARROWING SYSTEMS
Joseph I. Heller, New York, N. Y., assignor to Panoramic Radio Corporation, New York, N. Y., a corporation of New York
Application May 7, 1946, Serial No. 667,847
3 Claims. (Cl. 250—20)

1. In a panoramic receiving system for analyzing signals occupying a first predetermined frequency spectrum, means for converting said signals to further signals occupying a second predetermined frequency spectrum, said last named means comprising a local oscillator for generating a hetrodyning frequency, means for periodically varying said heterodyning frequency, a first narrow band intermediate frequency tuned channel coupled with said means for converting said signals to translate succeeding selected portions of said second predetermined frequency spectrum in time sequence during periodic variation of said heterodyning frequency, said first intermediate frequency channel having a predetermined high ratio of peak response to response at high energy points of the selectivity characteristic thereof, means comprising a further tuned intermediate frequency channel coupled with said means for

converting said signals to translate selected portions of said second predetermined frequency spectrum in time sequence during periodic variation of said heterodyning frequency, said further intermediate frequency channel having a predetermined low ratio of peak response to response at half energy points of the selectivity characteristics thereof, said first and further intermediate frequency channels being tuned to the same center frequency, and having substantially identical responses at a plurality of points below said first mentioned half energy points, means for separately detecting signals translated by said first and further intermediate frequency channels, means for differentially combining the outputs of said means for separately detecting, a cathode ray tube indicator having a cathode ray beam and means for deflecting said cathode ray beam in a first and a second coordinate direction, means for controlling said means for deflecting to deflect said cathode ray beam in said first coordinate direction in synchronism with variations of said heterodyning frequency and means responsive to said means for differentially combining for controlling said means for deflecting to deflect said cathode ray beam in said second coordinate direction.

2,472,532
BUTTON CARD
Jacob J. Heilman, Atlanta, Ga.
Application April 15, 1947, Serial No. 742,309
6 Claims. (Cl. 206—79)



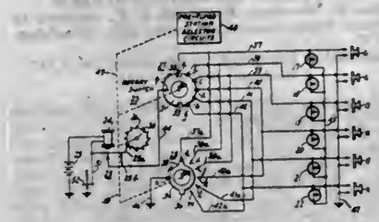
2. In a structure of the class described, a button mounting and displaying card provided with a keyhole-shaped slot, a button, a ring carried by said button, said ring being insertible and removable by way of said slot, whereby to permit the ring to function as a retainer when disposed on the reverse side of the card, permitting the button to be displayed from the obverse side of the card, the total length of the keyhole-shaped slot being approximately equal to the outside diameter of the ring, the enlarged end portion of the slot having communicating short keeper notches, said keeper notches being on diametrically opposite sides of said enlarged end portion.

2,472,533
MICA BASE HEATING SHEET
Moses D. Heyman, Woodmere, N. Y.
Application December 6, 1945, Serial No. 633,113
3 Claims. (Cl. 201—63)

1. A fabricated laminated mica sheet comprising extremely thin laminae having virgin surfaces, said laminae being arranged in random fashion whereby their surfaces are in contiguous relation and enabling the natural cohesive forces resident in the laminae to become effective, and whereby the laminated sheet differs from a natural mica sheet in that the laminae are relatively smaller and frequently lie in more than one plane with spaces formed between the contiguous edges of the laminae, and electrically conducting particles occupying said spaces.

2,472,534
TOBACCO CURING APPARATUS
Gilder S. Horne, Charlotte, N. C.
Application August 12, 1946, Serial No. 689,869
5 Claims. (Cl. 262—40)

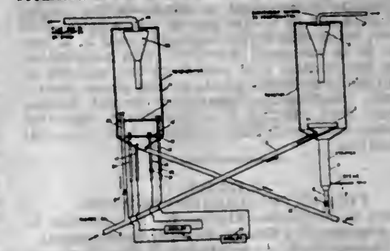
5. A tobacco curing system for curing tobacco hung in a barn comprising a plurality of gas burners disposed within the barn a substantial distance from the walls of the barn, a source of gas disposed on the exterior of the barn and a piped connection between the source of gas and the burners, said piped connection comprising a main pipe disposed substantially centrally of the barn, and each burner having a branch pipe connected to the burner and to the main pipe, means associated with each of the burners for regulating the flow of gas thereto, a control valve in the piped connection, temperature controlled means disposed within the barn and connected to said control valve for controlling the size of the opening in the control valve for regulating the flow of gas to the burners in accordance with the temperature within the barn, and a perforated cage member disposed on the floor of the barn and completely enclosing said burners to shield them against a falling tobacco leaf lodging thereon, each of said cage members having a pan in the top portion thereof into which water is adapted to be placed to be evaporated by the heat from the burners.



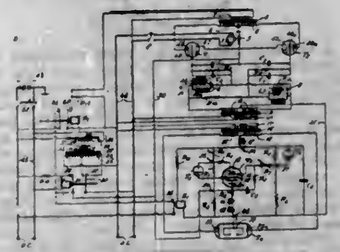
2,472,535
ELECTRIC REMOTE-CONTROL OR INDICATING SYSTEM
William Jones, Cambridge, England, assignor to Pye Limited, Cambridge, England, a British company
Application August 15, 1944, Serial No. 549,535
In Great Britain April 29, 1943
11 Claims. (Cl. 343—118)

1. In an electric remote control system for reproducing motion at a distance, the combination of a moving device capable of movement in opposite directions and at variable speed, and means for producing two series of pulse signals of the same sign with the pulses of the two series differentially modulated in response to the direction and the speed of the movement of said device, for transmission to a remote station to control apparatus thereat for reproducing the movement of said device.

6. In combination, a rotatable directional radio aerial, a station remote from said aerial, means associated with said aerial for producing pulse control signals differentially modulated in response to both the direction and the speed of rotation of said aerial, for transmission to said remote station, a cathode ray tube at said remote station, and means at said remote station responsive to said pulses for producing in said tube a rotating electro-magnetic field duplicating the rotation of said aerial.



2,472,536
TUNING INDICATOR SYSTEM
Otto C. Keil, Jr., Quakertown, and Jesse Hewitt Lofton, Havertown, Pa., assignors to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application November 25, 1947, Serial No. 788,052
4 Claims. (Cl. 177—353)



4. In a radio receiver; a plurality of pushbuttons, each of said pushbuttons being identified with a different station; individual indicator lamps associated with said pushbuttons; station selector mechanism operative in response to the actuation of a pushbutton for tuning automatically said receiver to a selected station; means operative upon said actuation of said pushbutton for connecting a low resistance path in shunt with said indicator lamps to maintain said indicator lamps extinguished during operation of said selector mechanism; and means automatically operative when the selection of the station has been effected, for opening said shunt path and for connecting the individual indicator lamp identified with the station selected in series with the other of said lamps, said other lamps being connected in shunt with each other, thus to illuminate the indicator lamp identified with the station selected while maintaining said other lamps in extinguished condition.

2,472,537
HYDROCARBON CONVERSION WITH FLUIDIZED CATALYST
Thomas Bisbee Kimball, Greenwich, Conn., assignor to Sinclair Refining Company, New York, N. Y., a corporation of Maine
Application April 10, 1947, Serial No. 742,605
4 Claims. (Cl. 196—52)

1. In the fluid catalyst process for the conversion of hydrocarbons wherein a finely divided catalyst at an elevated temperature is repeatedly brought into intimate contact with hydrocarbon vapors to be converted in a conversion chamber, spent catalyst is withdrawn from the conversion zone, stripped of readily vaporizable hydrocarbons, the stripped catalyst conveyed in fluid suspension to a regenerating chamber in which the catalyst in a dense phase fluidized body is regenerated by the burning off of carbon deposits formed thereon during the conversion by the passage of an oxidizing gas in contact therewith and from which catalyst is withdrawn and returned to the conversion chamber, the improvement in the regeneration of the catalyst which comprises passing the spent catalyst in suspension in the oxidizing gas into the lowermost zone of a regenerating chamber comprising at least three zones delineated by vertically spaced, horizontally positioned, perforated partitions, withdrawing catalyst from each zone except the lowermost zone, cooling the withdrawn catalyst and returning it to the respective zones of the regenerating chamber just below that from which it was withdrawn and withdrawing catalyst for return to the conversion chamber from the uppermost zone of the regenerating chamber.

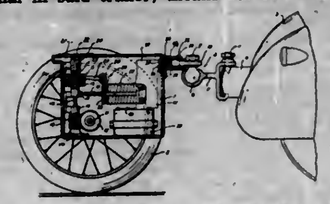
2,472,538
ALTERNATOR CONTROL SYSTEM
Otto Krauer, Yonkers, and Arthur W. Forsberg, Kew Gardens, N. Y., assignors, by mesne assignments, to Gaveco Laboratories, Inc., New York, N. Y., a corporation of New York
Application March 5, 1946, Serial No. 653,077
11 Claims. (Cl. 222—28)

1. In a system for automatically regulating the output line voltage of an A. C. generator having a D. C. field winding, a first rectifier energized by said line voltage, a bridge circuit comprising four impedance arms at least one of which is resistive, a voltage regulating device connected in said one arm to maintain the voltage drop across the resistance in that arm substantially constant, a rectifier circuit including a gas-filled rectifier tube having a cathode, an anode and a control grid, means coupling said circuit to said A. C. line

whereby to energize said field winding with rectified voltage from said line, connections between said first rectifier and one pair of conjugate points of said bridge whereby the rectified voltage therefrom is impressed across said conjugate points, a saturable-core reactor having an A. C. winding and a D. C. winding, said D. C. winding being connected to said bridge so that current flows through said D. C. winding in response to a difference of potential developed across the other pair of conjugate points of said bridge, means for polarizing the effect of said difference of potential, a phase-control circuit including the A. C. winding of said reactor, said circuit being effectively coupled to said A. C. line so as to be energized therefrom, and connections from the control grid and from the cathode of said tube to different points in said phase control circuit, whereby the energizing current flowing in said field winding is automatically regulated in accordance with fluctuations in A. C. potential in said line.

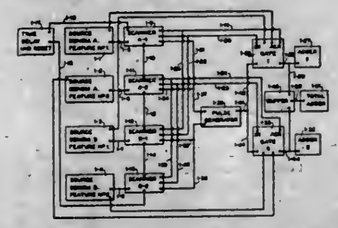
2,472,539
FIRE EXTINGUISHING POWDER
Robert C. McGlenn, Elmira, N. Y., assignor to American-La France-Foamite Corporation, Elmira, N. Y., a corporation of New York
No Drawing. Application May 18, 1946, Serial No. 670,845
2 Claims. (Cl. 252—7)

1. A fire extinguishing powder consisting essentially of a mixture of finely divided sodium bicarbonate and silica aerogel, both compounds having a particle size of about 200 mesh, the proportion of silica aerogel being about .5% to 1.5% by weight of the sodium bicarbonate.



2,472,540
PISTON RING
Jim C. Meador, Shreveport, La.
Application March 14, 1945, Serial No. 582,656
5 Claims. (Cl. 309—44)

1. A metallic piston ring having a stepped upper portion at its outer surface to reduce the thickness of the ring at its upper portion, transversely extending recesses in the reduced portion of the ring, and a filler of resilient material positioned in said recesses and covering the outer surfaces of the reduced portion of the ring flush with the outer surface of the lower portion thereof, said resilient material being responsive to pressure within a cylinder within which the ring is working to expand the resilient material against the wall of the cylinder.

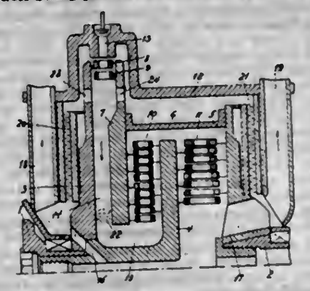


2,472,541
BRAKE TESTING DEVICE
Arthur N. Milster, Ferguson, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a corporation of Delaware
Application December 16, 1944, Serial No. 568,532
6 Claims. (Cl. 73—128)

3. In a brake testing device, a wheel supported trailer; means for connecting said trailer to a towing vehicle which includes a tubular member secured to said trailer and a part securable to said towing vehicle longitudinally movable in said tubular member when said trailer moves relative to said towing vehicle along the line of trailer travel in response to vehicle deceleration; a dial in said trailer; means for rotating said

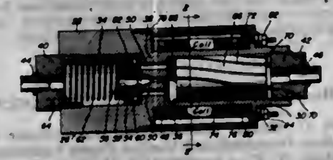
dial from the supporting wheel on said trailer; an electromagnetic clutch in said means; an electrical circuit for said electromagnetic clutch; and a switch in said electrical circuit operable by relative longitudinal movement of the parts of said connecting means for controlling the operation of said clutch.

2,472,542
ELECTRONIC TOTALIZING SYSTEM
Nathan A. Moerman, Brooklyn, N. Y., assignor to Potter Instrument Company, Inc., Flushing, N. Y.
Application January 29, 1948, Serial No. 5,112
7 Claims. (Cl. 235—61)



1. In a totalizing device, the combination of, a plurality of sources of multiple denomination items to be totalized, a scanner for detecting items in each of said sources, a pulse generator for generating pulses to represent each of said denominations, couplings between said scanners and said pulse generator to initiate pulses when said scanners detect items in said sources, a plurality of adders, a gate to apply said pulses to predetermined adders, and couplings between said sources and said gate to actuate said gate.

2,472,543
RADIAL-FLOW TURBINE OF DOUBLE ROTATION TYPE
Ragnar Olov Jacob Möller, Finspong, Sweden
Application December 10, 1943, Serial No. 513,743
In Germany December 11, 1942
1 Claim. (Cl. 253—16.5)

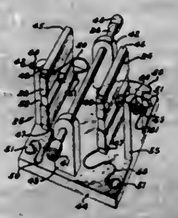


A turbine unit comprising a double rotation radial flow turbine having two shafts for opposite rotation, two groups of axially spaced radial discs alternately arranged with relation to each other so that at least one disc of each group forms a baffle between two discs of the other group, the discs of one group all being supported at their inner peripheries by one shaft, while only

one disc of the other group is directly supported at its inner periphery by the other shaft, a cylindrical member for connecting an outer point of another disc of said other group to said directly supported disc, so that the discs and said cylindrical member form a convolute passage comprising a set of radially extending channels between the discs for traverse successively by elastic driving fluid, turbine blades in said channels supported alternately by one and the other of the respective discs, the blades in the first radial channel in order of fluid flow which is adapted to be traversed by the driving fluid from outside inwardly being a set of impulse turbine blades located at the outer end portion of said first channel, the subsequently traversed radial channels each being provided with a group of reaction

turbine blades mounted on the respective discs, the first of said groups of reaction blades being arranged to be traversed by fluid passing outwardly and the last group by fluid passing inwardly, so that the driving fluid is delivered from the blade system in proximity to the turbine axis, a stationary casing enclosing said discs and blades, labyrinth packings sealing said discs and blades in said casing, the discs carrying the impulse blades being of a larger diameter than the remaining discs, the projecting portions of said larger discs being exposed to passages leading to the outer periphery of said packings and being formed with ports for allowing fluid that has passed the impulse blade system to reach the outer ends of the labyrinth packings for balancing purposes.

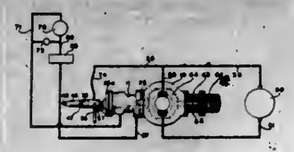
2,472,544
ELECTROMAGNETIC HILL HOLDER FOR VEHICLES
Henry Nissen, Hartford, Conn., assignor to Alfred Minukas, Hartford, Conn.
Application January 21, 1946, Serial No. 642,483
11 Claims. (Cl. 137—139)



1. An electromagnetic valve assembly comprising a valve casing including a chamber therein, a partition disposed in said chamber, a solenoid coil surrounding said chamber and a solenoid plunger snugly fitted and slidable therein, a fluid passage through said partition and a valve on said plunger controlling said passage, additional passages in said partition, and fluid passages in said plunger.

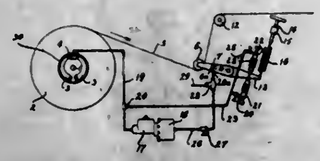
2,472,545
APPARATUS FOR TESTING VOLTAGE REGULATORS
Leslie Reginald Nixon, New Eltham, London, England, assignor to J. Stone & Company Limited, Deptford, England, a British joint-stock company
Application November 24, 1944, Serial No. 565,036
In Great Britain March 12, 1944
4 Claims. (Cl. 73—1)

1. In a testing device for electric regulators of the carbon pile type wherein compression of the pile is effected by a magnet operating against a main spring; a casing, a spring-loaded plunger enclosed in said casing, a frame for the regulator having a fixed slideway in which said casing is guidingly mounted and depressible therein for bringing said plunger into resilient engagement with a movable part of the regulator in opposition to said main spring, and stop means limiting the depression of said casing and the ultimate spring load on said plunger.



2,472,546
ADJUSTABLE CURRENT TRANSFORMER
Richard C. Pomeroy, Westchester, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application June 6, 1947, Serial No. 753,141
6 Claims. (Cl. 171—777)

6. An electrical transformer comprising a base member of insulating material, spaced parallel supports of insulating material extending from said base at the ends thereof, a tubular primary element supported by said supports and extending across said base in spaced relation thereto, another support member of insulating material extending substantially parallel to said first mentioned support members and mounted on said base at a side thereof, a coil supporting element movably mounted on said other support member, a substantially rectangular coil carried by said coil supporting element with its longest sides extending substantially parallel with the primary



element and one of said sides being closer to said primary than the other, and means for rotating said coil around an axis passing through and substantially normal to the long sides of said coil.

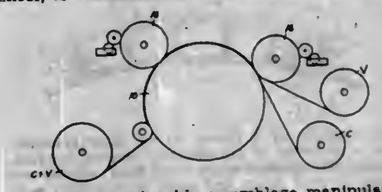
2,472,547
SERVOMOTOR MECHANISM
Howard M. Purcell, Mount Gilead, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del., a corporation of Delaware
Application February 15, 1946, Serial No. 647,786
4 Claims. (Cl. 121—41)

1. In a servomotor, a casing, a double acting ram in said casing, a valve in said ram for controlling the supply of fluid to and from opposite ends of said casing, a rod on said valve having a piston, a cylinder on said rod surrounding said piston, resilient means in said cylinder urging said piston toward one end thereof, means to admit pressure to said one end of said cylinder to urge said piston toward the other end thereof, and mechanism linked to said cylinder for normally actuating said cylinder, rod and valve as a unit and for holding said cylinder stationary when said piston is actuated by pressure whereby said valve may be shifted independently of said mechanism and cylinder.

2,472,548
AUTOMATIC TENSIONING DEVICE FOR REELS
Steve Schnell, Kirkwood, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a corporation of Delaware
Application February 24, 1945, Serial No. 579,539
4 Claims. (Cl. 242—75)

1. In an unreeling device; a reel for web material; a brake for said reel; a pressure fluid motor for actuating said brake; a compensator for supplying pressure fluid for actuating said pressure fluid motor; means for actuating said compensator; a source of power for said means; an idler mechanism for said reel which includes a pivoted frame having a roller therein about which said web material passes; a spring connected to said idler mechanism for tensioning said web material; a pair of shock absorbers operatively associated with said idler mechanism for preventing excessive movements in said idler mechanism; means operated by said idler mechanism for controlling said source of power for said means; and means for establishing communication between said compensator, said shock absorbers and said pressure fluid motor.

2,472,549
BED TRAY
John J. Schuhe, Chicago, Ill., assignor of one-half to S. W. Johns, Chicago, Ill.
Application August 23, 1946, Serial No. 692,644
2 Claims. (Cl. 287—12)

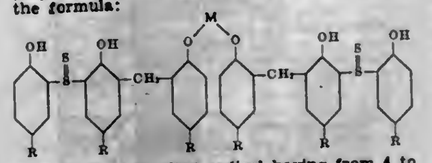


1. A rotatable joint for two spaced members, said joint including a sphere, means connecting said sphere to one of said members, said sphere having three projections spaced at right angles in a common plane through the center thereof, one of said projections being opposite said means, and means connecting said sphere to the other of said members, said means including a pair of spaced parallel plates having circular openings to engage said sphere, the opening of one of said plates having an extension to the end thereof capable of accommodating said first means, and the other of said openings having an extension to accommodate said one projection and located oppositely to the opening of said one plate, thus rotatably to support said members about one axis and to permit rotating of said members about an axis transverse to said first axis when said members have a predetermined angular relation about said first axis.

2,472,550
MANUFACTURE OF ORGANIC NITRO COMPOUNDS
Arthur Ernest Wilder Smith, Charles William Scaife, and Harold Baldock, Norton-on-Tees, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application May 18, 1945, Serial No. 594,602. In Great Britain April 3, 1944
3 Claims. (Cl. 260—644)

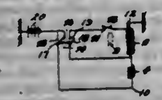
1. A process for the production of dinitro paraffins which comprises introducing at least one aliphatic mono-olefine having 3 to 6 carbon atoms into a solution of nitrogen tetroxide in an organic, saturated, non-benzenoid solvent compound containing carbon, hydrogen and oxygen only, all oxygen in said solvent being present in an ether group, and all ring systems present in said solvent compound having at least 5 members, said nitrogen tetroxide being in molar excess of said mono-olefine and being free from nitric acid and from nitric oxide; removing the solvent and any remaining nitrogen oxides by distillation at reduced pressure; treating the reaction product with water; removing the aqueous layer; and recovering dinitro paraffin from the non-aqueous residue by fractional distillation.

2,472,551
METHOD FOR PRODUCING SURFACE DECORATED PLASTIC SHEETS
Robert L. Smith, Amherst, N. H., assignor to Nashua Gummed and Coated Paper Company, Nashua, N. H., a corporation of Massachusetts
Application May 10, 1946, Serial No. 668,781
4 Claims. (Cl. 18—47.5)



1. The method of preparing a surface decorated, unitary, self-sustaining sheet of a flexible, readily extensible, resilient plastic which comprises forming from plastic batch material a solidified plastic sheet on an inextensible carrier sheet coextensive with said plastic sheet, said plastic sheet being in direct superficial contact with the surface of the carrier sheet, said surface being smooth and unfavorable to the formation of an interlocking bond with the plastic sheet, to which surface the plastic sheet coheres

to provide a fissionable assemblage manipulable as a unit, processing as a unit the two coherent sheets by securing decorative material to the exposed surface of the plastic sheet while maintained against distortion of area by the thereto cohering carrier sheet, and thereafter stripping from the carrier sheet the decorated plastic sheet as a self-sustaining unit.

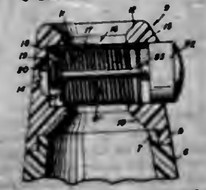


2,472,552
ADDITION AGENTS FOR MINERAL OIL LUBRICANTS
Herschel G. Smith, Wallingford, and Troy L. Cantrell, Lansdowne, Pa., and John G. Peters, Audubon, N. J., assignors to Gulf Oil Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application June 12, 1947, Serial No. 754,269
21 Claims. (Cl. 252—42.7)

11. A lubricant composition comprising a major amount of a mineral lubricating oil and a minor amount, sufficient to confer detergent properties on the composition, of a salt having the formula:

wherein R is an alkyl radical having from 4 to 12 carbon atoms, and M is a divalent metal.

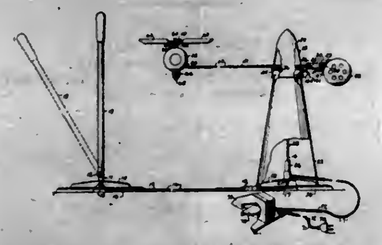
2,472,553
ELECTROMAGNET
François Jean Marie Theunissen, Brussels, Belgium, assignor to Societe Anonyme Teco, Bois-de-Breux (Liege), Belgium
Application April 5, 1946, Serial No. 659,691
In Belgium March 11, 1940
Section 1, Public Law 690, August 8, 1946
Patent expires March 11, 1960
1 Claim. (Cl. 175—335)



An electro-magnet including a movable armature, a main winding capable of attracting said armature when individually energized, an auxiliary winding connected in series with the main winding, the combined action of both windings, when energized in series, being only capable of maintaining the armature in its actuated position, a switch movable between two positions in each of which it connects the main winding to a source of current, a short-circuiting circuit for the auxiliary winding, a first breaker therein which is normally closed, means for opening said breaker by the aid of the armature towards the end of its attraction stroke, a second breaker in said short-circuiting circuit, this second breaker being normally open when the said switch is in the position corresponding to the non-attraction of the armature, and means for closing said second breaker when the said switch is shifted to its other position.

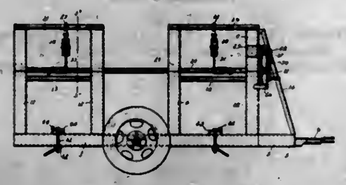
2,472,554
EXPANSIBLE REAMER
Harry G. Vells, Detroit, Mich.
Application March 26, 1946, Serial No. 655,867
2 Claims. (Cl. 77—76)

1. A reamer of the kind described, comprising a hollow cylinder and a shank axially extending therefrom, the cylinder having a plurality of radially disposed slots in its wall and extending parallel to the axis of the cylinder, a closure for the opposite end of the cylinder, a shaft axially disposed therein, said shaft being journalled in the end closure and being partly threaded into a bore in the shank end of the cylinder, a cone axially mounted on the shaft, a plurality of radially disposed blades, having outer edges serrated for cutting and having inner edges in a sliding abutment with the sides of the cone, a coiled spring transversely located within the body of each blade, the outer ends of the spring bearing against the inner surface of the cylinder to hold the blade in said abutment, and means to rotate the shaft to propel the cone axially, to cause the cone to force the blades outwardly against the tension of said springs.



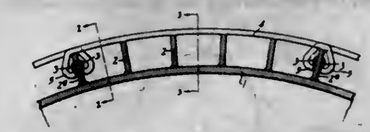
2,472,555
CONTAINER CAP AND VALVE THEREFOR
Joseph G. Ward, Staten Island, N. Y.
Application February 24, 1948, Serial No. 10,375
3 Claims. (Cl. 65—45)

3. A shaker for salt, sugar, and the like comprising a container having a cap provided with an axially disposed discharge passage and sockets, aligned with each other and at right angles to and on diametrically opposite sides of said passage, a tightly wound helical spring spanning and normally closing said discharge passage, said spring being at right angles to said passage and the endmost coils of said spring being mount-



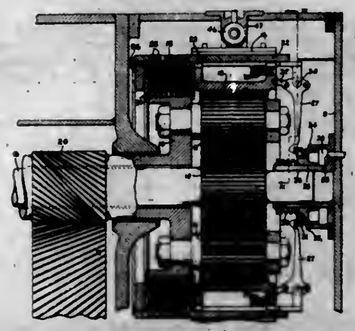
ed for controllable operation in said sockets, and manually actuatable operating means for said spring, said means being accessibly located on said cap at a convenient place for ready use, and embodying a plunger connected at one end to said spring and having a thumb button slidable in one of said sockets for pressing said plunger and opening and closing said spring.

2,472,556
ROTARY HELICOPTER AND SUPPORT
William L. West, Belmont, N. C.
Application May 12, 1947, Serial No. 747,463
5 Claims. (Cl. 46—75)



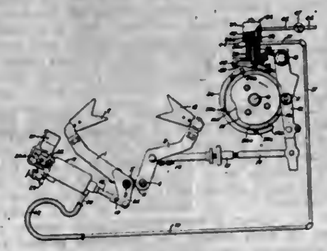
5. In a roundabout comprising a vertically movable support, a pipe mounted intermediate its ends on the upper end of said support, a motor mounted on one end of the pipe, a toy helicopter having a rotor mounted on the other end of said pipe, a driving shaft disposed within said pipe and connected to said motor and to said rotor, remotely mounted means for tilting the support for the pipe to vary the angle of attack of the rotor of the helicopter to thereby cause it to fly either forward or backward.

2,472,557
VEHICLE FOR TRANSPORTING TANKS
Alton G. Wills, Robstown, Tex.
Application November 5, 1946, Serial No. 707,839
3 Claims. (Cl. 214—75)



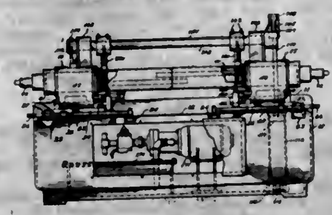
1. A tank transporting vehicle comprising a chassis having a pair of supporting wheels, parallel rails supported at their mid point on said wheels and connected at their forward ends, pairs of spaced arches symmetrically mounted on the front and rear portions of the rails, said pairs being spaced from each other to provide an unobstructed opening over said wheels, members connecting the tops of the respective pairs of arches, clevises longitudinally adjustable on said members, pulley blocks carried by the clevises, separate hoisting cables passing therethrough, and a shaft for winding said cables and means for rotating it.

2,472,558
ROTARY DRUM FILTER
Orville B. Ackerly, Jr., Piedmont, Calif., assignor to Oliver United Filters Incorporated, Oakland, Calif., a corporation of Nevada
Application December 27, 1945, Serial No. 637,345
6 Claims. (Cl. 210—202)



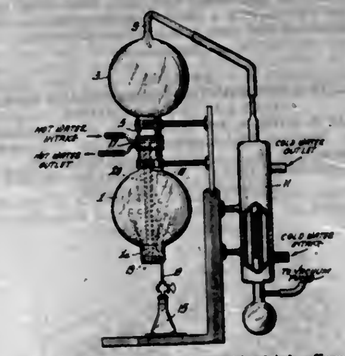
1. A drum of a rotary drum filter comprising: a plurality of peripherally spaced, longitudinally extending division strip bars secured and sealed to said drum and each provided on each of its sides with a longitudinally extending shoulder; and a plurality of rods overlying each successive pair of division strip bars transversely thereof, each end of each of said rods terminating in a downwardly and inwardly extending hook and each of said hooks being detachably secured under one of said shoulders.

2,472,559
PLANETARY GEARING
Edwin E. Arnold, Pittsburgh, and John S. Newton, Lansdowne, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 24, 1946, Serial No. 685,840
7 Claims. (Cl. 74—291)



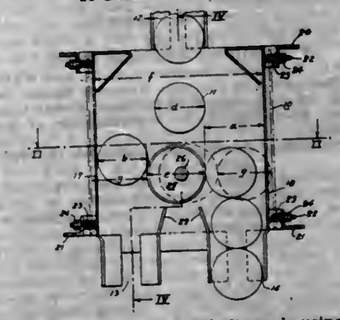
1. In planetary gearing, a sun gear, an orbit gear, planet pinions meshing with the sun and orbit gears, a carrier for the planet pinions, a brake drum encompassing the orbit gear, said orbit gear being capable of axial movement, a slidable coupling between the drum and the orbit gear, a clutch for connecting the carrier and the brake drum and operated by relative axial movement of the orbit gear, pressure-responsive operating means for moving the orbit gear and the drum relatively in one direction to connect the clutch, a spring for moving the orbit gear and the drum relatively in the other direction for disconnecting the clutch, braking means for the brake drum, pressure-responsive operating means for engaging the braking means with the drum, and means for applying fluid under pressure to either of said operating means and for releasing such pressure from the other operating means.

2,472,560
GLASS FEEDER SHEAR MECHANISM ACTUATING MEANS
Charles R. Avery, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a corporation of Delaware
Application November 20, 1946, Serial No. 710,967
9 Claims. (Cl. 49—14)



1. In combination with a shear mechanism for a glass feeder, actuating means for operating said shear mechanism comprising a fluid pressure cylinder, a reciprocable piston operatively disposed therein, means to feed pressurized fluid to one side of said piston at predetermined times and to release fluid therefrom at other predetermined times, regulable means to gradually admit fluid to the other side of said piston, normally closed valve means operatively connected to said cylinder and constructed and arranged to open under a predetermined fluid pressure within the cylinder at said second named side of the piston to exhaust fluid therefrom, and means to operatively connect said piston to said shear mechanism.

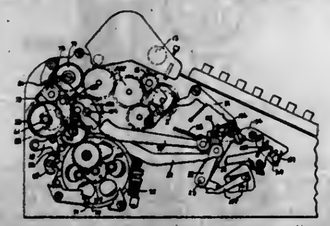
2,472,561
METALWORKING MACHINE
Arthur J. Barrie and Raymond J. Dwyer, Toledo, Ohio, assignors to Acorn Designing Co., Toledo, Ohio, a corporation of Ohio
Application March 28, 1945, Serial No. 585,224
15 Claims. (Cl. 153—73)



1. In combination, a frame; a work supporting mandrel mounted upon said support; an annular member surrounding said mandrel and adapted to engage and position the work upon the mandrel; a stripper ring surrounding said annular member; said annular member and stripper ring being formed with interengaging projections whereby the annular member is adapted for slidable movement within said stripper ring upon longitudinal movement of said mandrel; said stripper ring being arranged to engage and strip the work from the mandrel during retractive movement of said mandrel.

2,472,562
ART OF DEHYDRATING EFFERVESCENT LIQUIDS
Rudolph A. Bierwirth, Kingston, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application July 31, 1944, Serial No. 547,497
4 Claims. (Cl. 159—47)

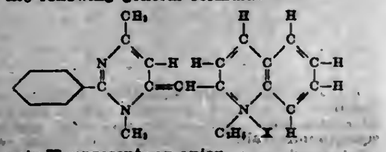
1. Method of treating a liquid which effervesces when subjected to heat, said method comprising applying heat to said liquid to cause it to effervesce, establishing a flow of heat to and from a zone above the level of said liquid, causing the emanations of said effervescing liquid to enter said zone and to abstract heat therefrom, and then varying a subsequent quantity of heat applied to said liquid as determined solely by the difference between the temperature of the flow of heat to said zone and the temperature of the flow of heat from said zone whereby to regulate the intensity of effervescence of said liquid.



2,472,563
CAN LINE DIVIDER
Eli Bourland, Millbrae Highlands, Calif., assignor to Pacific Can Company, San Francisco, Calif., a corporation of Nevada
Application December 9, 1946, Serial No. 714,993
10 Claims. (Cl. 193—31)

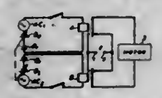
4. A can line divider, including a housing having an inlet adapted to receive cans, a plurality of outlets in its bottom for said cans, and resiliently mounted side plates adjacent the outside edges of said outlets, a shaft mounted in said

housing substantially parallel with its bottom and parallel with said side plates and above and between said outlets, means for rotating said shaft, and a cylinder mounted off center on said shaft and of such a diameter that as it rotates its positions of maximum clearance from said side plates will provide a space more than equal to the diameter of the cans passing therethrough, and its positions of minimum clearance from said side plates will provide a space less than equal to the diameter of the cans passing therethrough.



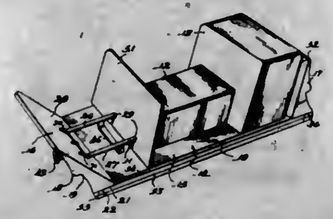
2,472,564
ACTUATOR CONTROLLING MEANS FOR CALCULATING MACHINES
Edwin F. Britten, Jr., Short Hills, N. J., assignor to Monroe Calculating Machine Company, Orange, N. J., a corporation of Delaware
Application July 13, 1945, Serial No. 604,853
4 Claims. (Cl. 192—.02)

1. In a calculating machine having electric circuit means provided with a switch, a motor in said circuit, differential actuators, a normally idle transmission means between the motor and the actuators including elements engageable to effect the drive, a motor key, and actuator stopping means; a cyclic auxiliary clutch driven from the motor, means driven by the auxiliary clutch under control of the motor key to engage the transmission elements, means for disengaging the auxiliary clutch in midcycle position thereof, means driven by the auxiliary clutch under control of the actuator stopping means to reengage the auxiliary clutch and thereby disengage the transmission elements, and devices including a notched disk operable by the auxiliary clutch to hold the switch closed when said clutch is out of its full cycle position.



2,472,565
PYRIMIDO-2'-CYANINE DYES
Leslie G. S. Brooker, Rochester, N. Y., and Walter F. Holcomb and Clarence Kenneth Banks, Detroit, Mich., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application September 10, 1946, Serial No. 696,028
3 Claims. (Cl. 260—240)

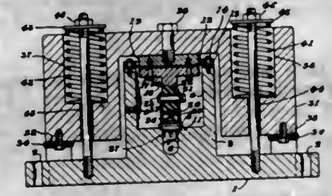
1. New compounds, prepared for use as therapeutics, consisting of the compounds represented by the following general formula:



wherein X represents an anion.

2,472,566
MOTOR CONTROL CIRCUIT
John T. L. Brown, Short Hills, and Charles E. Pellard, Jr., Hoboken, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application May 16, 1945, Serial No. 594,048
15 Claims. (Cl. 318—207)

1. In an amplifier circuit, two relays, means for applying a current of varying amplitude to the windings of said relays whereby said relays are caused to periodically operate in alternation in accordance with the periodicity of said current, an input circuit for applying a variable control current to the windings of said relays, a source of power, a load device, and means controlled by said relays for applying power from said source to said load device, the energization of the windings of said relays by said control current being effective to control the relationship between the operated periods of said relays whereby the direction of the impulses transmitted from said source to said load device is made dependent upon the direction of the control current and the duration of each impulse is made dependent upon the magnitude of the control current.

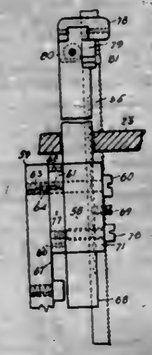


2,472,567
CARD FILING EQUIPMENT
George C. Bruen, Chicago, Ill., assignor, by direct and mesne assignments, of seventy and five-tenths per cent to Sophie E. Bruen, Chicago, Ill., five per cent to Edna V. Dickinson, Highland Park, Ill., nine per cent to Sarah M. Bullock, Wilmette, Ill., ten and five-tenths per cent to G. A. Stuart, Washington, D. C., two per cent to Jay Fisher, Chicago, Ill., one per cent to Marie Thoenen, Elmwood Park, Ill., one per cent to George H. Frederickson, Chicago, Ill., and one per cent to E. M. Thorsen, St. Joseph, Mo.
Application August 4, 1945, Serial No. 608,911
6 Claims. (Cl. 129—16)

1. A card filing tray comprising a base having a stable supporting surface, said base being provided at each of its ends with an upwardly extending wall member, a card supporting and securing unit removably mounted on said base, said unit including a rod extending longitudinally of and substantially parallel to said base and spaced therefrom, whereby a multiplicity of cards provided with apertures for receiving said rod may be slidably supported upon said rod in position to be opened at any convenient point for reference, the stacks of cards on either side of

the opening resting against said end walls, said supporting and securing unit having its rod formed to substantially U shape with side legs and a yoke portion removably fitting into a slot type recess in one of said walls, said recess opening longitudinally of the base, the ends of said U-shaped rod remote from the yoke portion engaging in recesses opening upwardly and longitudinally of the base at a distance therefrom in the other of said walls, a lateral brace extending between said side legs and having upwardly extending end flanges secured to the side legs near the ends thereof, said lateral brace providing support for the legs at substantially the level of the latter mentioned recesses, and the latter mentioned wall being provided with latching means including a movable latching bar for simultaneously engaging both ends of said rod, said latching bar having a latching position overlying the ends of said U-shaped rod in said recesses and a retracted position in which the said ends of the rods are removable from the recesses.

2,472,568
FLUID OPERATED VIBRATOR
Ralph Burt, Homer City, Pa., assignor to Syntron Company, Homer City, Pa., a corporation of Delaware
Application August 14, 1945, Serial No. 610,852
10 Claims. (Cl. 259—1)

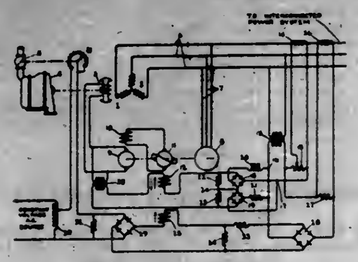


1. Vibratory apparatus comprising a base adapted to be secured to an object to be vibrated, and providing a pressure chamber, a pliable diaphragm closing one end of said chamber, inlet and outlet connections to said chamber, a valve for controlling flow through said outlet connection, resilient means connecting said valve and diaphragm, a massive body connected to said diaphragm, and spring means biasing said mass and diaphragm in a direction to close said valve.

2,472,569
MEANS FOR SECURING A PIPE FITTING TO A PLATE, WALL, OR THE LIKE
Percy Graham Caldwell and Lionel William Hope-Walton, London, England
Application January 21, 1947, Serial No. 723,328
In Great Britain January 26, 1946
8 Claims. (Cl. 285—25)

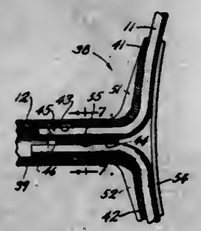
1. A pipe fitting adapted to be clamped into sealing relation with a hole in a wall, comprising a screw-threaded tube and a nut-operated jointing means for sealing the fitting to the hole, one end of the tube being adapted to be passed freely through the hole and having a freely displaceable head of such dimensions as to be capable of bridging the hole and bearing on the inside of the wall on opposite sides of the hole, the head being adapted to be displaced in relation to the tube and passed obliquely through the hole and then shaken into a position to bridge the hole as aforesaid so that it will thrust against the said wall while the nut is operated to clamp the jointing means, and being adapted to be shaken into a position in which it may be easily withdrawn through the hole when the clamp is slackened.

2,472,570
WORK-SUPPORTING ADJUSTABLE MANDREL FOR BAND SAWS
Stanley J. A. Christie, Oshawa, Ontario, Canada
Application August 11, 1944, Serial No. 549,162
2 Claims. (Cl. 143—132)



1. A mandrel for band saws and the like comprising a housing, means for securing said housing to a band saw table, set screw means for aligning said housing with the saw blade, a chassis adapted to carry a pedestal for supporting the work, said pedestal having a head and means for adjusting said head in a horizontal plane along a line aligned with said blade and along a line perpendicular to said aligned line.

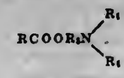
2,472,571
REGULATING SYSTEM
Selden B. Crary, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application August 1, 1946, Serial No. 687,634
11 Claims. (Cl. 290—7)



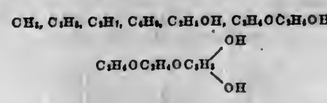
4. A field excitation control system for a synchronous generator driven by a prime mover comprising, a source of excitation for said generator field including a dynamo-electric exciter, means responsive to the output voltage of said generator for controlling the output of said exciter to maintain said generator output voltage constant, means for obtaining a potential proportional to the internal generated voltage of said generator including a resistance of effectively equal ohmic value to the ohmic value of transient reactance of said generator, means for

obtaining a second potential proportional to the electrical load on said generator including a rheostat variable in accordance with the position of the throttle of said prime mover, and means for limiting the generator field excitation lowering action of said dynamo-electric ex-

citer by comparing said first potential with said second potential and applying the excess of said second potential over said first potential to said exciter output control means to render said exciter ineffective to reduce generator field excitation below a predetermined minimum value.



2,472,572
LANDING NET
Lewis Anthony Dailey, Oshkosh, Wis.
Application June 4, 1945, Serial No. 597,431
1 Claim. (Cl. 306—45)



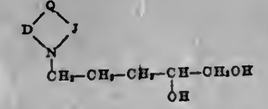
In a device of the class described, the combination of a length of wire formed in a generally circular loop with the opposite ends of the wire extending outwardly in the plane of the loop and parallel with each other to provide a pair of mounting shanks for the loop; each of said shanks including a notch on the exterior surface thereof; a tubular handle for the loop, and a mounting fitting having a portion telescoped within the handle and including a pair of parallel bores to receive the mounting shanks of the loop, together with a single rivet extending through the handle and the mounting fitting and engaging the notches in the shanks of the loop to lock the handle fitting and loop to each other; together with a pair of loop supporting arms on the mounting fitting, said arms each having an arcuate channel extending outwardly along a portion of the loop in a direction generally perpendicular to the axis of the mounting shanks, with flanges on each of said arms surrounding and engaging the wire near the shanks to support the loop at the shanks and in the curved portions of the loop adjacent the shanks.

2,472,573
PROCESS FOR BREAKING PETROLEUM EMULSIONS
Melvin De Groote, University City, and Bernhard Keiser, Webster Groves, Mo., assignors to Petrolite Corporation, Ltd., Wilmington, Del., a corporation of Delaware
No Drawing. Application March 11, 1948, Serial No. 14,397
7 Claims. (Cl. 252—341)

1. A process for breaking petroleum emulsions of the water-in-oil type, characterized by subjecting the emulsion to the action of a demulsifier including a cation-active polychloride, said cation-active polychloride being the reaction product of diglycol chloroformate and a hydroxylated mono acylated amine of the following formula:

in which RCO is the acyl radical of a higher fatty acid having at least 8 and not more than 22 carbon atoms and R_1 and R_2 are selected from the class consisting of the monovalent radicals

and R_3 is selected from the class consisting of the divalent radicals



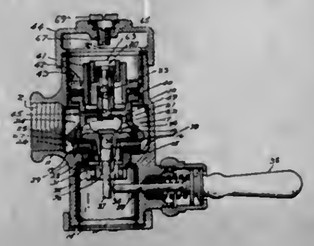
with the further proviso that there be at least one occurrence of an alcoholic hydroxyl radical in the radicals R, R_1, R_2, and R_3.

2,472,574
PROCESS FOR BREAKING PETROLEUM EMULSIONS
Melvin De Groote, University City, and Bernhard Keiser, Webster Groves, Mo., assignors to Petrolite Corporation, Ltd., Wilmington, Del., a corporation of Delaware
No Drawing. Application March 11, 1948, Serial No. 14,398
5 Claims. (Cl. 252—340)

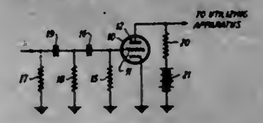
1. A process for breaking petroleum emulsions of the water-in-oil type, characterized by subjecting the emulsion to the action of a demulsifier including an oxyalkylated, drastically oxidized oiticica oil-castor oil condensate, said condensate being obtained by a reaction within the temperature range of 250° C. to about 280° C. in the presence of an acid sulfate activating agent; the proportion of oiticica oil to castor oil being within the range of one part of castor oil to two parts of oiticica oil, up to five parts of castor oil to two parts of oiticica oil; said oxidation being by means of a gaseous oxygen-containing medium and said oxyalkylation being sufficient to endow the final product with distinctly hydrophile properties and with the final proviso that the oxyalkylating agent be selected from the class consisting of ethylene oxide, propylene oxide, butylene oxide, glycide, and methyl glycide.

2,472,575
N-(4,5-DIHYDROXY-N-AMYL) AND N-(4,5-DIACYLOXY-N-AMYL) AROMATIC AMINES
Joseph B. Dickey, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application August 4, 1944, Serial No. 548,140
4 Claims. (Cl. 260—244)

1. The amines which are represented by the following general formula:

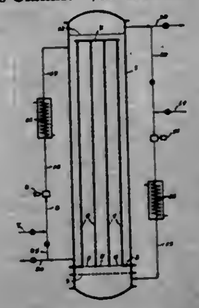


wherein D represents a monocyclic o-arylene group of the benzene series, the carbon atom in the aryl group in the para position to the



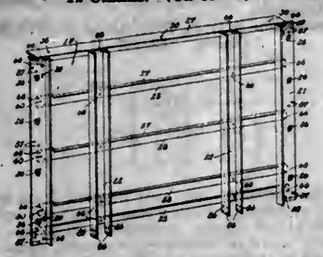
group having only a hydrogen atom attached thereto, J represents a 1,2-alkylene group and Q represents a member selected from the group consisting of a methylene group and an oxygen atom.

2,472,576
FLUSH VALVE
August C. Dobrick, Chicago, Ill., assignor to The Imperial Brass Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application April 22, 1946, Serial No. 663,889
5 Claims. (Cl. 137—93)



1. A flush valve comprising, in combination, a body having an inlet and an outlet for the fluid to be controlled, means within the body forming a main valve seat, a piston unit reciprocable in said body under the influence of fluid pressure differentials including a main valve element for cooperation with said main valve seat and relief valve means including a valve element controlling a passage leading from the end of said piston unit remote from said main valve element to the outlet of said body, and a rigid yoke-like element supported by said relief valve element and operable as an incident to movement of said piston unit to fully open position of said main valve to abut a portion of said body and positively to seat said relief valve element.

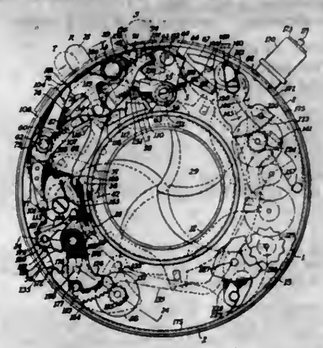
2,472,577
DOUBLE TIME-CONSTANT CIRCUIT FOR DIRECT-CURRENT RESTORATION
Vernon J. Duke, Rockville Centre, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application May 31, 1946, Serial No. 673,283
2 Claims. (Cl. 178—7.3)



1. In television apparatus wherein there is received recurrent signals indicative of the optical values of an image undergoing scansion and wherein there is received a recurrent signal indicative of the black level of the image undergoing scansion and wherein the direct current component of the signals developed during scansion of the optical image is inaccurately represented, apparatus for restoring a direct current component to said received signals comprising a thermionic tube having anode, cathode and at least one control electrode, a first resistor connected between said control electrode and a point of reference potential, a first condenser, a second resistor connected serially with the control electrode, the first condenser and the point of reference potential, and a second condenser connected serially with the first condenser, the time constant of the circuit formed by the first resistor and first condenser being in the neighborhood of the time of occurrence of several of the recurrent signals and the time constant of the circuit formed by second condenser and second resistor being short as compared to the time constant of the circuit formed by the first resistor and first condenser.

2,472,578
METHOD OF CONTACTING FLUIDS
Seymour W. Ferris, Mount Holly, N. J., and Edward R. Lamson, Hatboro, and Douglas M. Smith, Norwood, Pa., assignors to The Atlantic Refining Company, Philadelphia, Pa., a corporation of Pennsylvania
Application March 21, 1946, Serial No. 656,126
8 Claims. (Cl. 196—13)

1. The method of contacting a liquid with a partially immiscible fluid, which comprises forming said liquid into an uninterrupted film between a plurality of vertical, horizontally-spaced guides, and bringing said liquid film into intimate contact with said fluid without rupture of said film.

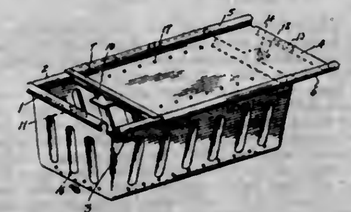


2,472,579
KNOCKDOWN DESK
Roland J. Freeman, Baldwin, N. Y.
Application October 20, 1945, Serial No. 623,585
12 Claims. (Cl. 45—8)

1. A desk pedestal comprising two separate and distinct pre-fabricated complementary metallic frame members, said frame members being oppositely disposed in spaced relation to partially form a load-bearing frame assembly for the desk pedestal, each of said frame members including a load-bearing main column, drawer guides supported in tier by said main column, and openings pre-punched in said frame member, said pre-punched openings being in alignment with the corresponding openings in said complementary frame member, a beam having a length governed by the width of the desk pedestal, said main columns being erected upon and carried by said beam and secured to the opposite ends thereof to partially cross brace said frame assembly, a plurality of cross braces, said cross braces having pre-punched openings formed in either end thereof registering with certain of the pre-punched openings in said frame members when said frame members are arranged in properly spaced relation and are plumb, square, and level, and means inserted in said pre-punched openings when in correct registry to lock said complementary frame members and said cross braces together to complete said load-bearing frame assembly.

2,472,580
CAMERA SHUTTER WITH AUTOMATIC DIAPHRAGM
Carl C. Fuerst, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Original application May 21, 1945, Serial No. 595,033. Divided and this application July 13, 1946, Serial No. 683,515
9 Claims. (Cl. 95—63)

1. In a camera of the type including an apertured casing, two interconnected blade rings movably mounted in the casing, shutter blades operatively connected to the blade rings for movement to make an exposure through the shutter casing aperture, the combination with said blade rings, of a master member, means for setting and releasing the master member, a striking surface on the master member movable through an arcuate path, an arm on one blade ring positioned to be struck by the striking member for operating the shutter blades, a diaphragm mechanism including leaves spring pressed toward an aperture closing position, a first diaphragm operating lever, a second diaphragm lever, a resilient connection between the first and second levers, the second lever lying in the path of the striking surface for closing the diaphragm leaves, said means for setting and releasing the master member causing movement of the striking surface in one direction for setting the shutter, said movement opening the diaphragm leaves through the first diaphragm operating lever, the second diaphragm

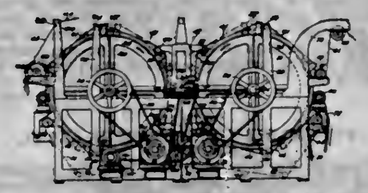


lever and the resilient connection between the first and second levers, said striking surface moving in a reverse direction when the master member is released for operating the shutter blades whereby the diaphragm mechanism spring may move the leaves to a closed position.

2,472,581
PREPARATION OF ALKOXY PYRAZOLONES
Walter A. Gregory, Oak Ridge, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application August 22, 1945, Serial No. 612,137
3 Claims. (Cl. 260—310)

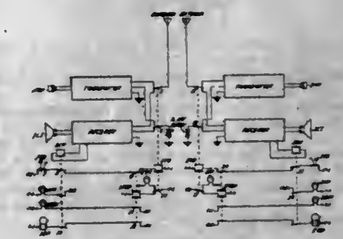
1. The method of producing a 3-alkoxy-5-pyrazolone, which comprises stirring an ether solution of a mono-substituted hydrazine selected from the group consisting of alkyl, mononuclear aryl and benzothiazolyl hydrazines and an ethyl β-alkoxy-β-iminopropionate while cooling in an ice bath for several minutes, then removing the mixture from the ice bath and continuing the stirring for approximately one hour, and isolating the reaction product from the mixture.

2,472,582
FOOD CONTAINER
William E. Green, Los Angeles, Calif.
Application May 4, 1946, Serial No. 667,423
1 Claim. (Cl. 220—41)



In a device for transporting goods in combination, a rectangular container having the upper side edges thereof and the upper edge of one end thereof upwardly and outwardly folded to form a continuous cylindrical rim, the side portions of the container rims being slightly smaller at the free outer ends thereof, the upper edge at the other end of the container being folded downward below the level of the side rims of the container, a cover having its side edges upwardly and outwardly folded to form similar cylindrical rims of a size freely to engage the side rims of the container from the small free ends thereof and to fit said rims snugly when the cover is fully closed, the forward end of said cover being upwardly folded to form a rim snugly fitting over the end rim of the container when the cover is fully closed, the cover being made with a lip forwardly projecting from said end rim thereof and positioned to enter into the end rim of the container when the cover reaches fully closed position, the other end of the cover being downwardly folded to form a cylindrical rim below the level of the side rims thereof, said rim having an opening therethrough, the other end of the container having a lip rearwardly extending therefrom and positioned to enter and pass through the opening in the cover rim when the cover reaches fully closed position, and means engaging said container lip for locking the cover in closed position on the container.

2,472,583
PRODUCTION OF CYCLIC NITROGEN BASE SULFONATES
Felix C. Gzemski, Philadelphia, Pa., assignor to The Atlantic Refining Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application November 7, 1944, Serial No. 562,496
7 Claims. (Cl. 260—239)

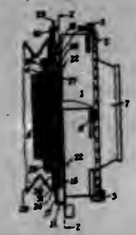


1. The method of producing a heterocyclic nitrogen base sulfonate, which comprises intimately commingling an oil solution of a sulfonic acid with a heterocyclic nitrogen base in an amount sufficient to at least partially neutralize the sulfonic acid, adding a small quantity of water to the mixture, settling the mixture, and separating the heterocyclic nitrogen base sulfonate from the oil.

2,472,584
NAPPING MACHINE
Wilfred Nourse Hadley, Springfield, Vt., assignor to Parks & Woolson Machine Co., Springfield, Vt., a corporation of Vermont
Application December 18, 1947, Serial No. 792,385
13 Claims. (Cl. 26—29)

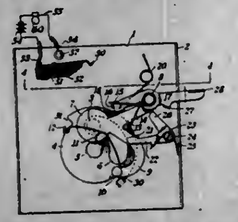
1. In a napping machine including a drum and rollers arranged to lead cloth around the drum through a path tangent to the drum at at least one point; the combination of a frame mounted for rotation at each end of the drum, a roller mounted on said frames in position to span the drum beneath the cloth and spaced from said point of tangency, motor driven means for moving said frames, whereby said roller may be moved either to lift the cloth from the drum or to permit the cloth to touch the drum, motor driven means for feeding the cloth, and a control operable alternatively to cut off the power to the feed means and simultaneously lift the cloth, and to start the feed means and move the frames simultaneously to permit the cloth to touch the drum.

2,472,585
SINGLE CHANNEL RADIO COMMUNICATION SYSTEM AFFORDING BREAK-IN OPERATION
William D. Halles, Brighton, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.
Application April 4, 1945, Serial No. 586,599
17 Claims. (Cl. 250—6)



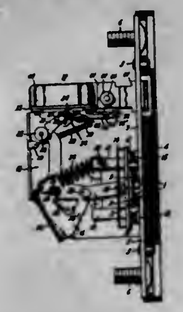
4. In a communication system for transmitting messages by the modulation of a carrier frequency, a plurality of stations each having a receiver and a transmitter, a carrier-responsive relay at each station associated with the receiver at that station and responsive to the reception of a carrier frequency irrespective of its modulations, a transmitter relay at each station normally rendering its receiver effective to receive a carrier signal but acting when energized to render its associated transmitter effective to transmit a carrier signal, manually operable means at each station for energizing its associated transmitter relay only when the associated carrier-responsive relay is inactive, and control apparatus rendered effective by the manual actuation of said manually operable means for automatically deenergizing said transmitting relay after a time interval independently of the operated condition of said manually operable means, said control apparatus being automatically restored by the deenergization of said transmitter relay, whereby transmission from each station while the manually operable means is actuated is intermittently interrupted to permit some other station to break in.

2,472,586
DETACHABLE SHUTTER MOUNT FOR CAMERAS
Douglass C. Harvey, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application April 20, 1946, Serial No. 663,704
2 Claims. (Cl. 95—53)



1. A mount for attaching a shutter, having a rear lens tube, to a camera, said mount comprising a metal lens board adapted to be carried by the camera, a recess in the lens board, a nut

adapted to fit into the recess, a plurality of flat lugs projecting from the lens board lying substantially parallel thereto and constituting hook-like members, formed of the metal lens board and overlying apertures therein, a notched flange projecting from the lens board, a latching plate having a recess therein fitting the nut, the lens board and latching plate having coaxially arranged central apertures to receive tthe rear lens tube of the shutter, the nut having a threaded en-



gagement with the lens tube for holding the latching plate on the shutter, a plurality of flat lugs carried by the latching plate for engagement with the flat hook-like members of the lens board to hold the plate to the lens board, and a latch arm positioned on the latching plate for engaging the notch in the flange projecting from the lens board, the latch arm having a resiliency enabling it to snap into, or be sprung out of, latching engagement with the notch.

2,472,587
BLADE AND COVER BLIND SHUTTER WITH BUILT-IN FLASH SYNCHRONIZER
Douglass C. Harvey, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application August 7, 1946, Serial No. 688,845
3 Claims. (Cl. 95—11.5)

1. A synchronizing shutter for cameras including, in combination, a support, having an exposure aperture therein, a shutter blade pivoted adjacent said aperture and having a slot through which an exposure may be made, a cover blind pivoted on the support, a spring connecting the blade and cover blind, a trigger pivoted on the support and connected to the cover blind by a spring, a cover blind latch for holding the cover blind in a normal position of rest, said latch lying in the path of movement of the trigger, a switch element lying in the path of movement of the cover blind, a flashlight circuit connected to the switch element, said spring connecting the trigger and the cover blind moving the latter at a predetermined speed into contact with the switch element to make the flashlight circuit when the spring is tensioned to a predetermined degree by the trigger moving to release the latch whereby said shutter blade may move past the exposure aperture, completing an exposure.

2,472,588
ELECTRIC SWITCH
Claude D. Hayward, Lansdowne, Pa., assignor to General Electric Company, a corporation of New York
Application November 2, 1944, Serial No. 561,539
12 Claims. (Cl. 200—166)

3. An electric switch comprising two spaced stationary contacts, a cooperating rectilinearly movable bridging contact, a rotatably mounted operating member having a mounting slot, a link interconnecting said bridging contact and said operating member and forming with the member a toggle for effecting circuit closing movement of the bridging contact upon a predetermined rotation of the member in one direction to align said slot for limited sliding movement of said member in the same direction as the rectilinear movement of said bridging contact, means including a latch offset substantially in quadrature with the line of the toggle opposite one side of said slot and engageable with said operating member upon said predetermined rotation therefor for holding the toggle to maintain the bridging contact in the closed circuit position, and a resilient member having a connection with said operating member laterally adjacent said one side of said slot and stressed during said predetermined rotation of said operating member for biasing said member to slide the toggle in the direction of circuit closing movement of the bridging contact while the toggle holding latch is effective and to turn in the direction to collapse the toggle and effect circuit opening movement of the bridging contact upon release of said latch.

2,472,589
POLYMERIZATION OF ALPHA ALKYL STYRENES
Arthur B. Hersberger, Drexel Hill, Pa., assignor to The Atlantic Refining Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application April 18, 1946, Serial No. 663,249
11 Claims. (Cl. 260—93.5)

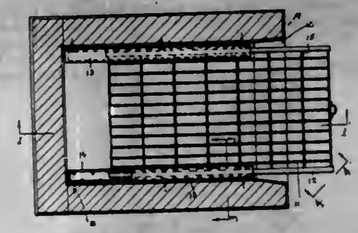
1. A process for polymerizing an alpha alkyl styrene, which comprises contacting said alpha alkyl styrene with a Friedel-Crafts catalyst in the presence of a solvent comprising an inert poly-

alkylpolysiloxane at a temperature below 10° C., said polyalkylpolysiloxane being liquid at the polymerizing temperature and having an alkyl hydrocarbon to silicon ratio between 2 and 3.

2,472,590
OXIDATION OF STARCH WITH NITROGEN DIOXIDE
William O. Kenyon and Cornelius C. Unruh, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application March 2, 1945, Serial No. 580,735
6 Claims. (Cl. 260—209)

1. NO_2-oxidized starch which is insoluble in water, free of non-uronic carboxyl groups and having a CO_2 equivalence of at least 12%.

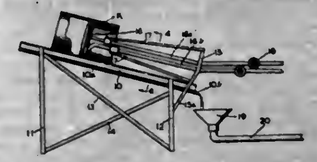
2,472,591
METHOD OF PREPARING AN OXIDIZED NITRATED CELLULOSE
William O. Kenyon and William F. Fowler, Jr., Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application March 29, 1946, Serial No. 658,218
6 Claims. (Cl. 260—220)



1. A method of preparing oxidized nitrated cellulose which comprises treating bone-dry cellulose with an anhydrous mixture of nitrogen dioxide, nitric acid, and a halogenated hydrocarbon, the nitrogen dioxide and the halogenated hydrocarbon being employed in approximately equal amounts, the nitric acid being employed in an amount constituting 4–25% of the total liquid, and the cellulose treated being approximately 2–5%, based on the total liquid with which it is treated.

2,472,592
INORGANIC INSULATING COATING FOR ELECTRICAL STEEL SHEET AND STRIP
George C. Kiefer, Springdale, Pa., assignor to Allegheny Ludlum Steel Corporation, a corporation of Pennsylvania
No Drawing. Application January 9, 1945, Serial No. 572,097
5 Claims. (Cl. 148—6.20)

3. A method of forming an insulating coating on silicon steel in strip or sheet form, which consists in coating at least a surface of such steel with an aqueous solution the solutes therein consisting essentially of magnesium chromate and magnesium acetate in which the chromate exceeds the acetate by weight but in an amount less than twice the weight thereof, then subjecting the material so coated to sufficient heat within the temperature range of from 400° F. to about 1750° F. to dehydrate such coating and to decompose the magnesium salts contained therein.

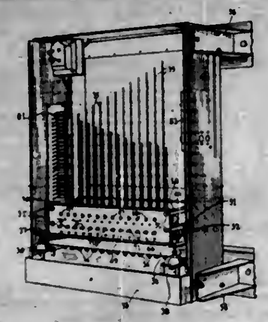


2,472,593
BALL BEARING DRAWER
Earl W. King, New York, N. Y.
Application May 16, 1945, Serial No. 594,013
1 Claim. (Cl. 211—143)

A drawer structure comprising a receptacle adapted to reciprocate into and out of a compartment, an elongated cylindrical runner mounted adjacent the lower edge of each side of the receptacle in spaced parallel relation thereto, a series of horizontal supports interconnecting the runner and the receptacle, a cylindrical track carried by the side walls of the compartment for each of the runners and having a longitudinal

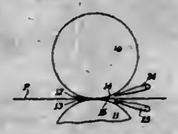
slot for the passage of the supports and a plurality of spaced anti-friction bearings interposed between the tracks and the runners.

2,472,594
APPARATUS FOR PROGESSIVELY MELTING AND DISPENSING SOLIDIFIED MATERIALS
Jack W. Kuehn, Minneapolis, Minn., and Marvin J. Rosefield, Alameda, Calif.
Application April 4, 1946, Serial No. 659,648
3 Claims. (Cl. 126—343.5)



1. Apparatus for progressively melting and dispensing a mass of solidified material from an open ended receptacle comprising an inclined slide for supporting said receptacle containing said material, said slide being inclined so that the receptacle will slide downwardly therealong under the influence of gravity a heating head disposed longitudinally of said slide and spaced thereabove to abut the material within said receptacle, said slide having collection means for receiving the material progressively melted and a winch for pulling a receptacle backwardly to the top of said slide.

2,472,595
MUSICAL INSTRUMENT
Jacob T. Kunz, North Hills, Pa., assignor to Schulmerich Electronics, Incorporated, Sellersville, Pa., a corporation of Pennsylvania
Application January 15, 1946, Serial No. 641,242
16 Claims. (Cl. 84—1.14)



5. In an electric musical instrument, a plurality of fixed-free rods, each of said rods being tuned to a predetermined tone thereof and having even harmonic pattern producing means therefor including a grooved portion adjacent the fixed end thereof; a base; rod holders adjustably mounted on said base and having means adjacent the outer end thereof for adjustably gripping said rods substantially circumferentially at their point of emergence from said holders; selectively operable strikers for said rods; translating means for changing mechanical vibrations of said rods to electrical vibrations; and an electro-acoustical

translating means producing tones when said rods are struck having substantially the same relation-

ship between the fundamental tone of a rod and the harmonic pattern thereof for all of said rods.

2,472,596
REMOVAL OF EXCESS LIQUID FROM WET FILM
Charles J. Kunz, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application May 17, 1946, Serial No. 670,636
4 Claims. (Cl. 34—14)

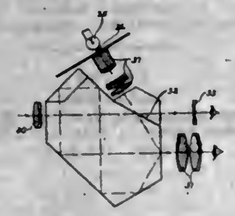
1. The method of removing the excess liquid from the body and surface of a wet film of absorbent material and comprising the steps of moving the film between a pair of wringer rollers to squeegee the liquid therefrom, and blowing a blast of air substantially normally to the nip between the rollers and web surfaces to continuously disperse the bead of liquid formed between the opposite faces of the film and the roller surfaces at the downstream side of said rollers to prevent said beads of liquid from rewetting the film faces as the film leaves the wringer rollers.

2,472,597
FLUORESCENT LAMP AND ASSEMBLY THEREFOR
Milton C. Levy, Chicago, Ill.
Application February 10, 1945, Serial No. 577,197
4 Claims. (Cl. 240—51.12)

3. A lamp assembly, comprising relatively juxtaposed and edgewise engaged sections, portions of which have registering recesses formed therein, a tubular lamp envelope of substantially closed configuration received about and arranged adjacent said sections, the opposite ends of said envelope being angularly extended therefrom in closely spaced relation and in substantially coplanar relation to the envelope, said angularly extended opposite ends entered into the sections through said registering recesses therein, and a lip on a substantially longitudinal medial portion of the inner side of the lamp envelope extended laterally from and beyond the same having its opposite ends spaced inwardly from the angularly extended opposite ends of the envelope, said lip being received and clampingly engaged between the adjacent edgewise engaged portions of said sections, and means interconnecting said sections.

4. An envelope for an electric lamp, comprising a light permeable tubular body of substantially closed configuration, tubular extensions of light permeable material integral with the opposite ends of said body, each of said extensions being disposed inwardly of the body at substantially right angles thereto and arranged in juxtaposed relation, said extensions and body being in substantially co-planar relation, and a continuous lip fixed to and extending from the inner side of said body having its ends terminating inwardly of said tubular extensions.

2,472,598
ULTRA HIGH FREQUENCY OSCILLATION GENERATOR
Bernard D. Loughlin, Bayside, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application March 1, 1945, Serial No. 580,375
12 Claims. (Cl. 250—36)



4. An ultra-high-frequency oscillation generator comprising, an electron-discharge device including anode and cathode electrodes and an intermediate control electrode maintained at a fixed reference potential, resonant-circuit means having a voltage-divider tap coupled to said control electrode, and a phase-shifting network including a reactance element of a first type serially connected with said resonant-circuit means between said anode and cathode electrodes and a reactance element of a second type effectively connected between said control electrode and one of said anode and cathode electrodes, said phase-shifting network providing in conjunction with said resonant-circuit means input and output circuits for said electron-discharge device effective to feed back energy from said output circuit to said input circuit with such phase as to support sustained oscillations at an operating frequency corresponding substantially to the resonant frequency of said resonant-circuit means.

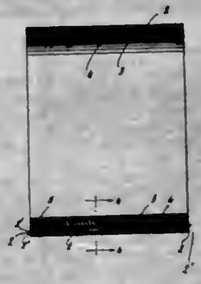
2,472,599
DENTAL X-RAY FILM PACKAGE
Benjamin E. Lubsehez, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application September 21, 1946, Serial No. 617,758
12 Claims. (Cl. 250—69)

1. In a film package, the combination with a sheet of photographic film, of a metallic enclosure for said film juxtaposed thereon and having a melting point substantially below that of the film emulsion.

2,472,600
OPTICAL ERECTING PRISM FOR FOLDING A LIGHT PATH
Benjamin E. Lubsehez, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application March 20, 1946, Serial No. 655,383
2 Claims. (Cl. 88—1)

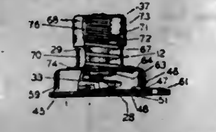
1. A reflecting prism system comprising a roof reflecting surface with a 90° dihedral angle, entrance and exit faces perpendicular to the plane bisecting said dihedral angle, and four internal reflecting surfaces also perpendicular to said bisecting plane, the intersection of said four surfaces and said two faces with the bisecting plane and the roof edge of said roof reflecting surface in said plane forming a seven-sided figure with two angles equal to 120° at each side of one face, two angles equal to 135° at each side of the other face, one angle 105° between one of the 120° and one of the 135° angles and the other two internal angles equal to 90° and 195° respectively.

2,472,601
PARACHUTE CANOPY
Henry R. Mallory, Manchester, Conn., assignor to Pioneer Parachute Company, Inc., Manchester, Conn., a corporation of Connecticut
Application October 25, 1946, Serial No. 705,632
5 Claims. (Cl. 244—145)



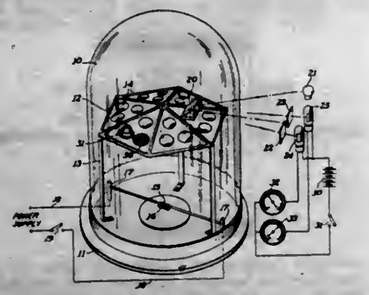
1. A parachute having a canopy divided into two areas constituting a lower skirt portion and an upper peak portion separated by an air vent, elastic means normally tending to close said air vent and yieldable in response to pressure applied to the inner surface of the canopy during shock loading to permit opening of said air vent, said elastic means being of sufficient strength to close said vent at least partially after shock loading and when the parachute is subjected to the forces incident to normal decent, said peak portion being of sufficient diameter when fully extended to hold said skirt portion open to receive air although said skirt portion is not fully extended.

2,472,602
OVERHEAD DOOR STRUCTURE
Charles J. Manville, Pontiac, Mich., assignor, by mesne assignments, to The Kurt Manufacturing Company, Akron, Ohio, a corporation of Ohio
Application January 17, 1947, Serial No. 722,510
10 Claims. (Cl. 20—16)



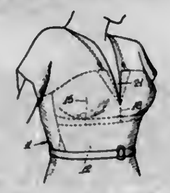
10. In an overhead door structure having an opening including a frame, a rigid door, means extending from each side of the door, located intermediate the top and bottom of the door and defining a horizontal turning axis, means on the door frame and connected to the door whereby to urge said first means upwardly, and means anchored in the door frame at a point below the position occupied by said first-mentioned means when the door is lowered and attached to an upper portion of the door to constrain the said upper portion to movement in an arcuate path as the first said means is moved vertically.

2,472,603
FORM FOR ELECTRIC WINDING COIL
Leonard L. Mayer, New York, N. Y.
Application October 5, 1946, Serial No. 701,535
1 Claim. (Cl. 242—119)



A form for electrical winding coil consisting of an outer and inner winding of electrical kraft paper over a fibre board core, said winding being straight, adhering by means of glue substance, the ends of the fibre board core being bound securely by electrical kraft paper with a glue thereon.

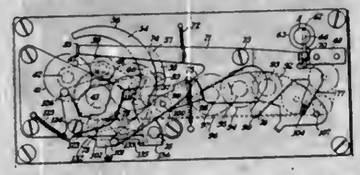
2,472,604
RHEOSTAT WITH SWITCH
Eugene F. McDonald, Jr., Chicago, Ill.
Application January 20, 1945, Serial No. 573,674
1 Claim. (Cl. 201—48)



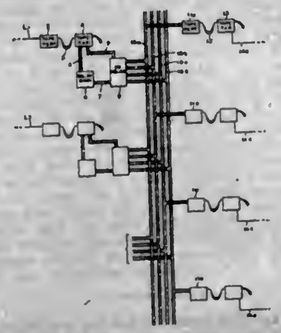
In combination, a housing, a rheostat and a pair of switches mounted in said housing, a common operating member having a shaft journaled in a wall of said housing and an enlarged member on the end of said shaft outside of said housing arranged for convenient rotation or linear movement of said shaft, said shaft having a longitudinal slot therein, a pin connected with said rheostat, said pin being arranged so that rotation of said enlarged member adjusts said rheostat by rotation of said shaft and pin in any position of linear movement of said shaft, a spring having a portion fixed in said housing and a free part spaced therein, in the path of linear movement of said shaft, one of said switches having a contact on the end of said shaft within said housing and having a second contact on the free part of said spring and the other switch having a first contact fixed on said free part of said spring and a second contact fixed in said housing in the path of travel of said free part of said spring whereby linear movement of said shaft into said housing first closes the contacts of said one switch and later closes the contacts of said other switch and adjustment of said rheostat by rotation of said shaft then wipes the contacts of said one switch.

2,472,605
METHOD OF DEPOSITING OPTICAL INTERFERENCE COATINGS
Daniel B. McRae, San Diego, Calif., and John H. McLeod, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application April 15, 1946, Serial No. 662,182
1 Claim. (Cl. 117—106)

The method of depositing on surfaces, optical interference coatings with a preselected minimum-intensity-wavelength, comprising supporting an object whose surface is to be coated, depositing the coating material gradually on said surface, illuminating a portion of the surface with light including wavelengths both longer and shorter than the minimum intensity wavelength, receiving the light specularly reflected from the surface on a pair of photoelectric means responsive predominately to said longer and shorter wavelengths respectively, continuing the depositing until the response of the shorter wavelength photoelectric means reaches a minimum and starts to increase and then terminating the depositing when the ratio of the two photoelectric responses reaches the value at which the spectral intensity of the specularly reflected light has its minimum at said preselected wavelength.



2,472,606
BRASSIÈRE
Rose Michaelson, New York, N. Y.
Application August 21, 1948, Serial No. 45,462
2 Claims. (Cl. 2—42)



1. A brassière comprising a pair of substantially square panels at the front thereof, each having a breast cup conformation therein, said panels being positioned in side by side relation and having two adjacent lateral edges connected at the lower portion thereof and flaring outwardly from said lower portion to the upper edge of each of said panels to form a substantially V-shaped gap between said adjacent lateral edges, a tension transmission member on each of said panels between said breast cup conformations, said members being substantially in the shape of a right angle triangle having a long leg and a short leg, said long legs being aligned with the respective lateral edges of said panels extending from the inverted apex of said V-shaped gap to the top edge of the respective panels, and said short legs being aligned with the upper edges of the respective panels, a pair of shoulder straps secured respectively at their rear ends to the back of said brassière, a connector loop affixed at each end to the upper edge of the respective panels with the ends of said loop aligned with the ends of the short leg of said tension transmission member and means connecting the front end of said shoulder straps to said connector loops, whereby when said brassière is worn the tension from said shoulder strap will be transmitted through said tension transmission member securely to press the latter against the chest of the wearer between the breasts.

2,472,607
VARIABLE APERTURE CURTAIN SHUTTER FOR CAMERAS
Joseph Mihalyi, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application July 30, 1946, Serial No. 687,093
21 Claims. (Cl. 95—57)

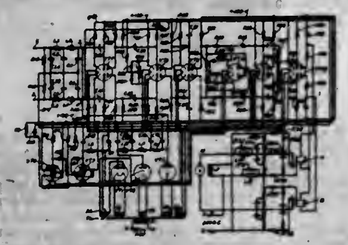
1. A controlling device for curtain shutters of the type having two curtains normally covering an exposure aperture, two spring rollers, one attached to each curtain for supporting one end of each curtain to one side of the exposure aperture, and coaxially arranged rollers, one supporting each curtain on the opposite side of the exposure aperture, the combination with said curtains and their supporting rollers, of controlling mechanism comprising gearing interconnecting the coaxially arranged rollers, and including a gear attached to each of the two of the coaxially-supported rollers, one for each curtain, gearing connecting said two gears including at least two movably-mounted intermeshing gears, means for shifting the axes of the movably-mounted gears while maintaining all gears in mesh, said controlling mechanism also including means for moving the shiftable axes of the movably-mounted gears to predetermined positions to adjust the width of an exposure slot between the curtains.

2,472,608
MEANS AND METHOD FOR SWITCHING OF TELEGRAPH MESSAGES
Joseph W. Milnor, Maplewood, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a corporation of New York
Application January 12, 1945, Serial No. 572,499
3 Claims. (Cl. 178—3)

1. In a system for the automatic switching of telegraph messages, the combination of a source of telegraph signals including a ready signal, a clearing signal and a switching signal transmitted in advance of the message characters, a plurality of outgoing lines, switching means for connecting said source to any one of said outgoing lines, means responsive to the receipt of said ready signal for preparing said switching means for operation by said clearing signal, means responsive to the receipt of said clearing signal for clearing all connection between said source and said outgoing lines, and means responsive to receipt of said switching signal for completing a connection between said source and a predetermined outgoing line.

2,472,609
ELASTIC FLUID-FLOW MEASURING SYSTEM
David W. Moore, Jr., New York, N. Y., assignor to Fairchild Camera and Instrument Corporation, a corporation of Delaware
Application November 8, 1944, Serial No. 562,557
8 Claims. (Cl. 73—194)

1. A system for measuring the flow of air to an internal combustion engine including an air intake conduit in weight per unit of time independently of variations in temperature, barometric pressure, and the like comprising, a chamber in fluid communication with said conduit, means including rotatable means in said chamber having provisions for driving by the engine for deriving a first effect varying substantially solely with the density and the square of the velocity of said fluid in said conduit, means having provisions for driving by the engine for deriving a second effect varying with the velocity of said fluid in said conduit, and means responsive jointly to said first and second effects for deriving a third effect representative of the quotient of said first effect by said second effect, constituting a measure of said fluid flow.



2,472,610
DISTILLATION OF OLEFIN-HYDROGEN CHLORIDE MIXTURES
Alan C. Nixon, Berkeley, David C. Lehwalder, Oakland, and Harry A. Cheney, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application November 17, 1947, Serial No. 786,544
8 Claims. (Cl. 202—57)

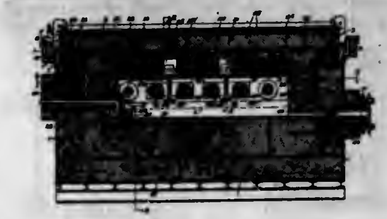
1. In a process for the separation of hydrogen chloride in a state of high purity from a mixture containing said hydrogen chloride in admixture with an olefin by fractionating said mixture at an elevated pressure, the improvement which comprises effecting said fractionation in a fractionating zone in which substantially all surfaces contacting said mixture undergoing fractionation are essentially only of nickel thereby effecting said fractionation in the absence of any substantial interaction of said hydrogen chloride and said olefin.

2,472,611
MOTOR CONTROL CIRCUIT
Bernard Ostendorf, Jr., Jamaica, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application June 2, 1945, Serial No. 597,205
2 Claims. (Cl. 318—257)

2. In a servo-amplifier system, a multivibrator comprising two tubes with substantially identical condenser resistance feedback circuits whereby with balanced grid potentials applied to the grids of said tubes oppositely poled square waves are generated in the plate circuits of said tubes having substantially equal closed and open periods, power amplifier tubes upon the inputs of which said output waves are impressed, relays in the output circuits of said power amplifier tubes operable in alternation in response to said amplified output waves, a source of power, a servo-motor operable in response to impulses transmitted thereto from said source by the alternate opera-

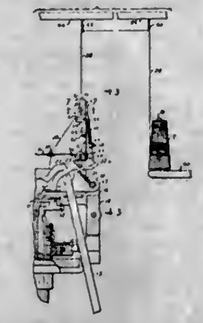
tion of said relays, a signal input circuit, and means responsive to the application of a signal potential to said signal input circuit to render the grid potentials of said multivibrator tubes unequal whereby the closed periods of one of said output waves become lengthened and the closed

periods of the other of said output waves become shortened to increase the net voltage of the impulses transmitted by said relays to said motor whereby said motor is caused to run in a direction determined by the polarity of the net voltage and at a speed determined by the magnitude of the net voltage.



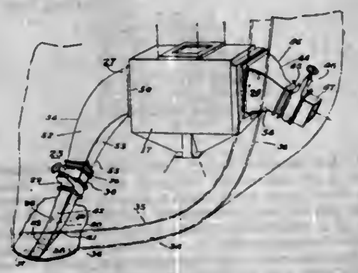
2,472,612
ELECTRIC FURNACE
Frank F. Poland, Rome, N. Y., assignor to Revere Copper and Brass Incorporated, Rome, N. Y., a corporation of Maryland
Application May 20, 1944, Serial No. 536,580
11 Claims. (Cl. 13—20)

1. An electric furnace having, in combination, walls forming a furnace chamber; said walls comprising a furnace lining, a refractory support for said lining, and refractory anti-friction means between said lining and support for facilitating expansive movement of said lining relative to said support; a metallic casing for said walls, and a layer of yieldable lagging between the lateral portions of said walls and the lateral walls of said casing for permitting over all expansion of the former independently of the latter.



2,472,613
ELECTRIC RESISTANCE FURNACE
Frank F. Poland, Rome, N. Y., assignor to Revere Copper and Brass Incorporated, Rome, N. Y., a corporation of Maryland
Application January 18, 1945, Serial No. 573,337
14 Claims. (Cl. 13—20)

2. An electric furnace having, in combination, means forming a furnace chamber having a roof, which latter comprises a wall of heat refractory carbonaceous material defining the top of said chamber, electric heating resistors in said chamber beneath said roof, means suspending said resistors from said roof comprising elongated mem-

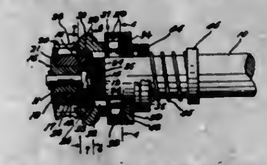


bers of heat refractory carbonaceous material extending through openings formed in said wall to the upper side of the latter, and heat refractory electric insulating means operatively carried by said wall at the upper side thereof for supporting said members on said wall.

2,472,614
TENSION DEVICE
John A. Pons, Morganton, N. C., assignor to Greensboro Textile Supply Company, Greensboro, N. C., a corporation of North Carolina
Application January 26, 1946, Serial No. 4,449
2 Claims. (Cl. 66—146)

1. In a knitting machine having a pivoted yarn feed finger for feeding yarn to the needles of the knitting machine, a pair of tension disks normally moved toward each other and through which the yarn passes, a plunger having a pointed upper portion adapted to pass between the disks and having a lower portion adapted to be engaged by the end of the yarn feed finger remote from the end which feeds the yarn to the needles, so that upon the yarn feed finger being moved to operative position, the plunger will be moved upwardly to cause its pointed portion to pass between the tension disks to remove any clamping effect on the yarn passing therebetween and when the yarn feed finger is moved to inoperative position the plunger will move downwardly from between the disks to cause the disks to clamp the yarn.

2,472,615
CONDENSER APPARATUS
Alexander I. Penomareff, Havertown, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 26, 1947, Serial No. 776,359
1 Claim. (Cl. 257—26)



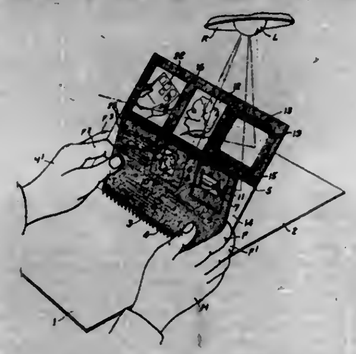
In a propulsion plant for a ship, a surface condenser and extending athwartship; said surface condenser including a shell which is rectangular in cross section, rectangular inboard and outboard tube plates connected to the ends of the shell, and a rectangular nest of tubes carried by the tube plates; means for circulating water through the tubes including inlet scoop and overboard discharge structures; said inlet scoop structure having a passage of rectangular section and whose inlet end is open to the exterior of the ship at the bottom thereof and whose outlet end is adjacent to the inboard tube plate; said inlet scoop structure extending upwardly and rearwardly and curved outwardly to aline the outlet of its passage with the inboard tube plate; said scoop passage having its flow area divergent from its throat at the inlet end to the outlet end thereof, whereby entering water may flow therethrough without encountering sudden enlargements in flow area to provide for gradual transformation of velocity energy thereof into pressure energy from the inlet to the outlet ends; said inlet scoop structure including four plates which taper in width and have their edges joined to form the diverging rectangular scoop passage and three of said plates having rolled curvature and the remaining plate being warped so that joining thereof at their edges results in a passage which extends upwardly and rearwardly and is curved outwardly.

2,472,616
TREATMENT OF WATER
William George Prescott, Ewart Ingham Akeroyd, and Eric Leighton Holmes, London, England, assignors to The Permutit Company, New York, N. Y., a corporation of Delaware
No Drawing. Application September 22, 1944, Serial No. 555,390. In Great Britain November 12, 1943
4 Claims. (Cl. 210—23)

1. The process of softening water which comprises introducing 0.1 to 10 parts per million of PO_4 ions into solution in the water, adding sufficient chemicals from the group consisting of lime and soda to react with the calcium and magnesium hardness in said water, and then flowing said water upwardly through a mass of particles at a rate of flow high enough to maintain said mass in suspension whereby the presence of said PO_4 ions increases the amount of calcium carbonate which crystallizes from said water on said particles.

2,472,617
TRIMMER
George Prodromes and Marcus Prodromes, Winston Salem, N. C.
Application October 7, 1946, Serial No. 701,726
7 Claims. (Cl. 12—88)

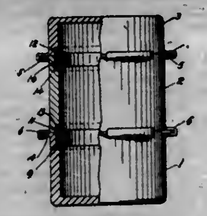
1. A trimmer comprising a shaft, an axial spindle on one end of the shaft forming an annular shoulder at its junction with the shaft, a stop collar fixed to the spindle in spaced relation to the shoulder, said stop collar having diametrically opposite longitudinal grooves in its periphery and diametrically opposite recesses in its end facing the shoulder, a cutter guard surrounding the spindle and having an enlarged stop collar receiving recess in one end, diametrically opposed lugs extending inwardly from the recessed end of the cutter guard for passage through the grooves and entrance into the recesses to establish driving connection between the shaft and the cutter guard, an outwardly extending annular guard flange on the end of the cutter guard opposite the recess, yielding means surrounding the spindle and abutting the shoulder for urging the lugs on the cutter guard into the recesses in the stop collar, a radially toothed cutter surrounding the cutter guard between the guard flange and the yielding means and an annular row of circumferentially spaced lugs on the guard flange for entering the spaces between the teeth on the cutter and effecting driving connection between the cutter and the cutter guard.



2,472,618
PRODUCTION OF ETHYL ALCOHOL
Alexander S. Ramage, Detroit, Mich., assignor to Albert A. F. Maxwell, Detroit, Mich., as trustee
No Drawing. Application February 8, 1944, Serial No. 521,282
3 Claims. (Cl. 260—639)

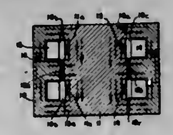
1. A process for the production of ethyl alcohol from ethylene comprising reacting ethylene, sulphur dioxide, and water in the proportions by weight of substantially 56 parts ethylene, 64 parts sulphur dioxide, and 18 parts water at a pressure of about 500 pounds per square inch and at a temperature of about 300° F., and then adding to the reaction mixture substantially 36 parts by weight of water and raising the pressure of the mixture to about 200 pounds per square inch, and then rectifying the final reaction mixture to recover ethyl alcohol.

2,472,619
PICTURE SELECTOR
Alfred B. Reed, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application October 25, 1945, Serial No. 624,563
6 Claims. (Cl. 35—56)



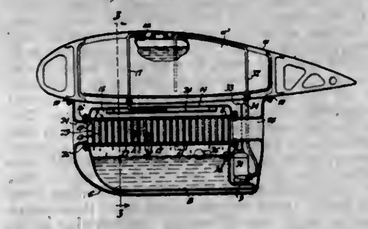
1. A photographic selector comprising a pair of relatively movable leaves, a first leaf including

picture-carrying frames and a second leaf carrying a reflecting surface and a picture mount, one of the picture-carrying frames of the first leaf being adapted to support a standard light-transmitting picture, the second leaf being adapted to support a standard opaque picture reproduced therefrom, the other picture frame of the first leaf being adapted to support a light-transmitting picture to be judged, movement of the first leaf



relative to the other leaf varying transmitted light and reflected light from a suitable light source and falling upon the pictures to form a standard viewing lighting when the standard reproduction opaque picture and the standard light-transmitting picture are similar in contrast and brilliance at which time said light-transmitting picture to be judged will appear in the contrast and brilliance which may be expected from an opaque picture to be reproduced therefrom.

2,472,620
PRESSURE COOKER
Thornton R. Rhodes, South Gate, and Ernest R. Hunt, Los Angeles, Calif.
Application June 21, 1946, Serial No. 678,242
2 Claims. (Cl. 285—175)

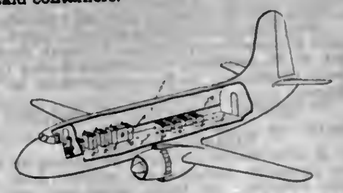


1. A pressure cooker comprising a cylindrical casing divided into axially interfitting sections provided with means for interlocking the sections, each section being made at one edge thereof with an internal annular recess having a V-shaped bottom, the edge of each abutting section being made with an annular groove in continued alignment with said recess, and an annular resilient sealing member seatable in each groove and freely extending to the bottom of each recess, the outer edge of each member being shaped to fit within the V-shaped recess bottom.

2,472,621
IMPULSE MOTOR
Herbert C. Roters, Roslyn, N. Y., assignor to Fairchild Camera and Instrument Corporation, a corporation of Delaware
Application June 29, 1945, Serial No. 602,365
24 Claims. (Cl. 318—122)

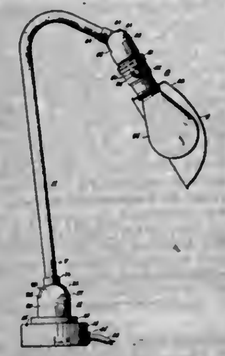
1. An impulse motor comprising, a magnetic circuit including an air gap, stationary means for developing a constant magnetic field through said circuit and extending transversely of said air gap, stationary means for developing an impulse magnetic field in the vicinity of said gap, and reciprocable means responsive jointly to said two fields and including provisions for translating a mechanical impulse.

2,472,622
VAPOR RECOVERY SYSTEM FOR AIRPLANE FUEL TANKS
Arthur J. Savard, San Diego, Calif., assignor to Consolidated Vultee Aircraft Corporation, a corporation of Delaware
Application December 9, 1944, Serial No. 567,506
14 Claims. (Cl. 244—1)



1. In combination with an aircraft having a tank for liquid fuel, a fuel vapor recovery system comprising an air cooled heat exchanger arranged to be cooled by air from the slip stream of the aircraft, connected to receive fuel vapor from the tank, and designed to condense the vapor as it flows therethrough, an accumulator connected to the heat exchanger to receive the condensate therefrom, means operative during flight of the aircraft to force the fuel vapor from the fuel tank into the heat exchanger and the condensate to flow into the accumulator, and means for delivering the condensate from the accumulator to a point of use.

2,472,623
AIR TRANSPORTATION OF SMALL PARCELS
Richard B. Schulze, Baltimore, Md., assignor to The Glenn L. Martin Company, Middle River, Md., a corporation of Maryland
Application November 10, 1945, Serial No. 627,918
6 Claims. (Cl. 244—118)



1. An air express transportation system including an airplane having a cargo carrying

compartment, a plurality of air impervious, flexible walled collapsible parcel containers located in said compartment, detachable connections for securing said containers in place relative to the aircraft structure, a manifold suction header extending along the wall of said compartment, and flexible connections interconnecting said containers and said header to effect a reduced pressure in said containers.

6. An air express transportation apparatus including an air impervious, flexible walled, collapsible parcel container, tie down means secured to said container adjacent the bottom thereof for detachably securing the container to a supporting surface, a wall portion of said container being provided with an access opening and a closure therefor including a slide fastener to secure the closure to the peripheral edges of the wall around said opening, cooperating pressure sealing means on the peripheral edges of said wall and said closure to minimize the leakage of air into said container, and a fitting formed in the wall of said container through which the air in the container may be exhausted, when said closure is closed, to collapse said container.

2,472,624
WORK LAMP SUPPORT
Nathan Rodney Schwartz, New York, N. Y., assignor to Naras Research Inc., New York, N. Y., a corporation of New York
Application July 10, 1943, Serial No. 494,433
2 Claims. (Cl. 248—346)

1. In a lamp base comprising a hollow base, a cylindrical housing, a spherical member therein and a closure washer for the base, said spherical member seated on a washer, a slot in said washer, means integral with said housing and enterable in said slot preventing said washer from rotating, and means cooperating between said closure washer and said housing limiting the rotative movement of said housing.

2,472,625
ELECTRIC CIRCUIT BREAKER
Sidney E. Smith, Jr., Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application May 23, 1944, Serial No. 536,672
2 Claims. (Cl. 200—113)

1. In an electric switching device, a pair of relatively movable contacts, a tube of insulating material, a slidable sleeve on one end of said tube, means tending to bias said sleeve away from said end of said tube, an over center spring means, and current responsive means arranged electrically in series with said contacts comprising an expansible wire extending through said tube and having one end thereof effectively fastened to the other end of said tube while the other end of said wire is fastened to said over center spring means so as to restrain said first mentioned means and cause said sleeve and tube to effectively act as a unitary force transmitting member, said over center spring means exerting when in one extreme position a force against said sleeve and tube acting as a unitary force transmitting member for holding said contacts in the closed position, said first mentioned means being adapted to move said over center spring means to its other extreme position when a predetermined high value of current flows through said contacts causing extension of said expansible wire, whereby said over center spring means causes relative separation of said contacts, said wire being fusible upon the flow therethrough of currents considerably above said predetermined high value to interrupt the circuit in said tube if for some reason interruption at said contacts does not occur.

2,472,626
FOG INHIBITOR FOR PHOTOGRAPHIC EMULSIONS
William F. Smith and Adrian P. H. Trivelli, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application December 19, 1947, Serial No. 792,843
6 Claims. (Cl. 95—7)

1. A silver halide emulsion containing a compound having the structure RuX_5 where X is a halogen atom.

2,472,627
FOG INHIBITOR FOR PHOTOGRAPHIC EMULSIONS
William F. Smith and Robert E. Stauffer, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application December 19, 1947, Serial No. 792,844
3 Claims. (Cl. 95—7)

1. A silver halide emulsion containing palladium nitrate.

2,472,628
PROCESS FOR PREPARING C-ACETYLATED AND O-ACETYLATED COMPOUNDS
John A. Spence, San Pablo, Calif., and Edward F. Degering, West Lafayette, Ind., assignors to Purdue Research Foundation, La Fayette, Ind., a corporation of Indiana
No Drawing. Application December 5, 1946, Serial No. 714,144
13 Claims. (Cl. 260—473)

1. A process for preparing an O-acetylated compound and a C-acetylated compound comprising reacting ketene with a ketoester selected from those represented by the following general formula:

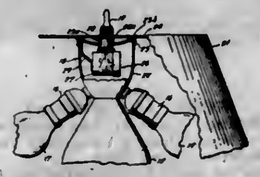
wherein R and R_1 each represents a hydrocarbon radical, in the presence of at least one basic tertiary amine catalyst, and separating the O-acetylated and C-acetylated compounds.

2,472,629
METHOD OF PREPARATION OF DIMETHYL SILICONE GUMS
Murray M. Sprung, Scotia, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application June 11, 1946, Serial No. 676,691
9 Claims. (Cl. 260—46.5)

4. The method of preparing a solid, elastic, curable, polymerized, methyl-substituted polysiloxane containing an average of from 1.98 to 2.0 methyl groups per silicon atom, which method comprises contacting a liquid polymeric dimethylsiloxane containing an average of from 1.98 to 2.0 methyl groups per silicon atom and containing up to 2 mol per cent copolymerized monomethylsiloxane with from 0.1 to 10 per cent, by weight, of an organophosphorus compound represented by the general formula

where R is a hydrocarbon radical selected from the class consisting of alkyl, aryl, alkaryl and aralkyl, and X is a halogen.

2,472,630
COVER MEANS FOR VEGETABLES AND OTHER PLANTS
John Ferguson Stevenson, Belfast, Northern Ireland
Application October 27, 1943, Serial No. 507,798
In Great Britain November 18, 1942
19 Claims. (Cl. 47—29)



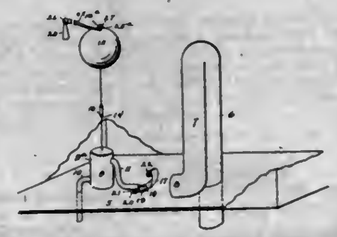
1. A cover means for plants comprising a plurality of cover or frame members having interconnectable edges and complementary interlocking means at said edges whereby the members can be separably attached edge to edge to form a rooflike covering structure, said means comprising projections spaced along the adjacent edges of the members so as to cross each other when the edges are set together and bearing means on each member adapted to be engaged by the corresponding projections on the other member to prevent further relative angular or flattening movement of the members beyond an obtuse angle, and an integral soil-engaging skirt set at an angle at the remote edge of each cover or frame so as to maintain plant head room at said edge.

2,472,631
PALLADIUM COMPLEXES AS PHOTOGRAPHIC EMULSION STABILIZERS
Robert E. Stauffer and William F. Smith, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application March 5, 1948, Serial No. 13,352
5 Claims. (Cl. 95—7)

1. A silver halide emulsion containing an anionic palladium complex salt selected from the group consisting of alkali metal and alkaline earth metal thiocyanato palladites, alkali metal and alkaline earth metal nitritopalladites, alkali metal and alkaline earth metal bromo-nitritopalladates and ammonium nitritopalladite.

2,472,632
LAMP
David Trompeter, Sandy Hook, Conn.
Application July 2, 1945, Serial No. 602,986
4 Claims. (Cl. 240—123)

1. An electrically wired lamp comprising a main lamp structure, an electrically energizable illuminating means interposed in the circuit constituted by such wiring, a switch carried by said structure and also interposed in said circuit, said switch being inclusive of an operating mechanism having a projected universally rockable actuator, said mechanism operating in response to a rocking of said actuator to condition said switch to reverse the same as between circuit opening and circuit closing condition, a lampshade, and means for operatively connecting said lampshade and said actuator and operably associated with said main lamp structure to mount the lampshade tiltably on the latter, said means being so arranged that a tilt of the lampshade at any point therearound manually casually encountered correspondingly rocks said actuator.

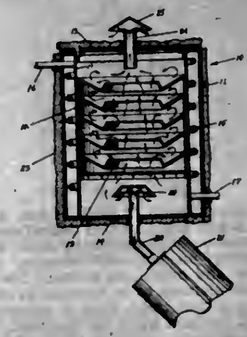


2,472,633
PROCESS FOR ACYLATING AMINES
William P. Utermohlen, Jr., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application June 27, 1945, Serial No. 601,917
17 Claims. (Cl. 260—247)

1. A process for acylating an amine selected from the group consisting of primary and secondary amines comprising condensing the amine with an unsaturated ester of the following general formula:

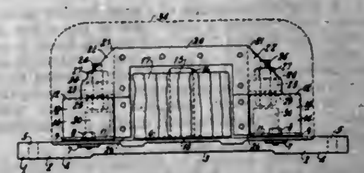
wherein R represents a member selected from the group consisting of alkyl, aralkyl and aryl groups when R_1 represents an alkyl group and R represents an alkyl group when R_1 represents a member selected from the group consisting of aralkyl and aryl groups, and recovering the acylated amine.

2,472,634
WATER CLOSET FLUSHING MECHANISM
Lewis E. Van Dercar, Miami, Fla.
Application December 6, 1946, Serial No. 714,487
2 Claims. (Cl. 4—44)



1. The combination with a flushing tank assembly of the character comprising a tank, a discharge siphon tube, and a horizontal jet tube discharging into the mouth of said siphon tube to induce siphonic action therein, of a diverter disposed transversely of and between the mouth of the diverter tube and the mouth of the siphon tube said diverter comprising a curved plate the lower portion of which is pivotally supported so that the plate may swing vertically, the lower portion of the plate having an opening therethrough, a float carried by the plate positioned to hold the plate elevated to a point where the opening therethrough lies in front of the jet tube when said float is submerged, the concave side of said plate being disposed toward the jet tube and the upper portion of the plate presenting a solid portion which gradually moves into the path of the stream from said jet tube as the float descends upon flushing of the tank.

2,472,635
METHOD FOR INHIBITING ACID ATTACK ON BRICK
Martin K. Weber, Berkeley, and Charles E. Nelson, San Carlos, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application November 3, 1947, Serial No. 781,856
7 Claims. (Cl. 252—145)

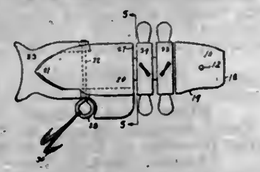


1. In a method for preventing attack on brick surfaces consisting essentially of fired siliceous products by an acid solution coming into contact therewith, the step comprising adding to said solution a quantity of from 0.75 to 5% by weight of a powdered brick material having the same general composition as that of the bricks forming said surfaces.

2,472,636
APPARATUS FOR PREPARING COFFEE SUBSTITUTES
Eugene Weissman, Baltimore, Md.
Application April 26, 1944, Serial No. 532,921
2 Claims. (Cl. 99—236)

1. Apparatus for condensing the aromatic vapors generated in a coffee roaster and providing for the absorption thereof by a coffee substitute material; comprising a condenser including spaced inner and outer vertically disposed imperforate cylindrical walls, a plate secured to the lower ends of said walls and having a fluid-tight connection therewith and the upper ends of said walls having a fluid-tight plate connection, a removable cover supported by the upper ends of said walls, a cooling coil disposed between said walls and having an inlet and an outlet extending through the outer wall, a plurality of material supporting trays disposed within the inner wall in superposed relation and each provided with a central aperture, a coffee vapor inlet tube extending through said bottom plate and terminating below the lowermost of said trays, and an exhaust tube extending through said cover.

2,472,637
VIBRATORY MOTOR
Carl S. Weyandt, Homer City, Pa.
Application December 14, 1946, Serial No. 716,290
3 Claims. (Cl. 172—126)

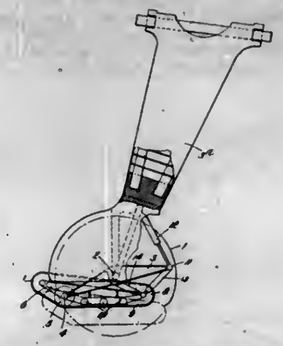


1. A vibrator consisting of a base constructed for attachment to an object to be vibrated, a vibratory motor having an electromagnetic field member and an armature member supported in operative spaced relation to provide a magnetic coupling therebetween, means for securing one of said members to the base, resilient means supporting the other member for vibration relative to the base, and an elastomer means interposed between said other member and the base for directly receiving and transmitting the full impact of the vibratory force to the base.

2,472,638
THERMOSTATIC CONTROL DEVICE
Everett H. White, St. Paul, Minn.
Application March 29, 1946, Serial No. 656,025
6 Claims. (Cl. 177—311)

1. In a thermostatic control device, an insulating base, a bimetallic strip of helical configuration supported on said insulating base, an indicating element, an actuator between said bimetallic strip and indicating element for causing the indicating element to be situated in one position when said bimetallic strip is energized and in a different position when the bimetallic strip is deenergized, a heat absorbing piece of conducting material contiguous with said bimetallic strip, a bimetallic blade supported upon said insulating base in heat exchange relation to said heat absorbing piece, said bimetallic strip, heat absorbing piece and bimetallic blade being conductively connected to each other, and a conducting element for selective engagement with said bi-metallic blade.

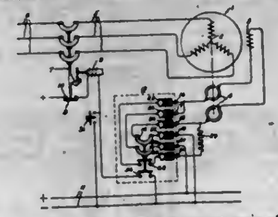
2,472,639
WIGGLER
Clarence W. Wickens, Portland, Oreg.
Application July 30, 1945, Serial No. 607,796
2 Claims. (Cl. 43—46)



1. A wiggler consisting of a core, having secured on one end thereof a body, and at the other end thereof and spaced from said body a head, a pair of oppositely propelled propellers mounted on said core between said head and body adapted to rotate in opposite directions, said head having a tunnel formed therein, adapted to divert water against said propellers, and means for stabilizing said body.

2,472,640
CLEAR AQUEOUS SOLUTIONS OF TYROTHRICIN
Paul W. Wilcox, Lansdowne, and Bernard B. Jatul, Norwood, Pa., assignors to Sharp & Dohme, Incorporated, Philadelphia, Pa., a corporation of Maryland
No Drawing. Application February 10, 1945, Serial No. 577,327
9 Claims. (Cl. 167—65)

1. A bacteriostatic composition of matter consisting of a clear, essentially aqueous solution comprising tyrothricin in a concentration greater than its solubility in water, and a water-soluble, non-ionic wetting agent which is a polyoxyalkylene derivative of a partial, long chain fatty acid ester of a hexitol inner anhydride, having at least four ethenoxy groups.



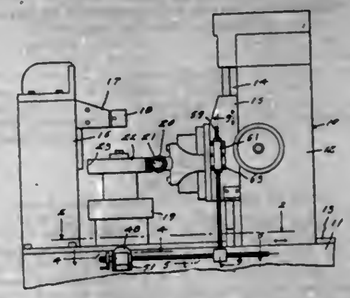
2,472,641
LANDING GEAR FOR AIRCRAFT
Reginald Thomas Wood, St. Albans, England
Application September 9, 1947, Serial No. 772,996
In Great Britain July 17, 1945
5 Claims. (Cl. 244—100)

1. Landing gear for aircraft including in combination, a support for the aircraft when on the ground, at least one pneumatic tyred landing wheel, at least one endless track both carried by said support, a chassis, wheels on said chassis for supporting and driving said track, an axle for said landing wheel, a lever pivoted between its ends to said axle, one end of said lever being connected to the forward end of said chassis and the other end of said lever being connected to the rear end of said chassis, an axle for said landing wheel, a gear wheel mounted on said axle, a countershaft carried by said lever, a gear wheel and sprocket wheel carried by said countershaft, a track driving wheel on said chassis a sprocket wheel mounted on said driving wheel axle, a chain connecting said sprocket wheels, a gear wheel mounted between and connecting the two first mentioned gear wheels, driving means, and a hydraulically actuated clutch for connecting said last mentioned gear wheel to said driving means for imparting an initial velocity to the landing wheel and to the track before either contacts the ground.

2,472,642
SWITCHING CONTROL FOR FIELD WINDINGS OF DYNAMOELECTRIC MACHINERY
John W. Yetter, Lansdowne, and Frederick G. Langer, Jr., Philadelphia, Pa., assignors to General Electric Company, a corporation of New York
Application June 6, 1945, Serial No. 597,822
11 Claims. (Cl. 175—294)

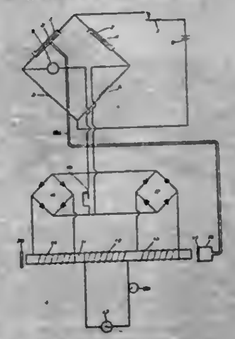
1. In a metal-enclosed switchgear for controlling the field winding of a dynamo-electric machine provided with a field discharge circuit and means for completing said discharge circuit in response to the opening of the circuit of said field winding; a drawout type switch for closing and opening the circuit of said field winding and having manually operable means for effecting withdrawal of said switch, means for opening said discharge circuit upon withdrawal of said switch, and sequential interlocking means including a first movable interlocking element having one position for tripping the switch and means for biasing said element to an alternative position for preventing operation of said withdrawal means until said element is moved to said one position,

and a second interlocking element movable with a time delay to a releasing position and interlocked with said first movable interlocking element for preventing the operation of said withdrawal means for a substantial time interval after the operation of said first movable interlocking element to said one position.



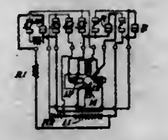
2,472,643
SHOE STITCH REMOVER
Alfred Barbagallo, West Palm Beach, Fla., assignor of one-half to Andrew James Longo, Palm Beach, Fla.
Application July 18, 1947, Serial No. 761,756
5 Claims. (Cl. 12—103)

1. An implement for removing old stitching particles from the welt of a shoe, comprising a handle, a plate attached to the handle, a blade carried by the plate and extending therefrom in a plane perpendicular to a face thereof, said blade being of a length to extend the width of the shoe welt to effect the removal of the old stitching particles when moved lengthwise of and in contact with the top surface of the welt, and a second plate attached to the handle and having spaced parallel relation with the face of the first plate from which the blade projects, said plates being spaced apart to snugly receive the shoe welt between the edge of the blade and the inner face of the second plate.



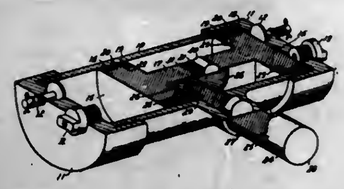
2,472,644
GEAR HOBBING MACHINE ATTACHMENT
John W. Barcus, Baltimore, Md., assignor of fifty per cent to N. R. Kneass, Baltimore, Md.
Application March 17, 1945, Serial No. 583,229
14 Claims. (Cl. 90—4)

1. In combination, a gear hobbing machine including a stationary bed, a horizontally slidable stanchion carried by said bed, a vertically slidable carriage carried by said stanchion, a pair of links, and means pivotally connecting said links together, means pivotally securing one of said links to said bed, and means securing the other



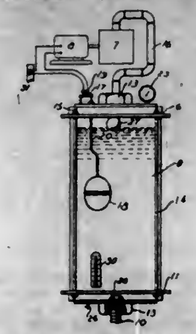
of said links to said carriage whereby said stanchion will move horizontally with vertical movement of said carriage said latter means including means for adjusting said other link means endwise.

2,472,645
THERMAL CONDUCTIVITY ANALYSIS OF GASES
William Jasper Clark, Norton-on-Tees, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
Application September 20, 1945, Serial No. 617,617
In Great Britain October 11, 1944
5 Claims. (Cl. 73—27)



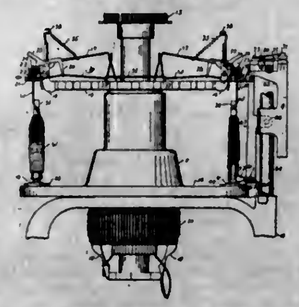
1. In apparatus for the quantitative thermal conductivity analysis of gaseous mixtures at subatmospheric pressure comprising an electrically heated wire, means for enveloping the said wire by the gaseous mixture, and current measuring means adapted to indicate changes in current through the wire, the provision of means for neutralising the effect of pressure changes of the gaseous mixture on the current measuring means, comprising a source of E. M. F., means for varying the E. M. F. in accordance with changes in the pressure of the gaseous mixture within the subatmospheric range and means for applying the E. M. F. to the circuit of the current measuring means.

2,472,646
SPEED CONTROL FOR INDUSTRIAL TRUCKS OR THE LIKE
Clyde E. Cochran, Cleveland, Ohio, assignor to The Elwell Parker Electric Company, Cleveland, Ohio, a corporation of Ohio
Application July 9, 1945, Serial No. 603,977
5 Claims. (Cl. 318—305)



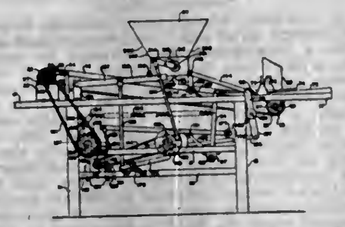
5. In an industrial truck or the like, driving mechanism for said truck including a series wound electric motor having two field windings, one of said windings having a substantially greater number of turns than the other of said windings, a source of electric energy for the motor; and means for controlling the speed of the motor, said means including a manually operable control member, and being operable to consecutively connect said windings in series, to render the longer of said windings only effective and then to connect said windings in parallel as said control member is moved consecutively through three-speed control position.

2,472,647
DOUBLE-ACTING RECIPROCATING PUMP
Meyer Covins, Danville, Ill.
Application May 9, 1945, Serial No. 592,814
1 Claim. (Cl. 103—175)



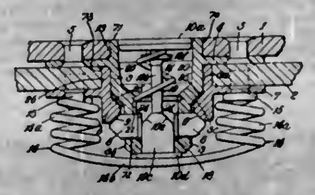
In a pump, a tube of uniform internal diameter throughout its length forming a cylinder, a piston therein having two longitudinally spaced heads connected by a longitudinally extending web having a thickness substantially less than the internal diameter of said cylinder, a slot in said web extending at a right angle to the longitudinal axis of the piston, a hollow boss extending outwardly from the wall of said cylinder forming a bearing, a shaft journaled in said bearing and extending into the interior of said cylinder, a crank arm removably secured to the inner end of said shaft and positioned between said web and the inner wall of said cylinder, the surface of said crank arm adjacent the inner wall of said cylinder being of curved configuration to provide clearance between said crank arm and the curved inner wall of said cylinder while said crank arm is at a right angle to the longitudinal axis of said cylinder during rotation of said shaft and crank arm, and a crank pin on the free end of said crank arm positioned in said slot.

2,472,648
PUMP PRIMER
James M. Cox, Fall River, Mass.
Application September 28, 1945, Serial No. 619,647
3 Claims. (Cl. 103—113)



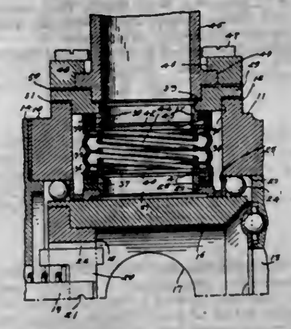
1. A pump primer comprising a pump, a primer mounted on and in operative communication with the pump, including a transparent shatter-proof body, with fluid inlet and outlet openings, a float engaged with the body and movable to cut off passage of fluid from the body when the fluid in the body reaches a predetermined level, and a free float independent of the first said float and operable to seat against the outlet opening to prevent passage of fluid from the body, in the event of failure of said first float.

2,472,649
WRAP YARN CONTROLLED STOP MOTION MECHANISM FOR KNITTING MACHINES
Clyde William Cox, High Point, N. C., assignor, by decree of distribution, to Ethel W. Cox
Application August 11, 1947, Serial No. 767,979
5 Claims. (Cl. 66—158)



1. In a knitting machine having a revolving wrap stripe mechanism disposed thereabove and comprising a table supported by the revolving wrap stripe mechanism, the table having mounted on the upper side thereof a plurality of vertically disposed holders for holding yarn cones filled with wrap yarn, each of the holders being slotted vertically and having a member pivoted in the slot near its lower end, each of the holders having outwardly biased resilient means for engaging the interior of the lower end of the cone, the yarn cone fitting over a holder having a slot in one side thereof coinciding with the slot in the holder, the yarn wound on the cone serving to hold the pivoted member in the holder in elevated position and preventing its falling out through the slot in the tube due to centrifugal force, stop motion actuating mechanism disposed adjacent the periphery of the table for engagement with the pivoted member when it moves under centrifugal force outwardly through the slot in the yarn tube to approximately horizontal position to actuate the stop motion actuating mechanism to stop the machine.

2,472,650
CONFECTION MAKING MACHINE
Harvey P. Curlee, near Charlotte, N. C.
Application April 11, 1947, Serial No. 740,854
7 Claims. (Cl. 91—3)

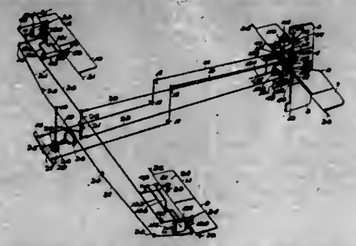


2. In a depositing machine for delivering a confectionery filling on articles to be deposited, the combination with a conveyor mechanism for advancing said articles intermittently past a depositing station, of a depositing mechanism at said station comprising a hopper adapted to contain a supply of filling material, means for delivering said filling material from said hopper onto said articles during the intermittent rest at said depositing station, and means for moving said hopper in the direction of advancement of said articles during delivery of filling material and while the articles are at rest, and for returning the hopper to starting position during the intermittent advance of said articles by said conveyor structure.

2,472,651
FASTENER
Herbert Edward Diaper, Bitterne, Southampton, England, assignor to Aviation Developments Limited, Garden City, Hertford County, England, a British company
Application March 15, 1944, Serial No. 526,593
In Great Britain March 17, 1943
6 Claims. (Cl. 24—221)

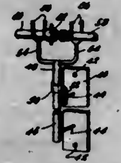
1. A fastener for securing two panels together comprising a tubular projection secured to one panel, locking means carried by said tubular projection and being arranged to move substantially laterally of said tubular projection, a press-button member carried by said tubular projection and movable substantially axially thereof, said press-button member having an enlarged portion for projecting said elements when moved therebetween, and a narrow portion for permitting the elements to be retracted when the enlarged portion is shifted out of the way, spring means reacting between said tubular projection and press-button member tending to move the enlarged portion out of the way of said elements, and means on the other panel arranged to move said press-button member against the action of said spring means to a position where the enlarged portion projects said locking elements.

2,472,652
BELLOWS SEAL FOR VALVE PLUGS
George T. Downey, Corry, Pa., assignor to Aero Supply Mfg. Co., Inc., Corry, Pa.
Application May 14, 1945, Serial No. 593,702
2 Claims. (Cl. 251—113)



1. In a valve assembly including a housing formed with a central intake port, a plurality of outlet ports, and a cylindrical valve plug opening at one end in the direction of said intake port and formed with a discharge port for registry with a selected outlet port; a sealing means for each outlet port comprising an expansible tubular member formed with inwardly extending reverted opposite ends, a ring at each end of said tubular member, a cylindrical flange carried by each ring engaging in the annular channel formed by said reverted ends, and an expansible spring between said rings interiorly of said tubular member and constantly urging the latter to expanded sealing position with respect to said outlet port and said valve plug.

2,472,653
FLUID PRESSURE CONTROL MECHANISM
Wilfred A. Eaton, Elyria, Ohio, assignor to Bendix-Westinghouse Automotive Air Brake Company, Elyria, Ohio, a corporation of Delaware
Application May 27, 1944, Serial No. 537,707
12 Claims. (Cl. 244—82)

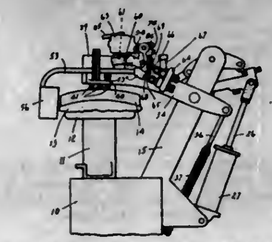


1. Mechanism for controlling the direction of movement of a body in a fluid medium including a manually operable control surface movably mounted on the body, a second control surface separately mounted on the body for movement independently of the first named surface, a power actuator for moving the second control surface,

and means controlled by movement of the first named control surface relative to the body and

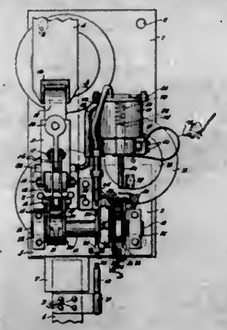
independently of said second surface for controlling the supply of power to said actuator.

2,472,654
PIPE-LINE SUPPORT
Herman G. Engelke, West Bend, Wis., assignor to Engelke Engineering, Incorporated, Hartford, Wis., a corporation of Wisconsin
Application November 1, 1946, Serial No. 707,238
3 Claims. (Cl. 248—161)



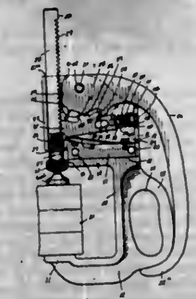
2. A pipe line support including a pillar, support means for said pillar, a support head detachably carried by said pillar, said support head comprising a rod telescopingly engaging said pillar, fastening means for adjustably securing said support head upon said pillar, a pipe line support fork on said support head, said support means including a bracket and an attaching means securing said pillar to said bracket, said attaching means including a pair of transverse pins, said fastening means including a collar and a depending hook, one end of said hook being mounted on said collar to rigidly retain it on said rod, the other end of said hook engaging a transverse pin to firmly retain the rod in vertical position.

2,472,655
BOTTOM FOR METALLURGICAL FURNACES
Theodore M. Fairchild, Johnstown, Pa., assignor to Bethlehem Steel Company, a corporation of Pennsylvania
Application August 5, 1944, Serial No. 548,395
1 Claim. (Cl. 266—43)



A bottom for a heating furnace having a surface comprising rows of chrome bricks alternating with rows of magnesite bricks.

2,472,656
PRESSING MACHINE HEAD CONTROL
Harry D. Forse, Anderson, Ind.
Application June 5, 1941, Serial No. 396,678
12 Claims. (Cl. 38—27)



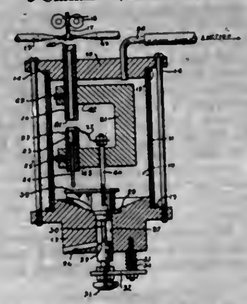
3. In a press, a head support movably mounted for moving a pressing head toward and away from a buck, fluid pressure means for moving the support into head pressing position, valve means controlling the application, maintenance, and release of fluid pressure to and from said means, a manual control for said valve means to initiate fluid pressure application, time controlled means to initiate automatically the release of fluid pressure following expiration of the predetermined pressing interval, said time controlled means including an electric device, a switch controlling same normally in open circuit position when the head is open and in closed circuit position when the head is closed or in buck engagement, and means operable by the device for valve means operation for fluid pressure release after a predetermined pressing interval has elapsed.

2,472,657
MEANS FOR DISCONNECTING A FAULTED FEEDER CIRCUIT FROM A POWER CIRCUIT
Fraser W. Gay, Metuchen, N. J.
Application May 8, 1945, Serial No. 592,620
4 Claims. (Cl. 200—108)

2. In combination, a spring opened disconnecting switch, releasable latch means for holding said switch closed, a spring actuated trip member operative to strike and release said latch means, electro-magnetic means for retracting said trip member against the tension of its actuating spring preparatory to operative strokes thereof, said electro-magnetic means being adapted to be energized by fault currents, and a blocking member comprising a pivoted weight of considerable inertia carrying a blocking lug adapted to be normally disposed thereby between said trip member and latch means, said blocking member being adapted to be turned about its pivot under impact of said trip member upon said blocking lug so as to swing the latter out of the path of tripping movement of the trip member, and thereby permit said trip member to be again retracted and released by said electro-magnetic means if the latter is again energized by a fault current, whereby to effect a non-blocked tripping stroke of said trip member, said blocking member being counterbalanced so as to slowly swing back to normal initial blocking position.

2,472,658
RACK AND PAWL ACTUATED QUICK-ACTING CLAMP
Clyde L. Gilbert, Elkhart, Ind.
Application August 17, 1945, Serial No. 610,924
5 Claims. (Cl. 144—305)

1. In a clamp structure having an anvil and a work clamping head movable toward and away from same, the combination of a reciprocable rack toothed member supporting the head, a lever pivotally mounted in spaced relation to the member, a multiple-toothed member movable toward and away from the rack toothed member for tooth engagement and disengagement, lever operable cam means for moving the second mentioned toothed member toward the anvil for effecting rack member and head movement toward the anvil for work clamping purpose, said lever operable cam means and said multiple-toothed member each having a pair of spaced opposed shoulders, the spacing of one pair being different from that of the other pair of shoulders, and means normally constraining said multiple-toothed member toward rack engagement, lever operation retracting the multiple-toothed member in opposition to the constraining means, at least two teeth of the multiple-toothed member having engagement with the rack toothed member when the latter exerts pressure upon the head.



2,472,659
TORQUE TOOL WITH YIELDING DRIVE
John J. Greer, Conimicut, R. I.
Application February 8, 1945, Serial No. 576,827
2 Claims. (Cl. 81—52.4)

1. In a torque tool, a work engaging member through which movement is transmitted to the work, a cam secured to said member, a handle rotatably mounted relative to said member and with the axis thereof extending coaxial with the axis of said member, spaced flat springs secured to said handle to move therewith and engaging said cam for opposing relative rotation between said handle and said member but moved apart

by said cam under certain pressure to permit relative rotation between handle and member, and a movable collar surrounding and engaging said springs and movable lengthwise thereof for varying the effective length of said springs.

2,472,660
APPARATUS FOR MOLDING GLASS
Harrison P. Hood, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
Application February 25, 1944, Serial No. 523,874
3 Claims. (Cl. 49—29)

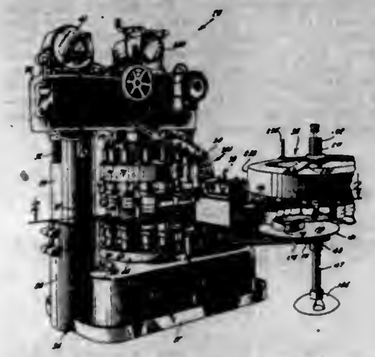
1. In a glass shaping apparatus, a closed chamber, a vertically disposed gob delivery tube having its delivery end terminating inside said chamber, an open top mold within said chamber arranged below and spaced from the delivery end of said tube, and a suction line in communication with said chamber for creating a subatmospheric pressure therein to accelerate the delivery of a gob to said mold.

2,472,661
RESINOUS INTERPOLYMERS
Reynold E. Holmen, Ann Arbor, Mich., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 29, 1946, Serial No. 713,115
7 Claims. (Cl. 260—73)

1. A process of preparing resinous interpolymers which comprises heating to an interpoly-

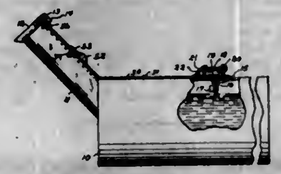
merizing temperature (A) from 30 to 65 parts of monomeric dimethallyl maleate (B) from 10 to 55 parts of a monomeric diester resulting from the esterification of methallyl alcohol with a dibasic acid selected from the group consisting of succinic, adipic, sebacic and azelaic acids and their methallyloxy derivatives, and (C) from 15 to 25 parts of monomeric styrene.

2,472,662
SUSPENSION CLAMP
Wilbert W. King, Bellevue, Ohio
Application July 31, 1947, Serial No. 765,140
2 Claims. (Cl. 294—112)



1. A suspension clamp comprising a rod removably secured to a supporting structure, a clevis adjustably carried by said rod, an elongated member pivoted at one end to said clevis and depending therefrom, a pair of upper links having inner ends pivoted to opposite sides of said member, a pair of elongated clamping members having upper terminals pivoted to the outer ends of said upper links, gripping jaws carried by the lower terminals of said clamping members, a pair of elongated lower links having outer ends pivoted to said clamping members medially the length of said clamping members, said lower links being pivoted adjacent their inner ends to the lower end of said member, said member having a slot, a pin slidably mounted in said slot, and a pair of pitmans connecting the pin to the inner ends of said lower links.

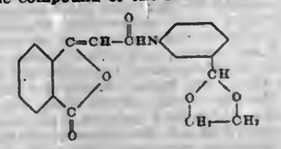
2,472,663
CATTLE FEED
Carl Wilhelm August Kleine and Milena Regina Stella Kleine, Stockholm, Sweden
No Drawing. Application June 19, 1946, Serial No. 677,905. In Sweden November 20, 1940
5 Claims. (Cl. 99—2)



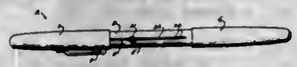
1. A cattle-feed comprising highly dispersed particles of fats of both vegetable and animal origin, glycerides of palmitic acid, of stearic acid and of the higher unsaturated fatty acids being present in the relative proportions by weight of 21 to 30 per cent, 5 to 15 per cent and 35 to 70 per cent, respectively, the fat mixture having a melting point within the range of 20° to 40° C., not over 25 per cent of said fat particles having a diameter exceeding 30 microns, the free fatty acid content of said fats not exceeding 3 per cent by weight, the bulk of the fats present being of animal origin.

2,472,664
APPARATUS FOR CAPPING CONTAINERS
Frank W. Krueger, Atherton, Calif., assignor to Food Machinery and Chemical Corporation, a corporation of Delaware
Application July 3, 1944, Serial No. 543,236
8 Claims. (Cl. 226—116)

1. An apparatus for vacuum capping containers which comprises: a table for supporting a container; a cylinder disposed above said container and in axial alignment therewith to provide a steam chamber; a plunger axially slideable in said cylinder; a capper provided on the bottom of said plunger; annular seal means on said cylinder surrounding the lower end thereof and adapted to engage said container; means causing relative vertical movement between said cylinder and said container supporting table to bring the upper end of said container and said seal means into sealing engagement, there being opening means in the wall of said cylinder for admitting steam thereto; and means operating in timed relation with said movement means for lifting said plunger upwardly in said cylinder so as to uncover said opening means and fill said chamber with steam between said capper and the upper end of said container when the latter engages said seal means and for then moving said capper downwardly to apply said cap to said container while surrounded by an atmosphere of steam.



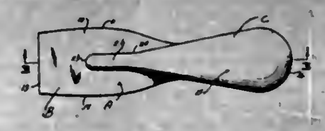
2,472,665
LIQUID LEVEL SIGNAL DEVICE FOR TANKS
Bruce Ladner, New Orleans, La.
Application May 23, 1947, Serial No. 750,012
2 Claims. (Cl. 177—311)



1. In combination, a gasoline tank having a visible spout extending upwardly therefrom, a cover hinged to the outer end of the spout and adapted to be lifted to fill the gasoline tank, a push button switch associated with the spout and adapted to be engaged by the cover to cause it to be opened, a float switch device mounted on the top of the tank and having a float adapted to extend downwardly into the tank for engagement with the surface of the gasoline as the gasoline rises to a substantial elevation within the tank, switch terminals adapted to be bridged by the float, a light signal indicator mounted upon the visible spout to give an indication and to radiate light rays through the spout so that the level of the gasoline therein can be more readily seen as under dark conditions, an electric source and wires leading from the electric source to the switches and the light signal, whereby first a light signal will be given as the gasoline nearly fills the tank and then a visible view can be had of the gasoline within the spout to determine accurately the height of the gasoline within the tank with the aid of the light rays.

2,472,666
PRODUCTION OF DYE INTERMEDIATES
Robert Mitchell Leekley, Chicago, Ill., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application May 16, 1946, Serial No. 670,309
4 Claims. (Cl. 260—338)

3. The compound of the formula:



2,472,667
MANICURING DEVICE
Maurice J. Lessard, Grand Forks, N. Dak.
Application October 20, 1947, Serial No. 780,986
2 Claims. (Cl. 132—74.5)

1. In a manicuring device, a barrel portion enclosing a reservoir and having an open end and a longitudinally-extending slot falling short of said open end; a nozzle detachably secured to said barrel with the opening therethrough in communication with said reservoir; means to force nail coating material from the reservoir through the opening through said nozzle including an arm, a toothed projection carried thereby and extending outwardly of said barrel portion, said arm having a portion extending into said slot, a piston within said reservoir; means detachably securing said arm to said piston; a nail file having a member at its inner end, constructed and arranged to close said open end, and means detachably securing said member to said barrel to close said open end, and having its other end constructed and arranged to extend between the teeth of said projection when detached from said barrel portion.

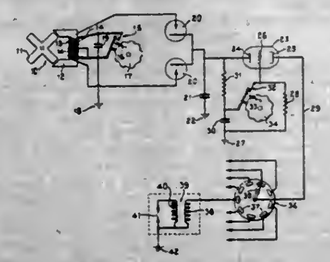
2,472,668
PUTTY KNIFE
Frank B. Lewandowski, Detroit, Mich.
Application February 7, 1946, Serial No. 646,160
2 Claims. (Cl. 30—169)

1. As an article of manufacture a scraping device comprising an integral blade and handle wherein the blade is of flat formation and the handle projects from the top surface of the blade entirely to one side of the plane of the blade, the handle being hollowed throughout the length

thereof and defining a recess which is exposed at the under side of the scraper, the handle furthermore having its lower edges beyond the blade lying flush with the plane of the blade.

2,472,669
PREVENTING COKE FORMATION IN PREHEATER TUBES
Eugene V. Mathy, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
No Drawing. Application November 2, 1945, Serial No. 626,432
2 Claims. (Cl. 196—47)

1. A process for heating and vaporizing in the absence of a catalyst and to a vapor phase catalytic cracking temperature a gas oil charge stock consisting essentially of a wide cut gas oil having a boiling range of 400° to 750° F. in a tube heater with substantially no deposition of coke on the heater tube walls comprising adding to said gas oil to be heated and vaporized a liquid non-coking oil in an amount of from 1 to 10 per cent by volume of the charge oil, said non-coking oil having an average boiling point above 1050° F. and above any temperature in excess of 1050° F. to which the subsequently formed gas oil vapors are heated, passing this mixture of oils into the heating coil tube, heating said mixture therein to a temperature at which the gas oil is substantially completely vaporized without cracking and the noncoking oil remains as liquid, and removing the gas oil vapors and the liquid non-coking oil from the heating and vaporizing coil.

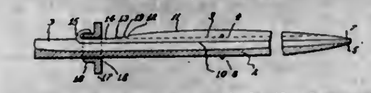


2,472,670
HAND TRUCK
James McFarland, Racine, Wis.
Application March 26, 1946, Serial No. 657,781
3 Claims. (Cl. 214—65.4)

1. In a two-wheeled hand truck, a frame comprising two parallel upright members, each bent so as to form three sections arranged at angles to each other with the extremities of the uppermost pair of said sections constituting a pair of

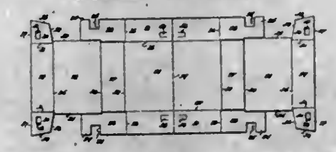
handles, a plurality of transverse members interconnecting said upright members, including a cross member located in the proximity of the lowermost bends in said upright members and a concave member having its extremities bent backward and interconnecting said upright members at the lower ends thereof, an intermediate upright member supported by the transverse members including said concave member and disposed between the lower portions of said first two upright members, an upturned hook carried by said intermediate member, and adjustable fastening means for connecting said hook to said intermediate member in any of a plurality of positions thereon.

2,472,671
ELECTRICAL APPARATUS
John V. McNulty, Binghamton, N. Y., assignor to Bendix Aviation Corporation, New York, N. Y., a corporation of Delaware
Application March 15, 1945, Serial No. 582,890
10 Claims. (Cl. 315—213)



1. In an ignition system or the like, a storage condenser, a second condenser, means for charging said condensers, a spark gap, a normally nonconductive electronic discharge device connected between said storage condenser and said gap, and means including a periodically and mechanically operable circuit maker for operably connecting said second condenser to said device for rendering said device conductive to the discharge of said storage condenser.

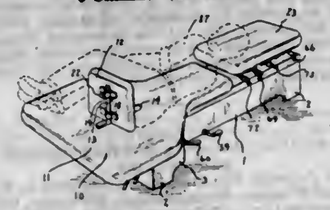
2,472,672
VINYL SULFONE-DIENE INTERPOLYMERS
Charles J. Mighton, Christiana Hundred, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application May 16, 1945, Serial No. 594,179
10 Claims. (Cl. 260—86.5)



1. An interpolymer obtained by polymerizing a mixture of from 15 to 60 parts by weight of a monovinylsulfone and from 85 to 40 parts by weight of a polymerizable diene containing conjugated double bonds in the 1,3-position, said monovinylsulfone having the general formula $RSO_2CH{=}CH_2$, wherein R is a monovalent hydrocarbon radical of the group consisting of monovalent aromatic and aliphatic, including cycloaliphatic, hydrocarbon radicals containing not more than eight carbon atoms, said polymerization being effected in aqueous emulsion in the presence of a water-soluble salt of an inorganic per-acid, an oxidizable sulfur compound, and an emulsifying agent.

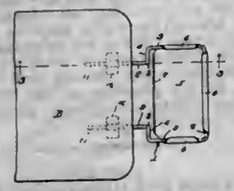
2,472,673
SCREW DRIVER HAVING EXPANDING SCREW HOLDING BIT
Edward L. Millen, Brookline, Mass.
Application October 11, 1945, Serial No. 621,749
1 Claim. (Cl. 145—50)

A screw driver having a blade, the free end of which is adapted to be mounted in a screw slot, said blade having a recess formed longitudinally in it, a tongue positioned therein, means pivotally mounting said tongue on an axis perpendicular to the recess, the bottom of said recess being spaced from the bottom of the tongue, whereby the tongue may be moved about the pivot point, said tongue having a shape at the free end of the blade to form with the blade a continuous surface when the tongue is in an inward position, said tongue at the other end terminating in a hooked section with the end portion bent over the tongue and spaced from the surface of the blade and a section adjacent the hooked section flush with the surface of the blade and a further section adjacent the last mentioned section having a shoulder rising above the surface of the blade, a collar normally positioned on the blade in said flush section, said collar having a cam shape whereby when moved under the top portion of said hook, it will engage within the hook and raise it, thereby depressing the other end of the tongue into said inward position, and when said collar is moved in the other direction it will ride on said shoulder, depressing the same to raise the other end of the tongue out of the recess.



2,472,674
DUPLEX BOX OR CARTON
Emil Morand, Jersey City, N. J.
Application October 31, 1947, Serial No. 783,366
6 Claims. (Cl. 229—36)

1. A duplex box formed from a blank of paper stock, said box comprising flat bottom and erect side panels, each side panel having end wall sections extending longitudinally from each end thereof and in-folded to stand across the ends of said bottom panel between said side panels, the meeting end portions of opposed end wall sections having cooperative means for interengaging the same in coupled together relation, a relatively foldable, longitudinally sequential arrangement of connected exterior end panel, top panel and interior end panel extending from each end of said bottom panel, each interior end panel having foldable side flaps laterally extending therefrom, each said arrangement being adapted to be infolded so that the exterior end panels respectively stand in external overlying relation to adjacent joined end wall sections and so that the top panels close the box top with the interior end panels inserted within and so as to stand in face to face relation across the box interior midway its ends and with their side flaps extending right angularly inwardly therefrom to internally overlie the



side panels, and a line of weakening perforations extending across the box medially of the inserted interior end panels, whereby to permit division of the box, by rupturing the same along said line of perforations, into two completely closed separate box members.

2,472,675
SIDE POSTURE CHIROPRACTIC ADJUSTING TABLE
Alfred L. Mueller, Hoopeston, Ill.
Application October 31, 1946, Serial No. 706,905
5 Claims. (Cl. 311—7)

1. In a table of the class described, a base, a body rest pivoted on said base for vertical swinging into upright position and for lowering into substantially horizontal position and having a tail end portion disposed lowermost when said rest is in upright position, a seat on said portion at a right angle thereto for supporting a patient in sitting position when said rest is upright and with the legs of the patient bent and one side of the body of the patient opposed to said rest for lowering of the patient in sitting side posture position with the body reclining against said rest and the legs bent, said portion being widened relative to the remainder of said rest at both sides of said rest and said seat being relatively narrower than said portion and disposed in the longitudinal center of said rest to provide for supporting in bent position the legs of the patient being lowered with the patient occupying the seat with either side opposed to said rest, and pressure means for swinging said rest.

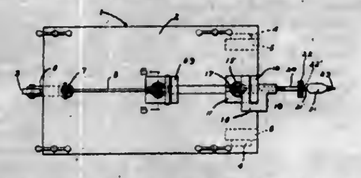
2,472,676
SMOOTHING IRON HOLDER
William Branch Nunnally, Sr., Atlanta, Ga.
Application February 27, 1946, Serial No. 650,428
2 Claims. (Cl. 248—117.1)

1. As an article of manufacture attachable to an ironing board, a holder for smoothing irons, comprising a frame, formed from a single length of material and including a transverse frame member, side frame members, inturned short frame members, all of said members being in the same plane, yokes dependent from the short frame members, and extensions on the yokes, an iron-supporting plate carried by the frame, the plate having edge portions inturned for clamping engagement with the transverse frame member and side frame members, and attaching plates connectable to the ironing board, the attaching plates having channels and bottom openings communicating therewith, the extensions being extended through the channels, and portions of the yokes being extended through the bottom openings.

2,472,677
DRAIN COCK
Delbert L. Phillips, Culver City, Calif., assignor to William R. Whittaker, William S. Whittaker, Beulah Whittaker, Robert M. Vandegrift, Roger D. Vandegrift, and Delbert L. Phillips, copartners doing business as Wm. R. Whittaker Co., Ltd., Los Angeles, Calif.
Application June 4, 1945, Serial No. 597,503
7 Claims. (Cl. 251—51)

1. In a device of the character described, the combination of: a valve body provided with a passage and provided with a guide defining a plane which traverses said passage; a rib on said body, said rib being parallel to said guide and having a surface arched in a direction perpendicular to said plane; a plate slidable in said guide transversely of said passage to vary the extent of opening of said passage; and means carried by said plate and slidably engaging said arched surface for releasably retaining said plate in any desired position in said guide.

2,472,678
CARTRIDGE CLIP
Earl C. Pickron, Creston, Iowa
Application December 31, 1946, Serial No. 719,451
2 Claims. (Cl. 42—87)



1. A cartridge clip for attachment to a gun stock comprising an elongated tube having an open front end, a bore slidably receiving cartridges therein, a rear end wall inclined forwardly relative to the longitudinal centerline of the tube, an opening in the side of said tube extending forwardly from the forward edge of said end wall a distance less than the length of a cartridge and circumferentially of said tube a distance sufficient to permit grasping a cartridge in the rear end of said tube between a thumb and forefinger, said end wall having a pair of wings disposed one at each side of said opening and inclined forwardly to hold cartridges in said clip against accidental spilling, a screw cap closing the forward end of said tube, and a pair of brackets secured to said tube, one near each end thereof, and adapted to be secured to a gun stock.

2,472,679
SUPPORT FOR DRILLS
William Pilkington, Beckley, W. Va.
Application March 7, 1946, Serial No. 652,572
1 Claim. (Cl. 77—54)

In a drill structure, a vertical standard having flat side faces a U-shaped bracket disposed

horizontally in straddling relation to said standard with its arms extending across the flat side faces thereof, a set screw passing thru a threaded opening in one arm for engaging the confronting side face of the standard and releasably securing the bracket in a vertically adjusted position upon the standard, the other arm being shorter than the first arm and carrying a lateral extension projecting outwardly from the bracket midway the width of the standard and formed with a longitudinally extending threaded bore

leading from its outer end, a shaft extending from the extension longitudinally thereof and being threaded from its inner end and screwed into the bore, a wheel for turning said shaft rigid with the outer end thereof and formed with a recess at the center of its outer face, and a drill extending longitudinally of the shaft and having a longitudinally extending stud projecting from its rear end and engaged in the recess of said wheel to hold the drill in alignment with the shaft.

2,472,680

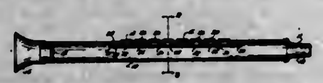
PROCESS OF MAKING COATING COMPOSITIONS USING POLYETHYLENE COATED PIGMENTS

Burt Carlton Pratt, Brandywine Hundred, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application February 13, 1945, Serial No. 577,732

3 Claims. (Cl. 260—41)

1. A process which comprises stirring finely divided metallic particles in a hot organic solvent solution of solid polymer consisting of polymerized ethylene, cooling the mixture to coat the metallic particles with a film of said polymer, and dispersing the coated metallic particles in a film-forming vehicle other than said polymer, said film-forming vehicle being a non-solvent for said polymer and being capable of drying to a continuous coherent solid film.



2,472,681

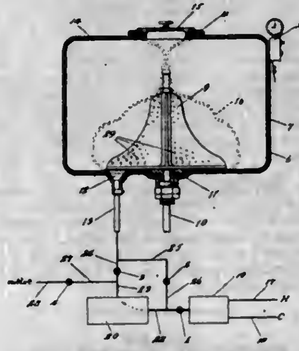
TOY MUSICAL INSTRUMENT

Gustave Froll, Newark, N. J.

Application January 31, 1947, Serial No. 725,656

2 Claims. (Cl. 84—375)

1. A toy musical instrument comprising a tubular body closed at one end and having a mouthpiece at its opposite end, said body having a plurality of spaced air emission apertures therealong, a carrier member of substantial thickness, said carrier member having a transversely convex top surface conforming to and sealed to the concave interior surface of said tubular body beneath the air emission openings thereof, said carrier member having a flat under face and being provided with longitudinal resonance chamber forming openings of substantial depth extending between its under and top sides, said openings being spaced correspondingly to the spacing of said body apertures respectively for communication therewith, slideway means contiguous to and extending along the said flat under face of said carrier member, and a flat reed plate having a plurality of longitudinally disposed tuned reeds spaced therealong, said reed plate being slidably entered in said slideway means so as to be disposed in face to face abutment against the said flat under face of said carrier member with the reeds respectively resonance aligned with the bottom ends of the resonance chamber forming openings of said carrier member, whereby adjacent resonance chambers are sealed against intercommunication.



2,472,682

WASHING MACHINE WITH SQUEEZER EXTRACTOR

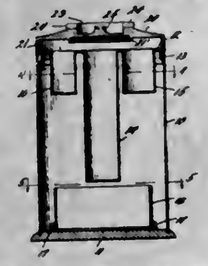
Henry J. Rand, Fairfield, Conn., assignor to H. J. Rand Washing Machine Corp., Cleveland, Ohio, a corporation of Delaware

Application July 9, 1946, Serial No. 682,322

14 Claims. (Cl. 68—21)

1. A washing machine comprising a tub, a flexible air- and watertight lining for said tub, an opening in said tub and lining for the insertion and removal of clothing, and air- and watertight closure for said opening, an impeller inside of said tub and lining which may be operated to wash the clothes, means for pumping water into said lining, and means for pumping water and air out of said lining whereby said clothes may be dried by the pressure of the lining against the clothes due to atmospheric pressure against the outside of the lining.

2,472,683



CONTAINER FOR BATHROOM SUPPLIES

William D. Richardson, Ontario, Calif.

Application December 6, 1944, Serial No. 566,876

4 Claims. (Cl. 312—31.1)

1. A container for bathroom supplies, comprising a casing elliptical in horizontal cross-section, a fixed annular shoulder inside the casing at its upper end, an elliptical top member closing said casing and resting at its periphery on said shoulder, said top member having a deep integral pocket for receiving a toilet bowl brush and shallow integral pockets at opposite sides of the deep pocket for receiving cleaning preparations and an elliptical lid for the casing, said lid resting on

said shoulder and having an annular flange encircling the upper end of the casing and matching with the outer wall of the casing.

2,472,684

PROCESS FOR REMOVING CORROSION PRODUCTS FROM SURFACES CONTAINING HEAVY METALS

Carlo Rossi, Basel, Switzerland, assignor to Ciba Limited, Basel, Switzerland, a Swiss firm

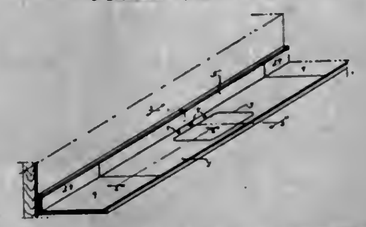
No Drawing. Application February 10, 1947, Serial No. 727,720. In Switzerland February 8, 1946

Section 1, Public Law 690, August 8, 1946

Patent expires February 8, 1966

8 Claims. (Cl. 252—105)

1. A process for removing corrosion products from surfaces containing heavy metals which are resistant to the action of alkaline solutions, which comprises treating the said surfaces with an alkaline aqueous solution of a member selected from the group consisting of polyhydroxybenzenes and polyhydroxydiphenyls, each of which contains at least two adjacent hydroxy groups, and their carboxylic acids, all these compounds being free from substituents other than hydroxy and carboxylic acid groups.



2,472,685

KITCHEN CABINET STRUCTURE

George Scharmer, New Milford, N. J.

Application June 6, 1946, Serial No. 674,688

6 Claims. (Cl. 4—189)

1. A kitchen cabinet table top comprising a base of plywood having an opening, a flat rim sink registered with said opening with the rim extending beyond the edges of the opening, a plurality of clamps fastened to said base with one end engaging said rim and the other end engaging the underside of the base, and a drainboard consisting of a sheet of stainless metal on the upper surface of said base, said drainboard having an opening registering with the opening in said base and having a wall extending downwardly into contact with said rim.

2,472,686

CASTER

Ory L. Snyder, Newark, N. Y., assignor of forty-nine per cent to The Dexter Company, Fairfield, Iowa, a corporation of Iowa

Application November 17, 1943, Serial No. 510,633

6 Claims. (Cl. 16—44)

1. A caster comprising a first bracket, a stem fixedly secured to said bracket, second bracket, a wheel pivotally connected with said second bracket, a lateral pivot member connecting said brackets to permit relative movement therebetween under action of the supported load, and a spring member carried by said pivot member to engage the brackets respectively and adapted to support the normal maximum weight of the supported unit upon said caster and to hold said unit in resilient suspension, said stem bracket having depending sides to straddle and overlap the sides of said wheel bracket, said brackets having overlapping end walls adjacent said members, said sides and walls forming a chamber to confine said members therein and to protect the same from damage and to divert moisture away therefrom, said stem bracket also having an overhanging canopy to drain moisture from said bracket at a point remote from said members.

2,472,687

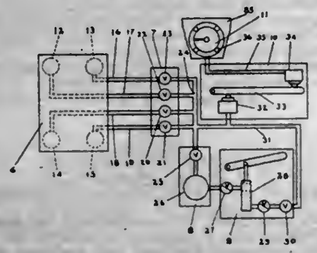
ANTISPLASH DEVICE FOR ATTACHMENT TO THE HEELS OF SHOES OR THE LIKE

Elizabeth Wellwood, Robert John McBride, William James Greer, and Joseph Wellwood, Belfast, Northern Ireland

Application March 23, 1946, Serial No. 656,630

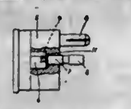
In Great Britain April 6, 1945

4 Claims. (Cl. 36—76)



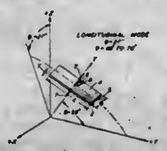
1. An anti-splash device especially for ladies' shoes comprising a member attachable to the wearing surface of the heel and provided with studs having a relatively small ground-contact surface to obviate any suction effect with the ground surface which tends to throw up mud, and means for detachably holding said member in position on the heel, said means comprising heel-gripping elements, of which, at least one is slidable relative to said member and transversely of the heel so that the device can be fitted to heels of different widths, and a rubber strap interconnecting said elements and, when the device is fitted to a heel, embracing the heel and urging the gripping elements firmly against the heel.

2,472,688
DISPENSER HAVING STEP-BY-STEP ROTATING VALVE WITH MEANS TO PREVENT REVERSE ROTATION THEREOF
Frank K. Wydra, Chicago, Ill.
Application March 26, 1946, Serial No. 657,207
1 Claim. (Cl. 222—248)



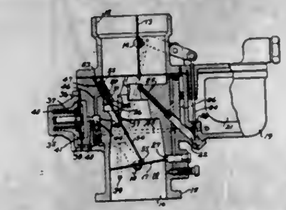
In a measuring and dispensing device of the type including a receptacle having a cover plate with a feed opening therein, a bladed rotor adapted to fit in the receptacle and be rotated in one direction therein, said rotor having a stem journalled in said cover plate, and an apertured reverse rotation plate fitted around said stem between said cover plate and rotor with tongues thereon engaging the edge of said cover plate at said opening to anchor the reverse rotation plate to said cover plate, said reverse rotation plate having a depending resilient ratchet tongue for wipingly engaging the blades of the rotor and flexing downwardly between the same to block reverse rotation of the rotor.

2,472,689
FLUID WEIGHING SYSTEM
Harold A. Adams, Bakersfield, and Merrill Eichelberger, Kernville, Calif., assignors to E. A. B. Incorporated, a corporation
Application October 7, 1944, Serial No. 557,676
2 Claims. (Cl. 265—47)



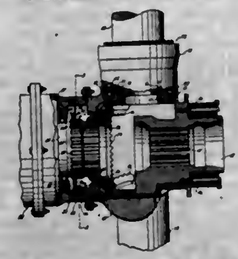
2. Plural fluid pressure responsive vessels; control valves; a fluid pressure responsive mechanical movement; a single registration dial; a single step-by-step incremental force indicating pointer; a piping system connecting said plural pressure responsive vessels with said control valves and said pressure responsive mechanical movement; a fluid functioning within said plural pressure responsive vessels, said control valves, said fluid pressure responsive mechanical movement and said piping system; means connecting said fluid pressure responsive mechanical movement to said single registration dial and said step-by-step incremental force indicating pointer whereby the single registration dial and single indicating pointer may be selectively energized by the operation of said control valves to indicate both the individual and total loads sustained by the plural fluid pressure responsive vessels.

2,472,690
ELECTRICAL PLUG
Thomas Atherton and Francis Ernest Ryder, Salford, England, assignors to Dorman & Smith Limited, Salford, England
Application December 21, 1944, Serial No. 569,195
In Great Britain January 10, 1944
1 Claim. (Cl. 173—361)



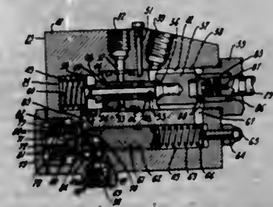
An electrical plug comprising a body of insulating material provided with recesses extending inward from one face of the body and openings of smaller diameter extending inward from the opposite face of the body in coaxial alinement with said recesses, a spring of conducting material in the form of a truncated cone housed and retained at its wider end in one of said recesses whereby it hangs with its narrower end in the axially alined opening of smaller diameter, an electric terminal block disposed in said recess and resting on the wider end of said truncated cone spring, said terminal block having a threaded opening therein of smaller diameter than and coaxial with the opening of smaller diameter in the plug, a contact pin of the same diameter as said plug-opening of smaller diameter, said pin having at one end a projection of smaller diameter than the pin thereby forming a shoulder between said pin and projection, said being exteriorly threaded in the same direction as the coil of said spring for engagement with the threaded opening in said terminal block thereby to cause said shoulder to engage and press inward the smaller end of said spring whereby when said pin is screwed home in said threaded opening the spring is entirely within the recess of larger diameter.

2,472,691
PIEZOELECTRIC CRYSTAL APPARATUS
Walter L. Bond, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 16, 1946, Serial No. 690,967
11 Claims. (Cl. 171—327)



1. An elongated ethylene diamine tartrate piezoelectric crystal plate having its thickness or thinnest axis dimension disposed in a plane containing the Y axis and inclined at an angle of substantially 59 degrees with respect to the +Y axis as measured from said +Y axis toward the plane of the +X and +Z axes, said plane containing said Y axis being inclined at an angle of substantially 27 degrees with respect to said +Z axis as measured from said +Z axis toward said +X axis in said plane of said +X and +Z axes, the lengthwise or longest axis dimension of said crystal plate lying substantially in said plane containing said Y axis.

2,472,692
CARBURETOR
Morris C. Brown, Richmond Heights, Mo., assignor to Carter Carburetor Corporation, St. Louis, Mo., a corporation of Delaware
Application May 21, 1945, Serial No. 594,945
4 Claims. (Cl. 261—34)

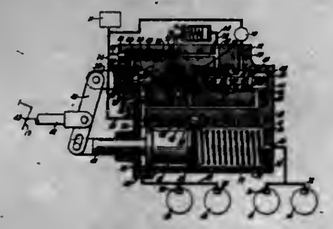


4. In a charge forming device, a mixture conduit, a throttle therein, a suction charged accelerating pump including an outlet passage terminating in a nozzle in said conduit, a valve in said passage near said nozzle and including a yieldable element influencing the valve to a position of passage closure, and a throttle-actuated member extendable through said nozzle and effective in any open position of the throttle, to maintain the valve open, said member in response to full closing of the throttle, acting to release the valve for passage closure under the influence of said element, said throttle-actuated member further coacting with said nozzle to effect a predetermined restricted opening at the nozzle.

2,472,693
PITCH INDICATOR FOR VARIABLE PITCH PROPELLERS
William V. Brown, Flushing, N. Y., assignor to Republic Aviation Corporation, near Farmingdale, N. Y., a corporation of Delaware
Application June 25, 1946, Serial No. 679,281
3 Claims. (Cl. 177—351)

1. A device for indicating the pitch of a variable pitch propeller consisting of a hub, a series of propeller blades each mounted for limited rotary movement in said hub, a driven gear fixed to the inner end of each propeller blade and a master driving gear meshing with all of said driven gears, comprising a variable resistor concentric to the axis of the master gear and fixedly secured to the interior of the hub, a contactor associated with the master gear for movement in unison therewith and cooperating with the aforesaid resistor to vary the effective value thereof, a normally balanced bridge having four electrically related resistors including the aforesaid variable resistor, and means associated with the bridge to indicate the degree of unbalanced conditions in said bridge resulting from variations in value of the variable resistor.

2,472,694
LIQUID PRESSURE OPERATED CONTROLLING SYSTEM
Leslie Cyril Chouings, Leamington Spa, England, assignor to Automotive Products Company Limited, Leamington Spa, England
Application April 13, 1944, Serial No. 530,934
In Great Britain January 29, 1943
7 Claims. (Cl. 137—144)

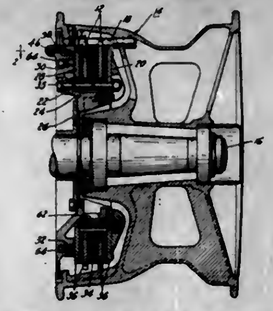


1. A control device for a fluid pressure system comprising inlet and outlet ports, a passageway connecting the inlet port to the outlet port, a control valve having a member constructed and arranged to be normally seated in the passageway, means for engaging said member for unseating the same and including a spring arranged to yield when the pressure in the passageway reaches a predetermined value to permit the member to be moved in a direction to be seated, a pressure responsive device having a valve member disposed in the passageway between the control valve and the outlet port in a manner to normally open the passageway to thereby provide a substantially unrestricted path for the fluid through said passageway to the outlet port and responsive to a second predetermined pressure to close the passageway, and restricted means associated with the pressure responsive device including passages connecting the passageway to the outlet port in a manner to pass fluid thereto when the valve member is in a position closing the passageway to thereby reduce the flow of fluid to the outlet port as compared with the flow of fluid thereto when the valve member is in its normally open position, whereby when the first mentioned predetermined pressure is reached to move the control valve member in a direction to be seated the flow to the outlet port is completely cut off.

2,472,695
SYSTEM OPERATED BY LIQUID PRESSURE
Leslie Cyril Chouings, Leamington Spa, England, assignor to Automotive Products Company Limited, Leamington Spa, England
Application January 1, 1945, Serial No. 570,995
In Great Britain August 9, 1943
5 Claims. (Cl. 60—51)

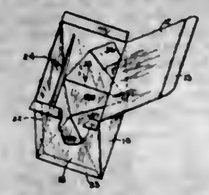
1. For use in a fluid pressure system having a pump for putting fluid under pressure, an

accumulator for storing fluid under pressure and a device to be operated by the fluid under pressure which comes either directly from the pump or from the pump and accumulator jointly, a control mechanism comprising a pressure regulating valve interposed between the pump and the accumulator and constructed and arranged to limit the pressure received by said accumulator, a passage constructed and arranged so that it receives fluid under pressure from the



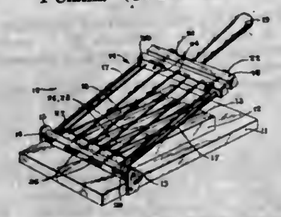
pump and returns the fluid to the inlet side of the pump, a control valve in the passage and normally open and constructed and arranged to be closed to obstruct the return of fluid to the inlet of said pump so as to subject said device to fluid under pressure, and an auxiliary valve disposed in said passage between the pump and the control valve and normally closed, said auxiliary valve being constructed and arranged to prevent the flow of fluid from the pump to said passage when the accumulator is being charged.

2,472,696
TENS TRANSFER MECHANISM
Edward P. Drake, Glendale, Calif., assignor to Clary Multiplier Corporation, Los Angeles, Calif., a corporation of California
Application March 13, 1945, Serial No. 582,554
9 Claims. (Cl. 235—138)



9. In a calculating machine having a plurality of rotatable accumulator elements of different denominational orders and means for driving said elements; tens transfer mechanism comprising a transfer actuator for each of said elements, means on said actuator forming a pair of driving teeth, means for moving said actuator through a transferring stroke, means for normally retaining said actuator in an ineffective condition during said movement thereof, and means responsive to movement of one of said elements, when a tens transfer is indicated, for rendering the actuator associated with the next higher order element effective to cause one of said teeth to drive said higher order element, means on each of said elements for returning its associated actuator to ineffective condition during said movement thereof while in effective condition, both of said teeth being effective to positively lock the associated element against rebound and overthrow during the last portion of said movement thereof.

2,472,697
AUTOMATICALLY ADJUSTABLE DISK BRAKE
William H. Du Bois, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application October 10, 1945, Serial No. 621,516
3 Claims. (Cl. 188—72)

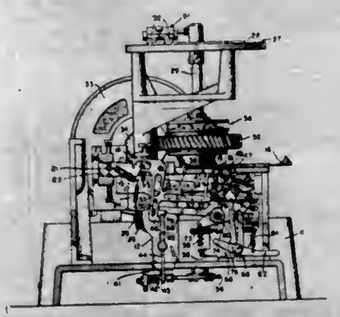


1. A self-adjusting disc brake comprising a first fixed support member, a second fixed support member axially spaced from the first and having an annular chamber formed therein at the inner side thereof and a plurality of circumferentially spaced substantially tangentially extending chambers formed therein on the outer side thereof and each intersected by a perpendicular opening which leads to said inner side, an annular piston reciprocable in said annular chamber, a non-rotatable but axially movable pressure plate acted on by said piston, an axially movable rotor disc located between said first fixed support member and said pressure plate and adapted to be retarded by frictional resistance induced by axial movement of the pressure plate under the influence of the piston, a plurality of circumferentially spaced axially extending positioning members secured to said pressure plate, each having a pawl formed on the end thereof and each extending through the respective opening into one of said tangentially extending chambers, a plurality of circumferentially spaced toothed rack members cooperating with said positioning members to determine the released position of said pressure plate, each of said rack members being movable lengthwise in one of said tangentially extending chambers, the pawl of each positioning member being engaged and axially positioned by the teeth of one of the rack members, the successive teeth of each rack member becoming gradually higher in profile to come closer to the aforesaid first fixed support member, a key associated with each rack member for preventing rotation of the same in its chamber, and a spring located in each such chamber and acting on the respective rack member to urge it endwise in a direction to move a higher tooth under the pawl of the associated positioning member and thereby hold the pressure plate in an advanced position, the angle of the line of contact of each pawl with the teeth of the respective rack member being such as to prevent movement of the ratchet member under influence of the spring until the pressure plate moves more than a predetermined distance during a pressure stroke, and the angle of relief of the teeth of the rack member being sufficient to insure adequate clearance in released position of the rotor disc from the non-rotatable brake members.

2,472,698
KNOCKDOWN CARTON
Anthony G. Edtmiller, Milwaukee, Wis., assignor to Hummel and Downing Company, Milwaukee, Wis., a corporation of Wisconsin
Application September 20, 1947, Serial No. 775,182
14 Claims. (Cl. 229—41)

11. A collapsible carton comprising four side wall panels having hinged corner connections with each other, a triangular bottom panel in hinged connection with one of said wall panels and defined by score lines extending diagonally from two of said corners, second and third triangular bottom panels connected with the bottom panel first mentioned upon the respective score lines aforesaid, a gluing flap hingedly connected marginally with the second triangular bottom panel and adhesively connected with one of said walls, and a supporting panel having a hinged connection with the third triangular bottom panel and extending upwardly therefrom in immediate proximity to a wall of the carton opposite that with which the gluing flap is connected, an intermediate wall of the carton opposite that with which the first triangular bottom flap is connected being provided with a false bottom resting upon the several bottom flaps and marginally abutting the supporting and gluing flaps.

2,472,699
FRUIT AND VEGETABLE SLICER
John Gangemi, Corona, N. Y.
Application September 18, 1946, Serial No. 697,650
1 Claim. (Cl. 146—147)

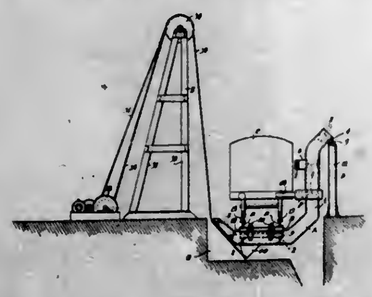


In a slicing device, a slicing frame comprising a pair of spaced bars extended parallel to each other, a pair of side rods extended between said spaced bars, a tension bar disposed between said spaced bars closely adjacent one of said bars, said tension bar and the other of said pair of bars being formed with aligned pairs of holes, a continuous length of wire having its ends anchored on the said other bar and having its intermediate portion laced through said aligned pairs of openings, and means for drawing said tension bar toward said one bar to draw said wire taut between said tension bar and the said other bar, said tension bar being formed at its ends with holes through which the intermediate portions of said side rods pass for slidably supporting said tension bar on said side rods for sliding movement toward the said one bar under the influence of said drawing means.

2,472,700
CONTAINER FOR A COMB
Rudolf Gingold, New York, N. Y.
Application December 11, 1946, Serial No. 715,385
2 Claims. (Cl. 132—9)

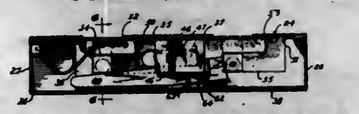
1. A container for a comb, comprising a trough of V-shaped section having an opening adapted to receive a comb, and a base having an elongated slot for receiving the bottom of the trough to support the trough in an upright manner upon a flat surface, one end of the V-shaped container having a notch adapted to receive the handle of the comb, and a transverse piece in the opposite end of the trough adapted to receive the forward end of the comb to retain the same above a liquid which may be disposed within the trough.

2,472,701
TAPE FEED SUPPRESSOR
Maurus T. Goetz, Chicago, Ill., assignor to Teletype Corporation, Chicago, Ill., a corporation of Delaware
Application September 20, 1945, Serial No. 617,515
3 Claims. (Cl. 178—22)



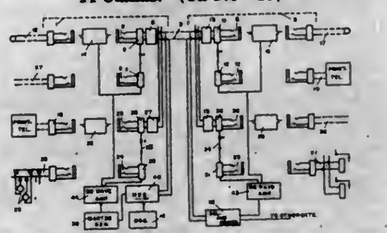
1. In a record reader for telegraphic transmitting devices, a record feeding mechanism comprising a cyclically moving member, means for actuating said member subsequent to each reading of the record, and means comprising a double trip-off latch cooperable with said cyclically moving member to invariably defer the actuation of said feeding mechanism for a time period of one cycle.

2,472,702
KNITTING FINGER RING
Hyman Greenstein, Brooklyn, N. Y.
Application May 23, 1947, Serial No. 749,993
9 Claims. (Cl. 242—149)



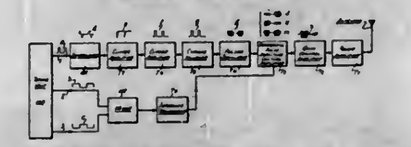
3. A finger ring tensioner for knitting wool and the like comprising a ring body having an opening for engaging on one's finger, a top block element mounted on the top side of the ring body, said top block element being formed with a passage extended inwardly from the top face thereof and at right angles to the opening in said ring body and through which a strand of knitting wool is adapted to be extended, a member extending across said passage, a stem extending upwardly from said top block element and passing freely through an aligned opening formed in said member, a spring coaxially wound on said stem and engaging the top face of said member, a nut threadedly engaged on the top end of said stem and bearing against the top end of said spring, and a washer removably mounted upon the stem whereby the strand of knitting wool may be trained therearound to provide additional opposition to the passage of the wool.

2,472,703
CAR AND WAGON TIPPLER OR DUMPER
George Wilfred Grossmith, Bristol, England, assignor of one-half to Strachan & Henshaw, Limited, Bristol, England, a company of Great Britain
Application February 20, 1947, Serial No. 729,839
In Great Britain May 17, 1946
20 Claims. (Cl. 214—52)



1. Wagon tilting apparatus comprising a frame for receiving a wagon, a rigid support, universal means connecting said frame, toward one peripheral portion thereof, to said support, and means for supporting said frame at substantially spaced-apart points toward peripheral portions of the frame opposite to said one peripheral portion, the said supporting means being operable to raise the frame at either of said points relatively to the other of said points.

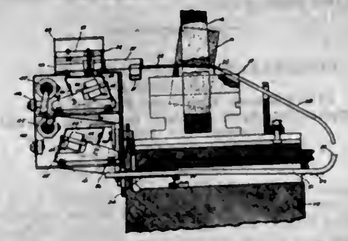
2,472,704
OUTBOARD MOTOR MOUNTING
Paul Homan, Napoleon, Ohio
Application June 11, 1947, Serial No. 753,892
8 Claims. (Cl. 248—4)



1. A mounting for an outboard motor having bolt-like clamping elements, said mounting comprising a housing secured to the boat and having notches for receiving the clamping elements therein, a latch shiftable between the open and the latching positions wherein the clamping elements are locked within said housing, spring means constantly urging the latch toward the latching position, and means for releasably holding said latch in the open position of adjustment.

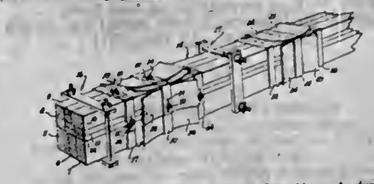
2,472,705
TIME DIVISION CARRIER MULTIPLEX TELEPHONE SYSTEM
John H. Homrighous, Oak Park, Ill.
Application July 17, 1944, Serial No. 545,206
14 Claims. (Cl. 179—15)

1. In a telephone system, a trunk line provided at one terminal with a pair of jacks and a relay for each jack, an oscillator for producing a carrier current channel for said trunk line, means for actuating either one of said relays independently over said channel, and switching means for disconnecting one of said jacks and its associated relay from said trunk line.



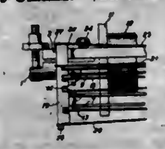
2,472,706
PULSE TRANSMISSION SYSTEM
George D. Hulst, Jr., Millburn, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application July 3, 1943, Serial No. 493,383
17 Claims. (Cl. 250—17)

1. In combination, an oscillator of radio frequency energy normally biased to cut-off, a circuit for impressing upon said oscillator two series of unidirectional current pulses to thereby cause said oscillator to produce two corresponding series of pulses of radio frequency energy, a utilization



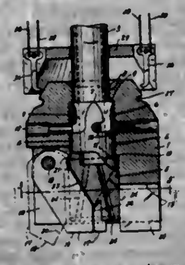
device, an amplifier between said oscillator and said utilization device, and means coupled to said amplifier for causing the same to change the relative amplitude of one of said series of pulses of radio frequency energy relative to the amplitude of the other series of pulses of radio frequency energy.

2,472,707
WORK LOADING DEVICE FOR GRINDING MACHINES
Alvin J. Jones and Charles Clement Walker Williams, Waynesboro, Pa., assignors to Landis Tool Company, Waynesboro, Pa.
Application September 20, 1945, Serial No. 617,540
3 Claims. (Cl. 51—103)



2. In a centerless grinding machine, a grinding wheel, a work rest and a control wheel forming a grinding throat, said control wheel being tilted relative to the grinding wheel so as to feed work pieces through said grinding throat at a predetermined rate, means to supply work pieces to said grinding throat at substantially the same rate including a vibratory conveyor substantially level with said grinding throat and vibrating means for actuating said conveyor, a hopper having a baffle plate therein for supplying work pieces to said conveyor at a controlled rate, said hopper and said conveyor being vibrated as a unit.

2,472,708
WOOD ADHERING MACHINE
John Watson Jones, Jr., Los Angeles, Calif., assignor to Radio Corporation of America, a corporation of Delaware
Application May 2, 1946, Serial No. 666,611
4 Claims. (Cl. 219—47)



1. A system for heating the glue lines between adjacent surfaces of a plurality of pieces of lumber, said glue lines running at right angles to one another comprising a pair of clamps for clamping said pieces into a predetermined form, a high frequency generator, a first electrode completely encircling and in contact with the periphery of said form and connected to said generator, and a second electrode completely encircling said form and connected to said generator, said second electrode being in contact with said form periphery at a distance from the center of said first electrode which is twice the depth of the glue line to be heated, said second electrode being flared away from said form in a direction toward said first electrode along a substantially exponential curve which is tangent to a plane at the region of contact of said second electrode with said form, said flare being at an angle of from fifteen degrees to thirty degrees with respect to said plane, said first and second electrodes being dimensioned to substantially surround the portion of said form in which the glue lines are to be dried, and said first and second electrodes being adjustable to fit various beam sizes.

2,472,709
CONTROL OF ELECTRICAL CONTACTING ELEMENTS
Harry M. Knapp, Scotch Plains, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application February 6, 1947, Serial No. 728,839
9 Claims. (Cl. 200—104)

6. A relay comprising an armature, a plurality of relatively fixed contact springs having contacts, a plurality of relatively movable resilient contact springs having contacts, all of the movable springs being tensioned normally by reason solely of their own tension to make closure with the said fixed springs at respective contacts thereof, and means having shouldered portions controlled by the said armature, certain of its shouldered portions being disposed to separate at least one of said closed pairs of springs when said armature is unoperated, the said means, when controlled by operation of said armature, being effective by said certain shouldered portions to release the separated pair or pairs to permit same to make closure due to the inherent tension of said movable springs and by others of its shouldered portions to separate the remaining closed pairs of said plurality of cooperating pairs of fixed and movable springs.

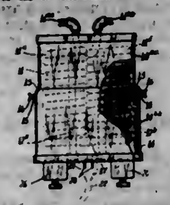
2,472,710
REMOVABLE DRILLING BIT
Carl C. Koeln, St. Louis County, Mo.
Application May 5, 1944, Serial No. 534,185
18 Claims. (Cl. 255—61)

1. In drilling apparatus, a rotary drilling shaft, a drilling bit body having a shaft receiving bore for permitting the bit to be slid on the shaft

and attached and removed from the lower end of said shaft without removing the shaft from the hole being drilled, means for attaching and detaching the body to the lower end of the shaft, a cutter, means for mounting the cutter on the bit body for movement to an operative position where it will cut the bottom of the hole being drilled below the shaft, and means carried by the shaft for engaging a rear portion of the cutter within the bore when the body is attached to the shaft and the cutter is in its operative position.

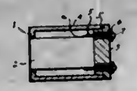
2,472,711
FORMING PAPER CLIPS
Chite Shaw Lee, Detroit, Mich.
Application December 16, 1946, Serial No. 716,538
22 Claims. (Cl. 140—82)

1. The method of forming a wire paper clip comprising the steps of continuously bodily moving a length of wire sideways along a predetermined path and in one direction, and forming in succession a plurality of U-shaped bends in said wire at different points along the length thereof.



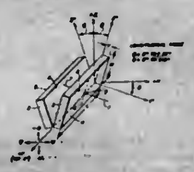
2,472,712
ROLL PAPER DISPENSER
Morris Lifschitz, New York, N. Y.
Application August 1, 1946, Serial No. 687,750
3 Claims. (Cl. 242—55.5)

1. In a paper roll dispenser, in combination, a substantially quarter cylindrical container comprising integrally bottom, rear, and top walls, said top wall being curved and being free of direct connection to said bottom wall, and a resilient end member permanently attached to one of said top and bottom walls and detachably engaging the other of said top and bottom walls.



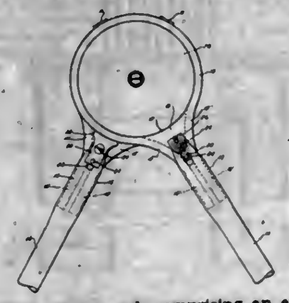
2,472,713
ELECTRIC WATER-HEATING SYSTEM
Ernesto Lijol, Brooklyn, N. Y.
Substituted for application Serial No. 109,228, November 8, 1936. This application April 14, 1948, Serial No. 20,962
8 Claims. (Cl. 219—39)

1. A water heating device, comprising a container formed of telescopically engaged sections, a water coil supported within said container upon one of said sections and having an inlet and an outlet, and a heater within said container and supported upon the other of said sections and extended into said water coil, said container sections being adjustable relative to one another for controlling the extension of said heater into said coil, said coil being formed of separate sections and said heater having separate heating elements extended into said coil sections, said heater being an electric heater and having its heating elements mounted in a circuit including in series a



source of power, a manually controllable rheostat and said heating elements.

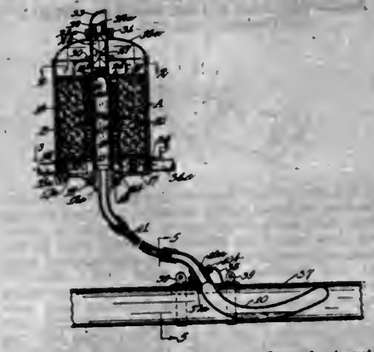
2,472,714
PIEZOELECTRIC SOUND PRESSURE MICROPHONE
Frank Massa, Cleveland Heights, Ohio
Application April 16, 1945, Serial No. 588,692
4 Claims. (Cl. 179—110)



1. In the method of making a microphone comprised of expander crystal means which comprises the steps of: establishing at one end of said crystal means a plane perpendicular to a direction of expansion of said crystal means, mounting said crystal means with its said plane face against a plane face of a base, connecting a housing to said base with said housing around said crystal means, the unattached end of said housing lying approximately in the plane of the unattached end of said crystal means, facing-off the unattached end of said housing and crystal means until they are brought into a common plane, and attaching a planar diaphragm to said crystal means and said housing at said end which has been faced-off.

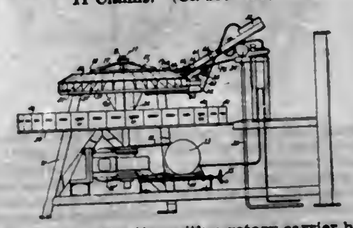
2,472,715
PIEZOELECTRIC CRYSTAL APPARATUS
Warren P. Mason, West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application January 21, 1947, Serial No. 723,264
17 Claims. (Cl. 171—327)

4. A rotated Y-cut type ethylene diamine tartrate piezoelectric crystal body adapted for motion substantially along its elongated lengthwise axis dimension, said crystal body having its major electrode faces disposed substantially parallel to the X axes and inclined at an angle of substantially 10 degrees with respect to the Z axis as measured in a plane perpendicular to said X axis, said lengthwise axis dimension being disposed substantially parallel to said X axis.



2,472,716
SPANNER WRENCH WITH WORK-RETAINING LOOP
Frank G. Miller, Farmingdale, and Leslie S. Begert, Richmond Hill, N. Y., assignors to Republic Aviation Corporation, Farmingdale, N. Y., a corporation of Delaware
Application February 27, 1945, Serial No. 579,960
3 Claims. (Cl. 81—90)

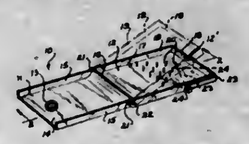
2. A spanner wrench comprising an engaging member consisting of a section of metal bent upon itself to form a loop having reverse bends adjacent its extremities thereby positioning its end portions in parallel juxtaposition, a hollow handle longitudinally slotted at one end and adapted for the reception and permanent attachment of said end portions of the loop, a filler interposed between and secured to the reverse bends aforesaid, one edge of said filler being curved to form an uninterrupted continuation of the inner edge of the loop, a latch mounted for sliding movement on the handle adjacent the engaging member, an enlargement at one end of said latch bearing on the handle to space the opposite end of the latch from the handle and the engaging member, a pin projecting from said enlargement to reciprocate in the slotted end of the handle whereby the spaced end of the latch may be removably projected over said filler, a lug projecting laterally from the engaging member in opposition to said latch, a flange angularly disposed to said lug to rest parallel to one face of the engaging member and to be spaced therefrom by the lug a distance substantially equal to the distance of the spaced end of the latch from the handle and filler, a series of spaced pins projecting from the engaging member in the direction of the lug, and means for fixing the latch against movement.



2,472,717
LUBRICATING OIL PURIFIER
Carlyle J. Morey, Minneapolis, Minn.
Application April 26, 1947, Serial No. 744,133
2 Claims. (Cl. 196—16)

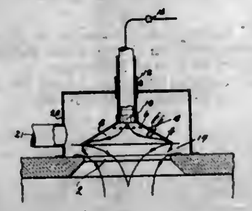
1. An oil purifier comprising a casing having a vent opening in its upper portion and having a pure oil outlet formed in the bottom thereof, a heating and refining passage formed in upstanding relation in said casing and communicating with said oil outlet, said casing having an oil inlet adapted to supply oil to the top of said passage, a cylindrical chambered heat distributing head centrally mounted in said heating and refining passage, a conduit having one end connected in sealed relation at the bottom of said head, a chambered heat receiver adapted to be inserted in the exhaust line of an internal combustion engine to be heated by the exhaust gases thereof and having its upper portion sealingly connected to the other end of said conduit, said head, conduit, and receiver forming a closed sealed heat transfer system and there being a small quantity of liquid enclosed therein whereby when said heat receiver is heated, the liquid within said system is vaporized to heat said head and thereafter condense and return to said heat

receiver for revaporization, a finned structure fixed in outstanding relation to the outside of said cylindrical head and adapted to receive oil from said oil inlet to retard the flow of the oil over said head and positively and uniformly heat said oil as it flows downwardly through said passage to drive off the volatile impurities of said oil through said vent opening, said purified oil flowing outwardly through said outlet.



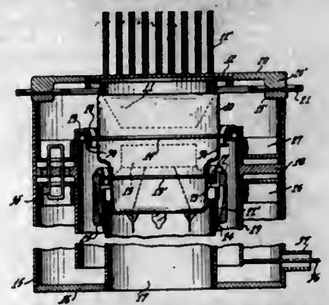
2,472,718
SORTER
Charles F. Mullen, Long Branch, N. J., assignor to Republic Aviation Corporation, Farmingdale, N. Y., a corporation of Delaware
Application August 25, 1944, Serial No. 551,134
11 Claims. (Cl. 209—90)

11. The combination with a rotary carrier having spaced, substantially semi-circular open pockets in the peripheral edge thereof, of a gravity feed to successively deliver rivets to said pockets whereby the head of each rivet rests on one face of the carrier and its shank passes through the pocket to project beyond the opposite face thereof, a stationary compressed air manifold disposed adjacent said carrier, a series of spaced air jets projecting outwardly from said manifold to terminate adjoining that face of the carrier beyond which the rivet shanks project, a stationary concentric rail cooperating with said carrier, having its height gradually reduced by a series of steps each step representing the length of a rivet shank and designed to overlap all



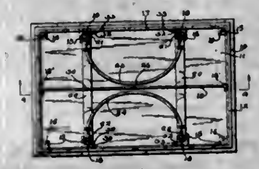
sharks having a greater length, and a chute coacting with each step to receive all rivets projected over that step by the corresponding air jet.

2,472,719
PEG GAME BOARD
George Mysels, New York, N. Y.
Application May 4, 1946, Serial No. 667,313
7 Claims. (Cl. 272—95)



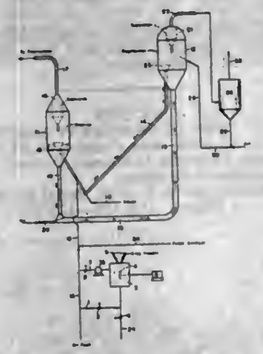
1. A game comprising an approach section having a rear bulbous hinge element, a target section having side walls overlapping said bulbous hinge element, a hinge pin passing through said target section side walls at their said overlapping portions and passing through said hinge element, hinging said sections together, said bulbous hinge element forming an obstacle between said sections, the side of said hinge element facing said approach section having a gradual slope and the side facing said target section dropping vertically, and targets supported on said target section for receiving an object propelled thereto along said approach section and over said obstacle.

2,472,720
METHOD OF BURNING OIL
Theodore Nagel, Brooklyn, N. Y.
Application December 19, 1944, Serial No. 568,889
1 Claim. (Cl. 158—117.5)



A method of burning oil in a combustion chamber having a wall provided with a firing opening, which method comprises continuously atomizing oil outside the firing opening and continuously mixing with the atomized oil a limited quantity of primary air sufficient for ignition of the atomized oil; continuously igniting the mixture of oil and primary air; intimately mixing secondary air with the ignited oil vapor resulting from the partial combustion of the mixture of atomized oil and primary air by continuously flowing an annular converging stream of secondary air toward the firing opening in such relation to the ignited oil vapor as to surround the same and draw the ignited oil vapor in the form of an annular stream into the converging stream of secondary air; and flowing this mixture continuously through the firing opening, thereby continuously obtaining relatively instantaneous combustion and a relatively short highly concentrated heat liberating flame body within the combustion chamber.

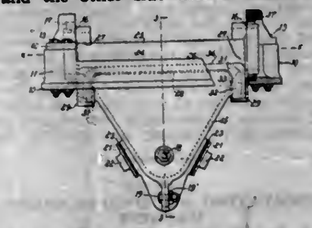
2,472,721
ELECTRON DISCHARGE DEVICE EMPLOYING CAVITY RESONATOR CIRCUITS
Leon S. Nergaard, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application March 16, 1945, Serial No. 583,018
13 Claims. (Cl. 315—39)



1. An electron discharge device having a cathode, grid and anode, and a cavity resonator coupled between said grid and cathode, said resonator comprising an elongated hollow conducting member, said elongated hollow conducting member being coupled to said cathode and said grid at spaced apart portions of said hollow conducting member, and a conducting partition within said elongated hollow conducting member and extending from the portion of said elongated hollow conducting member coupled to said grid toward but out of contact with a wall portion of said elongated hollow conducting member intermediate said spaced apart portions, whereby the effective electrical length of said elongated hollow conducting member is increased.

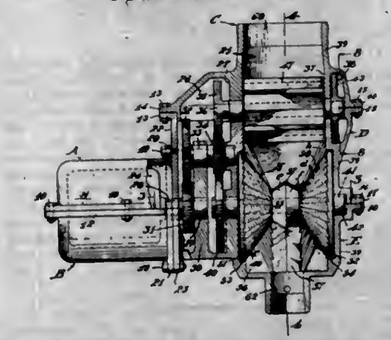
2,472,722
VERTICALLY ADJUSTABLE TABLE
Ralph Newstead, New York, N. Y.
Application August 17, 1946, Serial No. 691,187
2 Claims. (Cl. 311—39)

1. A vertically adjustable table comprising an outer casing having a bottom therein, a bottomless inner casing fitting movably within the outer casing, guide members extending upwardly from the bottom of the outer casing and having latch sockets, a frame structure connected to the inner casing, a table top hinged to the inner casing to be lifted to provide access to the inner frame structure, said frame structure comprising a longitudinally extending member, a pair of transversely extending, longitudinally spaced bars connected at their intermediate points to the longitudinally extending member, latch elements provided on the ends of the transverse bars, and means for operating the latch members in unison whereby when said inner casing is in raised position, it is held therein by said latch elements being disposed in said sockets.



2,472,723
METHOD FOR REMOVAL OF METAL COMPOUNDS FROM OIL FEED TO FLUID CATALYST CRACKING
Nick F. Peet, Goose Creek, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J., a corporation of Delaware
Application June 5, 1947, Serial No. 752,804
2 Claims. (Cl. 196—50)

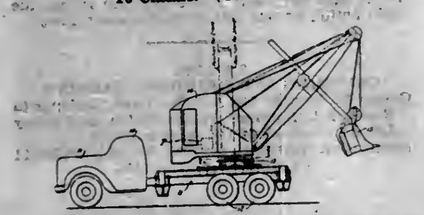
1. A method for treating a residual hydrocarbon feed stock containing contaminants, which is charged to a fluid catalytic cracking operation embodying a reaction and a regeneration zone and a recovery zone for the catalyst which comprises admixing at least a portion of the hydrocarbon feed stock with contact clay having a particle size in the range between 5 and 10 microns, slurrying the admixture, introducing the slurry into hydrocarbon feed stock, adding catalyst to the admixture of slurry and hydrocarbon feed stock and charging this admixture to a reaction zone maintained under conversion conditions, separating reaction products from the catalyst and contact clay, regenerating the catalyst and contact clay in a regeneration zone under combustion conditions to form a mixed phase of products of combustion and catalyst and contact clay, separating catalyst from products of combustion and contact clay in a recovery zone, discarding the products of combustion and the spent contact clay from said recovery zone, and returning the catalyst from said recovery zone to the system.



2,472,724
SEAL
Paul Pevney, Massapequa, N. Y., assignor to Republic Aviation Corporation, Farmingdale, N. Y., a corporation of Delaware
Application June 26, 1944, Serial No. 542,061
10 Claims. (Cl. 244—83)

3. In a high altitude aircraft having a pressure cabin, the combination with the floor of said cabin and a control lever trunnioned for oscillatory movement in an opening in said floor, of cylindrical portions formed on said lever between said trunnions and coaxial therewith, a frame circumscribing said opening and surrounding said lever and provided with bearings for said trunnions, a continuous channel carried by said frame, and a continuous resilient sealing strip of substantially U-section, one side of said U constituting a retaining flange confined in said channel and the other side thereof constituting a

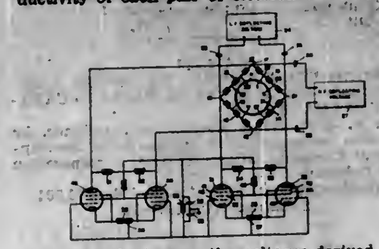
tapered flexible sealing flange the active edge of which constantly and sealingly contacts with said cylindrical portions by the cumulative effect of the inherent elasticity of the resilient material of said strip and of the pressure within the cabin acting on one side of said sealing flange.



2,472,725
CRUSHING AND GRINDING MACHINE
George W. Rundle, Los Angeles, Calif., assignor to Rudolph L. Pummer, James Cullen, and Silvey Leo Ambrose, all of Los Angeles, Calif.
Application November 26, 1945, Serial No. 630,714
1 Claim. (Cl. 241—155)

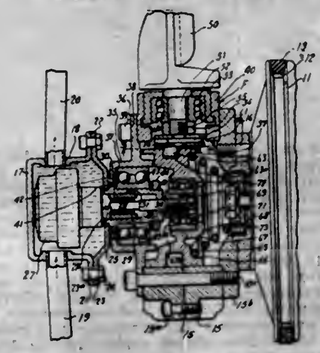
In a crushing and grinding machine, a housing having an intake opening in its upper end and an outlet passage in its lower end, a pair of cooperative crushing rollers on horizontal axes in the upper portion of said housing contiguous the intake opening, a pair of rotatable conical grinding rollers mounted on a shaft in said housing arranged with their tapered faces extending toward each other, the conical rollers being located beneath the crushing rollers and mounted with their axes parallel to the axes of the crushing rollers, radially extending teeth on the tapered faces of said grinding rollers, a grinding element fixed in the housing on one side of the grinding rollers and having inclined side walls extending between and slightly spaced from the toothed tapered faces of said grinding rollers, downwardly inclined teeth on said inclined faces, extending in oblique relation to the contiguous teeth on the grinding rollers, a filler block fixed in the housing on the opposite side of the grinding rollers and having inclined side faces overlying con-

tiguous opposed teeth of the grinding rollers, a collar on the shaft abutting the inner ends of the grinding rollers and having tapered circumferential walls, oppositely tapered from those of the grinding rollers, said stationary grinding element and said block each being formed with a vertical groove, the walls of which overlie the tapered walls of said collar in close proximity but spaced therefrom, the clearances between the grinding rollers, the collar, the fixed grinding element and the filler block providing the sole spaces for material to pass from the upper end of the housing to the outlet thereof and means for driving said crushing and grinding rollers.



2,472,726
EXCAVATING AND LOAD HANDLING MACHINE
Louis R. Russell, Edison, Ohio, assignor to Insley Manufacturing Corporation, Indianapolis, Ind., a corporation of Indiana
Application November 19, 1945, Serial No. 629,461
10 Claims. (Cl. 212—28)

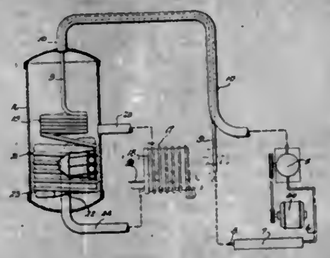
1. An excavating and load handling machine comprising a trailer frame, a mounting plate on said frame, a guideway on said mounting plate extending longitudinally of said vehicle, a supporting plate on said mounting plate and adapted for longitudinal movement in relation to said mounting plate along said guideway between a rearwardly disposed excavating position and a forwardly disposed load handling position, a turntable and superstructure on said supporting plate, said superstructure including a crane and operating means therefor, and cooperating gearing on said plates, respectively, for driving said supporting plate longitudinally on said mounting plate.



2,472,727
VOLTAGE DISTRIBUTION SYSTEM
Hans W. G. Salinger and Harold W. Beach, Fort Wayne, Ind., assignors, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application November 27, 1946, Serial No. 712,660
8 Claims. (Cl. 315—24)

1. A system for controlling the direction of an electron beam comprising, a plurality of field-producing electrodes uniformly spaced around the path of said beam, a voltage-distributing network comprising a balanced bridge arrangement of a plurality of impedance devices having two pairs of corner points and a plurality of intermediate tap points, said tap points being coupled respectively to said field-producing electrodes, two pairs of electron discharge devices having relatively high impedance space discharge paths, means for coupling the space discharge paths of each pair of electron discharge devices to respective pairs of said corner points, a source of space current for each pair of electron discharge devices, and means for oppositely varying the conductivity of each pair of electron discharge de-

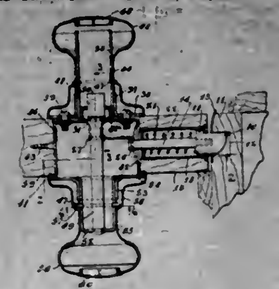
vices, whereby to vary the voltages derived from said space current source and impressed upon said network corner points.



2,472,728
FRONT TYPE THERMOSTAT MOUNTING
Elmore J. Sanders, San Gabriel, Calif., assignor to Evans Products Company, Detroit, Mich., a corporation of Delaware
Application March 1, 1946, Serial No. 651,071
1 Claim. (Cl. 170—135.72)

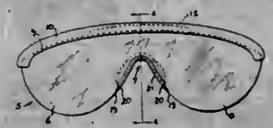
A variable pitch fan for an internal combustion engine, comprising, a hub assembly having a periphery and front and rear sides, means on said rear side for affixing the hub assembly to a rotating member for rotation therewith, fan blades projecting radially from said periphery, bearing means mounting said blades on said periphery for rotation about their radial axes, crank means eccentric of said radial axes on the inner ends of said blades, an activating member common to all of said crank means within said hub assembly, said activating member rotating with said hub assembly, bearing means slidably mounting said activating member within said hub assembly for axial movement with respect to said hub assembly, whereby, when said activating member moves axially, said blades are turned about their radial axes, a combined rotary and axial thrust bearing centrally disposed in said activating member including an outer bearing sleeve rotating with said hub assembly about an inner bearing member, the front side of said hub assembly having an axial opening therein, a second combined rotary and axial thrust bearing having an outer sleeve affixed within said opening and rotating about an inner sleeve, and a thermostatic control assembly comprising a

sleeve, means for affixing said sleeve within the inner ring of said second bearing member with the front end of said sleeve projecting beyond the front side of said hub assembly, a liquid tight housing affixed to the front end of said sleeve, an axial shaft extending from the inner bearing member of said first combination bearing to said chamber, thermal-responsive means in said chamber for moving said shaft axially upon changes of temperature of said cooling liquid, and means for connecting the interior of said housing to a source of cooling liquid.



2,472,729
REFRIGERATION SYSTEM
Philip A. Sidell, Galesburg, Ill., assignor to Outboard Marine & Manufacturing Company, Galesburg, Ill., a corporation of Delaware
Application April 11, 1940, Serial No. 329,140
18 Claims. (Cl. 62—8)

1. In a refrigerating system, the combination in series connection of a compressor, a condenser, a capillary tube, a heat exchange coil of larger cross section than the capillary tube and into which said capillary tube discharges, a continuous tube evaporator into which said heat exchange coil discharges, a separating chamber in communication with the evaporator outlet and having a portion for reception of liquid refrigerant enclosing said heat exchanging coil, and a return conduit leading from the upper portion of the separating chamber to the compressor.

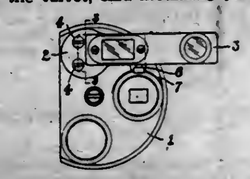


2,472,730
DOOR LATCH MECHANISM
David C. Smith, Toledo, Ohio, assignor of thirty per cent to E. W. Sauers, thirty per cent to A. E. Giesey, both of Cleveland, Ohio, and twenty per cent to Leroy L. Oblinger, Toledo, Ohio
Application November 26, 1947, Serial No. 788,128
6 Claims. (Cl. 292—169)

1. Door latch mechanism having a spring-tensioned latch bolt comprising a pair of knob assemblies adapted to be disposed on opposite sides of the door, one knob assembly including an oscillatable tube, an actuator having a pair of actuating lugs, a connection between said actuator and tube so that oscillating movements of the latter are transmitted to the former, a retractor shiftable at right angles to the axis of said tube and having parts engageable respectively by said lugs for effecting shifting movement thereof, said retractor being adapted operatively to engage the latch bolt, the other knob assembly having an oscillatable tubular member, a spindle fixed at one end to and concentric with said tubular member, and a driver on the opposite end of said spindle and coupled to said actuator so that oscillation of said spindle imparts corresponding movement to said actu-

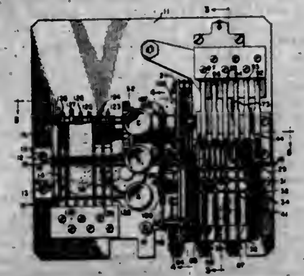
ator, said driver being separable from said actuator by longitudinal shifting movement.

2,472,731
ONE-PIECE CHANNELED LENS MOUNTING
Edward M. Splaine, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Application December 15, 1944, Serial No. 568,282
7 Claims. (Cl. 88—41)



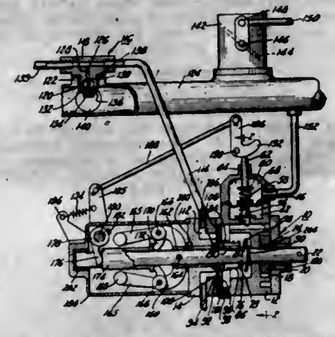
1. An ophthalmic mounting of the character described comprising a bar-like member of relatively rigid material curved substantially to the general contour of the face and having temple connection means adjacent either end, said bar-like member having rearwardly extending means thereon for engaging the brow and having an attachment seat extending longitudinally thereof forming a curve complementary to the curved shape of said bar-like member, a shield-like lens member of transparent material having a nasal recess in the lower edge thereof and having the major portion of its upper contour edge secured in said attachment seat, the rigidity of the bar-like member retaining said lens member to said curvature of the bar-like member, and with the end portions of said bar-like member curving outwardly and rearwardly of the brow engaging means so as to cup the lens member about the face of the wearer, said lens member having shouldered portions adjacent the nasal recess thereof for receiving the ends of a nose engaging member, a nose engaging member having a slotted portion interfitted with the edge of the lens member in said nasal recess and retained against movement by said shouldered portions, said nose engaging member having integral rearwardly extending nose pad portions.

2,472,732
RANGE FINDER MOUNTING FOR CAMERA LENS TURRETS
Ralph Stillwell, Baldwin, N. Y.
Application May 27, 1946, Serial No. 672,570
2 Claims. (Cl. 95—44)



1. In a movie camera having a rotative turret formed with several screw threaded openings

into one of which a lens having a rotative focusing ring is mounted, means for supporting a range finder from one of the threaded openings adjacent the threaded opening provided with the lens with the operating lug of the range finder engaging the focusing ring of the lens, comprising a mounting plate attached at one end to the range finder and having its other end overlying the desired threaded opening of the turret, an insert threaded into the desired threaded opening of the turret, said mounting plate and said



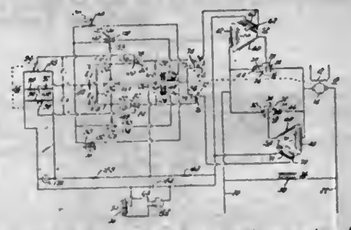
insert being formed with aligned threaded holes, and screws threaded into said threaded holes securing said mounting plate to said insert, said mounting plate being thinner than the material of said turret so that when said screws are tightened said mounting plate will be caused to frictionally abut the adjacent face of the material of the turret surrounding the desired threaded opening drawing forward on said insert securing said insert against rotative movement within the desired threaded opening.

2,472,733
KEY OPERATED TRANSMITTER
Carl W. Swan, Skokie, Ill., assignor to Teletype Corporation, Chicago, Ill., a corporation of Delaware
Application August 6, 1943, Serial No. 497,591
2 Claims. (Cl. 177—380)

1. In a signal transmitter, a plurality of keys, a bail under the control of each of said keys, a plurality of selector levers permutably controlled by said bails in accordance with predetermined signals, a blocking bar to hold said selector levers in their permuted positions, a bail lock forming a portion of said blocking bar, electrical contact means operated by said selector levers, a distributor for controlling the transmission of said predetermined signals in accordance with said electrical contact means, means responsive to the operation of any one of said bails for releasing said distributor for a cycle of operation, and means under the control of said blocking bar operating after said distributor has been released to disable said distributor releasing means until after said selected bail has been released by said bail lock.

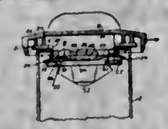
2,472,734
FUEL CONTROL SYSTEM
Michael J. Thomas, Birmingham, and Guy C. Fricke, Pleasantridge, Mich., assignors to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application June 27, 1946, Serial No. 679,774
11 Claims. (Cl. 123—119)

1. In a fuel supply system for an internal combustion engine having an intake manifold: a fuel pump for receiving fuel from a source and for delivering the fuel to said manifold; a passage from the outlet side of the pump for said fuel; a fuel nozzle connected with said passage; a by-pass from the outlet side to the inlet side of the pump; a valve for controlling the flow of fuel through said by-pass, a yieldable means for urging the valve toward the closed position; and means operative throughout the engine operating range for varying the effective force tending to close said valve in accordance with engine speed and charging pressure.



2,472,735
BAROMETRIC INSTRUMENT
Carl J. Ulrich, Minneapolis, Minn.
Application September 12, 1945, Serial No. 615,764
9 Claims. (Cl. 73—385)

2. A device of the class described having in combination, a U-shaped tube of resilient material having the spaced portions thereof extending substantially vertically, a heavy liquid in said tube, transparent tubes secured in the upper ends of said portions respectively and communi-

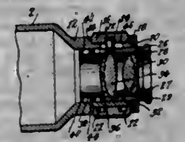


cating respectively therewith, a rigid member having a groove in which said first mentioned tube is disposed, a second rigid member having ribs thereon transversely alined with said groove and adapted to engage said tube, and means for relatively moving said members to move said ribs against said tube and cause the liquid in said tube to move upwardly therein.

2,472,736
MOTOR CONTROL
Herbert C. Waterman, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application April 21, 1945, Serial No. 589,527
10 Claims. (Cl. 318—506)

1. The combination with a direct current motor, of a pair of grid controlled gas tube rectifiers adapted to be connected to a source of alternating current, each of said tubes being connected in series with the motor and in parallel with respect to each other for supplying unidirectional current to the motor, phase shifting means adapted to be connected to the alternating current source, said phase shifting means connected to each of the rectifier tubes for changing the phase relationship of the grid voltage with respect to the anode voltage to fire one or the other of the gas tubes depending on the desired direction of rotation of the motor, and means including a controller for selecting a voltage which determines the direction of rotation of said motor and for causing the phase shifting means to fire only the gas tube corresponding to the selected direction of rotation of the motor, said last-named means also including a generator with an output proportional to motor speed and connected in opposition to the selected voltage for causing the other gas tube to fire to tend to rotate the motor in the opposite direction when the controller is displaced to a position to decelerate the motor.

2,472,737
LIQUID FUEL TANK CAP
Solomon Wise, Shaker Heights, Ohio
Application October 2, 1945, Serial No. 619,808
3 Claims. (Cl. 220—40)



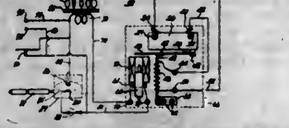
3. In a cap closure for the tubular filling stem of a liquid fuel tank; a cap body for covering the stem end, and having a central housing portion integral therewith and depending therefrom for centering in the open end of the tank stem; the lower end of the depending portion being open and tubular and provided with diametrically opposite downwardly open notches; a cover plate secured to and covering the said tubular open end and having cover portions covering the notches to thereby provide apertures; a post projecting integrally upwardly from the center of the cover plate; a sheet metal spring having an enlarged central portion and fingers extending oppositely radially therefrom; a perforation in the central portion of the spring loosely telescoped over and encircling the post; the central portion formed with a downwardly extending bulge resting upon the cover plate and the spring being free to rock bodily thereon; the fingers extending through and beyond the apertures and held thereby against rotation around the post, and engaging the bottoms of the apertures to keep the spring from becoming untelescoped from the post.

2,472,738
TERMINAL BLOCK
Christian B. Backer, Ottawa, Ontario, Canada
Application December 4, 1944, Serial No. 566,464
In Canada December 9, 1943
1 Claim. (Cl. 173—328)

In a plug-in type of electric range element having at least one tubular member, a terminal block comprising a substantially inclined porcelain block, a metal housing on the porcelain block, and means for clamping the ends of said tubular member to the housing comprising a U-shaped member having a body portion fixed to the housing and a pair of spaced arms having aligned openings therein to receive said ends, a bar positioned between said arms and engaging one side of said ends, and a screw having a head engaging said bar and a nut thereon engaging the substantially opposite side of said ends.

2,472,739
SEALED ADJUSTABLE EYEPIECE FOR OPTICAL INSTRUMENTS
Allister L. Baker, Jersey City, N. J., assignor to Keuffel & Esser Company, Hoboken, N. J., a corporation of New Jersey
Application October 26, 1945, Serial No. 624,853
3 Claims. (Cl. 88—32)

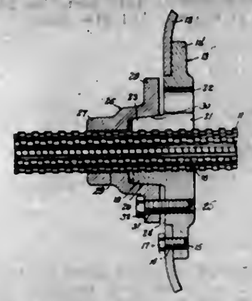
1. In an optical instrument having a reticle and an eyepiece, draw tube means having an outside cylindrical surface, means on the instrument adjacent said draw tube means having an inside cylindrical surface spaced from said outside cylindrical surface of said draw tube, said means forming a cylindrical channel between said outside cylindrical surface of said draw tube and said inside cylindrical surface of said instrument, an optical element of said eyepiece mounted in said draw tube means, means for moving said draw tube longitudinally to focus on said reticle,



the cylindrical channel being at least one half as long as the maximum movement of the draw tube required for focusing said eyepiece, a resilient elastic annular member in said channel having a substantially circular cross section of a diameter slightly greater than the radial dimension of said cylindrical channel for sealing said instrument and maintaining the seal by rolling in said cylindrical channel when said eyepiece is focused.

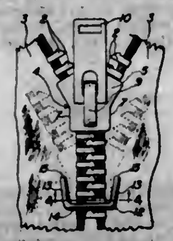
2,472,740
PIANO KEY ACTION
David Barnett, Wellesley, Mass.
Application December 10, 1947, Serial No. 790,825
5 Claims. (Cl. 84—237)

1. The combination of a pivotally mounted key lever operatively associated with a piano hammer action, a key, and a linkage pivotally connecting said key to said key lever to enable maintaining the upper face of said key parallel to a predetermined plane at all times.



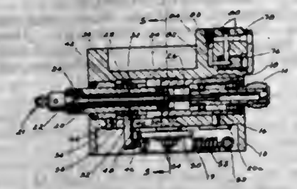
2,472,741
LIGHT CONTROL
Kenneth L. Berninger and Chauncey H. Lowrey, Dayton, Ohio, assignors to The Eldee Products Company, Dayton, Ohio, a corporation of Ohio
Application April 16, 1947, Serial No. 741,776
12 Claims. (Cl. 315—361)

1. In a control unit for controlling a lamp circuit embodying an electric lamp and a manually controlled switch connected to a current source, the combination comprising, a transformer having a primary winding across the manual switch, a secondary winding, a control circuit including a control switch and a heating coil shunting the primary winding, an electromagnetic winding and an impulse switch serially connected with the transformer secondary, a pivoted leaf responding to the energization of said electromagnetic winding for actuating the control switch, a bimetal latch exposed to the heating coil and operable to hold the pivoted leaf in control switch closed position, and means for actuating the impulse switch for energizing the magnet and the lamp circuit although the manually operated switch is open.



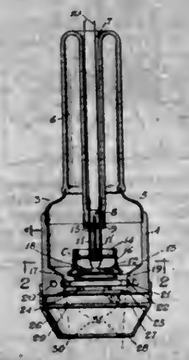
2,472,742
ADJUSTABLE AXLE AND WHEEL ASSEMBLY
Theophilus Brown, Moline, Ill., assignor to Deere & Company, Moline, Ill., a corporation of Illinois
Application February 27, 1948, Serial No. 11,596
5 Claims. (Cl. 301—128)

1. In a wheel and axle assembly of the type in which the axle is externally screw threaded and axial adjustment of the wheel on the axle is effected by relative rotation of the two, and wherein the axle has an axial external keyway utilized for locking the wheel in a selected position of axial adjustment, the improvement comprising: a hub for carrying the wheel and including an axial extension portion provided with an external coaxial taper; means including an axially directed opening through the hub and extension portion to receive the axle and provided with an internal screw thread to mate with the axle screw thread; means in the hub including a relieved portion providing for radial flexibility of the hub and extension portion; a radial flange on the hub at the base of the taper on the extension; a locking



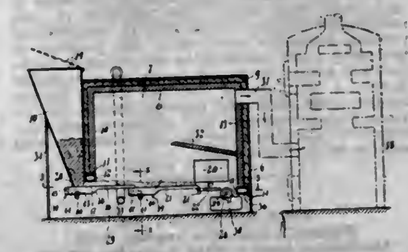
member including a central portion bored to receive the axle and having a counterbore that is internally tapered to receive the tapered hub extension, and further including a radial flange complementary to the hub flange; means including a key element within the bored portion of the locking member and engaging said member and the axle keyway for holding said member against rotation with respect to the axle; and means for securing the flanges together including a plurality of apertures in the locking member flange, a plurality of tapped bores in the hub flange, and a plurality of cap screws passing through said apertures and threaded into said tapped bores.

2,472,743
END STOP FOR SLIDE FASTENERS
Alfred E. Carlile, Great Neck, N. Y., and Alexander M. Brown, Spring Lake Heights, N. J., assignors to Talon, Inc., a corporation of Pennsylvania
Application September 23, 1944, Serial No. 555,440
3 Claims. (Cl. 24—205.11)



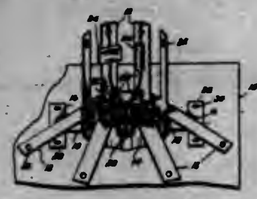
1. An end stop for slide fasteners of the class described, including a series of spaced interlocking fastener elements arranged along the opposed edges of a pair of stringer tapes and a slider mounted thereon for engaging and disengaging the same, consisting of a substantially U-shaped member having a pair of leg portions and a central connecting portion, fabric penetrating attaching means carried by each of said leg portions, said leg portions adapted to be positioned to either side of the fastener elements with attaching means penetrating the stringer tapes rearwardly of said fastener elements and with the open end of said U-shaped member disposed toward the slider with the central connecting portion arranged substantially parallel to the fastener elements whereby the slider is adapted to pass between said leg portions and be seated in the open end of said U-shaped member when it is moved to that end of the fastener at which the stop is positioned.

2,472,744
MACHINE TOOL
Gordon Forbes Esson, Detroit, Mich., assignor to Ex-Cell-O Corporation, Detroit, Mich., a corporation of Michigan
Application March 29, 1944, Serial No. 528,647
3 Claims. (Cl. 77—32)



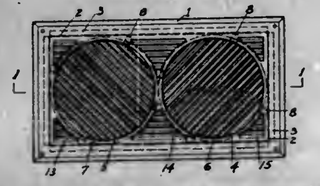
1. A machine tool having, in combination, a rotatable and axially shiftable tool supporting spindle, spring means yieldably urging said spindle toward a retracted position, power actuated means for advancing said spindle in a feeding movement and for releasing the spindle for return by said spring means, said power actuated means including a cam having a gradually sloping surface for effecting the feed of the spindle, said surface terminating in an abrupt drop-off to permit rapid return of the spindle by said spring means, a follower operatively associated with said spindle for shifting movement therewith and engageable by said cam for shifting said spindle in opposition to said spring means, a shaft rotatably supporting said cam, a rack member supported for reciprocation transversely of said shaft, a pinion rigid with said shaft and coacting with said rack, cylinder and piston means reversibly operable in a forward stroke at an adjustable slow speed and in a return stroke at a relatively rapid speed for reciprocating said rack to rotate said shaft alternately in opposite directions, means providing a one-way driving connection between said shaft and said cam to effect positive rotation of said cam and said shaft in one direction in synchronism with said forward stroke of said cylinder and said piston means, and to permit reverse rotation of the shaft during the return stroke of said cylinder and piston means to normal rest position while said cam remains stationary, and control means operable as said cam drop-off moves past said follower and in response to the return of said spindle to effect reversal of said cylinder and said piston means at the end of said forward stroke.

2,472,745
APPARATUS FOR PRODUCING A CONVERGENT X-RAY BEAM
Lude K. Frevel, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
Application September 19, 1946, Serial No. 697,933
5 Claims. (Cl. 250—142)



4. A tube for producing a hollow conical beam of X-rays comprising a cathode, an annular target, and an X-ray opaque partition spaced axially from the target in the direction remote from the cathode and closing the tube, such partition having therein an annular X-ray transparent window co-axial with the target and of diameter less than the latter.

2,472,746
HEATING UNIT, INCLUDING RECIPROCATING GRATES
Leslie F. Gough, Toronto, Ontario, Canada
Application March 17, 1947, Serial No. 735,096
3 Claims. (Cl. 110—38)

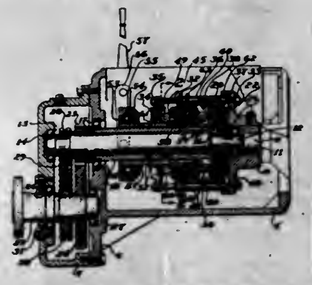


1. In a heating unit, a grate structure comprising a grate bar having depending flanges terminating in flat edge faces constituting bearing surfaces, a rock shaft supported to extend transversely of said grate bar and seating said flat edge faces to provide a support for the grate bar, an arm rigid with said rock shaft and projecting upwardly between said flanges, and means within the confines of said flanges forming a mechanical connection for reciprocating said grate bar when the rock shaft is oscillated, and means for oscillating the rock shaft.

2,472,747
BASE SHIELD
Walter R. Jones, Emporium, Pa., assignor to Sylvania Electric Products, Inc., a corporation of Massachusetts
Application December 17, 1946, Serial No. 716,785
8 Claims. (Cl. 174—35)

1. The combination of a generally circular socket having multiple terminals with a grounding and shielding cage surrounding said socket and having approximately as many strips as the socket has terminals, said strips being wide in comparison to their spacing and being approximately as long as the socket diameter.

2,472,748
AIR REGISTER
Otto A. Labus, La Crosse, Wis., assignor to The Trane Company, La Crosse, Wis.
Application March 8, 1946, Serial No. 652,862
2 Claims. (Cl. 98—40)

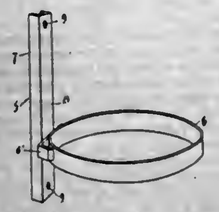


1. An air register comprising a front plate, a rectangular flange fastened to said front plate, a plurality of substantially circular openings in said front plate within the boundary of said rectangular flange, a plurality of longitudinal parallel secondary openings in the portions of the front plate surrounding the circular openings and within the boundary of said rectangular flange, a plurality of circular grilles having blades tilted from the normal, means on the front plate supporting said grilles in said substantially circular openings for rotation with respect to the front plate.

2,472,749
WELL REAMING TOOL
William F. Lake, Los Angeles, Calif.
Application April 10, 1945, Serial No. 587,509
8 Claims. (Cl. 255—73)

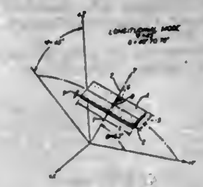
1. A well reaming tool including an elongate cylindrical body, longitudinally spaced flanges fixed on the exterior of the body each having circumferentially spaced opposed shoulders extending longitudinally of said body, there being circumferentially faced lips at the shoulders spaced from the exterior of the body forming grooves extending lengthwise of the body, the exterior of the body between the flanges forming a seat, a reaming element carried on said seat and between said flanges, and shoes at the flanges engaging the reaming element retaining it on the seat and having oppositely projecting lips engaged in said grooves, and like removable annular retainers around the body at the flanges holding the shoes against axial movement.

2,472,750
MULTIPLE CLUTCH
Francis L. Lavash, Dedham, Mass., assignor to Kinney Manufacturing Company, Jamaica Plain, Mass., a corporation of Massachusetts
Application December 21, 1945, Serial No. 636,202
8 Claims. (Cl. 192—48)



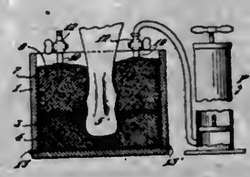
1. A clutch for a unit having a pair of concentric driven shafts, a flanged driving member axially alined with said shafts and constituting a backing element, a clamping plate slidable relative to said backing element, a first pressure plate supported in a fixed relation to said backing plate, a second pressure plate slidable relative to said clamping plate, a clutch disc on each of said shafts separated from each other by said clamping plate, a mount movable with said clamping plate and located between said pressure plates, a shifter slidable with reference to said shafts and having two operative positions and an intermediate inoperative position, and first and second sets of thrust means carried by said mount, said first set of thrust means being engaged and wedged into contact with said first pressure plate by said shifter as it is moved into one operative position thereby to cause said thrust plate to clamp one of said clutch discs against said backing plate and the other set of thrust means being engaged and wedged into contact with said second pressure plate by said shifter as it is moved into the other operative position thereby to clamp said other clutch disc between it and said clamping plate.

2,472,751
GLOVE INCORPORATING A CHANGE PURSE
Harriette Le Clair, Brockton, Mass.
Application March 15, 1946, Serial No. 654,580
3 Claims. (Cl. 2—160)



1. A palm purse for a glove, mitten or the like comprising in combination the said glove; sheet material lining the inner side of the palm thereof; and stitches securing the said lining to material of the palm of the glove, so that interiorly the glove has a pocket whose opening is on that side of the pocket which is toward the thumb edge of the palm; the said pocket extending farther toward the fingers of the glove than does the said interior opening; there being an exterior opening in the surface material of the glove at the thumb edge of the palm, the way between said exterior and interior openings being aligned in the direction of the wrist; whereby a purse is constituted, whose contents the glove tends to retain while the glove is being worn, except when the hand that is wearing this glove is first pointed upward for gravity to shift the contents toward the wrist, and afterward is pointed downward, and has its thumb edge downward.

2,472,752
MOUNTING BRACKET FOR TRANSFORMERS
Edward J. Mackereth, Mimico, Ontario, Canada
Application July 21, 1944, Serial No. 546,046
1 Claim. (Cl. 248—221)



A mounting of the class described comprising a bracket formed of a channel member and a substantially circular ring, the channel member being vertically arranged with its back portion welded to the ring so that the flange portions thereof are adapted to bear against a side of a pole in the securing of the channel member directly to the pole, the ring being extended at right angles to the channel member and braced at its juncture therewith by means of lateral arms welded to the channel member and to the ring to form therewith a sturdy structure suitable for supporting a rural transformer sealed in a case having bushings on its top end displaced from the vertical axis thereof and having a shoulder about its girth whereby it is seated loosely in said ring for rotary adjustment in locating the bushings to suit prevailing line conditions.

2,472,753
PIEZOELECTRIC CRYSTAL APPARATUS
Warren P. Mason, West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 16, 1946, Serial No. 690,872
11 Claims. (Cl. 171—327)

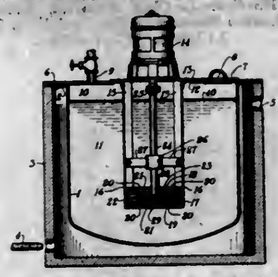
1. An elongated ethylene diamine tartrate piezoelectric crystal plate having its thickness or thinnest axis dimension disposed in a plane containing the Y axis and inclined at an angle of substantially 63 degrees with respect to the +Y axis as measured from the said +Y axis toward the plane of the +X and +Z axes, said plane containing said Y axis being inclined at an angle of substantially 45 degrees with respect to said +Z axis as measured from said +Z axis toward said +X axis in said plane of said +X and +Z axes, the lengthwise or longest axis dimension of said crystal plate lying substantially in said plane containing said Y axis.

2,472,754
METHOD FOR MAKING AND MAINTAINING AN IMPRESSION OF THE SHAPE OF AN OBJECT
Warren J. Mead, Belmont, Mass.
Application October 20, 1945, Serial No. 623,517
4 Claims. (Cl. 18—55)

1. The method of making and maintaining an impression of the shape of an object by means of a plurality of deformable, impression receiving units, each unit comprising a container wall of flexible, extensible and impervious sheet material filled with a deformable mass of mixed granular material and fluid, which method comprises packing a number of said deformable units about the object so that the assembled units will envelop and conform to that surface of the object which is to be duplicated, solidifying the granular mass in each unit by reducing the pressure of the fluid therein, and removing the object from the solidified units.

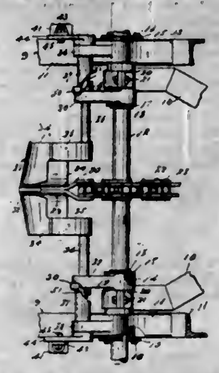
2,472,755
DI-(2-CHLORO-CYCLOHEXYL)-SULFIDE AS INSECTICIDE
Harold W. Moll, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application July 22, 1944, Serial No. 546,203
4 Claims. (Cl. 167—30)

1. A moth-proofing composition including a solution of di-(2-chloro-cyclohexyl)-sulfide in a volatile organic solvent.



2,472,756
PARTITION STRUCTURE
Nels Nelson, Chicago, Ill., assignor to United States Gypsum Company, Chicago, Ill., a corporation of Illinois
Application November 23, 1943, Serial No. 511,451
3 Claims. (Cl. 72—46)

1. A partition construction of the non-load bearing type characterized by its relative thinness, rigidity and high resistance to failure by impact, comprising a series of relatively tall, thin and flexible plaster receiving bases, one of the ends of the said bases engaged between the converging projecting edges of a runner attached to a ceiling, one of the said converging projecting edges being longer than the other, the other end of the said bases engaged by a groove in floor runner, the said floor runner being substantially in parallel coplanar relationship with the ceiling runner, a set plastic composition disposed about and upon the surfaces, and including the ends of said bases in a thickness of substantially not less than one and one-half inches to provide a strong rigid substantially monolithic appearing partition wall construction.

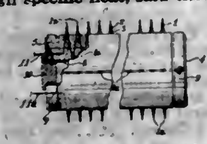


2,472,757
MECHANICAL METHOD FOR GRAIN REFINING MAGNESIUM ALLOYS
John S. Peake, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
Application February 16, 1945, Serial No. 578,254
6 Claims. (Cl. 75—67)

6. A method of grain refining aluminum magnesium casting alloys including mechanically agitating a body of the molten alloy while at a temperature of approximately 1400° F. just prior

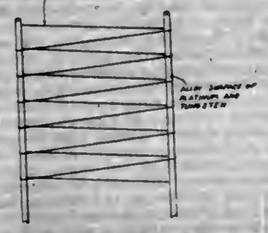
to casting, and without the introduction thereinto of any carbonaceous material.

2,472,758
TRENCH EXCAVATOR SHOVEL AND SCRAPER
Daniel F. Przybylski, Winona, Minn.
Application November 23, 1945, Serial No. 630,311
6 Claims. (Cl. 37—83)



1. In an excavator, the combination with a drive wheel and a conveyor arranged to run over said wheel, of a shovel having an upstanding post attached to the conveyor, a pair of scrapers for the shovel spaced apart to leave a passageway therebetween for the post, said scrapers being pivoted for independent movement with the shovel when held by an obstruction thereon, means independent of the pivotal movement of each scraper for moving the same outwardly from the post as said scraper is moved with the shovel, and yielding means under strain to hold each scraper in normal position.

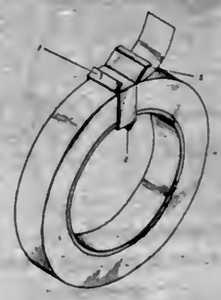
2,472,759
THERMOPILE FOR MEASURING AIR TEMPERATURES
August Raspet, Locust Valley, N. Y.
Application May 3, 1945, Serial No. 591,721
1 Claim. (Cl. 136—4)



A free-air thermometer adapted to measure the temperature of an air stream, comprising, in combination, a cylindrical metal chamber adapted to hold a refrigerant, arcuate sections of a

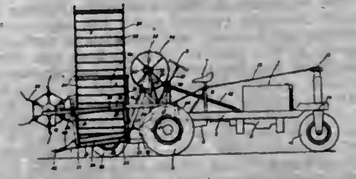
metal of high specific heat mounted on the surface of said chamber so as to substantially surround the chamber, corresponding arcuate sections of an insulating material mounted on the outer surface of said arcuate sections of metal, a plurality of multi-junction thermopiles corresponding in number to the arcuate sections of metal of high specific heat, said thermopiles be-

ing positioned longitudinally of said refrigerating chamber and disposed between the arcuate sections with alternate junctions closely adjacent to but insulated from the said arcuate sections of metal and the other junctions extending outside said insulating material so that they will be exposed to an air stream the temperature of which is to be measured.



2,472,760
ELECTRODE FOR ELECTRON DISCHARGE DEVICES
Harry L. Ratchford, Williamsport, Pa., assignor to Sylvania Electric Products Inc., Emporium, Pa., a corporation of Massachusetts
Application December 30, 1943, Serial No. 516,251
2 Claims. (Cl. 250—27.5)

1. A wire grid electrode for use within an electron tube and subjected to electron bombardment during the normal operation of the tube, said electrode comprising an alloy of approximately 96% platinum and 4% tungsten to increase the stiffness of the electrode while preserving the low electron-emissive properties of platinum.

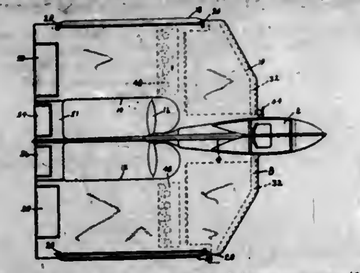


2,472,761
TAPE DISPENSER
Arthur B. Reed, Shreveport, La.
Application September 3, 1946, Serial No. 694,663
1 Claim. (Cl. 164—84.5)

In a tape dispenser; a frame, and a thumb tab, a finger tab, a cutting table support, all carried by said frame, a cutting table carried by said cutting table support, said frame consisting of a sleeve of rectangular cross section, the sides of said frame being in relative spaced parallelism, and the top and bottom of said frame being in relative spaced parallelism, said thumb tab supported by and extending at a forward and upward inclination from the back edge of said top, said cutting table support extending at a forward and upward inclination from the front edge of said top, said cutting table extending in a forward and horizontal direction from the front edge of said cutting table support, said finger tab

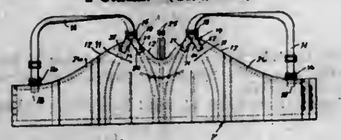
supported by and extending at a downward and backward inclination from the front edge of said bottom, and all of the foregoing parts being composed of a single piece of sheet material.

2,472,762
HARVESTER
Harry C. Sage, Stockton, Calif., assignor to Thomson-Sage, Inc., Stockton, Calif., a corporation of California
Application April 11, 1944, Serial No. 530,459
8 Claims. (Cl. 56—23)



4. In combination, a tractor, a header including a sickle bar and a side delivery draper, means mounting the header on the tractor for vertical adjustment relative to the tractor, a laterally extending upwardly inclined elevator conveyor pivotally connected to the header at a point adjacent the side delivery draper and arranged to receive material from the draper, a ground engaging wheel disposed laterally of the tractor, and means supporting the conveyor on the wheel at a point intermediate the ends of such conveyor, and means hingedly connecting said supporting means with the tractor frame and header, respectively.

2,472,763
AIRPLANE
Jack F. Rodeck, Odessa, Wash.
Application August 5, 1946, Serial No. 686,434
7 Claims. (Cl. 244—13)

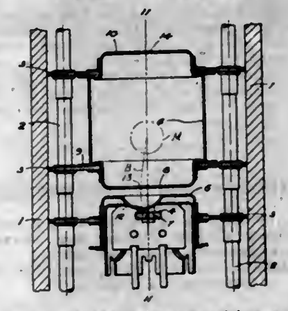


1. In an airplane the combination with a fuselage having spaced upper and lower rearwardly extending vertical fins, and wings extending substantially the full length of the fuselage and centrally recessed to form with the spaced fins an open center, of propulsion means located forwardly in the open center, an open frame connecting the aft end of the wings and fins and

aligned to permit the passage of the propulsion blast therethrough, and rudder flaps on the

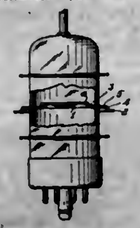
frame independently controlled to maneuver the airplane.

2,472,764
BRASSIÈRE
Louis Shulman, New York, N. Y.
Application June 21, 1947, Serial No. 756,161
1 Claim. (Cl. 2—42)



The combination with a brassière having two breast receiving pockets and a top edge portion which is low between said pockets and curves upwardly to the tops of said pockets and downwardly to the end portions of the brassière and shoulder straps connected at one of their ends with the end portions of said brassière and having hooks at their other ends, of a cross strap anchorage on the top of each of said pockets for receiving said hooks, each cross strap anchorage comprising a pair of straps crossing at the top of each pocket for one of said hooks to hook beneath the crossing sections of said pair of straps, and said pair of straps having portions continuing from said crossing sections and extending obliquely downward upon the front and back faces of said pockets and attached at their bottom ends to the front and back faces of the material of said pockets.

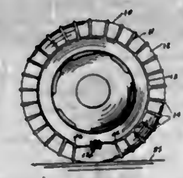
2,472,765
STRAPLESS BRASSIÈRE
Louis Shulman, New York, N. Y.
Application October 15, 1947, Serial No. 779,964
1 Claim. (Cl. 2—42)



In a strapless brassière, a sufficient length of elastic tape mounted across the top portion of the brassière in order to contract said top portion sufficiently when the brassière is in a free condition to give the brassière a U-shape in which the end portions of the brassière extend upwards of the central portion, and means for connecting said end portions when said brassière is stretched straight about a wearer's body and worn in order that the central portion of the brassière is forced upwards for lifting the breasts.

2,472,766
CATHODE-RAY TUBE
Leonard Albert Woodbridge, Woodford, England, assignor to A. C. Cossor Limited, London, England, a British company
Application December 21, 1945, Serial No. 636,454
In Great Britain December 28, 1944
5 Claims. (Cl. 250—162)

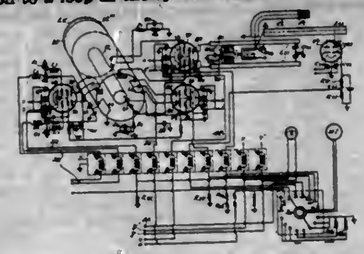
1. A cathode ray tube comprising an evacuated envelope having a neck-portion and a bulbous portion symmetrical about a common axis with a fluorescent screen on the end of the said bulbous portion, an electron gun arranged within said neck portion symmetrically about said axis but having its grid and first anode apertured eccentrically with respect thereto in the same radial direction so that an emergent electron and ion beam is skewed with respect to said axis, and deflecting means acting upon said emergent electron and ion beam to restore the electron portion of the beam to coincidence with the said axis but leaving the ionic portion of the emergent beam relatively undeflected so that the said ionic portion strikes a part of the cathode ray tube other than the said fluorescent screen.



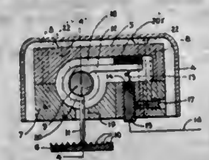
2,472,767
ELECTRON TUBE GRID STRUCTURE
Joseph B. Zetka, Clifton, N. J., assignor to Sylvania Electric Products, Inc., a corporation of Massachusetts
Application March 19, 1947, Serial No. 735,723
3 Claims. (Cl. 250—27.5)

1. A mesh grid for an electron tube comprising a mesh of relatively hard wires and an annular

grid frame of softer metal, the wires having their ends embedded adjacent the inner edge of the annular grid frame.



2,472,768
MEANS FOR APPLYING AND SECURING ANTISKID CHAINS
Joseph D. Carroll, McKeesport, Pa.
Application June 28, 1946, Serial No. 680,031
3 Claims. (Cl. 152—241)

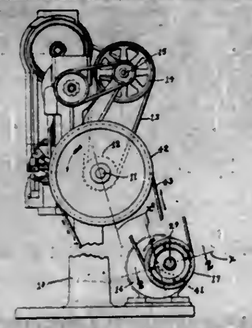


3. A connector for yieldably drawing the opposed ends of a side chain of a vehicle anti-skid chain, said connector comprising closed dashpot cylinder means, plunger means having rod means extending through outer end portions of the cylinder means and having means for connection to at least one of the opposed ends of the side chain, spring means normally pressing the plunger means away from the rod means whereby to pull the end portions of the side chain toward said cylinder means, additional connecting means extending past and operatively connected to said cylinder means for further connection to end portions of said side chain, and normally closed air-escape valve means communicating interiorly with the cylinder means, the valve means when closed serving to prevent the plunger means from leaving innermost positions within the cylinder means whereby the connector is maintained in contracted condition, the valve means when closed also preventing the plunger means from leaving outermost positions within said cylinder means, whereby said connector is maintained in expanded condition with said spring means in compressed condition, until said valve means be opened to exhaust air accumulated in the cylinder means behind said plunger means and permit said spring means to contract the connector and draw the end portions of the side chain toward each other.

2,472,769
SIGNALING SYSTEM
Halian Eugene Goldstine, Fort Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application March 7, 1945, Serial No. 581,412
6 Claims. (Cl. 332—28)

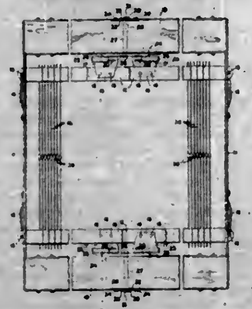
1. In a signalling system, a resonant line comprising two parallel conductors conductively connected together at one end, said conductors having portions of close spacing and portions of wide spacing, apparatus for relatively adjusting the lengths of the conductors for tuning purposes, a tube generator having its input and output electrodes regeneratively coupled by loops in the space between said conductors, a reactance tube having its output electrodes coupled to a loop in the space between said conductors and having its input electrodes coupled to a loop in the space between said conductors, a phase shifting network in one of said last two couplings, an output tube having input electrodes coupled for excitation to a loop in the space between said conductors, and a load circuit coupled to said output tube.

2,472,770
RESISTANCE APPARATUS FOR CONVERTING MECHANICAL MOVEMENT INTO ELECTRICAL PULSES
Leo L. Helterline, Jr., Danvers, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
Application November 20, 1945, Serial No. 629,854
5 Claims. (Cl. 179—100.41)



1. In an apparatus for producing electrical impulses from a sound record having a groove therein, a modulator member comprising a casing an operating shaft supported in the casing for slight rotative oscillating movement, a sound record having a sound groove therein, a pointed needle engaging the sound groove and acting to move the operating shaft in accordance with the sound record in said groove, an arm secured to and extending outward from the shaft, a resilient wire secured to the outer end of said arm, a semi-conducting member having a face thereof disposed in engagement with said wire said semi-conducting member having the characteristic of varying the impedance of its contact with said wire in accordance with varying pressure applied thereto, and electrical connections from said wire and semi-conducting member for connection in a circuit.

2,472,771
REDUCTION DRIVE MECHANISM
Otto J. Huelster, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a corporation of Connecticut
Application December 12, 1945, Serial No. 634,458
9 Claims. (Cl. 74—242.9)



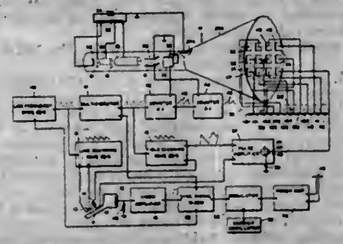
1. A reduction drive for machines of the class described, said drive comprising a unit adapted for mounting on the shaft of an electric motor, the unit comprising a cup-shaped pulley, an internal gear in said pulley, a frame arranged in the pulley and having a shaft portion forming an axis of rotation of the pulley about said frame, a bearing portion on the frame offset with respect to said shaft, a bushing in said bearing portion,

means for coupling a motor shaft with said bushing, the bushing including a protruding stud, means on said stud and on said bushing engaging

the frame to retain the bushing against displacement from the frame, and a pinion secured to said stud and meshing with said internal gear.

2,472,772
LOOM HARNESS
John Jacob Kaufmann, Elkins Park, Pa., assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application September 27, 1947, Serial No. 776,431
6 Claims. (Cl. 139—92)

1. In loom harness including a heddle frame having top and bottom rails and a pair of heddle supporting rods at the top and at the bottom adjacent said rails, said heddle supporting rods comprising thin flat metallic strips removably mounted in said frame, the means for supporting said rods intermediate the ends thereof comprising, at each location, a bracket mounted in the rail, a member secured to each rod, and said members being spaced longitudinally of said rods, said members detachably engaging said bracket, and means for normally maintaining said members in locked engagement with the bracket.

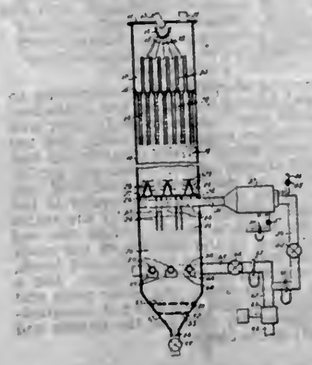


2,472,773
CIGAR AND CIGARETTE LIGHTER
Heard Lee, Houston, Tex., assignor of one-half to T. S. McFarland, Cook County, Ill.
Application February 19, 1946, Serial No. 648,616
1 Claim. (Cl. 67—7.1)

A cigar and cigarette lighter comprising, a hollow cylindrical liquid fuel container having a wick therein with an exposed end, a cylindrical shaped housing fitted over one end of the container and enclosing the exposed end of the wick, said housing having an elongated slot, a side opening opposite the slot and an axial bearing, a shaft rotatable in said bearing, a beveled friction wheel fixed to the inner end of the shaft and a disc fixed to the outer end of the shaft whereby the shaft may be turned, a friction stone in the housing positioned adjacent the exposed end of the wick and in contact with the friction wheel, an extended shank on one end of which the friction stone is fixed, a screw extended through said slot whose inner end is threaded into said shank and whose outer end is provided with an enlarged head, said

housing having an external countersunk portion about the slot in which said head is located, said screw being releasable to permit adjustment of the screw, shank and friction stone with relation to the friction wheel and said screw and enlarged head forming clamp means for clamping the shank and friction stone at a selected place of adjustment, the end of the container, enclosed by said housing being beveled opposite said opening thus providing space within the housing in which the friction wheel operates, said container having a filling inlet duct leading inwardly from said beveled face for filling purposes, a removable plug for closing said duct and a shutter for closing said opening.

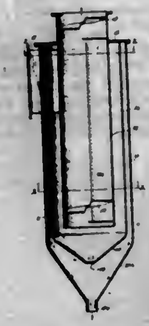
2,472,774
IRREGULAR INTERLACE SCANNING SYSTEM
Louis F. Mayle, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application October 17, 1945, Serial No. 622,752
6 Claims. (Cl. 178—7.7)



5. A scanning circuit for determining the order of interlace of successive scanning fields of a

television tube comprising first electron deflecting means for defining the horizontal component of a scanning trace, second electron deflecting means including a source of waves for defining the vertical component of said scanning trace, pulse generating means for generating pulses equal in duration to that of one of said waves and of irregular amplitude to provide irregular order of interlace comprising a cathode ray tube for generating a cathode beam, a plurality of electrodes in said tube arranged to be scanned successively by said cathode beam, and deflecting means connected to said source of waves for deflecting said beam into impingement with one of said electrodes after another at the same periodicity as said waves, potential divider means including sections connected between different ones of said electrodes for providing different potentials of irregular amplitude incident to impact of electrons on said electrodes, and means for superimposing said potentials on said waves.

2,472,775
METHOD OF TREATING POTATOES
Joseph F. P. Newhall, St. Petersburg, Fla., assignor to S. C. Johnson & Son, Inc., Racine, Wis.
No Drawing. Application September 27, 1946, Serial No. 699,639
1 Claim. (Cl. 99—168)

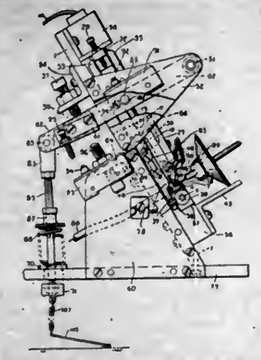


A method of treating a potato to inhibit shrinkage and sprouting thereof during storage comprising adding methyl ester of alpha naphthaleneacetic acid to aqueous wax emulsion, agitating the wax emulsion sufficiently to form a foam, and applying the foam directly to said potato, forming a water-insoluble wax coating on the surface of said potato, said coating retaining said ester in direct contact with said potato while inhibiting the vaporization thereof.

2,472,776
METHOD OF HEAT-TREATING PARTICLE-FORM SOLID ADSORBENTS
John W. Payne, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application March 4, 1947, Serial No. 732,304
16 Claims. (Cl. 252—410)

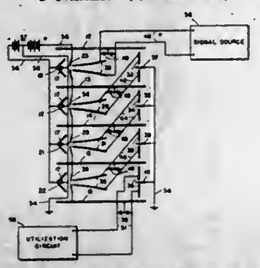
1. A method for heat treating particle form gel type solid adsorbent materials at controlled elevated temperatures without substantial cracking of the solid particles which comprises the steps: heating said solid material by indirect heat transfer to a temperature sufficiently high to insure substantially complete moisture removal and of the order of about 500° F. to 700° F. at a rate of about 75° F. to 150° F. per hour, further heating said solid material to a predetermined heat treating temperature within the range 1000° F. to 1600° F. at a substantially higher rate, maintaining said solid material near said predetermined heat treating temperature while subjecting it to contact with a steam containing gas for a period of about 2 to 20 hours and cooling said heat treated solid material by direct contact with a suitable cooling gas, which is substantially chemically inactive with relation to the solid material.

2,472,777
TRIPLE TUBE CYCLONE SEPARATOR
David H. Putney, Kansas City, Mo., assignor to Stratford Development Corporation, Kansas City, Mo., a corporation of Delaware
Application February 26, 1947, Serial No. 731,504
2 Claims. (Cl. 183—83)



1. A separator for removing entrained solid particles from gaseous materials comprising three vertical concentric vessels, the inner vessel open-ended at top and bottom, the top opening constituting a gas discharge outlet, the two outer vessels closed at the top and tapered at the bottom to form restricted bottom openings in the respective vessels, said openings in spaced relation below the bottom opening of the inner vessel, an inlet connected tangentially into the upper portion of the intermediate vessel for introducing gases and entrained solids to the space between the inner and intermediate vessels, an outlet for the removal of solids at the bottom of the outer vessel, and slotted passageways in the walls of the inner and intermediate vessels for removing solids from the gaseous materials passing respectively therethrough.

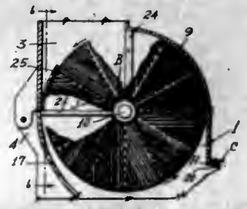
2,472,778
COIL CLAMPING METHOD AND APPARATUS
Gerald S. Quinn, Salem, Mass., and James E. McLoughlin, New Haven, Conn., assignors to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
Application May 22, 1948, Serial No. 28,574
10 Claims. (Cl. 219—3)



1. The method of closing a metal hook about a wire member which comprises: sequentially po-

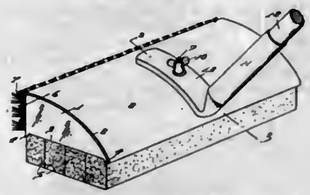
sitioning the wire member in the hook, bringing a

heating means into engagement with the hook, heating the hook, and deforming the heated hook.



2,472,779
CATHODE-RAY TUBE AMPLIFIER
Paul J. Selgin, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application February 17, 1947, Serial No. 729,022
3 Claims. (Cl. 315—13)

1. A cathode ray tube comprising, an evacuated envelope, means for producing a plurality of electron beams, a pair of deflecting plates and a pair of target electrodes for each of said beams, a plurality of pairs of resistors mounted in said envelope, there being one pair of said resistors for each of said beams, and conductors coupling respective pairs of said resistors to the target electrodes for one of said beams and to the deflecting electrodes for another one of said beams.



2,472,780
CEREAL GRAIN CRACKING MACHINE
John W. Thomas, Wichita, Kans., assignor to Thomas, Stone & French, Inc., Wichita, Kans.
Application August 27, 1945, Serial No. 612,771
2 Claims. (Cl. 241—245)

1. In a machine of the class described for cracking grain, a casing comprising a hood hingedly connected to the casing and a hopper positioned on the hood, and a hollow portion to carry the casing, said hopper to receive grain and discharge the same into the casing and a bottom for the hollow portion, said bottom slanting downwardly and outwardly from the hollow portion to function as a discharge for the grain from the casing, a disc rotor having a smooth periphery and grooved sides, said disc rotor having a shaft and being journalled in the casing, elongated cutting blades adjustably carried by the casing and extending outward in the same direction from the turning

axis of the rotor and being on a horizontal plane therewith and the cutting edges of the blades extending in and toward their respective grooved sides of the rotor, and bars vertically secured to the hood side walls inwardly thereof, said bars extending from the shaft to the casing thereabove to close the space between the walls and sides of the rotor to restrict the flow of grain to the approaching movement of the rotor and to avoid continuous rotation of the grain with the rotor while cracking the grain.

2,472,781
SCRUBBING AND MOPPING DEVICE
Thomas S. Vosbikian and Peter S. Vosbikian, Melrose, Pa.
Application August 22, 1947, Serial No. 770,026
1 Claim. (Cl. 15—115)

A scrubbing and mopping device, comprising an elongated block having its bottom and a side face at substantially right angles to each other and intended to receive cleaning material, the top face of the block being convex transversely and straight longitudinally of the block and inclining rearwardly and downwardly from said side face, a cover plate conforming generally to the contour of and covering substantially the entire top face of the block, a handle having one end shaped to conform to the contour of the cover plate, a single bolt passing through said block, cover plate and said end of the handle, and a nut for said bolt to clamp the cover plate and handle to said block, said bolt and nut constituting the sole means for securing the handle end and cover plate to the block.

DESIGNS

JUNE 7, 1949

154,013
DESIGN FOR A BRASSIÈRE
Pierre Amyot, Quebec, Quebec, Canada
Application July 5, 1947, Serial No. 140,131
Term of patent 14 years
(Cl. D20—4)

The ornamental design for a brassière, as shown and described.

154,014
DESIGN FOR A WRIST WATCH BRACELET
Eric G. O. Anderson, Cranston, R. I., assignor to Everfine Jewelry Manufacturing Company, Providence, R. I., a corporation of Rhode Island
Application December 20, 1946, Serial No. 135,653
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a wrist watch bracelet, as shown and described.

154,015
DESIGN FOR A TOP SHELL FOR AN EXPANSIBLE BRACELET OR SIMILAR ARTICLE
Eric G. O. Anderson, Cranston, R. I., assignor to Everfine Jewelry Manufacturing Company, Providence, R. I., a corporation of Rhode Island
Application July 28, 1947, Serial No. 140,557
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a top shell for an expansible bracelet or similar article, as shown.

154,016
DESIGN FOR A FINGER RING OR THE LIKE
Nicholas Barbieri, Providence, R. I., assignor to Uncas Manufacturing Company, a corporation of Rhode Island
Application September 29, 1947, Serial No. 141,631
Term of patent 14 years
(Cl. D45—10)

The ornamental design for a finger ring or the like, substantially as shown.

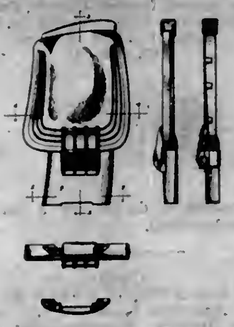
154,017
DESIGN FOR A FINGER RING OR THE LIKE
Nicholas Barbieri, Providence, R. I., assignor to Uncas Manufacturing Company, a corporation of Rhode Island
Application September 29, 1947, Serial No. 141,632
Term of patent 14 years
(Cl. D45—10)

The ornamental design for a finger ring or the like, substantially as shown.

154,018
DESIGN FOR A FINGER RING OR THE LIKE
Nicholas Barbieri, Providence, R. I., assignor to Uncas Manufacturing Company, a corporation of Rhode Island
Application September 29, 1947, Serial No. 141,638
Term of patent 14 years
(Cl. D45—10)

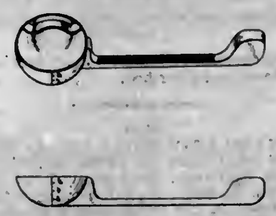
The ornamental design for a finger ring or the like, substantially as shown.

154,019
DESIGN FOR A RING OR SIMILAR ARTICLE
Nicholas Barbieri, Providence, R. I., assignor to Uncas Manufacturing Company, a corporation of Rhode Island
Application February 16, 1948, Serial No. 144,516
Term of patent 14 years
(Cl. D45—10)



The ornamental design for a ring or similar article, substantially as shown and described.

154,020
DESIGN FOR A JEWELRY CHAIN
Paul Bardach, Providence, R. I.
Application February 24, 1948, Serial No. 1,051
Term of patent 3½ years
(Cl. D45—16)



The ornamental design for a jewelry chain, substantially as shown.

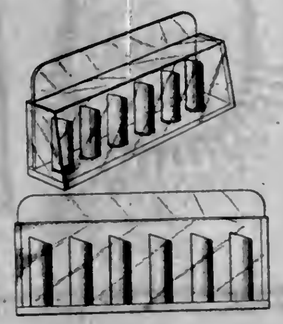
154,021
DESIGN FOR A CHAIR END STANDARD
Willard H. Bond, Jr., Grand Rapids, Mich., assignor to American Seating Company, Grand Rapids, Mich., a corporation of New Jersey
Application January 22, 1948, Serial No. 143,983
Term of patent 14 years
(Cl. D15—8)

The ornamental design for a chair end standard, substantially as shown.

154,022
DESIGN FOR A MEASURING SPOON
Carl E. Bretney, Toledo, Ohio
Application March 26, 1947, Serial No. 137,900
Term of patent 3½ years
(Cl. D44—29)

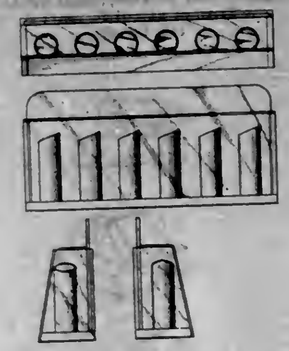
The ornamental design for a measuring spoon, as shown.

154,023
DESIGN FOR A SOFA
Anthony J. Buckner, Jackson Heights, N. Y., assignor to Grosfeld House, Inc., New York, N. Y.
Application December 23, 1947, Serial No. 143,294
Term of patent 7 years
(Cl. D15—11)



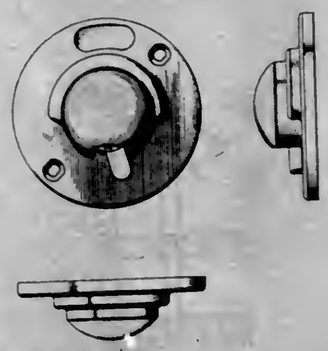
The ornamental design for a sofa, substantially as shown and described.

154,024
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
Edward J. Conroy, Meriden, Conn., assignor to The International Silver Company, Meriden, Conn., a corporation of Connecticut
Application April 16, 1947, Serial No. 138,437
Term of patent 14 years
(Cl. D54—12)



The ornamental design for a spoon or other article of flatware, substantially as shown and described.

154,025
DESIGN FOR A COMBINED DISPLAY CASE AND LIPSTICK EXHIBIT
Irving Willard Crull, Geneva, Ill., assignor to Campana Sales Company, Batavia, Ill., a corporation of Delaware
Application November 13, 1946, Serial No. 134,760
Term of patent 14 years
(Cl. D80—9)



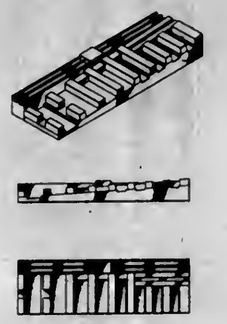
154,025—Continued

The ornamental design for a combined display case and lipstick exhibit, substantially as shown.

154,026
DESIGN FOR A BOX COVER SWITCH
Victor R. Despard, Syracuse, N. Y., assignor to Pass & Seymour, Inc., Syracuse, N. Y., a corporation of New York
Application February 24, 1948, Serial No. 144,676
Term of patent 14 years
(Cl. D26—13)

The ornamental design for a box cover switch, as shown.

154,027
DESIGN FOR A SUCTION CLEANER CASING
Henry Dreyfuss, New York, N. Y., assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio
Application July 16, 1948, Serial No. 147,632
Term of patent 14 years
(Cl. D9—2)

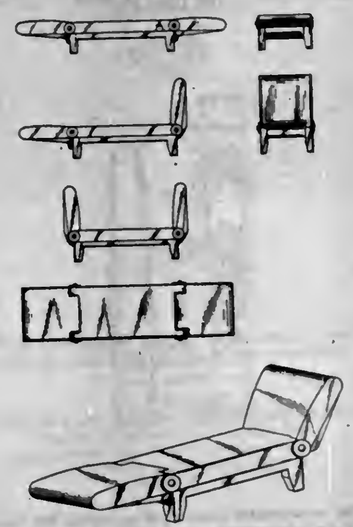


The ornamental design for a suction cleaner casing, as shown.

154,028
DESIGN FOR A HOLDER FOR A KEYWAY BROACH AND BUSHING SET
William B. du Mont, Greenfield, Mass., assignor to The du Mont Corporation, Greenfield, Mass., a corporation of Massachusetts
Application October 30, 1947, Serial No. 142,221
Term of patent 3½ years
(Cl. D80—5)

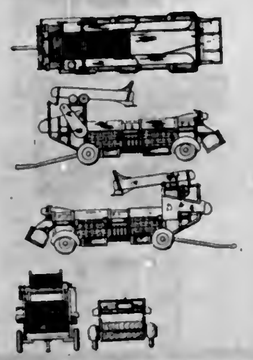
The ornamental design for a holder for a keyway broach and bushing set, as shown.

154,028
DESIGN FOR A HOLDER FOR A KEYWAY BROACH AND BUSHING SET
William B. du Mont, Greenfield, Mass., assignor to The du Mont Corporation, Greenfield, Mass., a corporation of Massachusetts
Application October 30, 1947, Serial No. 142,222
Term of patent 3½ years
(Cl. D80—5)



The ornamental design for a holder for a keyway broach and bushing set, as shown.

154,030
DESIGN FOR A NECKLACE
Maurice Duvalet, Congers, N. Y., assignor to Van Cleef & Arpels, Inc., New York, N. Y., a corporation of Delaware
Application March 22, 1949, Serial No. 1,572
Term of patent 7 years
(Cl. D45—16)



The ornamental design for a necklace, substantially as shown.

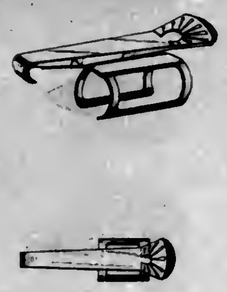
154,031
DESIGN FOR A COMBINATION LOVE SEAT, LOUNGE, AND BED
Robert N. Eisendrath, Chicago, Ill.
Application May 15, 1947, Serial No. 139,045
Term of patent 14 years
(Cl. D15—11)

The ornamental design for a combination love seat, lounge, and bed, as shown.

154,032
DESIGN FOR A TRAILER FOR GRADING ARTICLES
Earl A. Ernst, Bakersfield, Calif.
Application May 19, 1947, Serial No. 139,142
Term of patent 14 years
(Cl. D14—3)

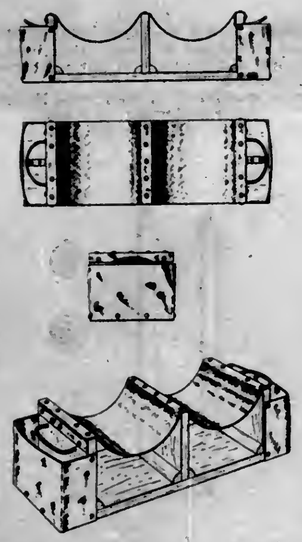
The ornamental design for a trailer for grading articles, substantially as shown.

154,033
DESIGN FOR AN ARTIFICIAL FISH LURE
Joseph V. Ferriot, Akron, Ohio
Application April 21, 1948, Serial No. 145,882
Term of patent 14 years
(Cl. D31—4)



The ornamental design for an artificial fish lure, substantially as shown and described.

154,034
DESIGN FOR A WRITING INSTRUMENT
Howard L. Fischer, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a corporation of Minnesota
Application March 28, 1947, Serial No. 137,998
Term of patent 14 years
(Cl. D74—24)

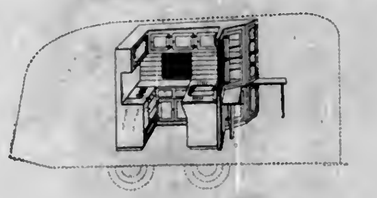


The ornamental design for a writing instrument, as shown.

154,035
DESIGN FOR A PEN AND PENCIL CLIP
Floyd P. Griffith, Appalachia, Va.
Application July 15, 1948, Serial No. 147,577
Term of patent 3½ years
(Cl. D74—1)

The ornamental design for a pen and pencil clip, as shown and described.

154,036
DESIGN FOR A KNEELING HAMMOCK
Melvin R. Grubb and Nerina C. Grubb, Mission, Kans.
Application August 11, 1947, Serial No. 140,822
Term of patent 14 years
(Cl. D15—8)

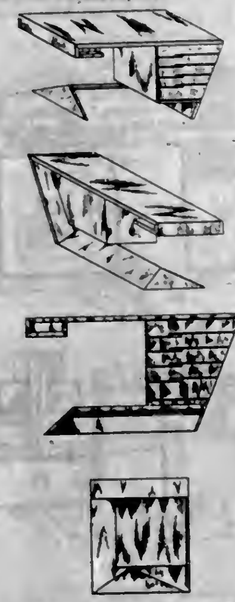


The ornamental design for a kneeling hammock, as shown.

154,037
DESIGN FOR A HANDLE FOR TABLE FLATWARE
Armand M. Guier, New York, N. Y., assignor to Imperial Dania Silver Corp., New York, N. Y.
Application October 13, 1948, Serial No. 149,106
Term of patent 7 years
(Cl. D54—12)

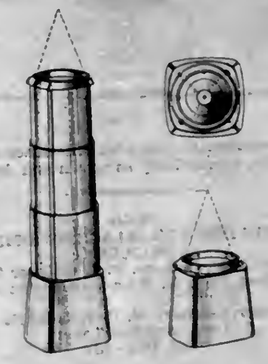
The ornamental design for a handle for table flatware, substantially as shown and described.

154,038
DESIGN FOR A COMBINED TABLE, SINK, STOVE, AND CABINET UNIT FOR VEHICLE TRAILER
Donald F. Ham, Chicago, Ill., assignor to Chicago Streamlite Corporation, Chicago, Ill., a corporation of Illinois
Application December 3, 1947, Serial No. 142,928
Term of patent 3½ years
(Cl. D14—3)



The ornamental design for combined table, sink, stove, and cabinet unit for vehicle trailer, substantially as shown and described.

154,039
DESIGN FOR A RING OR SIMILAR ARTICLE
Anton Hoeckele, Providence, R. I., assignor to Clark & Coombs Company, a corporation of Rhode Island
Application August 23, 1947, Serial No. 141,024
Term of patent 7 years
(Cl. D45—10)



The ornamental design for a ring or similar article, substantially as shown and described.

154,040
DESIGN FOR A DESK OR SIMILAR ARTICLE
Dan R. Johnson, Los Angeles, Calif.
Application July 7, 1947, Serial No. 140,143
Term of patent 3½ years
(Cl. D33—7)

The ornamental design of a desk or similar article, substantially as shown.

154,041
DESIGN FOR A TELESCOPIC PAPER CUP DISPENSER
Gerald C. Johnson, Bronxville, and Albert A. Perelman, Brooklyn, N. Y., assignors to Lily-Tulip Cup Corporation, New York, N. Y., a corporation of Delaware
Application April 21, 1948, Serial No. 145,888
Term of patent 14 years
(Cl. D52—2)

The ornamental design for a telescopic paper cup dispenser, substantially as shown and described.

154,042
DESIGN FOR A CONTAINER CAP
Albert H. Jung, Flushing, N. Y., assignor to Victor Industries Corporation, Brooklyn, N. Y., a corporation of New York
Application May 12, 1948, Serial No. 146,322
Term of patent 14 years
(Cl. D58—26)

The ornamental design for a container cap, substantially as shown.

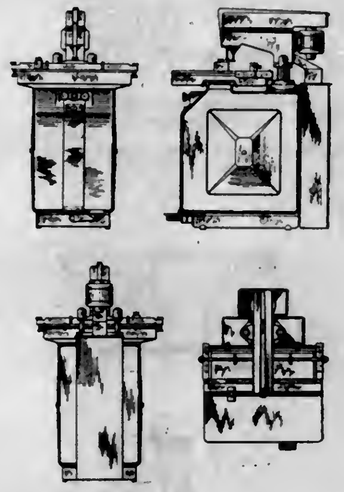
154,043
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 24, 1949, Serial No. 1,049
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

154,044
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 24, 1949, Serial No. 1,050
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

154,045
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 26, 1949, Serial No. 1,120
Term of patent 7 years
(Cl. D45—16)



The ornamental design for a necklace or similar article, substantially as shown and described.

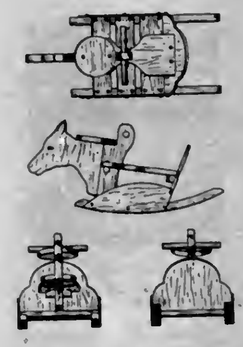
154,046
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 26, 1949, Serial No. 1,121
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

154,047
DESIGN FOR A SINGLE SPINDLE HYDRAULIC PAPER DRILL OR SIMILAR ARTICLE
David G. Lammi, Chicago, Ill.
Application January 29, 1948, Serial No. 144,137
Term of patent 14 years
(Cl. D55—1)

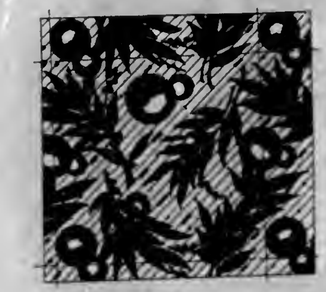
The ornamental design for a single spindle hydraulic paper drill or similar article, as shown.

154,048
DESIGN FOR A CUFF LINK
Gloria Le Vaggi, Attleboro, Mass., assignor to Swank, Inc., a corporation of Delaware
Application December 30, 1948, Serial No. 150,461
Term of patent 14 years
(Cl. D17—7)



The ornamental design for a cuff link, substantially as shown and described.

154,049
DESIGN FOR A COMBINED TOOTH PASTE DISPENSER AND TOOTHBRUSH HOLDER
Nat Lipton, Long Beach, Calif.
Application October 22, 1947, Serial No. 142,089
Term of patent 14 years
(Cl. D4—3)

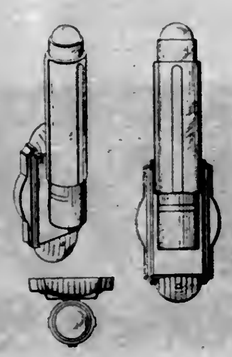


The ornamental design for a combined tooth paste dispenser and toothbrush holder, as shown.

154,050
DESIGN FOR A CHILD'S ROCKING HORSE
William S. Mandina, Kansas City, Mo.
Application March 15, 1948, Serial No. 145,102
Term of patent 14 years
(Cl. D34—15)

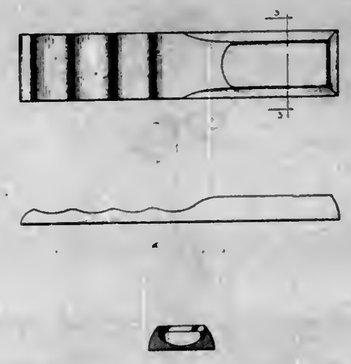
The ornamental design for a child's rocking horse, as shown.

154,051
DESIGN FOR WRAPPING PAPER
Oswald F. Marquardt, Montclair, N. J.
Application June 17, 1947, Serial No. 139,736
Term of patent 7 years
(Cl. D59—2)



The ornamental design for wrapping paper, as shown and described.

154,052
DESIGN FOR WRAPPING PAPER
Oswald F. Marquardt, Montclair, N. J.
Application June 17, 1947, Serial No. 139,737
Term of patent 7 years
(Cl. D59—2)



The ornamental design for wrapping paper, as shown and described.

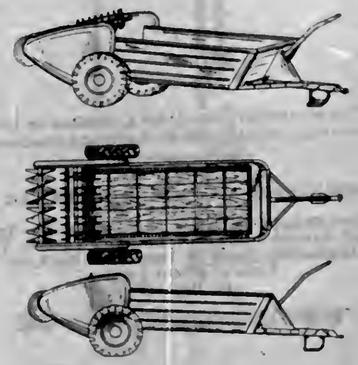
154,053
DESIGN FOR A LIGHTING FIXTURE
Clyde D. McCann, Des Moines, Iowa
Application November 10, 1947, Serial No. 142,424
Term of patent 14 years
(Cl. D48—4)

The ornamental design for a lighting fixture, substantially as shown.

154,054
DESIGN FOR A NAIL POLISH BOTTLE HOLDER AND FINGER REST
Ladislas Medgyes, New York, N. Y., assignor to Helena Rubinstein, Inc., New York, N. Y., a corporation of New York
Application December 23, 1947, Serial No. 143,306
Term of patent 7 years
(Cl. D86—10)

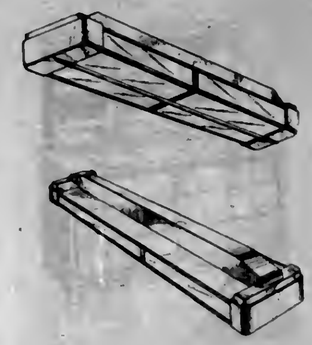
The ornamental design for a nail polish bottle holder and finger rest, as shown.

154,055
DESIGN FOR AN ANIMAL FIGURE
Irving Miller, New York, N. Y.
Application August 18, 1948, Serial No. 148,173
Term of patent 14 years
(Cl. D34—2)



The ornamental design for an animal figure, as shown.

154,056
DESIGN FOR AN ASH TRAY
Jennings Nelson, St. Paul, Minn.
Application May 3, 1947, Serial No. 138,788
Term of patent 14 years
(Cl. D85—2)

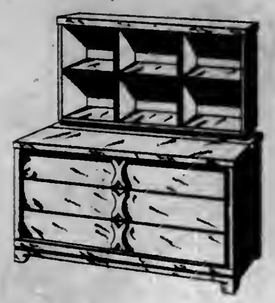


The ornamental design for an ash tray, as shown.

154,057
DESIGN FOR A MANURE SPREADER
Noral A. Nelson, Royal Oak, Mich., assignor to Harry Ferguson, Inc., Detroit, Mich., a corporation of Delaware
Application October 5, 1946, Serial No. 133,797
Term of patent 14 years
(Cl. D35—2)

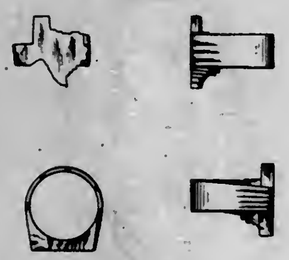
The ornamental design for a manure spreader, substantially as shown.

154,058
DESIGN FOR A FLUORESCENT LIGHTING FIXTURE
Carl Nitardy, Ipswich, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
Application September 12, 1947, Serial No. 141,355
Term of patent 14 years
(Cl. D48—23)



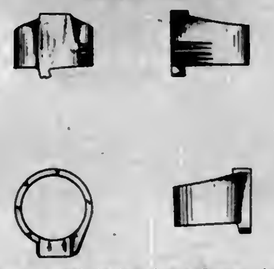
The ornamental design for a fluorescent lighting fixture, as shown.

154,059
DESIGN FOR AN ILLUMINABLE RULE
Roland K. Olson, Newton, Mass.
Application April 25, 1947, Serial No. 138,605
Term of patent 3½ years
(Cl. D74—1)



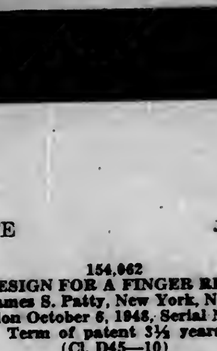
The ornamental design for an illuminable rule, substantially as shown.

154,060
DESIGN FOR A COMBINATION CHEST AND HUTCH
John Gordon Osborn, Sheboygan, Wis.
Application July 31, 1947, Serial No. 140,645
Term of patent 3½ years
(Cl. D33—19)



The ornamental design for a combination chest and hutch, as shown.

154,061
DESIGN FOR A FINGER RING
James S. Patty, New York, N. Y.
Application October 6, 1948, Serial No. 148,981
Term of patent 3½ years
(Cl. D45—10)



The ornamental design for a finger ring, substantially as shown.

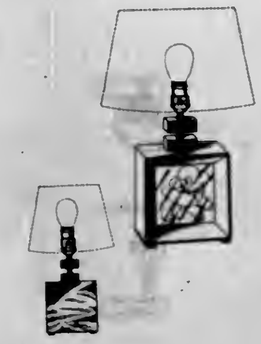
154,062
DESIGN FOR A FINGER RING
James S. Patty, New York, N. Y.
Application October 6, 1948, Serial No. 148,982
Term of patent 3½ years
(Cl. D45—10)

The ornamental design for a finger ring, substantially as shown.

154,063
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application February 24, 1949, Serial No. 1,061
Term of patent 7 years
(Cl. D45—16)

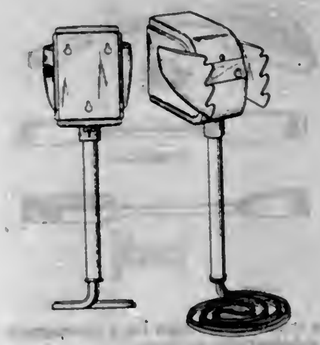
The ornamental design for a necklace or similar article, substantially as shown and described.

154,064
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application March 26, 1949, Serial No. 1,641
Term of patent 7 years
(Cl. D45—16)



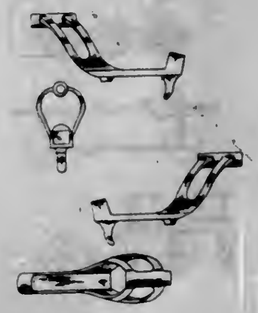
The ornamental design for a necklace or similar article, substantially as shown and described.

154,065
DESIGN FOR A COMBINATION FISHING ROD AND WALKING CANE
Harvey M. Phillips and Harry H. Boucher, Dallas, Tex.
Application June 5, 1947, Serial No. 139,458
Term of patent 14 years
(Cl. D31—4)



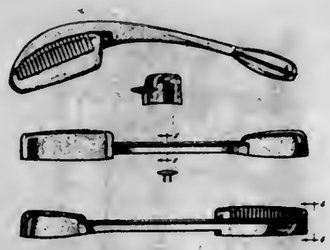
The ornamental design for a combination fishing rod and walking cane, substantially as shown and described.

154,066
DESIGN FOR A LAMP WITH ILLUMINABLE BASE
Joseph Provenzano, New York, N. Y.
Application December 24, 1948, Serial No. 150,344
Term of patent 7 years
(Cl. D48—20)



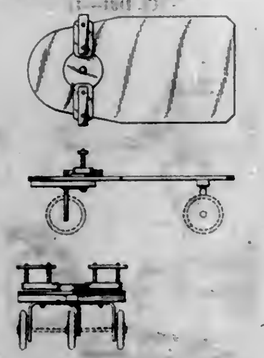
The ornamental design for a lamp with illuminable base, substantially as shown and described.

154,067
DESIGN FOR AN ELECTRICAL HEATING APPARATUS
Carl Reynolds, Jr., Detroit, Mich., assignor to Moffats Limited, Weston, Ontario, Canada, a corporation
Application January 13, 1948, Serial No. 143,720
In Canada November 10, 1947
Term of patent 7 years
(Cl. D81—10)



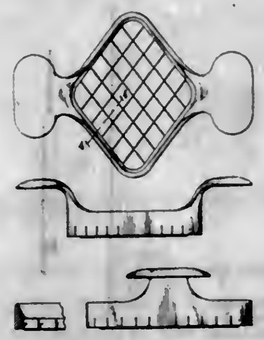
The ornamental design for an electrical heating apparatus, as shown.

154,068
DESIGN FOR A FISHING ROD REEL MOUNT
Walter L. Rives, Jacksonville, Fla.
Application March 17, 1948, Serial No. 145,186
Term of patent 14 years
(Cl. D31—4)



The ornamental design for a fishing rod reel mount, as shown.

154,069
DESIGN FOR A PHONOGRAPH TONE ARM
Carl W. D. Schaefer, Dayton, Ohio, assignor to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application September 29, 1948, Serial No. 148,873
Term of patent 7 years
(Cl. D26—14)

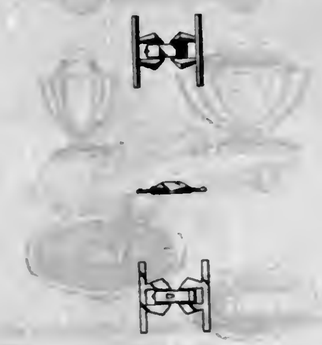


The ornamental design for a phonograph tone arm, substantially as shown.

154,070
DESIGN FOR A SCOOTER
David M. Simpson, Hawthorne, Calif.
Application February 9, 1948, Serial No. 144,367
Term of patent 3½ years
(Cl. D34—15)

The ornamental design for a scooter, substantially as shown and described.

154,071
DESIGN FOR A VEGETABLE CUTTER
Frederick B. Smith, Toledo, Ohio
Application May 28, 1947, Serial No. 139,319
Term of patent 14 years
(Cl. D59—1)



The ornamental design for a vegetable cutter, substantially as shown and described.

154,072
DESIGN FOR A RING OR SIMILAR ARTICLE
Vincent Sorrentino, Providence, R. I., assignor to Uncas Manufacturing Company, a corporation of Rhode Island
Application April 15, 1948, Serial No. 145,737
Term of patent 14 years
(Cl. D45—10)

The ornamental design for a ring or similar article, substantially as shown.

154,073
DESIGN FOR A CLASP
Arthur S. Spear, Providence, R. I., assignor to Sperry Mfg. Co., a corporation of Rhode Island
Application May 28, 1948, Serial No. 146,651
Term of patent 3½ years
(Cl. D45—4)

The ornamental design for a clasp, substantially as shown.

154,074
DESIGN FOR A CLASP
Arthur S. Spear, Providence, R. I., assignor to Sperry Mfg. Co., a corporation of Rhode Island
Application May 28, 1948, Serial No. 146,652
Term of patent 3½ years
(Cl. D45—4)

The ornamental design for a clasp, substantially as shown.

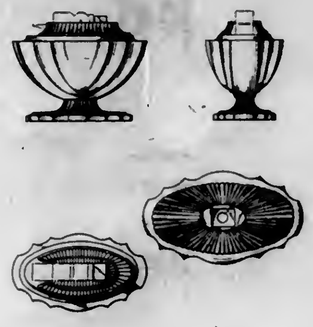
154,075
DESIGN FOR A CLASP
Arthur S. Spear, Providence, R. I., assignor to Sperry Mfg. Co., a corporation of Rhode Island
Application May 28, 1948, Serial No. 146,653
Term of patent 3½ years
(Cl. D45—4)

The ornamental design for a clasp, substantially as shown.

154,076
DESIGN FOR A JEWELRY CHAIN
Arthur S. Spear, Providence, R. I.
Application February 24, 1949, Serial No. 1,062
Term of patent 3½ years
(Cl. D45—16)

The ornamental design for a jewelry chain, substantially as shown.

154,077
DESIGN FOR A JEWELRY CHAIN
Arthur S. Spear, Providence, R. I.
Application February 24, 1949, Serial No. 1,063
Term of patent 3½ years
(Cl. D45—16)



The ornamental design for a jewelry chain, substantially as shown.

154,078
DESIGN FOR A JEWELRY CHAIN
Arthur S. Spear, Providence, R. I.
Application February 24, 1949, Serial No. 1,064
Term of patent 3½ years
(Cl. D45—16)

The ornamental design for a jewelry chain, substantially as shown.

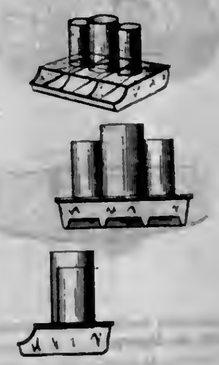
154,079
DESIGN FOR A TABLE LIGHTER
Gerald E. Stahl, New York, N. Y., assignor to American Safety Razor Corporation, Brooklyn, N. Y., a corporation of Virginia
Application June 25, 1948, Serial No. 147,183
Term of patent 14 years
(Cl. D48—27)

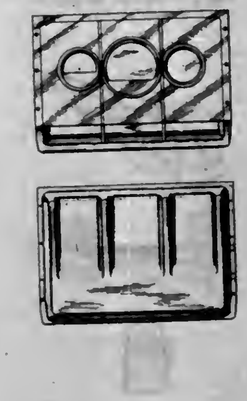
The ornamental design for a table lighter, as shown and described.

154,080
DESIGN FOR AN AUTOMOBILE
Clifford Brooks Stevens, Milwaukee, Wis.
Application December 18, 1947, Serial No. 143,209
Term of patent 7 years
(Cl. D14—3)

The ornamental design for an automobile, as shown.

154,080—Continued





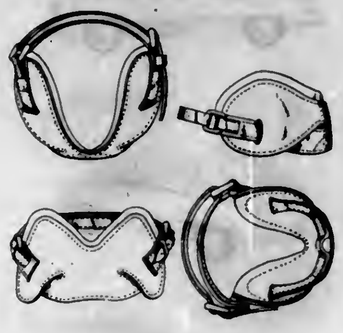
154,081
DESIGN FOR A DISHWASHER
Frederick K. Storm, Jr., Los Angeles, Calif., assignor to Perry Kilsby Inc., Los Angeles, Calif., a corporation of California
Application December 30, 1948, Serial No. 150,447
Term of patent 14 years
(Cl. D49—1)

The ornamental design for a dishwasher, as shown.

154,082
DESIGN FOR A MERCHANDISE CONTAINER OR THE LIKE
Orville W. Thrashill, Wellington, Kans.
Application November 12, 1947, Serial No. 142,450
Term of patent 7 years
(Cl. D60—5)

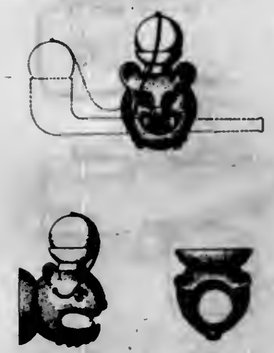
The ornamental design for a merchandise container or the like, substantially as shown.

154,083
DESIGN FOR AN AUTOMOBILE LAMP
Wagn Trautner, Syracuse, N. Y.
Application November 10, 1948, Serial No. 149,552
Term of patent 14 years
(Cl. D48—32)



The ornamental design for an automobile lamp, substantially as shown.

154,084
DESIGN FOR AN AUTOMOBILE LAMP
Wagn Trautner, Syracuse, N. Y.
Application November 10, 1948, Serial No. 149,553
Term of patent 14 years
(Cl. D48—32)



The ornamental design for an automobile lamp, substantially as shown.

154,085
DESIGN FOR A QUARTER BOOT
Arthur E. Warren, Des Moines, Iowa
Application November 14, 1947, Serial No. 142,535
Term of patent 7 years
(Cl. D38—11)

The ornamental design for a quarter boot, as shown.

154,086
DESIGN FOR A PIPE HOLDER
Walter E. Weaver, Nacogdoches, and Vascar N. Bridges, Houston, Tex.; said Bridges assignor to said Weaver
Application October 30, 1947, Serial No. 142,229
Term of patent 14 years
(Cl. D85—8)

The ornamental design for a pipe holder, as shown and described.

154,087
DESIGN FOR A COMBINED CHAIR AND VIBRATOR
John Werner, Chicago, and Albert H. Zeigler, Kenilworth, Ill., assignors to Aciform Corporation, Chicago, Ill., a corporation of Illinois
Application January 7, 1948, Serial No. 143,574
Term of patent 7 years
(Cl. D15—1)

The ornamental design for a combined chair and vibrator, as shown.

154,088
DESIGN FOR A TOY ROLY-POLY OR SIMILAR ARTICLE
Constance Ray White, Beverly Hills, Calif.
Application April 16, 1948, Serial No. 145,763
Term of patent 7 years
(Cl. D34—4)

The ornamental design for a toy roly-poly or similar article, substantially as shown.

154,089
DESIGN FOR A TOLL COIN OR TOKEN DEVICE FOR AUTOMOBILES
Abraham Zitenfield and Joe Weil, New York, N. Y.
Application June 21, 1947, Serial No. 139,856
Term of patent 14 years
(Cl. D52—4)

The ornamental design for a toll coin or token device for automobiles, substantially as shown.
